WASHINGTON:  
GOVERNMENT PRINTING OFFICE,  
1901.

## MEMBERS OF THE INDUSTRIAL COMMISSION.

---

MR. ALBERT CLARK, *Chairman*

Senator BOIES PENROSE	Mr. ANDREW L. HARRIS.
Senator STEPHEN R. MALLORY	Mr. JOHN M. FARQUHAR
Senator JOHN W. DAVIS	Mr. EUGENE D. CONGER
Senator THOMAS R. BARD	Mr. THOMAS W. PHILLIPS
Representative JOHN J. GARDNER	Mr. CHARLES J. HARRIS
Representative L. F. LIVINGSTON	Mr. JOHN L. KENNEDY
Representative JOHN C. BELT	Mr. CHARLES H. LITCHMAN.
Representative THORVALD ORFEN	Mr. D. A. TOMPKINS
Mr. WILLIAM LORIMER	

E. DANA DERAND, *Secretary*

---

[Extract from act of Congress of June 18, 1898, defining the duties of the Industrial Commission showing the scope of its inquiries.]

SEC. 2. That it shall be the duty of this commission to investigate questions relating to immigration, to labor, to agriculture, to manufacturing, and to business, and to report to Congress and to suggest such legislation as it may deem best on these subjects.

SEC. 3. That it shall furnish such information and suggest such laws as may be made a basis for uniform legislation by the various States of the Union, in order to harmonize conflicting interests and to be equitable to the laborer, the employer, the producer, and the consumer.

INDUSTRIAL COMMISSION,

*December 5, 1901.*

*To the Fifty-seventh Congress:*

I have the honor to transmit herewith, on behalf of the Industrial Commission, a report to Congress on the subject of Labor Organizations, Labor Disputes, and Arbitration; and a report on the subject of Railway Labor. These subjects have also been treated extensively in other volumes of the Commission's reports. The conclusions and recommendations of the Commission regarding them will be presented in its final report.

Respectfully,

ALBERT CLARKE,

*Chairman.*

## PREFATORY NOTE

The following report regarding Labor Organizations, Labor Disputes, and Arbitration has been prepared in the office of the Industrial Commission and under its supervision. The subject of the relations between employers and employees is one of the most important which the Commission has considered. Doubtless the most powerful single factor in affecting those relations at the present time is organization of labor, and this is the first subject covered in the report. Particular interest attaches to all methods which tend to promote peaceful relations between employers and employees; and the practices of collective bargaining, conciliation, and arbitration accordingly constitute the subject-matter of a second section of the report. From time to time, however, peaceful relations are broken by strikes and lockouts and by other forms of industrial disputes. The statistics regarding these disputes have been presented and discussed, while a special part of the report is devoted to the discussion of the attitude of the courts toward various acts of workmen in connection with labor disputes.

The information regarding American labor organizations and regarding the American systems of collective bargaining and of arbitration and conciliation within the trade has been obtained largely by correspondence with the officers of organizations of employers and of employees. Schedules of questions were sent out to all national labor organizations and to a very considerable number of local organizations. The officers of the national unions have almost uniformly shown marked courtesy in filling out these schedules and in making answers to such specific inquiries as were later found necessary. They have also furnished in most instances the constitutions, reports, agreements, and other documents published by the unions. The officers of the American Federation of Labor have been of especial assistance in giving information regarding that body and its constituent unions. It is believed that, since the statements of fact contained in this report have been obtained almost wholly from official sources, they may be considered thoroughly authentic.

Doubtless because of the fact that the officers of local unions are in most instances actively employed in their trades, and also because the business of local organizations is conducted in a less systematic manner than that of national unions, it has been found impossible to obtain any considerable amount of information regarding local unions, except in so far as the officers of national organizations have furnished it.

The Commission is under obligations to Hon. Carroll D. Wright, United States Commissioner of Labor, for the use of documents in possession of the Department of Labor, and especially for furnishing advance sheets of the sixteenth annual report of the Department, covering the subjects of strikes and lockouts. By this means the Commission is able to publish a summary of the statistics contained in that report contemporaneously with their publication by the Department of Labor.

The text of that part of the report on Labor Organizations, Labor Disputes, and Arbitration which regards labor organizations has been prepared for the most part by Mr. Charles E. Edgerton, while the text regarding collective bargaining, conciliation and arbitration, and labor disputes has been prepared principally by Mr. E. Dana Durand. Both have, however, cooperated under the direction of the Commission in the preparation of the entire work.

The report on Railway Labor, which constitutes the second division of the present volume, has been prepared under the direction of the Commission by Dr. Samuel M. Lindsay, of the University of Pennsylvania. The statements regarding matters of fact contained in this report are based almost altogether on official documents and information. Schedules of questions were sent to the officers of the leading railroad companies, as well as to the officers of the leading organizations of railway employees, and in most cases the desired information was cheerfully and fully furnished. To the discussion of facts regarding railway employment - wages, hours of labor, and regulations as to entering employment, promotion and discipline, and other matters - has been added a compilation of the decisions of the courts regarding the liability of railway employers for injuries to their employees, a subject in which very general public interest has been manifested. The Commission is also under obligations to the Pennsylvania Railroad for having permitted the republication of a report submitted to it by Mr. Riebenack, its assistant comptroller, regarding the systems of insurance of employees on foreign railways, as well as to Mr. Riebenack himself. This report appears as an appendix.

# LABOR ORGANIZATIONS, LABOR DISPUTES, AND ARBITRATION.

### SUMMARY AND GENERAL DISCUSSION.

---

#### CHAPTER I.

#### TRADE AND LABOR ORGANIZATIONS.

##### I. ORGANIZATION AND GOVERNMENT

###### NATIONAL AND LOCAL UNIONS — DEFINITIONS

Among American trade unionists three types of trade union are formally recognized—the local, the national, and the international. The typical local union includes only members who live and work in one town, and its business is done by vote of all the members, meeting in one place. Sometimes there are subordinate organizations, more or less formal, composed of members employed in single establishments. Such are the “chapels” of the printers, which long antedate any more formal organization of the craft. Such are the “shop meetings” of many other trades. It often happens that workers in a place where no local union of their trade exists attach themselves to the nearest, though they may not be able to take part in its ordinary deliberations. Less often, where a few workers of a trade are gathered, they are organized as a branch of a neighboring local union, which thus assumes a complex character. This method is often adopted by the Brewery Workmen.

The national and the international unions represent only a single type, though the formal distinction between them is carefully made in trade-union literature. The typical national union aspires to control all the workers of its trade in the United States. The international union has locals not only in the United States, but also in Canada, and, in a few cases, in Mexico. It sometimes happens that unions which are recognized as national do not in fact have members outside of a limited territory, and perhaps make no effort for more general extension. For instance, the Cotton Mule Spinners, like several other unions in the cotton industry, are confined to New England, excepting a few local unions in New York. The Northern Mineral Mine Workers have apparently no desire to extend beyond the boundaries of Michigan, Minnesota, and Wisconsin.

National and international unions are made up of local unions, which possess more or less complete autonomy, and which join in one way or another in the government of the general body.

In the speech of trade unionists the phrase “local union” is often abbreviated to “local,” and this technical usage is frequently employed in the present report. The word “national” is used in this report to include both those unions which call themselves national and those which are distinguished as international.

## XVI INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

The great majority of the national trade unions are bound together in the great federal organization, the American Federation of Labor. In one or two instances there are alliances for certain purposes among small numbers of national unions in related trades. The International Typographical Union, the Pressmen, and the Bookbinders have for some years maintained a "tripartite agreement." Efforts have for some time been making to establish an alliance of the national unions in the metal trades.

Scarcely inferior in importance to the Federation of Labor are the local federations or trades councils, which bind together the local unions of particular cities. Almost every important town has its central organization, in which all or most of the local unions of the place meet together by delegates to consider matters of common interest. The local unions of the building trades commonly have federal organizations of their own, called building trades councils, for the consideration of matters of peculiar and common interest to them. Similar local alliances are sometimes formed by unions concerned in other broad departments of industry, such as metal working. The present report is devoted primarily to the organization and policy of the national unions, and touches only incidentally upon these highly important but local phenomena.

### TRADE-UNION STATISTICS.

The existing statutes of Great Britain provide an effective method for the collection of trade-union statistics. The registration of trade unions, while not compelled, is induced by being made a condition of valuable privileges, relating especially to the protection of the union funds, and every registered union is required to file annual statements, showing receipts and expenditures, assets and liabilities, and giving separately the amounts expended for each of the several objects of the union. Statistics of membership do not seem to be required by the letter of the act, but they are customarily asked for by the labor department and customarily given by the unions. Moreover, the labor department, being regularly concerned with the collection of trade-union statistics, undertakes to compile statistics of the unions which are not registered; and in this also it seems to be almost completely successful. At the end of 1899, 614 unions, with 1,408,702 members, were registered under the law, and 678, with a membership of 393,816, were not registered, but made reports to the labor department. Over 78 per cent of the membership of unions known to the labor department was, therefore, included in the registered unions.

No such effective machinery for compiling a statistical account of trade unions exists in the United States. A few State bureaus of labor statistics have given some attention to the matter. That of New York has for some years published statistics of the number and membership of unions within its State. That of Indiana published tables of membership, dues, benefits, strikes, etc., in its report for 1893-94, but has published none since. Somewhat full information for Kansas is given in the recent reports of its bureau. The latest report of the Ohio bureau, that for 1900, contains detailed tables of membership, receipts, and expenditures of Ohio unions, as well as wages, hours of labor, strikes, etc. The Ohio report notes, however, that only 43 per cent of the unions reported so simple a matter as their total receipts.

In the absence of some strong statutory inducement, the only hope of obtaining tolerably complete returns is in persistent effort, and the gradual education of the union officers to the desirability of helping. So far as local unions are concerned, their officers are changed so often that the education of them would be a difficult process. But from the national unions, with their comparatively permanent tenure of office, steady pressure might extract tolerably full information.

At the best, the gathering of trade union financial statistics would be more difficult in this country than in Great Britain, because of differences in methods of union organization. A British national union of the normal type puts all the receipts of

its local branches into a common fund. When such a union makes returns to the registrar of friendly societies, its returns cover all the financial operations of the local bodies. Hardly half a dozen American unions are organized on this plan. In the great majority the local treasuries are entirely separate and independent. The national officers have no knowledge of the receipts and expenditures of the local branches. To gather complete financial statistics of labor organizations would involve getting returns from all the thousands of local officers.

Even the accounts of the national organizations are so kept, in many cases, that no useful classification of receipts or of expenditures can be based upon them. The number is not so great, however, but that it might be possible, by continuous effort, extending over some years, not only to establish the custom of making returns to a governmental authority, but to induce such changes of bookkeeping that the returns could be compared and tabulated.

The Industrial Commission, in the limited time which it has had for this work, has been unable to gather a body of trade-union statistics which makes any satisfactory approach to completeness. A few important organizations have failed to respond to requests for information. The great majority have responded courteously, and have gladly furnished such information as was readily available to them. Their financial operations are, however, so differently classified, and in some cases so unclassified, that it has not been found possible to prepare classified tables which would have any considerable value.

Even if all the financial operations of the national unions were uniformly classified, and so could be brought into tables which should be accurate for the ground which they should cover, the tables would have only a limited value. For reasons already given, a comparison of them with similar tables relating to the unions of Great Britain would be seriously misleading. Out-of-work benefits constitute the largest expenditure of the typical British union. The typical American national union would report none, yet considerable amounts might have been paid for this purpose from the independent treasuries of the local branches. One American union might report considerable death benefits and sick benefits, and the next might show none, yet the members of the second might actually have contributed as much for these forms of insurance as those of the first.

The labor department of the British board of trade, to which trade unions report their membership and financial statistics, does not make any distinction between local and national organizations. It does, however, select for special treatment 100 principal unions, chiefly on account of their membership and solidity, but also with a view to securing adequate representation, so far as possible, of different branches of industry. The following table, giving the growth both of the 100 principal unions and of all others from 1892 to 1899, indicates the tendency of the stronger unions to increase their relative weight. The 100 principal unions have increased by 212,000 from 1892 to 1899, while all other unions increased only 87,000. At the end of 1899 the 100 principal unions contained 1,117,000 members, while all other unions, 1,192 in number, contained only 685,000. The 100 principal unions increased 23½ per cent during the 7 years, while the other unions increased only 11½ per cent. The latter increase took place entirely during the 2 years of good trade, 1898 and 1899, while the increase of the 100 selected unions was continuous, excepting slight decreases in 1895 and 1898.

# XVIII INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

## *Membership of British trade unions <sup>1</sup>*

Year	100 principal unions	Other unions <sup>2</sup>	Total
1892. . . . .	905,116	598,116	1,503,232

<sup>1</sup>Twelfth Report on Trade Unions in Great Britain and Ireland, 1899, published by the labor department of the British board of trade, p. xx.

<sup>2</sup>During the years 1893-1899, 55 smaller unions, with a total membership of 9,680 were absorbed by the 100 principal unions.

It will be seen that the membership of all unions known to the labor department had increased from 1,503,232 at the end of 1892 to 1,802,518 at the end of 1899, an increase of 20 per cent in the 7 years. The number fell off with the coming of the depression of 1893, and continued to decrease until 1895. Since that time the number has increased year by year.

As has been said, no attempt has been made to gather similar statistics from year to year for the whole of the United States, and not even any State bureau of labor has prepared a consecutive series of such statistics, excepting the bureau of New York. The series of official statistics for New York begins with 1894. This was in the midst of the industrial depression, and the effect of that depression can not therefore be observed by a comparison of membership before and after the beginning of it. The reported membership was larger in 1895 than in 1894. Since, however, statistics of this sort are necessarily less complete when the first attempt is made to gather them than afterwards, it is almost certain that some part at least of this increase was due to increased accuracy. The reported membership was smaller in 1896 than in 1895, and still smaller in 1897. From this point, two years after the lowest point of union membership in Great Britain, a rally began, and progress has gone on with accelerating velocity. The increase was 21,000 in the year ending June 30, 1898, 16,000 in the next year, and 59,000 in the next.

## *Number and membership of labor organizations in New York State for the years 1894 to 1900*

Year	Unions	Member- ship
1894 (end of June) . . . . .	840	157,197
1895 (end of June) . . . . .	927	180,241
1896 (end of October) . . . . .	962	170,296
1897 (end of June) . . . . .	976	161,206
1898 (end of June) . . . . .	1,079	172,340
1899 (end of June) . . . . .	1,210	188,155
1900 (end of June) . . . . .	1,603	217,602
1901 (end of June) . . . . .	1,805	255,630

On page 27 of this volume a statement is given of the number of members apparently represented from year to year in the conventions of the American Federation of Labor. For reasons which are there pointed out, these figures can not be taken even as approximations to the membership of the unions affiliated with the Federation. It would be quite unjustifiable to present them as approximations to the aggregate membership of trade unions in the United States from year to year. The Federation is even yet far from embracing the whole trade-union world of the United States. The representation in the conventions, the basis used for calcula-

tion, does not accurately represent the membership of the Federation. Finally, the Federation has tended year by year to embrace an increasing proportion of the American unions, so that its growth has been somewhat greater than the growth of unionism as a whole. Yet, while not showing, even approximately the absolute membership of American unions, these figures may give some indication of the direction and the velocity of movement. The number of members apparently represented in the Federation conventions rose from about 200,000 in 1890 and 1891 to nearly 250,000 in 1893, fell sharply to about 175,000 in 1894, then rose gradually to a little more than 250,000 in 1898, and went up by leaps to nearly 325,000 in 1899, and to more than 500,000 in 1900.

The following table gives a rough estimate of the aggregate membership of the labor organizations of the United States on July 1, 1901.

*Estimated membership of labor organizations in the United States on July 1, 1901.<sup>1</sup>*

Unions affiliated with the American Federation of Labor . . . . .	950,000
Customs clothing makers . . . . .	3,800
Lithographers . . . . .	2,100
Bricklayers . . . . .	39,000
Plasterers . . . . .	7,000
Stonecutters . . . . .	10,000
Box makers . . . . .	5,500
Piano workers . . . . .	7,700
Engineers, marine . . . . .	6,000
Engineers, locomotive . . . . .	37,000
Firemen, locomotive . . . . .	39,000
Conductors, railway . . . . .	23,800
Trainmen, railroad . . . . .	16,000
Switchmen . . . . .	15,000
Letter carriers . . . . .	15,000
Knights of labor and menimemered organizations, say . . . . .	194,100
Total . . . . .	1,100,000

RELATIONS OF NATIONAL AND LOCAL UNIONS

In a historical view the local union is the source and spring of the whole labor movement. It was by the alliance of existing local unions for mutual encouragement and support that the great national organizations came into existence. Local unions of stonecutters, of carpenters, of hatters, and of printers had existed for many years before organization on a larger scale was seriously attempted. Even nowadays, though labor unions come more with taking thought than formerly, and less as the spontaneous outgrowth of the internal conditions of their trades, it is seldom attempted to build a national union in any other way than by uniting existing locals.

The printers have perhaps the oldest national labor organization existing in the United States. The convention out of which the International Typographical Union has grown was held on December 2, 1850. The national association of the stonecutters may possibly, however, be as old or older. It had an established position and a regularly published official journal by 1857, but the date of its origin is not known.<sup>2</sup> The United Sons of Vulcan, one of the predecessors of the Amalgamated Association of Iron, Steel, and Tin Workers, was formed in 1858, the Iron Molders' Union of North America in 1859, and the National Cigar Makers' Union in 1864.

<sup>1</sup> For the basis of the estimate of the unions affiliated with the American Federation of Labor, see pages 28 and 29, below. The Knights of Labor is a secret organization, and gives no information about its membership. The estimates of the membership of other organizations here given are based on the statements of their officers. Some of the unions have branches in Canada, but the number of members there is small in proportion to the aggregate. The total given in this table, considered as an estimate of the total membership of labor organizations in the United States on July 1, 1901, is believed to be subject to a probable error of from 50,000 to 100,000.

<sup>2</sup> According to the report of Jos. D. Weeks on Trade Societies, bound with vol. xx of the reports of the Fifth Census, the Silk and Fur Hat Finishers' National Association was formed in 1813, and the National Trade Association of Hat Finishers in 1854. This report does not mention the National Union of Stone Cutters, and it is possible that the existence of this society was interrupted at the time of the

## XX INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

Local unions had preceded the national by nearly half a century. The New York Society of Journeymen Shipwrights is said to have been incorporated on April 30, 1803, and the house carpenters of New York City in 1806.<sup>1</sup> It is not known, however, how far the purposes and methods of these societies coincided with those of modern trade unions. A union of tailors is said to have been formed in 1806, and one of hatters in 1819. The Baltimore union of printers claims to have existed since 1831; the Newark union of stonecutters since 1834.<sup>2</sup>

Very early in the eighteenth century local unions of tailors and of weavers had been formed in Great Britain.<sup>3</sup> In spite of the determined opposition of the propertyed classes, expressing itself through Parliament and the courts as well as in other ways, the movement had attained a great growth by the year 1800. The national unions, however, even in Great Britain, are a phenomenon of the nineteenth century. Not to speak of extensive unions which have either dissolved or been swallowed up in larger amalgamations, the Friendly Society of Iron Founders, which now has some 18,000 members, was established in 1809, the United Boiler Makers, whose present membership is about 18,000, in 1834. The two British unions which have branches in this country—the Amalgamated Society of Engineers and the Amalgamated Society of Carpenters and Joiners—were established in their present form in 1851 and 1860, respectively. The former has a total membership of some 85,000, the latter of 65,000.<sup>4</sup>

Though the local union is historically the primary phenomenon, and the national union is secondary, a very large proportion of the local unions which exist to-day, and a larger proportion of those which from day to day come into existence, are, in fact, the offspring of national organizations. Some of the stronger national unions maintain regular paid organizers, who devote either the whole or some portion of their time to traveling from place to place, encouraging and strengthening existing locals of their trade, and, where none exist, establishing them. The work of the organizers commissioned by the American Federation of Labor is perhaps even more important. This work may be credited to the national organizations in cooperation. A considerable share of the money that supports it comes now from local unions which have no national trade organization and which are directly affiliated with the Federation, but these locals are themselves almost exclusively the result of past Federation work, and the new locals, so far as they are to be regarded as their children, are descended from the nationals only a little more remotely. The Federation has over 800 "general organizers" bearing its commission in all parts of the country, and constantly active in the neighborhood of their homes in organizing not the workmen of their own trades only, but those of all trades. These men and women work without payment, except the commissions, ranging from \$5 to \$20, which most national unions offer for the organization of new locals.<sup>5</sup> They support themselves by the daily labor of their hands. Their organizing work is therefore confined to their hours of leisure. Until recently the Federation had no money for organizing, except sporadically, by any other means. The great increase of its membership during the last two or three years has changed that. The income has doubled and trebled. The salaries of its officers have not been materially increased, and while there has been an increase of necessary administrative expenses, it has borne no comparison to the increase of receipts. There has remained, therefore, a surplus of many thousand dollars a year applicable to missionary labors. During 1900 the Federation kept in the field upon the average some eight "special organizers" under salary. During 1901 the average number may reach twenty-five. Some of the time of these

<sup>5</sup> The "special organizers," whose salaries and expenses are paid by the Federation, are forbidden to receive such commissions. They do accept them sometimes, however.

men is devoted to the settlement of disputes, the supervision of strikes, and other work of maintenance and conservation. Their energies are chiefly directed, however, to bringing the unorganized into the union ranks, and especially to the establishment of new local unions where there has been no organization of the crafts concerned.

The local trade union, properly so called, is of course composed of men of a single occupation. There are workers everywhere who are willing to join the ranks, but who can not well be brought into unions of the regular type, because not enough members of their separate crafts can be gathered. The Knights of Labor set the example of forming "mixed assemblies," composed of all sorts of workers. The American Federation of Labor has found it desirable to revert to this method of organization, for the purpose of absorbing the residuum which it would be impossible to organize otherwise. It establishes, in each town where it is able, a "federal labor union," into which all wage earners, whose occupations do not make them eligible to any trade union in the town, are welcomed. Some of these federal unions have become large and flourishing bodies, with a membership of hundreds and even of thousands. It is not desired, however, to secure for them a large permanent membership. They are regarded rather as recruiting stations, from which each class of workers, as soon as enough members of it to form a separate union have been gathered, are to be drawn off to an independent organization of their own.

The constitutions of national unions usually provide that local unions may be established by not less than 5 or 7 or 10 workers at the occupation, 7 is far the commonest number. It is often added that the local can not be dissolved so long as a given number of members, usually the same number that is required for establishing the local, are willing to retain the charter. In many unions, when a local already exists in a place, its consent must be asked for before a second can be established. If it objects, however, the general executive board often has power to overrule its objections. One or two national unions never establish more than one local in a place. A notable example of this policy is furnished by the International Typographical Union. It does not establish in any city more than one local union of compositors working in English, though it forms other local unions of the allied crafts—stereotypers, photoengravers, mailers, etc., and of compositors working in other languages. The result of the one-local policy in New York City is "Big Six," with a membership of about 5,000.

When several locals belonging to the same national union exist in a place, they are often united in a district council. The Brotherhood of Carpenters and the Painters require a district council to be established wherever there are two local unions. The powers of the district councils vary greatly in the different organizations. In the Brotherhood of Carpenters their powers are very great; they not only frame and enforce working and trade rules for their districts, but they adopt by-laws and rules covering strike benefits and other benefits to be paid by the locals under their jurisdiction. District councils are always composed of delegates from local unions. In some organizations their more important decisions are submitted to the locals for confirmation.

Each local union, even when subordinate to a national organization, is a self-governing unit. Its theoretical relation to the national body is similar to that of one of our States to the United States. The local body has power to do anything which is not specifically forbidden in the national constitution. Rates of wages are, of necessity, matters of local consideration in almost all trades. Hours of labor are also fixed locally, in most trades, according to local conditions. Even the unions which have national laws to limit hours can not always enforce them in all places, and they are glad to have hours shortened by their locals beyond the national requirement. The regulation of apprenticeship is left by many unions to the locals, and even when national rules are made the locals often make further restrictions. A few national unions fix initiation fees and dues, but in most cases the locals fix them, either without any restriction or subject to a maximum or a minimum limit. Locals levy

## XXII INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

assessments upon their members, and inflict fines and other forms of discipline. Hardly any restriction is placed upon the power to collect local assessments, except that in a few cases it is forbidden to raise them to support strikes unauthorized by the national officers. In the matter of discipline there is usually an appeal to the national authorities, and a few unions forbid the imposition of a fine above a certain amount without the approval of the national executive board. In ordinary cases, however, in most organizations, the local unions do what is right in their own eyes.

### LOCAL UNIONS—ORGANIZATION AND GOVERNMENT

The local labor union is as democratic in its government as it is possible for any assembly of men to be. Indeed, it is hard to conceive of any government but a pure democracy under such conditions. The members are within easy reach of one another. They meet always once a month, often twice a month, sometimes weekly. If any question of special importance arises, a special gathering is easily arranged for. The members stand on a footing of substantial equality in trade affairs. All gain their support by daily work at the common occupation. There is no opportunity for specialization of governmental and executive skill by the setting apart of individuals to governmental activities. The tendency of the local unions is to minimize such specialization, even below the limit that circumstances might make possible. Officers are usually elected once in 6 months, and there is a strong tendency to maintain a rotation in office.

The democratic tendency of the unions has been intensified by experience. Labor leaders, both of the smaller and of the larger sort, have accepted political positions which have seemed to come to them by reason of their prominence in labor circles, and others have taken positions with employers, and so have seemed to go directly over to the ranks of the enemy. In all such cases a suspicion is likely to arise that the union has been "sold out." Without doubt this suspicion is, in many cases, perhaps in most cases, unjust, but, just or unjust, it has had a large weight in determining the policy and methods of the organizations. There is so strong a fear of one-man power that the action of the organizations is weakened by it. Even minor committees are often chosen by vote of the body rather than by appointment of the chairman. The born leader of men will always lead, whether his sphere of activity is the labor organization, the combination of capitalists, or the political arena. But, so far as forms of organization and methods of action go, the local labor union is the extreme type of a democratic assembly.

The local union offers only one position in which a somewhat high degree of specialized executive ability may sometimes be developed. That is the position of the business agent, or, as he used to be called, the walking delegate. But even he is usually elected for 6 months only, and, while he may be reelected, and may even hold the place for several terms, it is not the general disposition of the unions to make his position permanent. The business agent is the representative of the union in dealing with employers, to get redress of grievances, and to see that union rules are kept; in finding work for unemployed members, in maintaining the fidelity of members and collecting their dues, and in the gaining of recruits from among nonunion men of the trade. The office of business agent exists in only a minority of locals. A local must have considerable strength before it can afford the expense, and in many trades the need is hardly felt. The office plays an especially large part in the building trades.

In his capacity of employment agent for the union the business agent is able, if he is not quite upright, to serve his special friends, and so to make it worth while for members who are or may be out of jobs to consult his desires. As the representative of the union in dealing with employers, he is able to bring the organization, without the previous consent of the members, into positions from which it can not easily retreat. In some unions he has power to order strikes. Even when this

power is not formally granted, his advice to quit work will often produce the same effect. On the other hand, the business agent may sometimes take it upon himself to make agreements with employers on behalf of the union. The union is likely to repudiate such agreements if they do not meet its views, but the employers blame the union in such cases, and consider that it has violated its obligations.

So long as he holds his place, therefore, the business agent has a large power for good or evil. The living of his fellow-members depends upon his wisdom and his honesty. But they realize it, and they watch him with the eyes of a jealous master. If they come to believe that he is either rash or foolish or dishonest his authority will be quickly ended.

The other chief officers of the local union, and those which are everywhere to be found, are such as necessarily arise in any society. There is a president, usually called by that title, but sometimes by some other, such as master. There is a secretary, or more commonly two or three secretaries; perhaps a recording secretary, a corresponding secretary, and a financial secretary. The financial secretary, where he exists, collects the dues of the members. Perhaps he keeps the funds and makes disbursements ordered by the union. Perhaps there is a separate treasurer, to whom the financial secretary turns over his collections. Sometimes there is an executive committee, which has general supervision, subject to the action of the body as a whole, of union affairs, but this is somewhat unusual. In general, every question, from the ordering of a strike to the buying of an account book, is decided by vote of the members in full meeting.

The local officers, except business agents, are not expected to devote regular working time to the affairs of the union, and their pay, when they receive any, is small. Business agents often receive the regular rate of wages of their trade, though the rate is sometimes fixed a little higher.

Every labor organization, national or local, large or small, has regularly an engraved seal, with which every document which it sends out, including the commonest official letters, is authenticated. Nowhere else, outside of formal legal proceedings, does the use of the seal maintain so large a place in our modern life. The use of it is expected as a matter of course by union officers, and they sometimes refuse to consider complaints and propositions from which, presumably by oversight, the seal has been omitted.

#### NATIONAL UNIONS—ORGANIZATION AND GOVERNMENT.

The pure and simple democratic constitution of a local union is, of course, impracticable, at least in its primitive form, in the national organizations. Some use is almost necessarily made of the representative principle. The original formation of the national union and the original shaping of its constitution could hardly be effected otherwise than by a representative convention, and periodical conventions are provided for in most of the written constitutions. The majority of the unions hold them annually, less hold them once in 2 years, still less once in 3 or 4 years. The Cigar Makers have lengthened the period to 5 years. But a considerable number of unions make the holding of conventions dependent in one way or another upon a popular vote. Some provide that a convention shall be held at given intervals unless the members decide otherwise, either by a simple majority or by a greater preponderance of opinion, such as two-thirds. Others have enacted that at a fixed period before the regular time of the convention the question shall be sent out from headquarters to every local, "Shall a convention be held this year?" Others provide no fixed time at all for conventions. The Stone Cutters, for instance, do not mention the subject in their written constitution, and they have held no convention since 1891. The German-American Typographers has held none since 1884, and the Granite Cutters have held none since 1880.

## XXII INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

assessments upon their members, and inflict fines and other forms of discipline. Hardly any restriction is placed upon the power to collect local assessments, except that in a few cases it is forbidden to raise them to support strikes unauthorized by the national officers. In the matter of discipline there is usually an appeal to the national authorities, and a few unions forbid the imposition of a fine above a certain amount without the approval of the national executive board. In ordinary cases, however, in most organizations, the local unions do what is right in their own eyes.

### LOCAL UNIONS—ORGANIZATION AND GOVERNMENT

The local labor union is as democratic in its government as it is possible for any assembly of men to be. Indeed, it is hard to conceive of any government but a pure democracy under such conditions. The members are within easy reach of one another. They meet always once a month, often twice a month, sometimes weekly. If any question of special importance arises, a special gathering is easily arranged for. The members stand on a footing of substantial equality in trade affairs. All gain their support by daily work at the common occupation. There is no opportunity for specialization of governmental and executive skill by the setting apart of individuals to governmental activities. The tendency of the local unions is to minimize such specialization, even below the limit that circumstances might make possible. Officers are usually elected once in 6 months, and there is a strong tendency to maintain a rotation in office.

The democratic tendency of the unions has been intensified by experience. Labor leaders, both of the smaller and of the larger sort, have accepted political positions which have seemed to come to them by reason of their prominence in labor circles, and others have taken positions with employers, and so have seemed to go directly over to the ranks of the enemy. In all such cases a suspicion is likely to arise that the union has been "sold out." Without doubt this suspicion is, in many cases, perhaps in most cases, unjust, but, just or unjust, it has had a large weight in determining the policy and methods of the organizations. There is so strong a fear of one-man power that the action of the organizations is weakened by it. Even minor committees are often chosen by vote of the body rather than by appointment of the chairman. The born leader of men will always lead, whether his sphere of activity is the labor organization, the combination of capitalists, or the political arena. But, so far as forms of organization and methods of action go, the local labor union is the extreme type of a democratic assembly.

The local union offers only one position in which a somewhat high degree of specialized executive ability may sometimes be developed. That is the position of the business agent, or, as he used to be called, the walking delegate. But even he is usually elected for 6 months only, and, while he may be reelected, and may even hold the place for several terms, it is not the general disposition of the unions to make his position permanent. The business agent is the representative of the union in dealing with employers, to get redress of grievances, and to see that union rules are kept; in finding work for unemployed members, in maintaining the fidelity of members and collecting their dues, and in the gaining of recruits from among nonunion men of the trade. The office of business agent exists in only a minority of locals. A local must have considerable strength before it can afford the expense, and in many trades the need is hardly felt. The office plays an especially large part in the building trades.

In his capacity of employment agent for the union the business agent is able, if he is not quite upright, to serve his special friends, and so to make it worth while for members who are or may be out of jobs to consult his desires. As the representative of the union in dealing with employers, he is able to bring the organization, without the previous consent of the members, into positions from which it can not easily retreat. In some unions he has power to order strikes. Even when this

Brotherhood of Carpenters, all constitutional amendments are submitted to popular vote, and the Cigar Makers, the Boot and Shoe Workers, the Tailors, the Bakers, and many others use the referendum in electing their officers. The initiative exists in full vigor, both in its application to legislative proposals, and, where officers are elected by popular vote, in nominations.

The convention is always composed of delegates elected by the locals. The national officers, or at least the chief of them, usually have seats in it. The president presides over it and the national secretary keeps its minutes. But, excepting in a few unions, the national officers have no votes unless they are regularly elected delegates of their locals.

A few unions give their locals power in their conventions as nearly as possible in proportion to their membership, that is, a local is allowed one delegate for each 25 or 50 or 100 members. In the majority of unions, however, the smaller locals have a disproportionate power. Sometimes, in addition to the representation based on membership, each local has an additional representative for the body as such. This gives a distribution of power analogous to that among our States in the election of the President. Oftener, however, the unit of representation is frankly varied with the size of the locals, to the disadvantage of the larger. Thus in the Brotherhood of Carpenters a local which has 100 members or less in good standing is entitled to one delegate; one which has more than 100 members and less than 500, to 2 delegates; more than 500 and less than 1,000, 3 delegates, 1,000 or more, 4 delegates. The Team Drivers do not allow more than two votes to any local, no matter how large. The Leather Workers on Horse Goods and the Upholsterers give each local only one vote. In some cases, however, while the number of delegates is restricted, either to save expense or to keep the body down to a convenient size, the delegates of the larger locals are allowed an increased number of votes. Thus the Machinists allow only one delegate to each local, but each delegate casts a vote for each 25 members that he represents.

It is often required that a local, to be represented at the convention, must have been organized and affiliated with the national body for some fixed period, usually not more than a month or two. It must also have paid its debts to the national treasury, either up to the time of the convention or to within some short period before it. A member, to be eligible as a delegate, is usually required to have been a member of the local which elects him, in good standing, for a fixed time—often 6 months, sometimes a year, sometimes as little as 3 months. This requirement is necessarily waived if the local has been organized within the specified time. Some unions require that delegates be actually employed at their trade, unless they are employed as union officers.

In most unions the duties of the delegates are confined to the convention, but in a few they act as corresponding secretaries throughout the period between conventions, and are required to make the regular reports, and, in some cases, the remittances, to the national officers. The Amalgamated Association of Iron, Steel, and Tin Workers has this system.

The tendency of the stronger and more highly organized unions seems to be to put the burden of conventions, including the traveling expenses, wages, and hotel bills of delegates, upon the treasuries of the national organizations. This is also done by many of the smaller and newer unions. In many cases, however, the expenses of delegates are borne by the locals. Sometimes the national treasury pays the cost of transportation, and the locals pay the other expenses. This makes it equally feasible for all locals, wherever they are, to send delegates.

The executive head of a national union is usually called the president. Occasionally he is called grand master, or, in the railroad brotherhoods, grand chief engineer, grand chief conductor, etc. In the larger organizations in which the office exists he is a salaried officer, giving his whole time to the organization. In many of the smaller

## XXVI INDUSTRIAL COMMISSION: — LABOR ORGANIZATIONS.

unions he works regularly at his trade, and receives no pay from the union beyond repayment of expenses he may incur and wages for time that he may lose in union work. His wages are then reckoned either at the rate which he earns at his trade, or, more commonly, at a somewhat higher rate fixed by the organization. The duties of secretary and treasurer are combined in the majority of national unions, and the officer who performs them is called the secretary-treasurer. The secretary-treasurer is usually the first officer who, in the growth of a particular organization, comes to be employed by it for his whole time and at a regular salary, but in the weaker organizations even he has to work at his trade. There are a few cases, of which the Cigar Makers and the Street Railway Employees are the most important, in which the president performs the duties of secretary and treasurer. There are a few other cases, of which the Brewery Workmen are a type, in which the office of president does not exist, but executive control rests altogether in a board.

In every national union there is an executive board or executive council, in whose hands the direction of the affairs of the body rests, subject to the supreme authority of the convention or of the popular vote. In most cases the principal officers of the organization—the president, the vice-presidents, and the secretary-treasurer, or the secretary and the treasurer—are members of it by virtue of their offices. Other members, specially elected, are sometimes added, but not always. In many cases there are a considerable number of vice-presidents, three or five or six, whose membership in the executive council is their principal or their only function. The American Federation of Labor furnishes an extreme instance. Its six vice-presidents have no right of succession to the presidency. It might be said that they are elected for no other purpose than to serve on the executive council, though this service involves a large amount of individual activity in behalf of the affiliated unions.

In most cases the members of the executive council are widely scattered, and of necessity the greater part of their debates are carried on and the greater part of their votes are given by mail. Various devices have been hit on to avoid this inconvenience. In the Brewery Workmen executive power is lodged in a council of 13. Seven must live at the headquarters, and the remaining 6 in other places. The decisions of the council are made in the first place by the resident 7, but they are not binding until the nonresident 6 have sent in their votes, and until it appears that a majority of the whole have voted yea. A few unions provide that the members of the council must all be elected, by the convention or by referendum, from locals within some short distance of a center, which has been chosen, usually on account of its importance as a center of the trade, for the national headquarters. In other cases, as the Tailors, the Carriage Workers, and the Wood Carvers, a place is periodically chosen for the headquarters by the convention or by vote of the members, and the unions within that place or within a short distance of it have power to choose the council from among their own members. This government of the whole body by representatives of a single branch constitutes a reversion to a type which is historically earlier than government by the direct representatives of the whole, though it has never prevailed widely in America. Among the English unions the first step beyond a loose alliance of separate local clubs was the appointment of a seat of government or "governing branch." The local union where the seat of government was placed managed the current affairs of the whole, and its officers served as general officers. The participation of all was secured, not continuously, but by rotation, through periodical removals of the seat of government.<sup>1</sup>

In a considerable number of cases the unions which hold regular conventions elect their officers by vote of the delegates. Many of them, however, including some of the most important, refer the election of officers to the membership at large. This is necessarily done in those unions which hold few conventions or none. It requires

<sup>1</sup> Sidney and Beatrice Webb, *Industrial Democracy*, p. 17.

more elaborate machinery than election by convention, and is oftener found, therefore, in old and highly organized bodies. Whatever the method, it is almost always provided that a full majority of the votes cast is necessary to an election. If the election is by convention the candidate who has received the lowest vote on an unsuccessful ballot is usually dropped, and a new ballot is taken, and the process is repeated until a majority for one candidate appears. Less often in elections by convention, but usually in elections by popular vote, only the two candidates who have received the highest votes on an unsuccessful ballot are eligible when the ballot is repeated.

In elections by the members at large the Australian system is universally employed. Nominations are sent in by the several local unions, and official ballots bearing the names of the regularly nominated candidates are sent out from the national headquarters. In some organizations each candidate, in order to be eligible, must prepare a letter of acceptance, for publication in the official journal, outlining the policy which he intends to follow if he is elected. Several unions impose a fine, usually 50 cents, upon any member who is qualified to vote and fails to do so. It seems to be felt that the judgment of every member is more needed in the election of officers than in the decision of any other question. No union fines its members for failure to vote on constitutional amendments. The Cigar Makers got out a vote of 22,805 at the election of officers in March, 1901, while only from 7,000 to 10,000 voted on several constitutional amendments which were submitted about the same time. It is impossible to say how much the penalty of 50 cents may have had to do with the fuller vote for officers.

There is a considerable tendency to permanency in the tenure of office. Thus Mr. McGuire was secretary of the Brotherhood of Carpenters from the establishment of the union in 1881 up to 1901. Mr. Arthur has been at the head of the Locomotive Engineers since 1874. Though these cases are exceptional, it is common to find men who have served their unions for many successive years. The holder of an important office has an advantage as a candidate, in that he is better known to his constituents than any new man is likely to be. In the absence of a distinct feeling in favor of rotation in office, which seems to manifest itself only moderately, with regard to the higher positions in the trade-union world, he has an advantage in the tendency to let things continue as they are.

The most of the more important unions of Great Britain have fallen into so fixed a habit of reelecting their general secretaries, who are then principal executive officers, that the tenure of the office has become practically permanent. In some of the largest unions all provision for reelection has been dropped from the constitutions. The Cotton Spinners specially provide in their rules that the secretary shall continue in office so long as he gives satisfaction, and when the election of a new man is necessary, he is chosen in the light of a severe, practical, competitive examination.

No American union has reached any such development as this. All offices are filled by election at regular intervals, as a matter of course. The same man is often reelected year after year without opposition, but he must be reelected.

The salaries of the national officers are in most cases moderate in proportion to their responsibilities. In this respect, as in several others, the great railroad brotherhoods form a class by themselves. The presiding officers of the Engineers, the Conductors, and the Firemen are understood to receive \$5,000 a year. No organization in any other field of work pays half so much. The Knights of Labor did pay Mr. Powderly \$5,000 a year, as general master workman, for several years, but they pay such rates no longer. The president of the Marine Engineers now receives a salary which is believed to be the highest paid to any labor-union officer outside the railroad brotherhoods—\$2,400 a year. The president of the American Federation of Labor receives \$2,100, and the secretary, \$1,800. The secretary of the Letter Carriers receives \$2,000. The International Typographical Union pays its president

## XXVIII INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

\$1,400 and its secretary \$1,700. The president of the Glass Bottle Blowers has \$1,800; their secretary, the secretaries of the Stone Cutters and the Longshoremen, and the presidents of the Mine Workers, the Iron Molders, and the Machinists have \$1,500. The secretary-treasurer of the Mine Workers has \$1,300. The secretary of the Iron Molders and the secretary-treasurer of the Machinists have \$1,200. The president of the Cigar Makers receives \$30 a week; the president and the secretary-treasurer of the Boot and Shoe Workers, each, \$22.50 a week. The commonest rates of pay for the principal officers—the president and the secretary—when they are expected to devote their full time to the work, range from \$800 to \$1,300 a year. Some receive smaller rates, and the salaries paid by those unions which expect their work to be done in leisure hours, in the intervals of employment at their trades, range down to nominal amounts.

### MEMBERSHIP.

The prescribed qualifications for membership usually include either present employment or some fixed length of service in the occupation which forms the field of the union. A relation can often be traced between the required length of service and the amount of technical skill required. The Retail Clerks say that the candidate must have had one year's experience in some branch of the retail trade other than the liquor trade, and must be actively employed in a retail store at the time of application. The Boot and Shoe Workers only require that the candidate be actively employed at the craft. The Broom Makers require 1 year's work at the trade, the Bakers 2 years, the Electrical Workers 3 years, the Coremakers, the Machinists, and the Typographical Union 4 years, and the Pattern Makers and the Amalgamated Society of Carpenters 5 years. Some unions of skilled trades, however, such as the Boiler Makers, the Blacksmiths, the Flint Glass Workers, the Brotherhood of Carpenters, and the Stone Cutters, do not require the following of the trade for any fixed period. In the Brotherhood of Carpenters a candidate "must be of good moral character and competent to command standard wages." The requirement of the Boiler Makers is very similar. The Stone Cutters admit any practical journeyman "who can complete stonework true and perfect," including "all kinds of stonework—plain, molded, or carved." It should be remembered, however, in all such matters, that locals may impose restrictions in addition to those of the national bodies.

In many small-scale industries independent workers and small employers may be admitted. Thus the Teamsters admit anyone who is engaged in driving a vehicle and who does not own or operate more than 5 teams. The Cigar Makers and the Trunk and Bag Workers admit manufacturers who employ no journeymen, and in the case of the Cigar Makers such independent craftsmen, working alone or with the help of their families, form a large part of the membership. Working proprietors of small printing offices may belong to the Typographical Union, provided they conform to union rules and employ union members when they need help. The Painters and the Butcher Workmen leave the admission of employers to the option of the locals. The Baggers, however, specifically exclude them. Many unions which admit small employers exclude all who belong to employers' associations.

Several unions, including the Bricklayers, the Brotherhood of Carpenters, the Brick-makers, and the Musicians, admit only persons who are citizens of the countries they live in, or who have declared their intention to become citizens. To join the Boiler Makers one must be "a free-born male citizen of some civilized country." A few unions discriminate against foreigners in the matter of initiation fees. Thus while the general initiation fee of the Stone Cutters is \$10, and an apprentice who completes his term within the jurisdiction of the association may join within one month after his term expires for \$2.50, an applicant from a foreign country without a card from a recognized stonecutters' union must pay \$25. If he brings a card showing membership in the union where he came from, he is admitted for \$10, but if he had belonged to a recognized union in this country he would have been admitted without any fee.

The Flint Glass Workers admit Americans for \$3; but foreigners must pay \$50, and must also state their intention to become citizens of the United States. The Glass Bottle Blowers ordinarily charge Americans \$5 and foreigners from \$50 to \$100, according to the decision of the general officers. The unions which pursue such a policy have good control of their trades, and at the same time feel the competition of immigrants somewhat seriously. Even in their case the wisdom of it is not always clear. The Flint Glass Workers, for instance, have found that keeping men out of the union does not always keep them out of the country, and that the policy of exclusion has raised up new nonunionists to plague them.

In the occupations in which both men and women work, both are usually admitted on equal terms. The Border Makers admit only males, but they are not likely to have applications from women. The Bakers specially forbid any distinction on account of "race, sex, creed, or nationality." The Retail Clerks, the Cigar Makers, and the Tobacco Workers admit men and women on the same footing. One or two unions give women the advantage of lower initiation fees and lower dues.

The great railroad brotherhoods exclude colored persons, but in this as in several other respects they stand quite apart from the rest of the labor world. The machinists formerly had a similar provision, but it was eliminated early in the 90's. The American Federation of Labor formerly refused to receive any national union whose constitution excluded the negro. Several unions, in their constitutions, specially forbid any distinction of race. The Hotel Employees receive colored persons, but organize them in separate locals. The Tobacco Workers, although their membership is largely in the South, declare in their constitution that they "will draw no line of distinction between creed, color, or nationality," but will "work hand in hand for the common good of all." The color question has, however, caused some friction in the labor organizations of the Southern States. In the earlier days of the labor movement there the democratic feeling among the few trade unionists was strong enough to bring whites and negroes even into the same local meeting rooms. It is strong enough still in some trades and in some places. As the unions have grown, however, separate locals have been demanded. Finally, in some places the city central bodies have begun to reject colored delegates. While there are still many places in the South where whites and negroes meet on an absolute equality in the labor organizations, there are others where not only separate local trade unions but separate city federations have become necessary.<sup>1</sup>

A few national unions provide for admission to membership on application to the national officers, if the applicant lives outside the jurisdiction of any local union. Those who join in organizing a new local are almost necessarily admitted by action of the national officers. In all unions, however, the regular mode of entrance is by vote of a local.

In many cases a written application is required, indorsed by two members in good standing. Such an application, when it is required, is usually referred to a committee, and the committee is often forbidden to report at the same meeting at which the application is presented. Whatever the preliminaries may be, the admission of the candidate depends upon the vote of the members. Often the vote is required to be taken by ball ballot, but many unions leave the method to the option of the locals, and a few require an open vote. In many a majority is sufficient to admit a candidate, and in many others the required majority is two-thirds. In several, two, three, or five black balls work exclusion. In a large proportion of these, however, those who cast the black balls are required, either in all cases or when they do not exceed a certain number, to give their reasons. Sometimes the reasons are presented in writing, and the names of the objectors are not known except to the president. If no reasons are given, it is usual to declare the candidate elected. If reasons are pre-

### MEMBERSHIP.

The prescribed qualifications for membership usually include either present employment or some fixed length of service in the occupation which forms the field of the union. A relation can often be traced between the required length of service and the amount of technical skill required. The Retail Clerks say that the candidate must have had one year's experience in some branch of the retail trade other than the liquor trade, and must be actively employed in a retail store at the time of application. The Boot and Shoe Workers only require that the candidate be actively employed at the craft. The Broom Makers require 1 year's work at the trade, the Bakers 2 years, the Electrical Workers 3 years, the Coremakers, the Machinists, and the Typographical Union 4 years, and the Pattern Makers and the Amalgamated Society of Carpenters 5 years. Some unions of skilled trades, however, such as the Boiler Makers, the Blacksmiths, the Flint Glass Workers, the Brotherhood of Carpenters, and the Stone Cutters, do not require the following of the trade for any fixed period. In the Brotherhood of Carpenters a candidate "must be of good moral character and competent to command standard wages." The requirement of the Boiler Makers is very similar. The Stone Cutters admit any practical journeyman "who can complete stonework true and perfect," including "all kinds of stonework—plain, molded, or carved." It should be remembered, however, in all such matters, that locals may impose restrictions in addition to those of the national bodies.

In many small-scale industries independent workers and small employers may be admitted. Thus the Teamsters admit anyone who is engaged in driving a vehicle and who does not own or operate more than 5 teams. The Cigar Makers and the Trunk and Bag Workers admit manufacturers who employ no journeymen, and in the case of the Cigar Makers such independent craftsmen, working alone or with the help of their families, form a large part of the membership. Working proprietors of small printing offices may belong to the Typographical Union, provided they conform to union rules and employ union members when they need help. The Painters and the Butcher Workmen leave the admission of employers to the option of the locals. The Bag Makers, however, specifically exclude them. Many unions which admit small employers exclude all who belong to employers' associations.

Several unions, including the Bricklayers, the Brotherhood of Carpenters, the Brick-makers, and the Musicians, admit only persons who are citizens of the countries they live in, or who have declared their intention to become citizens. To join the Boiler Makers one must be "a free-born male citizen of some civilized country." A few unions discriminate against foreigners in the matter of initiation fees. Thus while the general initiation fee of the Stone Cutters is \$10, and an apprentice who completes his term within the jurisdiction of the association may join within one month after his term expires for \$2.50, an applicant from a foreign country without a card from a recognized stonecutters' union must pay \$25. If he brings a card showing membership in the union where he came from, he is admitted for \$10, but if he had belonged to a recognized union in this country he would have been admitted without any fee.

In other words, his admission to membership is optional with the local. In most cases, however, the acceptance of a member on his credentials is a matter of course. Even in that case, however, a new initiation fee is sometimes required of him. This is not usual, however, except in the case of one who has been a member of the organization only a short time, say less than six months, and who comes from a local which has a lower initiation fee to one with a higher. In such cases the difference of initiation fee is often collected. This regulation is necessary in some cases to prevent persons who live where the initiation fee is high from evading it by obtaining membership where the fee is lower. Another provision, which is often found, permits a local union which has local sick and death benefits to charge a new initiation fee to a member transferred to it, or at least to charge any difference between its initiation fee and that which the member has paid, or, as an alternative, to exclude the member from the local benefits.

It is often provided that a local whose members are on strike need not accept transfer cards. This is to discourage members from coming where trouble exists, and especially to prevent the drawing of strike pay by persons who are not fairly entitled to it.

The secretary of the local which receives a transfer card is often required to forward it to the local which issued it, by way of notification that the transfer of membership has been completed. A few unions have more elaborate regulations. In the Brotherhood of Carpenters the clearance or transfer card has two coupons attached. When the card is deposited the financial secretary who receives it must sign coupon number one and affix the seal of his union, and mail both coupons to the financial secretary of the local which issued the card, as evidence that it has been deposited. The latter secretary must then sign coupon number two and affix the seal of his union, and return it to the former, as evidence that the card was legally obtained.

#### DISCIPLINE

The maintenance of discipline, the judging of offenses, and the infliction of punishment fall almost entirely to the local unions. It is the local that decides for the most part what acts are to be considered offenses. In many of the national organizations, however, criminal codes have grown up, and in some of them the number of offenses specified is large.

No offense appears oftener in these national codes than "undermining" brother members in prices or wages or conditions of work. Allied to this is working or offering to work below the union scale. Several unions forbid taking a job or offering to take it for less than it has paid before. Going to work where a strike is on is mentioned rather less often, possibly because it is so obvious and grievous an offense that specific mention seems even less necessary. Revealing the business or transactions of the union to outsiders, and especially to employers, is often referred to. A few unions lay special penalties on revealing the name of a member who has opposed the admission of a candidate. Disturbing the meetings of the union by swearing, by abusive language, by refusing to obey the president, or by appearing in a state of intoxication, is mentioned in perhaps a dozen codes. A series of penalties is often provided for repetition of these offenses, first a small fine, then a larger fine, then ejection from the meeting, and perhaps suspension. Neglect of duty by an officer or a member of a committee is often punishable by a fine, and in the case of an officer by forfeiture of his position. Absence of an officer from meetings and failure to have at a meeting books which are in his charge are often specially provided for. Misapplication of funds of the union, or any sort of fraud against the union or its members, is often mentioned. Fraud against outsiders is not punishable under any of these national written codes, though some unions enforce the payment of debts due to outsiders, particularly to employers, and others announce that they will not support a member who is discharged for fraudulent conduct or for refusal to

## XXVIII INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

\$1,400 and its secretary \$1,700. The president of the Glass Bottle Blowers has \$1,800; their secretary, the secretaries of the Stone Cutters and the Longshoremen, and the presidents of the Mine Workers, the Iron Molders, and the Machinists have \$1,500. The secretary-treasurer of the Mine Workers has \$1,300. The secretary of the Iron Molders and the secretary-treasurer of the Machinists have \$1,200. The president of the Cigar Makers receives \$30 a week; the president and the secretary-treasurer of the Boot and Shoe Workers, each, \$22.50 a week. The commonest rates of pay for the principal officers—the president and the secretary—when they are expected to devote their full time to the work, range from \$800 to \$1,300 a year. ### MEMBERSHIP.

The prescribed qualifications for membership usually include either present employment or some fixed length of service in the occupation which forms the field of the union. A relation can often be traced between the required length of service and the amount of technical skill required. The Retail Clerks say that the candidate must have had one year's experience in some branch of the retail trade other than the liquor trade, and must be actively employed in a retail store at the time of application. The Boot and Shoe Workers only require that the candidate be actively employed at the craft. The Broom Makers require 1 year's work at the trade, the Bakers 2 years, the Electrical Workers 3 years, the Coremakers, the Machinists, and the Typographical Union 4 years, and the Pattern Makers and the Amalgamated Society of Carpenters 5 years. Some unions of skilled trades, however, such as the Boiler Makers, the Blacksmiths, the Flint Glass Workers, the Brotherhood of Carpenters, and the Stone Cutters, do not require the following of the trade for any fixed period. In the Brotherhood of Carpenters a candidate "must be of good moral character and competent to command standard wages." The requirement of the Boiler Makers is very similar. The Stone Cutters admit any practical journeyman "who can complete stonework true and perfect," including "all kinds of stonework—plain, molded, or carved." It should be remembered, however, in all such matters, that locals may impose restrictions in addition to those of the national bodies.

In many small-scale industries independent workers and small employers may be admitted. Thus the Teamsters admit anyone who is engaged in driving a vehicle and who does not own or operate more than 5 teams. The Cigar Makers and the Trunk and Bag Workers admit manufacturers who employ no journeymen, and in the case of the Cigar Makers such independent craftsmen, working alone or with the help of their families, form a large part of the membership. Working proprietors of small printing offices may belong to the Typographical Union, provided they conform to union rules and employ union members when they need help. The Painters and the Butcher Workmen leave the admission of employers to the option of the locals. The Bag Makers, however, specifically exclude them. Many unions which admit small employers exclude all who belong to employers' associations.

Several unions, including the Bricklayers, the Brotherhood of Carpenters, the Brick-makers, and the Musicians, admit only persons who are citizens of the countries they live in, or who have declared their intention to become citizens. To join the Boiler Makers one must be "a free-born male citizen of some civilized country." A few unions discriminate against foreigners in the matter of initiation fees. Thus while the general initiation fee of the Stone Cutters is \$10, and an apprentice who completes his term within the jurisdiction of the association may join within one month after his term expires for \$2.50, an applicant from a foreign country without a card from a recognized stonecutters' union must pay \$25. If he brings a card showing membership in the union where he came from, he is admitted for \$10, but if he had belonged to a recognized union in this country he would have been admitted without any fee.

This number does not include the local publications, of which there are a considerable number—organs either of important local unions, or oftener of the central councils or federations of cities.

The most ambitious of the trade-union journals are those of the railroad brotherhoods. Such publications as those of the Locomotive Engineers, the Locomotive Firemen, the Railway Telegraphers, and the Railroad Trainmen aspire to a position as literary journals of general interest. The journal of the Firemen is particularly noticeable for the large amount of technical matter, appealing to the studious and ambitious engineman, which it regularly publishes.

The journal of the American Federation of Labor, called the American Federationist, is a monthly magazine of high value to every one who wishes to inform himself of the general progress of the labor movement. It contains thoughtful editorials and contributed articles on trade-union matters, and an elaborate record of the progress of the Federation of Labor and of its affiliated unions.

There are of course the broadest differences of policy and of value between the journals of the several organizations. Many of them contain interesting discussions of social questions, from the trade-union point of view. Others are confined purely to the chronicling of events whose interest is practically confined to the members of the trade. Some of them publish in every issue a list of all the locals of their organizations and of the principal local officers. Some devote much space to local reports of the condition of trade. They are generally the medium of the financial reports of the national officers, and detailed reports of accessions and losses of membership are often given.

The great majority of the journals are published monthly. A few appear in the form of weekly newspapers. In most cases they are sent free to all members of the organization, and are supported either out of the general funds of the organization or by a special tax. Where a special tax is levied it does not generally exceed 50 cents a year. In a few cases, however, as in that of the Machinists, it rises as high as \$1. A considerable number of journals, including those of the Coopers, the Carriage Workers, the Bakers, the Carpenters, and the Brewery Workmen, are printed partly in German. German only is used in the journal of the German-American Typographers, which is strictly a German organization. The Granite Cutters' Journal contains some columns in French, and the Journal of the United Mine Workers did, for 3 years preceding 1901, print two pages in Bohemian.

Very rarely a union adopts as its official organ a paper which is owned by a private member. The journal of the Bookbinders, though now controlled by the organization, was started as a private enterprise, and the journal of the Pressmen is published by an individual member, under a contract with the body, by which the union gets a certain proportion of the net income.

## II. FINANCES AND INSURANCE.

### FINANCES.

In most of the trade unions of Great Britain there seems to be complete community of funds between the local branches. Mr. and Mrs. Webb remark that when the local clubs began to draw together into national unions it was assumed, as a matter of course, that any cash in possession of any branch was available for the needs of any other branch. Before a central authority was established, the several local bodies were expected spontaneously to send their surplus moneys to the aid of any district engaged in a strike. When there came to be a common treasury the local treasuries were treated as parts of it, and as collectively composing it. This involves, of course, uniform contributions from all the members throughout the organization.<sup>1</sup>

<sup>1</sup> Sidney and Beatrice Webb, *Industrial Democracy*, pp. 90-95.

## XXVIII INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

\$1,400 and its secretary \$1,700. It should be remembered, however, in all such matters, that locals may impose restrictions in addition to those of the national bodies.

In many small-scale industries independent workers and small employers may be admitted. Thus the Teamsters admit anyone who is engaged in driving a vehicle and who does not own or operate more than 5 teams. The Cigar Makers and the Trunk and Bag Workers admit manufacturers who employ no journeymen, and in the case of the Cigar Makers such independent craftsmen, working alone or with the help of their families, form a large part of the membership. Working proprietors of small printing offices may belong to the Typographical Union, provided they conform to union rules and employ union members when they need help. The Painters and the Butcher Workmen leave the admission of employers to the option of the locals. The Baggers, however, specifically exclude them. Many unions which admit small employers exclude all who belong to employers' associations.

Several unions, including the Bricklayers, the Brotherhood of Carpenters, the Brick-makers, and the Musicians, admit only persons who are citizens of the countries they live in, or who have declared their intention to become citizens. To join the Boiler Makers one must be "a free-born male citizen of some civilized country." A few unions discriminate against foreigners in the matter of initiation fees. Thus while the general initiation fee of the Stone Cutters is \$10, and an apprentice who completes his term within the jurisdiction of the association may join within one month after his term expires for \$2.50, an applicant from a foreign country without a card from a recognized stonecutters' union must pay \$25. If he brings a card showing membership in the union where he came from, he is admitted for \$10, but if he had belonged to a recognized union in this country he would have been admitted without any fee.

may suspend a local union or cancel its charter if its per capita tax or assessments fall behind for a period which varies in different organizations from two months to a year, but is oftenest put at six months. Of course, in practice neither the suspension of the individual member nor that of the local is likely to be sharply enforced. It is the desire of the organization to retain members, not to get rid of them. If there is any reasonable excuse for delay of payment, or even if it is believed that by the exercise of patience payment can ultimately be obtained, patience will generally be exercised. In the United Mine Workers any local whose members have been idle for more than a month is exempt from the per capita tax. This provision seems to be unique, though several unions provide either for delay of payment or for a diminution of the dues of idle individuals.

The charter fee collected by the general treasury on the organization of a new local is from \$5 upward. Possibly the commonest amount is \$15. The charter fee usually includes provision for a complete outfit of books and stationery, including a seal. The cost of such an outfit may not fall much short of \$5.

The per capita tax collected by the national organizations from the locals varies from 2½ cents a month, the amount charged by the Brickmakers, up to 50 cents a month for the Pattern Makers. The amount of it is determined less by the ability of the members to pay than by the strength of the organization and the degree in which the system of benefit payments has been developed. In a few cases the per capita tax, instead of being a fixed amount, is a percentage of the wages of the members. Thus the Glass-bottle Blowers and the Hatters regularly collect for the national treasury one per cent of all wages. The Flint Glass Workers levy a fixed per capita tax for the general expenses of the union, but support a separate strike fund by the regular payment of two per cent of wages. This system is sometimes applied to special assessments even when it is not applied to the regular taxes. In the Amalgamated Association of Iron, Steel, and Tin Workers, which levies fixed taxes of 30 cents a quarter for the official journal of the association, and 60 cents a quarter for the strike fund, besides a sufficient tax to cover general expenses, assessed quarterly by the president, it is the duty of the president to levy a special assessment of from one to five per cent of wages every four weeks, whenever the amount in the national treasury falls below \$25,000.

Several unions, including some of the strongest, have uniform initiation fees and dues throughout, and treat the total receipts substantially as a common fund, after the manner of the British unions, or divide them between the national treasury and the local treasuries according to some fixed rule. The Cigar Makers may, perhaps, best be taken as the type of this kind of organization. Their initiation fee is \$3, and their dues are 30 cents a week. A certain proportion of the gross receipts of each local union is applicable to local expenses. The proportion varies with the size of the local. Unions of 30 members or less may use 30 per cent of the gross receipts for such purposes; unions of from 30 to 50 members, 25 per cent, and those of 50 members and upward, 20 per cent. No money is ever sent to the national headquarters except such amounts as are needed for the current expenses of the central administration. Every month the president selects certain unions and directs them to remit sums which he names for this purpose. The rest of the funds remains in the local treasuries. When any local runs short, by reason of legitimate disbursements, the president directs some other local, which has a surplus, to remit to it a designated sum. At the end of each year the aggregate amount in all the local treasuries is determined and divided by the total number of members. Those local unions which have more than their per capita share of the cash assets are directed to remit to those which have less. In this way, at the beginning of each year, every local has in its treasury the same amount per capita as every other. If any local uses for local expenses more than its constitutional proportion, it must make up the deficit by a local assessment. Locals may levy local assessments for any purpose except an

unauthorized strike. In aid of strikes in other trades local assessments may be levied not exceeding 50 cents a week, and not for a longer period than from one meeting to another.

The German-American Typographers and the Piano Workers follow a similar system of equalization among the local treasuries. The Granite Cutters, the Iron Molders, the Core Makers, the Boot and Shoe Workers, the Leather Workers on Horse Goods, and the Tobacco Workers also have uniform initiation fees and uniform local dues, but they do not leave their common funds in the hands of the local officers. They make a division between the national treasury and the local treasuries, and the share of the national body is placed in the hands of the national officers. The Granite Cutters require all receipts, after payment of certain local expenses, to be remitted to the national headquarters. The Core Makers divide the receipts equally between the national and the local treasuries. The Boot and Shoe Workers and the Tobacco Workers require two-thirds of all receipts to be sent to the national office. The national treasury of the Leather Workers on Horse Goods receives a graduated percentage of the local payments, ranging from 50 per cent for a local of 15 members or less to 80 per cent for one of over 55 members.

Since the payments to the national treasurer are, in most organizations, in the form of a tax upon the local union, the local officers are inclined to make it as small as possible. If there is any excuse for considering a member out of good standing he is likely not to be counted as a member for purposes of tax paying. The secretary of the Boiler Makers complained in 1899 that, in his opinion, the local lodges were much inclined to interpret the tax laws in their own favor. When members let their dues run behind, he said, the local reported them not in good standing and did not pay the per capita tax upon them. A large proportion of them paid up their dues afterwards, and the per capita tax for the period of delinquency ought then to be remitted to headquarters; but in many cases it was not. The secretary treasurer of the Pressmen spoke even more strongly in his report to the convention of 1900. He announced that he had adopted the policy of refusing to give a receipt to any union which did not send a list of the names of its members with its remittance. Speaking of the more stringent collection of the tax, which he had inaugurated after his recent accession to office, he said: "From the records you will find that the month previous to my coming in a great many unions had a membership of possibly 15 or 20, and when they sent me a list they had 35 or 40."

Partly to obviate this policy of tax dodging, a considerable number of unions have adopted the use of adhesive stamps as evidence of payment of the amounts due from the members to the national treasury. The Cigar Makers, whose initiation fees and dues are uniform throughout the organization, issue a stamp for the initiation fee, a stamp for each weekly payment of 30 cents, and a stamp for each special assessment that is levied. Each member is provided with a book, and when he makes a payment to the local treasurer the appropriate stamps are attached to the leaves of the book, and dated to indicate the period covered by the payment. Since the stamps are furnished by the national office, it is evident that, if the members insist upon having this form of receipt and no other, the national office has a perfect check upon the payments received by each local treasurer. No other form of receipt is recognized by the national union; and if a member should be so careless as to fail to have a stamp placed in his book, he would lose all right to the valuable insurance benefits to which his membership in the union entitles him. To prevent fraud, the color of the stamp is changed by the president several times a year, at irregular intervals.

Other unions, which have not uniform dues, but whose national treasuries are supported in the usual way by a per capita tax, issue stamps for the payments to the national treasury only. Thus the Machinists have an initiation stamp of \$1, a monthly due stamp covering the per capita tax of 20 cents, a quarterly due stamp

covering the special tax of 25 cents for the official journal, and other stamps for special purposes.

In some unions all the receipts of the national treasury go into one general fund. In others they are divided into special funds for particular purposes. The two commonest special funds are that for strikes and that for sick and death benefits. Particular fractions of the receipts are sometimes set aside for other purposes, such as the payment of various insurance benefits, the support of the official journal, and the payment of the expenses of conventions.

The financial officers of the national organizations are, almost without exception, required to give bonds signed by some surety company. The cost of the bond is regularly paid by the organization. It is very common, also, to limit the amount of money which the secretary or the treasurer may retain in his hands, and to require that all above a certain small maximum be deposited in some bank. In a few cases, as that of the Seamen, somewhat complicated regulations are made, restricting the power of the financial officer to withdraw the funds of the union when they have been deposited.

The requiring of bonds from local officers, though common, is by no means universal. It is less necessary, since the amounts which they have charge of are usually small. In the Cigar Makers, local unions are forbidden to deposit in private banks, and local treasurers must deposit and draw funds in the presence of two trustees. Somewhat similar provisions are found not infrequently.

The funds in the hands of local treasurers do not usually exceed a very few hundred dollars, and those in the hands of a national treasurer seldom exceed a few thousands. The great accumulations of some of the British unions, amounting in some cases to a million or a million and a half of dollars, have no parallel in America. Two or three of the railroad brotherhoods have strike funds of about \$100,000 each, and other funds, chiefly belonging to their insurance departments, which bring their total assets up to \$300,000 or \$400,000 each. The Cigar Makers have over \$300,000, applicable to strikes or to any other purpose at the will of the organization, but, as has been said, the money is in the custody of the local unions, and is not gathered into the hands of one officer. With these exceptions hardly any American union has more than a very moderate amount of ready cash.

Under these circumstances the only resources of the unions when trouble comes are voluntary contributions and assessments. In a great strike, which arouses widespread interest, voluntary contributions are sometimes a more important source of revenue than might be supposed. In the great cigar makers' strike in New York City, in 1900, about \$65,000 was voluntarily given by individuals and local unions of the trade, outside of the district affected, in addition to the regular assessments; and about \$40,000 was given by individuals and labor organizations of other trades. At the time of the anthracite miners' strike of 1900 the national executive of the Brewery Workmen was reported to have levied an assessment of 5 cents a member a week for their benefit, to be continued throughout the duration of the strike.

It is, of course, impossible, however, to rely on contributions as the chief source of revenue. In the absence of a large accumulated fund the main reliance in times of trouble must be placed upon assessments. Unfortunately, assessments sometimes prove almost as unreliable a resource as contributions. Even strong organizations sometimes find it hard to extract from their members anything beyond their accustomed payments.<sup>1</sup>

The higher the regular dues and the larger the accumulated funds, the more readily additional assessments are paid. The Cigar Makers pay 30 cents a week to the union, out of their comparatively small wages, and they have an accumulated fund of some \$300,000, which is far more than any other union has available for strike purposes, yet, in the disastrous year 1900, when strikes took nearly \$140,000 from the national

<sup>1</sup> See below under Strikes, p. LXIV

funds, they did not let the funds diminish. They paid assessments enough, not only to maintain the amount in the treasury, but to increase it by over \$20,000. Meantime the local unions levied local assessments in support of strikes to an amount considerably greater than the payments for the purpose from the national treasury.

The promptness and readiness with which the Cigar Makers meet their extra assessments is partly due to their highly developed benefit system, and to the high dues and the large accumulated funds which are correlative with it. Every member of the union has an interest in that fund of \$300,000. Every member knows that if he falls sick or loses his employment, the union will take care of him, and, if he dies, the union will make a payment to his family. If he fails to meet the demands of the organization, his name will be dropped from the rolls, and he will lose all claim to insurance against misfortune. When an assessment has been levied, his own interest urges him to pay it. But the readiness with which the members vote the assessment, when the needs of the moment might be met by simply drawing down the funds on hand, is due to the perception that the strength of the organization, as a factor in determining the economic condition of its members, is largely dependent upon its financial strength.

#### INSURANCE BENEFITS.

The trade union does not stand on the same basis in the provision of insurance as any organization to which the provision of insurance is the primary object. The payments to be made by the union depend upon its current rules, and those rules may at any time be changed. The scale of contributions and benefits may at any time be altered, even to the extent of abolishing benefits altogether. After a man has for years made his contributions on a high scale, the benefits which he has helped to pay to others may thus be cut off, by vote of the members, from him and his heirs. Even if the rules are not altered, one who has contributed to the sick and death funds for a lifetime may at any moment be expelled and forfeit all claim, for reasons quite unconnected with insurance against death or against sickness. He has no appeal from the decision of his fellow-members. Moreover, if the union has accumulated a fund, presumably available for the payment of insurance liabilities, it may at any moment be dissipated in the support of a strike.

Mr. and Mrs. Webb mention four chief considerations which lead experienced trade union officials in Great Britain to advocate allowances for sick and superannuated members. (1) The promise of these benefits is a direct aid in getting new recruits and in maintaining the enthusiasm and loyalty of members. (2) When, as is usually the case, the whole contribution goes into a common fund, it gives an additional financial reserve, which can be used to support the union's trade policy in time of need, and replaced as opportunity permits. (3) The losses entailed by expulsion give an additional means of discipline, and of enforcing upon all the decisions of the majority. (4) The provision of a channel through which accumulated funds may flow back to the members, other than the channel of strikes, tends to increase the conservatism of the members in trade disputes. When there is a considerable reserve, for which there is no visible use, the men are likely to quit work for almost any reason, and use up the money.<sup>1</sup>

The last consideration plays no great part in determining the policy of American unions or the desires of their officers. With rare exceptions our unions do not accumulate enough money to constitute an important incentive to strike. The other points, however, are as important in America as in Great Britain, and they determine the attitude of many of the most progressive labor leaders. In particular, the value of an extensive benefit system in attracting new members and in holding old ones is constantly brought forward.

<sup>1</sup>Sidney and Beatrice Webb, *Industrial Democracy*, pp. 158, 159.

The general opinion of the most intelligent union leaders seems to favor an extensive system of benefits. But extended benefits require high dues, and the rank and file of most unions have not yet been convinced that they are worth the cost. National officers often urge on the members the need of accumulated funds to support strikes, and the desirability of provision for insurance benefits of various kinds; but it is only slowly and painfully that actual advance is made. The Cigar Makers and the German-American Typographers, with their strike benefits, sick benefits, death benefits, out-of-work benefits, and traveling benefits, are perhaps the only American unions which can be said to approach in the fullness of development of their benefit systems the leading British unions. Even they do not pay the benefits on account of total disability by accident or on account of old age which are common in Great Britain. In general, the evolution of our benefit systems, even so far as it has progressed, has followed lines somewhat different from the British, and indicates somewhat different aims and different estimates of the relative value of insurance against different calamities.

*Death benefit.*—The first purpose of the funds of a labor union is the maintenance of the organization, and the second is the betterment of trade conditions, especially by the support of trade disputes. After these primary demands the payment of death benefits is the purpose which appeals first to most American unions. Nearly 40 national organizations, out of a total of less than a hundred, pay death benefits from national funds. A few have separate organizations which do a mutual insurance business for the members of the union. The taking of insurance in such cases may or may not be compulsory. The Locomotive Engineers have established a corporation, known as the Locomotive Engineers' Mutual Life and Accident Insurance Association, entirely distinct from the Brotherhood of Locomotive Engineers. This corporation has its own officers and its own funds, and is in form entirely distinct from the brotherhood. Its business is, however, confined to members of the brotherhood, and all members of the brotherhood who are not ineligible by reason of age or disability must take policies in the insurance association. Policies of \$750 and \$1,500 are issued, and a member under 40 years of age may take three \$1,500 policies. Members under 45 may take two such policies, and those under 50, one. The insurance is on the assessment basis, and the cost is not far from \$16 a thousand a year. Though the other railroad brotherhoods make their insurance a part of the business of the primary organizations, the brotherhoods themselves, instead of establishing separate insurance associations, the stronger of them resemble the Locomotive Engineers in the relatively large amounts of insurance which they offer, and in giving their members a considerable range of choice between larger and smaller amounts. The Conductors issue policies of \$1,000, \$2,000, \$3,000, \$4,000, and \$5,000. Members under 30 may insure for any amount, from 50 to 60 years of age they are limited to \$1,000, and those over 60 are not permitted to join the mutual benefit department. The insurance funds, though paid into the treasury of the Order of Railway Conductors, are kept separate from the general funds. The Firemen have abolished this distinction. All their receipts go into a single fund. They issue beneficiary certificates for \$500, \$1,000, and \$1,500. The Trainmen issue certificates for \$400, \$800, and \$1,200. In the Telegraphers the amounts are \$300, \$500, and \$1,000.

The Letter Carriers have organized the United States Letter Carriers' Mutual Benefit Association, whose funds are separate from those of their national association, and whose management is in the hands of different officers. This benefit association issues certificates, payable at death, for \$1,000, \$2,000, and \$3,000. This is believed to be the only insurance association connected with any American labor organization which grades its assessments according to the ages of its members. Even the railroad brotherhoods charge the same amount for an insurance certificate of the same size, no matter what the age of the holder may be. The letter carriers' association grades its assessments, according to the age of its members upon joining, from

## **XL INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.**

38 cents for a single assessment on a \$1,000 certificate for a man who joins between 21 and 25, to 88 cents for a man who joins between 49 and 50.

In the remaining unions the benefits offered are always smaller than in those which have been mentioned, and they are regularly paid out of the treasury of the union itself. In some cases the death-benefit fund is supported by a special assessment, and in others particular portions of the per capita tax are set apart for it. In many cases, however, there is no formal separation of funds. The highest amount paid by any labor organization, except those already mentioned, is \$500. This is the benefit of the Glass Bottle Blowers; and the Cigar Makers pay the same to one who has been a member for 15 consecutive years. In their case no benefit is paid to one who has not been a member for 2 years, only \$50 after from 2 to 5 years, \$200 after from 5 to 10 years, and \$350 after from 10 to 15 years. The Lithographers pay graded benefits ranging from \$50 to \$500, but the spaces of time which they take into account are very short. If one has been in good standing for 6 consecutive months immediately before death he is entitled to the \$500, and one who has been in good standing less than 30 days to \$50. To remain in good standing, and so be entitled to the high benefit in case of death, means to make prompt payment of all dues to the organization.

The death benefits offered by the remaining unions seldom exceed \$200, and range, for the most part, from \$50 to \$100. Some gradation, according to the length of membership in good standing, is often found.

A few unions pay a small benefit on the death of a member's wife. The amount is usually \$40, \$50, or \$75, and the payment is regarded as a funeral benefit. In most cases a member is allowed to draw this benefit only once.

*Sick benefit.*—The commonest insurance benefit, after that for death, is the sick benefit. This is established as a national institution in about a dozen trades. The amount paid is usually \$4 or \$5 a week. In several unions sick benefits can be drawn for not more than 13 weeks in any year. In some unions six months' membership is required before any can be drawn. The German-American Typographers pay \$5 a week for 50 weeks, and then \$3 a week for a second 50 weeks, if the sickness continues. A few unions pay benefits for disability by accidents, but none for sickness.

Somewhat elaborate precautions are provided in the rules of several organizations to prevent fraud in the distribution of sick benefits. It is required that a committee of two or three members be appointed by the local union, and that this committee visit the sick members every week. Sometimes it is directed that the members of the committee make the visit separately. If they are denied admission to the sick room the benefit is not paid. A physician's certificate is customarily required also.

*Permanent-disability benefit.*—A considerable number of unions pay a lump sum in the event of total and permanent disability. The railroad brotherhoods make their insurance policies or beneficiary certificates payable, in such event, to the same extent as at death. In several of the other organizations there is a total-disability benefit which is larger than that paid at death. Thus, the Amalgamated Glass Workers, whose funeral benefit is \$50, pay \$150 in the case of the total disability of one who has been, for more than a year, a member in good standing. The Brotherhood of Carpenters, whose highest funeral benefit is \$200, pays \$400 for total disability after 5 years' membership.

*Superannuation benefit.*—A superannuation benefit is paid by 38 of the principal unions of Great Britain, including the two British unions which have branches in this country—the Amalgamated Society of Engineers and the Amalgamated Society of Carpenters and Joiners. The Amalgamated Society of Carpenters pays \$2.80 a week for life to a member who is 50 years of age and incapable of earning the usual wages, if he has been 25 years continuously in the society; if he has been 18 years in the society he is allowed \$2.45 a week. No strictly American union has yet begun to pay this benefit. Only the Pattern Makers and the Brotherhood of Carpenters have

## XLII INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

ity in union matters, is provided for by a large number of American national unions. In most cases such members are entitled to the same relief as participants in an authorized strike. In a few unions they draw their full regular wages.

*Traveling benefit.*—Two or three unions make loans from the national treasury to members who are out of employment and wish to travel in search of work. Such loans are limited to \$20 or \$25. One union only, the German-American Typographical, pays a traveling benefit under such circumstances without expecting repayment. The amount in this case is 2 cents a mile for the first 200 miles and 1 cent for each additional mile, not exceeding \$10 in all.

Though these payments or loans for traveling expenses are distinguished as traveling benefits, it is evident that they are a special form of out-of-work benefits.

*Local benefits.*—Out-of-work benefits are sometimes paid by local unions when their national unions pay none. In such cases the purpose of maintaining the conditions of employment by relieving members of the necessity of underbidding each other is often evident. For four or five years after the revolution in the printing trade caused by the introduction of type-setting machinery, "Big Six" (Typographical Union No. 6, of the International Typographical Union), the printers' union of New York City, supported a large fraction of its members. It not only paid out-of-work benefits, but for several years it maintained a farm, on which a home and an opportunity to work were given to members who could get no work at their trade.

Other forms of insurance, particularly against sickness and death, are often provided by local unions. It is probable that the aggregate amount of such local benefits is greater than the amount paid by the national organizations.

## III. TRADE POLICIES.

### WAGES.

The establishment of a standard rate of wages may perhaps be said to be the primary object of trade-union policy. Without the standard rate the trade union, such as it is, could have no existence. The union exists to modify the condition of its members by making the contract of employment through a collective instead of an individual bargain. But if a single bargain is to determine the pay of a considerable number of men, the pay of each man must evidently be referable to a common standard. This principle is not peculiar to the trade union. The small master may make an independent bargain on such terms as he can with every person who comes into his employ, but in every employment on a large scale whole classes of workers are necessarily grouped together, and their pay is regulated by a common rule.

It is a great mistake, however, to suppose that the standard rate of the labor organization means a uniform wage for each member by the day or by the week. The standard rate means a uniform compensation to all members for the same performance. A very large proportion of the trade unions secure this uniformity of compensation by means of piecework prices. In that case the recognition of superior skill and speed is automatic. When the circumstances of the trade and the experience of the members make time wages seem the more effective means of maintaining the standard rate, the usual method is to adopt a minimum price, below which no member of the union is allowed to work. It may seem as if the union itself might undertake a classification of its members according to their efficiency, and the establishment of a series of daily or weekly rates, to some one of which each member should be assigned. Such a system does not meet with the favor of any labor organization. The Brotherhood of Carpenters declares that the grading of wages is demoralizing to union principles and to the welfare of the trade. The Stone Cutters say that such a system tends to destroy that friendship which is essential to trade unionism. The

The general opinion of the most intelligent union leaders seems to favor an extensive system of benefits. But extended benefits require high dues, and the rank and file of most unions have not yet been convinced that they are worth the cost. National officers often urge on the members the need of accumulated funds to support strikes, and the desirability of provision for insurance benefits of various kinds; but it is only slowly and painfully that actual advance is made. Even they do not pay the benefits on account of total disability by accident or on account of old age which are common in Great Britain. In general, the evolution of our benefit systems, even so far as it has progressed, has followed lines somewhat different from the British, and indicates somewhat different aims and different estimates of the relative value of insurance against different calamities.

*Death benefit.*—The first purpose of the funds of a labor union is the maintenance of the organization, and the second is the betterment of trade conditions, especially by the support of trade disputes. After these primary demands the payment of death benefits is the purpose which appeals first to most American unions. Nearly 40 national organizations, out of a total of less than a hundred, pay death benefits from national funds. A few have separate organizations which do a mutual insurance business for the members of the union. The taking of insurance in such cases may or may not be compulsory. The Locomotive Engineers have established a corporation, known as the Locomotive Engineers' Mutual Life and Accident Insurance Association, entirely distinct from the Brotherhood of Locomotive Engineers. This corporation has its own officers and its own funds, and is in form entirely distinct from the brotherhood. Its business is, however, confined to members of the brotherhood, and all members of the brotherhood who are not ineligible by reason of age or disability must take policies in the insurance association. Policies of \$750 and \$1,500 are issued, and a member under 40 years of age may take three \$1,500 policies. Members under 45 may take two such policies, and those under 50, one. The insurance is on the assessment basis, and the cost is not far from \$16 a thousand a year. Though the other railroad brotherhoods make their insurance a part of the business of the primary organizations, the brotherhoods themselves, instead of establishing separate insurance associations, the stronger of them resemble the Locomotive Engineers in the relatively large amounts of insurance which they offer, and in giving their members a considerable range of choice between larger and smaller amounts. The Conductors issue policies of \$1,000, \$2,000, \$3,000, \$4,000, and \$5,000. Members under 30 may insure for any amount, from 50 to 60 years of age they are limited to \$1,000, and those over 60 are not permitted to join the mutual benefit department. The insurance funds, though paid into the treasury of the Order of Railway Conductors, are kept separate from the general funds. The Firemen have abolished this distinction. All their receipts go into a single fund. They issue beneficiary certificates for \$500, \$1,000, and \$1,500. The Trainmen issue certificates for \$400, \$800, and \$1,200. In the Telegraphers the amounts are \$300, \$500, and \$1,000.

The Letter Carriers have organized the United States Letter Carriers' Mutual Benefit Association, whose funds are separate from those of their national association, and whose management is in the hands of different officers. This benefit association issues certificates, payable at death, for \$1,000, \$2,000, and \$3,000. This is believed to be the only insurance association connected with any American labor organization which grades its assessments according to the ages of its members. Even the railroad brotherhoods charge the same amount for an insurance certificate of the same size, no matter what the age of the holder may be. The letter carriers' association grades its assessments, according to the age of its members upon joining, from

#### **XLIV INDUSTRIAL COMMISSION;—LABOR ORGANIZATIONS.**

the union results in the dropping from employment of the less efficient members, except in times of the highest trade activity.

To many persons of the middle and upper classes it seems obvious that this last fact in itself proves the shortsightedness and folly of the policy of the minimum wage. Here, they think, is a condition which condemns large numbers of men to most precarious employment, or drives them altogether out of the trades to which whatever skill they have pertains. It places a premium on deception and a penalty on honor; for the less skillful workman is tempted to get employment, at the expense of his obligation to his union, by working at cut rates. If he yields, he condemns his more honorable fellow to walk the streets. Moreover, so far as the unions compel the payment of more than would otherwise be paid for the same work, the aggregate amount of unemployment is thought to be increased; for less work of a given kind will be called for at \$4 a day than at \$2.

The trade unionist admits the temptation to price cutting, and does what he can to make it difficult. Nothing can convince him, however, that his class is injured by putting an artificial or monopoly price on what it has to sell. He can hardly deny the personal troubles which the minimum wage may sometimes bring upon individuals. Even those individuals, however, he believes to be fully compensated for any increased idleness, in most cases, by the higher pay they get when they have work. The proposition that high wages diminish the aggregate amount of employment, even if he should admit it, would not trouble him. It is not production, but distribution, that is to his mind the important problem. The question is not how many hours' work shall be done in a year, but how much out of the product of the work shall come into the ownership of the workers. That the share of the workers is increased by raising the rates of pay he does not question for a moment.

But the proposition that high wages increase unemployment, upon the whole, is itself one which the trade unionist would deny. He might admit some such effect, for the time being, in a particular trade. But when the matter is considered broadly, he asserts, the primary effect of raising wages is to put more consuming power into the hands of the wage workers, and less into the hands of the other classes. The wage workers use their consuming power almost exclusively in getting articles for immediate consumption. The other classes "save" a considerable proportion of their consuming power. They "invest" it. That is, they get goods with it which are not meant to be immediately consumed, but are meant to assist further production. This may give an equally large demand for labor at the moment; but by increasing the capacity of society to produce without increasing the capacity or the tendency to consume, it is believed to intensify those periods of apparent overproduction, which we know as industrial depressions or crises. In the long run, therefore, the trade unionist believes that the increase of the economic power of the working class will diminish unemployment, rather than increase it.

Among the English unions the problem of unemployment is quite generally dealt with by a sort of sharing of the wages of those who are at work. A subsistence, at least, is guaranteed to every member out of the union treasury. In America, however, this policy is as yet exceptional.<sup>1</sup>

There is necessarily a residuum of members, especially members of advanced years, to whom no master at any time is willing to pay the standard rate. If the almost overwhelming temptation to gain a livelihood by scabbing is to be removed from them, the union must permit them to depart from the rules which, under ordinary circumstances, it enforces. It can not, with safety, allow them to make individual bargains at their own will. The expedient which it adopts is the separate consider-

---

<sup>1</sup> See above, Out-of-work benefit, p. XLII.

ation of each individual case, either by the local union as a whole or by a suitable committee of it, and the establishment for each such exceptional individual of an exceptional rate of wages. Thus among the Stone Cutters a member over 50 years of age, and physically unable to earn the standard rate of wages may be granted an "exempt card" on the recommendation of an investigating committee. The committee regulates the wages of the exempt members.

#### HOURS OF LABOR AND HOLIDAYS.

It was not until the close of the eighteenth century, apparently, that the English unions began to interest themselves in making the working day shorter or more regular. The workmen of the small shops were able to stop work at their pleasure, within certain limits, and a large part of the workers were in their own homes and had their time entirely at their own disposal. The few attempts which were made in the eighteenth century to establish a common rule for the day's work of a trade were confined to those craftsmen who were paid by the day or the week and who worked on the premises of their employers.

The rise of machine industry bound the human instrument to the instrument of non. While the machinery ran the worker had to keep to his task. It was in the cotton industry, in which machine production first developed, that the first struggles were made for definitely fixing and for shortening the hours of labor. The agitation for legislative action on these points was directed nominally to the interests of the women and children, and it was to the women and children only that the successive acts of Parliament applied; but the real strength of the agitation was in the desire of the male workers to shorten their own workday. The cotton operatives and the coal miners are still the most strenuous advocates among the British work people of definitely limited and uniform hours of labor. They feel the greatest need of this defense, because their industries are not protected by any system of apprenticeship, and because the beginning and the ending of their work do not depend on their will, but, in the cotton mill, on the starting and stopping of the engine, and in the mine on the running of the cage. Those unions which still rely upon strict regulation of apprenticeship are much less strenuous in their insistence upon regulation of the hours of labor. In such trades, where piecework prevails and where the old workers have been able to maintain a rigid restriction of the number of competitors, they are sometimes content to let each individual fix his hours of work for himself. In the building and the machinist trades, with the decay of apprenticeship, and the impracticability of maintaining the practice of exclusion, the insistence on the definitely limited normal day grows stronger and stronger.<sup>1</sup>

The course of development of the movement for shorter hours has been somewhat different in the United States. It has been, upon the whole, less affected by legislation than in Great Britain. The laws of Massachusetts have effectively reduced the hours in many occupations to 58 a week, and the legislative movement there was largely due to the action of the cotton operatives. In most States, however, legislation has had little effect upon hours. The rising cotton industry of the South is still employing its laborers for 11 and 12 hours a day. The coal miners have now reduced their hours to 8 by union action throughout a large area, but the movement has taken place only within the last 3 or 4 years. The Machinists succeeded in 1900 in reducing the hours of a large part of their members from 10 a day to 9½, and they have been engaged in recent months in a struggle for a further reduction to 9 hours without reduction of pay. In this they have been only partly successful.

The 8-hour day has perhaps been obtained by as large a proportion of workmen in the building trades as in any great industrial group. Among the Bricklayers 52 local

<sup>1</sup> Sidney and Beatrice Webb, *Industrial Democracy*, vol. I, pp. 325, 335-341.

## XLVI INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

unions had the 8-hour day in 1896, 121 at the end of 1899, and 172 out of a total of 441 on December 1, 1900. Few organized bricklayers work more than 9 hours. The same is true of the Brotherhood of Carpenters, though the exceptions are somewhat more numerous. Ten hours a day was universal among the carpenters 20 years ago, when the Brotherhood of Carpenters was organized. In 1898 there were only 23 places where the members of the brotherhood were working 10 hours; in 424 places they worked 9 hours, and in 105, 8 hours. In 1900 the number of 8-hour places had increased to 186. About 40 per cent of the local unions of Plumbers are said to have the 8-hour day, and fully half the local unions of Steam Fitters. Of the Plasterers, 65 unions out of 97 reported that they had the 8-hour day on October 31, 1900, 26 worked 9 hours; 5, 10 hours, and 1, 7 hours. The high proportion of 8-hour unions among the Plasterers is perhaps due to the fact that their local organizations are, to a great extent, in the larger places. In small towns the plasterers are likely to have no separate organization, but, so far as they are organized, to belong to the Bricklayers. In the same way the steam fitters in the smaller places are likely to go with the Plumbers. About half the Tile Setters work 8 hours, and the Painters report that they have the 8-hour day in most cities.

The Cigar Makers have had a universal 8-hour day since 1886. Their early success must apparently be attributed to high organization and strong leadership. Their trade is not very highly paid and is subject to sweat-shop competition. It is not easy to see any reason in the circumstances of the occupation itself which could either inspire them to demand a concession which scarcely any American workers had at that time obtained, or enable them to get it.

The German-American Typographia forbids its members to work more than 8 hours a day or 48 hours a week. The International Typographical Union, however, still finds it necessary to permit a large part of its members to work 9 hours, and in some places they work 10. Many of its locals, however, work 8 hours, or even less. The shortening of hours has been greatest among the machine operators. Among those in newspaper offices a day of 8 hours or less is almost universal. Perhaps the shortest standard week which any union has fixed is that of the Hebrew compositors of New York City, in their scale for evening newspaper work. The working week is 24 hours, or 4 hours a day. The wages are \$12 a week.

A working day longer than 10 hours exists only exceptionally, among organized workers. The Bakers and the Barbers and the Street Railway Employees are examples of unions which are rising into power, but whose hours of labor are, up to the present time, excessively long. All of them, however, are taking action to reduce their hours in one place after another as they gather strength. The majority of the Hebrew bakers of New York City, of whom there are said to be a thousand, got a 10-hour day and a 6-day week by a strike early in 1901. Partial returns of the Street Railway Employees at the close of 1900 showed 10 divisions working 9 hours a day; 9 divisions working 10 hours; 6 divisions working from 8 to 10½ hours, and 24 divisions working for longer periods; the longest reported, by a single local, being from 14 to 16 hours.

The Marine Engineers are perhaps the only labor organization which does not seem to set before itself as a goal a day shorter than 10 hours. Their actual work appears to run from 12 hours upward, and their secretary reports that 12 hours is the limit which the association aims at. This is the more remarkable since their average pay is perhaps higher than that of any other association which regards itself as a labor organization, excepting one or two of the railroad brotherhoods, and the Amalgamated Association of Iron, Steel, and Tin Workers. It is noteworthy that these other high-wage unions have also given much less attention to the question of shorter hours than many unions of lower earnings.

The general drift of opinion among American trade unionists is strongly in the direction of emphasizing the importance of a shorter work day. The most progres-

sive leaders, such as Mr. Gompers, of the Federation of Labor, are constantly urging their associates to put the shorter work day in the forefront of their demands. Organize and control your trade and shorten your hours, is their position, and wages will take care of themselves. The idea that a man will produce as much in 8 hours as in 10 may occasionally be advanced by labor leaders, but it is not their general position; and even if one does advance it he is likely to bring forward in the next paragraph ideas that are entirely inconsistent with it. The argument which really carries weight with them is based on the opposite idea. It is that the reduction of hours will diminish the supply of labor power in the market, and so will raise its price. It will make room for the unemployed, and so will remove the depressing influence of their competition.

"Whether you work by the piece or work by the day,  
Decreasing the hours increases the pay,"

is a constantly reiterated expression of the current creed of the union leaders.

A second great line of argument is based upon the direct benefit of shorter hours to the individual workman, in giving him his rightful share of family and social life, affording him an opportunity for intellectual improvement, and tending to develop in him new rational wants. It is added, however, that this effect upon the individual will have a favorable reaction upon society, in causing the workman to insist upon more wages that he may gratify his newly aroused wants. This, it is held, will increase the consuming power of society, and so will in a measure counteract the tendency to overproduction and to recurring industrial depression.

Overtime work and work on Sundays and holidays are special cases of extension of the hours of labor. The position of the labor leaders logically requires that all work outside of regular hours be abolished. This is in fact the desire of all the more progressive union men, and the desire which is almost universally expressed in the collective action of the organizations. When overtime becomes systematic, it is said, it does not give any actual increase of wages; the nominal regular wages are certain to be cut down so that the workman's earnings will be no greater than they would be if the normal day were not exceeded. Even temporary overtime is regarded as injurious to the interests of the workers as a whole. There is a tendency to increase the hours of labor when times are bad, and so to spread the interest on the cost of the plant over more hours of work. The result is that when social conditions cause less work than usual, of a certain kind, to be demanded, some men do more than usual of it. When there would be at the best an increase of unemployment, unemployment is made greater yet by the overwork of those who are employed.<sup>1</sup>

Only a few unions have, however, felt themselves strong enough to forbid overtime absolutely. The German-American Typographers does not permit it, but this union is peculiarly situated in that its work, the production of German printed matter, tends to diminish in the United States, and the union has, therefore, a special interest in dividing the waning employment among all its members. It has even gone so far in some places as to introduce the five-day week. The Mule Spinners have in some places refused to permit their members to work overtime or to work at night. The Metal Polishers forbid their members to work overtime until all vacant places have been filled, and do not permit it then unless it is absolutely necessary. The Watch-case Engravers threaten a fine of \$50 or more on any member who works overtime without the sanction of the shop committee, except in case of absolute necessity. The Pattern Makers also forbid it except in case of absolute necessity, and the Wood Carvers direct their local unions to prohibit it. The constitutions and resolutions of various other organizations, as, for instance, the Machinists, urge the locals to discourage overtime as much as possible. The stronger organiza-

<sup>1</sup> Compare the testimony of Mr. Gompers, *Reports of the Industrial Commission*, Vol. VII, Testimony, pp. 613, 614.

## XLVIII INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

tions usually secure a higher rate of pay for work outside of regular hours. The building trades in particular get time and a half, and sometimes double time. The Lithographers and the Core Makers have national rules requiring time and a half, and similar rules are enforced by the local unions in many trades. A curious indication of the feeling against overtime is furnished by the Wood Workers. They insure their members against loss of tools by fire or accident, but they pay no loss which is incurred while the member is working on Sunday or after regular working hours.

Several unions recite in detail the days which are to be observed as holidays, and either forbid work upon them or require that holiday work be paid for as time and a half, or even as double time. The extra pay for holidays is often even higher than that for overtime. Thus many local regulations in the building trades require time and a half for extra hours on regular working days, but double pay for holidays.

Labor Day is held especially sacred by all American trade unionists. It is not unusual to levy a fine of \$2, \$3, or even \$5 upon any member who works. Sometimes a member is fined even for not joining in the Labor-Day parade. Of course these special regulations have a motive beyond the economic motive which prompts the observance of other holidays and the disapproval of overtime. Labor Day is sacred to the working class, and to fail to do it honor is a sort of profanation.

The Flint-glass Workers, the Glass-bottle Blowers, and the Amalgamated Association of Iron, Steel, and Tin Workers always take a summer stop, usually of from a month to two months. One reason for it is the excessive heat in which their work is carried on, and another is the need of overhauling and repairing the working plants. The glass-working unions, however, apparently insist upon the summer stop for the same economic reasons which lead to the shortening of working time in other ways; and the same is probably true of the Amalgamated Association.

### COMPREHENSIVENESS.

Every labor organization, as soon as it acquires the power, sets a definite choice before the nonunion men of its trade—they may join the union or they may leave the occupation. The feeling of the unionist toward the nonunionist does not often appear in formal rules, but now and then a rule appears which illustrates it. Thus the Amalgamated Association of Iron, Steel, and Tin Workers forbids its members to lend tools or render any assistance to a workman who persistently refuses to become a member. The Chain Makers have the following rule: "No member in any shop shall render assistance to, speak to or associate with, or lend his tools to any chain maker who deliberately refuses to become a member of the organization, or refuses to pay the arrearages or fines or assessments to the same, or uses his influence to disorganize his fellow-workmen."

The universal policy of trade unions in this respect, and the appearance which that policy wears to the average man outside the wage-earning class, can hardly be better stated than it is stated in the following paragraphs by Mr. and Mrs. Webb. The particular unions which they refer to are, of course, British organizations; but the general spirit, both in the unions and outside of them, is the same here as in Great Britain.

In the best organized industries indeed, whether great or small, such as the boiler makers, flint glass makers, tape sizers, or stuff pressers—the very aristocracy of "old unionists"—the compulsion is so complete that it ceases to be apparent. No man not belonging to the union ever thinks of applying for a situation or would have any chance of obtaining one. It is, in fact, as impossible for a nonunionist plater or riveter to get work in a Tyneside shipyard as it is for him to take a house in Newcastle without paying the rates. This silent and unseen, but absolutely complete compulsion, is the ideal of every trade union. It is true that here and there an official of an incompletely organized trade may protest to the public, or before a royal commission, that his members have no desire that any workman should join the union except by his own free will. But, however bona fide may be these expressions by individuals, we invariably see such a union, as soon as it secures the adhe-

sion of a majority of its trade, adopting the principle of compulsory membership, and applying it with ever greater stringency as the strength of the organization increases.

Whatever we may think of these various forms of compulsion, it is important to note that they are in no way inconsistent with the old ideal of "freedom of contract"—the legal right of every individual to make such a bargain for the purchase or sale of labor as he may think most conducive to his own interest, and that they are, in fact, a necessary incident of that legal freedom.

When an employer, or every employer in a district, makes the sliding scale a condition of the engagement of any workman the dissentient minority are "free" to refuse such terms. They may, in the alternative, break up their homes and leave the district, or learn another trade. The wage-earners can not be denied a similar freedom. When a workman chooses to make it a condition of his acceptance of employment from a given firm, that he shall not be required to associate with colleagues whom he dislikes, he is but exercising his freedom to make such stipulations in the bargaining as he thinks conducive to his own interest. The employer is "free" to refuse to engage him on these terms, and if the vast majority of the workmen are of the same mind, he is "free" to transfer his brains and his capital to another trade, or to leave the district. But to anyone not obsessed by this conception of "freedom" it will be obvious that a mere legal right to refuse particular conditions of employment is no safeguard against compulsion. Where practically all the competent workmen in an industry are strongly combined, an isolated employer, not supported by his fellow-capitalists, finds it absolutely impossible to break away from the "custom of the trade" \* \* \* *Wherever the economic conditions of the parties concerned are unequal, legal freedom of contract merely enables the superior in strategic strength to dictate the terms.* \* \* \*

If, indeed, we examine more closely the common arguments against this virtual compulsion, we shall see that the customary objection is not directed against the compulsion itself, but only against the persons by whom it is exercised, or the particular form that it takes. The ordinary middle-class man, without economic training, is wholly unconscious of there being any coercion in an employer automatically deciding how he will conduct "his own business." But the very notion of the workman claiming to decide for themselves under what conditions they will spend their own working day strikes him as subversive of the social order.<sup>1</sup>

It is hardly to be expected that the average man, outside the wage-earning class, will consider this universal policy of trade unions sufficiently justified by the argument that the workmen have as much right to manage their "own business" as the employer has to manage his. He is likely even to have some difficulty in seeing that to work or not to work with such companions as the workmen may happen for any reason to fancy is their "own business." As is shown elsewhere,<sup>2</sup> courts have often held that such a policy toward nonunion men is unlawful conspiracy; although several late American decisions, as well as the recent authoritative utterance of the British House of Lords, decide that men may quit work, or threaten to do so, for any cause they see fit, including the objection to working with a non-union man.

If, however, the right to choose one's working mates is granted, and if it is in some sort a justification of the union policy, it is in no wise an explanation. Men do not quarrel with their companions nor risk their livelihood in strikes merely because they have a right to do it. The universal adoption of a policy, wherever the organization of labor has progressed so far as to make it possible, must be based on a need which the organized workers universally feel.

If union and nonunion men work side by side, the nonunion men either do or do not receive the full union rate of wages. In either case the union feels that it has a grievance against them. If nonunion rollers are permitted to work in a steel mill for which a scale has been signed by the Amalgamated Association, their rate of pay is fixed by the action of the organization. They receive, the unionists hold, many more dollars every month than they would receive if the members of the union did not spend time and trouble and money in maintaining the organization and formulating and enforcing its demands. They make a gain, therefore, strictly at the expense of their organized companions. Simply as a matter of share and share alike, the union men feel that the nonunion men ought to join the organization, and that if they have not enough sense of fairness to do it of themselves they ought to be compelled to do it.

<sup>1</sup> Sidney and Beatrice Webb, *Industrial Democracy*, pp. 213-217.

<sup>2</sup> See p. cxvi.

On the other hand, argues the unionist, if nonunion bricklayers are permitted to be introduced at the will of the employer, side by side with the members of the union, there can be no possible guaranty that they do receive the union rate. The union has no jurisdiction over them and no means of knowing what they get. There is a constant probability, therefore, that the employer will introduce as many non-union men as possible, will hire them below the union rate, and will, as opportunity offers, discharge the members of the organization. Those who are in the union will be tempted to get out of it and work for lower wages in order to retain their employment. The presence of the nonunion men is a menace to the existence of the organization and to the wages and other working conditions of the craft. The same menace exists even in those exceptional occupations, like the steel industry, in which, because of their very magnitude, uniformity of conditions can more easily be obtained. Even there, as the Amalgamated Association of Iron, Steel, and Tin Workers has recently complained, there is a tendency to give work to nonunion mills at the expense of union mills when the same company owns both; and if non-union men are permitted to enter union mills at all, the union can have no guaranty that the number of them will not be gradually increased until they can be made a means of destroying the union altogether.

The union is conceived as a means of bettering the condition of its members by united action. If this action is to be thoroughly effective, it must be taken by or on behalf of all the members of the craft. It is by the establishment of an absolute monopoly of labor power of a particular kind that the union hopes to raise the market price of that sort of labor power and to ameliorate the conditions under which it is sold and used. The trade-unionist conceives the members of his craft as a corporate body whose interests it is the duty of every member to further. More than that, he conceives the whole wage-earning class as a larger unity, to the welfare of which every member of it is in duty bound to contribute. The workman who refuses to contribute to the support of the union of his craft, who stands aloof and gives aid and comfort to the enemy, is regarded as a traitor to his own trade and to the working class as a whole. His mind is to be enlightened, if it can be, by argument and persuasion; but if he refuses to be persuaded, any legal means of bringing him to conform his action to right rules are legitimate and praiseworthy.

#### EXCLUSIVENESS.

Two sorts of monopoly, which a trade union may seek for, ought to be carefully distinguished. The first is that which has just been discussed. It consists in so complete an inclusion of all workers at a trade that the union is able to take, before the employers, the position of the sole seller of that kind of labor power which its members offer. The other consists in the exclusion of candidates for membership in the union, or the placing of difficulties in the way of joining it, coupled with control of employment at the trade. In the first case a monopoly exists only so far as the relation of the union to the employers is concerned. In the second case, a monopoly is maintained by the actual members against their fellow-workmen.

Complaints are sometimes made that certain unions are close corporations, and that men who desire admission to them are without good cause rejected. In other cases the money cost of joining is made high. When a local union of longshoremen is able to control the loading and unloading of vessels at a given port, the fixing of an initiation fee of \$25 has an evident tendency to lessen the competition in their employment. Some locals of the Garment Workers have made their initiation fees excessively high in the hope of getting more work in union shops for existing members. The national officers repeatedly censured them for it, and the national union finally restricted the initiation fee to a maximum of \$5.

The same spirit which leads to the exclusion of men from the union, and thereby from employment, appears in the restriction of the number of apprentices. The

restriction of apprenticeship is not so evidently futile and shortsighted, however, and it is not so directly contrary to the spirit of craft brotherhood which labor organizations universally proclaim, and which, no doubt, to a considerable extent, they feel. Something of the same spirit, applied to foreigners, appears both in the advocacy of measures to restrict immigration by law, and in the placing of especially high initiation fees on foreigners.

The monopoly against fellow-workmen is in some degree inconsistent with the monopoly against employers. That against employers is founded on universal inclusion; that against fellow-workmen on exclusion. The attempt to establish a monopoly of the second sort will make it impossible permanently to maintain one of the first. If men are not permitted to join the union they will still be able in most occupations to make themselves felt as competitors, and their competition will be severer and more injurious than it would be if they were admitted to the union. It is possible that in a few closely controlled trades, like those of the glass industry, the selfish interests of the existing members of the union will be promoted by this exclusive policy. In the great majority of occupations it is believed that such a policy is shortsighted, even if nothing is considered but the interest of the union itself and its existing members. The union which adopts it, while working with one hand for the complete organization of its industry, cultivates a new crop of non-unionists with the other.

It is undoubtedly true that many of the officers and leaders of the unions conceive the mission of the organizations with no little idealism, and would be sorry to see lines drawn by which the unions should be made agencies for the creation of a privileged class among the workers. The broadest-minded union leaders unquestionably desire that all wage earners be brought into the ranks of organized labor. Such a desire is not necessarily inconsistent with an exclusive policy for their particular trade unions, since it might mean only a desire to organize the great residuum of the unskilled by themselves; yet the opinions of the most advanced leaders seem to be opposed to the harsher restrictions upon apprenticeship, and to the more severe of the other means by which some skilled workers have undertaken to prevent the accession of new members to their trades. It is probable that the great body of the rank and file and many of the leaders would take any action which should seem likely to further their own interests. When a union has established its monopoly against employers it is exceedingly likely to go on, if it feels strong enough, to a monopoly against outside workers. But whether this tendency is chiefly restrained by ethical considerations, by lack of strength, or by farsighted considerations of policy, the actual restraint upon it, up to the present time, has been tolerably effective. No such policy is attempted on any broad scale, except in those modified forms in which it is applied to foreigners and to the discouragement of learners.

#### APPRENTICESHIP

Considering how thoroughly the modern conditions of production have destroyed the old apprentice system in most trades, it is surprising to see how many unions not only look back to it with longing, but retain expressions of desire for it in their written constitutions. A considerable number of national organizations urge their members to strive for some action of the State which shall promote the formal indenturing of apprentices. It is believed that such indenturing hardly anywhere appears.<sup>1</sup> Some of the stronger unions are able, however, to maintain something like it by their own power. They provide that an apprentice shall agree to stay with an employer for a fixed term, and that if he leaves before the term is up he shall not be permitted to work at the trade under the jurisdiction of the union. It is

<sup>1</sup>See, however, the assertion of a witness that apprentices in stove foundries are usually articulated. Reports of the Industrial Commission, vol. vii, Testimony, p. 866.

sometimes provided also that an employer who discharges an apprentice without good reason shall not be permitted to replace him.

Apprentices are often admitted to the union, either from the beginning of their apprenticeship, or, more frequently, as they approach the end. Their dues and benefits are usually less than those of journeymen. Sometimes in the last year of apprenticeship they are admitted to the union meetings, without payment of dues, without benefits, and without vote, simply that they may be prepared to take their places in the union when their apprenticeship is over.

The commonest terms of apprenticeship as defined by the organizations are three and four years. In a few cases a shorter term is mentioned, and the Pattern Makers and the Watch-case Engravers require five years. In many cases there is a rule requiring apprenticeship to begin before the age of 16; in some unions before 15 or 14. An upper limit for beginning is sometimes named also, usually 18 years or 21, but sometimes as low as 16. The Plate Printers require that apprenticeship begin between the ages of 17 and 18.

There is a strong tendency, where the strength of the union and the nature of the trade make it possible, to fix a definite limit to the ratio of the number of apprentices to the number of journeymen. Of limits fixed by the rules of national organizations, the commonest is perhaps 1 to 10. Occasionally a ratio as low as 1 to 15 is named. On the other hand, the Pressmen, the Trunk and Bag Workers, and the Flint Glass Workers (as to mold shops) allow 1 to 4. A tendency often appears to favor small shops rather than large. This is sometimes done, as by the Machinists and the Iron Molders, by allowing one apprentice to each shop, irrespective of the number of journeymen employed, and in addition one apprentice to 5 journeymen among the Machinists, and to 8 among the Iron Molders. The Lithographers allow one apprentice for the first 5 journeymen or less in any branch of the business, one additional apprentice for the next 10, another for the next 15, and another for the next 25. The Stone Cutters forbid employing more than one in a yard which employs less than 15 journeymen, more than two where there are less than 100 journeymen, or more than four in any case whatever.

All these regulations represent standards set by the national organizations; actual conditions may conform to them closely, or loosely, or not at all. It may be impossible, generally or locally, to enforce the written law. On the other hand, local unions may make harder rules than those of the national union, and may enforce them. On the whole, it seems probable that the actual restrictions are somewhat milder than the rules which national organizations have made might indicate. The weaker and less closely organized national bodies are not likely to undertake to control the matter. Such national rules as appear, therefore, are likely to be of the stricter sort. It may be that the ratio of 1 to 5 is the commonest among those actually enforced by local unions. It sometimes happens that the number of apprentices which a union is willing to allow proves to be greater than the masters care to take on.<sup>1</sup>

If an apprenticeship of 3 years is enforced, and one apprentice is employed for every 5 journeymen, the training of new journeymen goes on, at any given moment, at a rate which would double the existing number in 15 years. Since the working life of a journeyman is considerably greater, such a ratio, with a 3-years' apprenticeship, would provide for a considerable increase of the number of journeymen from year to year. Moreover, since the number of apprentices would be based on a constantly increasing number of journeymen, the increase would proceed at a geometrically accelerated rate, as money increases at compound interest. It is probable that such rules would permit an actual doubling of the number of journeymen in less than 15 years, even with due allowance for those who die and those who leave the trade. A ratio of one apprentice to 10 journeymen, on the other hand, with an apprenticeship

<sup>1</sup> Reports of the Industrial Commission, vol. vii, Testimony, pp. 853, 854.

of 3 years, would allow new journeymen to be trained only at a rate which, if continued without change, would produce a number equal to the existing number in 30 years. It is doubtful whether such rules, strictly enforced throughout a trade, would even provide new blood enough to replace the natural losses from the ranks.

It is obvious that the chief motive which influences the unions in the shaping of their apprenticeship rules is the desire to maintain their wages, by diminishing competition within the trades. The only motive which is not included within this formula is the desire, for reasons which may be classed as artistic, to prevent a lowering of the standard of skill. This feeling can not be supposed to exert more than a minor influence upon actual policy. Yet the desire to modify, in some degree, the working of competition, as manifested in the number of apprentices and in the training of them, is not so absolutely unreasonable nor so evidently injurious to society as persons outside the working class sometimes assume.

First, it is maintained that, in the absence of restrictions, there is a tendency to get a large part of the work done by boys, who work for trifling sums, to the displacement of the mature men, who should be the breadwinners of their families.<sup>1</sup> Employers of the less scrupulous sort, who are willing to follow this policy, are able to underbid the more careful and conscientious. So far as this results in imperfect and shoddy work, it is injurious to the consuming public, as well as to the trade.

Second, it is argued, the effect of such a policy is bad, even upon the boys themselves. The opponents of restriction lament the fate of the boys who are shut out of the skilled trades. But, says the unionist, it is not the aim of the employers to teach trades. Their aim is to get their work done, this week and this year, for the least possible money. This purpose is not consistent with the giving of thorough instruction in a craft, but is promoted, first, by the restriction of each boy to some narrow specialty, and, second, by discharging each boy as soon as he demands a man's wages, and putting in a new one. The policy of the unions, they declare, is meant to make it sure that when a boy undertakes to learn a trade, he shall have a chance to learn it. They require that he remain in his apprenticeship long enough to learn it, and they require that instead of being kept, as the interests of the master would dictate, on a narrow range of duties, he be employed in turn at each of the branches which together make up the trade.

Besides these arguments of a general kind, which might be plausibly brought forward anywhere and at any time, the special circumstances of this country give the unions a special incentive to restriction. The trades are steadily recruited by immigration. This can not be lessened by any union rules; and the unions are therefore the more tempted to lessen, if they can, the number of native recruits.

It must be admitted that the restriction of apprentices, just as far as it is successful, makes America more attractive to skilled European mechanics, and in the long run tends to increase the immigration of them. That result, however, is comparatively far off. Of the immigrants who are coming to us at the present time, only a small part are skilled workmen, or come into direct competition with the members of the stronger labor organizations. But the restriction of apprenticeship does not succeed in diking the trades—except in a few narrow and closely controlled industries, like the glass manufacture—even against the inflow of American youth. If the unions do not allow enough apprentices to supply the normal demand for journeymen, trades are picked up in country places and in nonunion shops. The men who learn there are possibly, on the average, less skilled than those who have learned in union establishments, but their competition is hardly the less to be feared on that account. They have certainly not been trained in the spirit of organization, and for that reason they are the more to be dreaded.

PIECEWORK.

There is a widely prevalent belief that the policy of trade unions in general is antagonistic to piecework wages. This belief does not appear to be supported by a study of the actual practice of union men, either in Great Britain, where trade unionism had its first and has had its strongest development, or in the United States, which, in respect to the strength of labor organizations, now begins to rival Great Britain.

The following table is not complete, but it indicates the customs of most of the important American trade unions. It contains all the national unions, in occupations suitable for the application of piecework scales, concerning whose attitude on this question definite information is at hand:

*Unions whose members work by the piece, at least in some departments, without active opposition on the part of the organizations.*

Boot and Shoe Workers.	Northern Mineral Mine Workers.
Hatters.	Piano and Organ Workers.
Garment Workers	Coopers.
Tailors.	Amalgamated Association of Iron, Steel, and Tin Workers.
Custom Clothing Makers.	Stove Mounters.
Ladies' Garment Workers.	Sheet Metal Workers.
Lace Curtain Operatives.	Tin Plate Workers.
Mule Spinners.	Wire Weavers.
Elastic Goring Weavers.	Longshoremen.
Typographical Union.	Cigar Makers.
Steel and Copper Plate Printers	Leather Workers on Horse Goods.
Glass Bottle Blowers	Stogie Makers.
Flint Glass Workers.	Upholsterers.
Potters.	
United Mine Workers.	

*Unions which either forbid piecework or actively discourage it.*

Bookbinders.	Carriage Workers.
Bricklayers.	Machinists.
Carpenters, Brotherhood.	Amalgamated Society of Engineers.
Painters (paper hanging excepted).	Iron Molders.
Plasterers.	Pattern Makers.
Plumbers.	Blacksmiths.
Stonecutters.	Bakers.
Tile Layers.	Brickmakers.
Amalgamated Glass Workers.	Watch Case Engravers.
Wood Workers.	Jewelry Workers.
Wood Carvers.	Oil and Gas Well Workers.

Mr. and Mrs. Webb give tables of those trade unions in Great Britain which insist on piecework, those which willingly recognize both piecework and time work in different departments, and those which insist on time work.<sup>1</sup> Counted by the number of members, those which insist on piecework are a majority of the whole, and those which either insist on piecework or are willing to make use of it in some departments are more than two-thirds. These tables are not altogether comparable with the tables of American unions, given above; but so far as they embrace the same classes of workers they indicate a remarkable uniformity of policy in the several trades in

<sup>1</sup>Industrial Democracy, pp. 286, 287.

the two countries. The same trades, for the most part, which have been led, according to Mr. and Mrs. Webb, to a preference for piecework in Great Britain, have been led independently to follow the system in the United States, and those trades which in Great Britain regard the piecework system as an engine of oppression have on this side of the water reached the same conclusion.

In both countries the building trades generally, the machinists, the foundry workers, the carriage workers (if the British coach makers may be regarded as in some degree corresponding to them), and the bakers reject piecework. In both the textile operatives in general, the makers of clothing, shoes, and hats, the workers in steel mills, the glass and pottery workers, the miners, the typesetters, and the cigarmakers employ it. So remarkable a parallelism seems to indicate fundamental differences in the operation of the piecework system, according to the circumstances of the several trades.

Several sets of conditions may be specified which determine the desirability of piecework rates in particular classes of occupations. In cotton spinning, for instance, the work done depends upon the number of spindles which the spinner attends to, and on the speed of the machinery. Day wages would subject the spinner to increased exertion with the gradual increase of the size of the mules, and, in an even more insidious way, with the gradual and perhaps unnoticed increase of speed. The piecework system gives the operatives a proportionate increase of pay for every increase of performance, and as mechanical improvements progress puts upon the employer the onus of demanding a lowering of rates. A second case is that of the miners, whose work, from its nature, is incapable of effective supervision by a foreman in the ordinary manner. The only alternative here, it has been held, is piecework for each individual miner, or the employment of small contractors, each of whom hires one or more men at day wages, and works with them at the face of the mine. The contractor sets the fastest pace that his own strength permits, and compels his men, so far as he can, to keep up with him. He gets the benefit, not only of his own extra exertion, but of theirs. The result to the majority of the workers is a piecework intensity of exertion for day-work wages.<sup>1</sup>

In the trades whose unions reject piecework it will often be found that comprehensive piecework scales, insuring uniformity of pay, have not been found practicable. In such work as that of the machinists, the iron molders, the stonecutters, and the plumbers, there are such differences between job and job that piecework rates would practically do away with the union scale, and reduce the remuneration of labor to a matter of individual bargaining. This is the result which every labor organization is bound at all hazards to avoid. In those trades in which piecework prevails, and in which a considerable variety of work is covered, long and elaborate tables of specifications grow up, which are intended to include, so far as possible, every item of work. The printed price list of the Glass Bottle Blowers contains some 1,200 specifications. The garment workers of New York, in their agreements with their employers, prepare a very elaborate list, and provide that prices for new styles or garments shall be determined in no case by a bargain of an individual worker, but by the employer and a committee of operators and tailors employed in his factory.

In some trades those branches of work which it has been found possible to reduce to a uniform scale are habitually paid by the piece, while other work is paid by the

<sup>1</sup> This system, which is known in Great Britain as the *butty* system, does not now seem to prevail in America, except in the anthracite region of Pennsylvania, and there only in a modified form. In the anthracite mines, a single contracting miner used sometimes to employ as many as 10 laborers. He furnished all tools, powder, and other supplies, and paid the laborers one-third of their earnings, as reckoned according to the terms of his contract. The laborers were therefore actually paid on a piece-price basis. Yet the system has caused much friction and strife, and as soon as the United Mine Workers acquired the power, at the time of the strike of 1900 they restricted it by limiting each contract miner to not more than 2 assistants. (Letter, dated August 31, 1901, from John Mitchell, president of the United Mine Workers.)

## INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

7. Among the Boiler Makers and Iron Ship Builders most of the new work in ship-building is done by the piece, but repair work on ships and almost all boiler work done by the day. The Sheet Metal Workers make a distinction between building work and work on sheet metal ware. The ware, on which the fixing of uniform prices is comparatively easy, may be made by the piece, but piecework on buildings is prohibited. The granite cutters of Concord, N. H., have a scale of rates for different classes of work, filling 16 printed pages, and accompanied with elaborate series of diagrams illustrating the different classes of work and explaining the price lists. A diagram with the price marked on it must be given to the workman with each stone taken by the piece. All stones not covered by these agreed specifications, as well as all under a certain size, must be done by the hour. The Longshoremen, before the establishment of their union, worked for day wages like other contractors. Since the union has become strong enough to control the situation at the most of the ports on the Great Lakes, it has established a system of comparative piecework. The piecework rates are fixed for the season by agreement between the union and the dock managers or the association of vessel owners, as the case may be.<sup>1</sup> At each port gangs are made up, by mutual consent, each with a foreman elected by the men. The gangs take turns in employment. When a vessel arrives in, the gang whose turn it is does the loading or the unloading of it. The pay is divided equally among the members of the gang, including the foreman.

It appears, then, that the circumstances of a considerable number of trade unions where piece prices seem more favorable to their interests than day wages. It must be noted, however, that our tables exaggerate the favor with which piecework is treated. There are unions in which piecework rates are universal, but among these members there is, notwithstanding, a strong desire to escape from them. The piecework system, in their case, is an inheritance from the days before the unions were established. Thus the bulk of the clothing manufacture, from the work of the high-class tailor to the worst-sweated manufacture of underclothing, is done by the piece. The Jewish garment workers of New York would strenuously resist an attempt to establish a system of time wages. Their instincts, however, it may be said, are not those of workmen, but those of traders. Their ambition is, in a few years of furious work, to lay by a little capital and set up as clothing contractors. The United Garment Workers, as a whole, would be glad to see the piecework system wiped out. The hope of wiping it out is expressed in their constitution, and the hope not only of the officers, but of many of the workers; even of those whose position is comparatively good. For instance, the manufacture of overalls is carried on exclusively in factories, under comparatively fair conditions and at relatively good wages. Yet the girls who do the work, or at least the intelligent leaders among them, would be glad to substitute time work for work by the piece. In their case complaint is that though the weekly wage is fair, it is earned at the expense of long exertion, and that seven or eight years in an overalls factory wears a girl out. The secretary-treasurer of the Boot and Shoe Workers says that four-fifths of the work in shoe factories is piecework, but that the system is simply endured by the workers as one of the necessary evils of close competition and minute subdivision of labor. "The piecework system tends to give decent wages to none but the swiftest workmen, thus leaving the slower workmen oftentimes earning wages which seem to be below the subsistence point." The nervous strain on piecework employees, due to the high relative speed at which they are induced to work, is mentioned by this officer as one of the serious evils of the system. The secretary-treasurer of the Boiler Makers would be glad to have piecework abolished in all branches of his trade. The Northern Mineral Mine Workers, who report that 80 per

<sup>1</sup> See pp. 369-372.

cent of their members work by contract, add that the system is not approved by the organization. The reason given is the impossibility of predicting the hardness or softness of a given piece of work, and the consequent impossibility of making earnings regular. The president of the Piano and Organ Workers, while saying that about 90 per cent of his members work on the piece system, adds that there is a desire for the abolition of it. The reason given here is the tendency to require all workmen to keep up to the pace of the fastest, and the tendency to cut wages till only the fastest can earn a decent wage.

It is generally held that the piecework system results in the giving of more work for the same pay; and it is even maintained that no intensity of exertion beyond a certain point will give any permanent increase of daily wages. Every employer has in his mind, it is said, a somewhat definite standard of fair wages for every class of workers. He is apt to assume that all of them could, if they would, do as much as the fastest actually do. If the fastest considerably and habitually exceed the amount of earnings which seems to him proper, he is certain, say the workmen, to reduce the piece price.<sup>1</sup>

The attitude of the trade unions of Great Britain toward piecework, as it appears to Mr. and Mrs. Webb, after their exhaustive study of trade-union history and methods, is summed up in the following passage: "What the capitalist seeks is to get more work for the old pay. Sometimes this can be achieved best by piecework, sometimes by time work. Workmen, on the other hand, strive to obtain more pay for the same number of working hours. For the moment, at any rate, the individual operative can most easily secure this by piecework. But not even for the sake of getting more pay for the same number of hours' work will the experienced workman revert to the individual bargain, with all its dangers. Accordingly, the trade unions accept piecework only when it is consistent with collective bargaining, that is, when a standard list of prices can be arrived at between the employers on the one hand and the representatives of the whole body of workmen on the other. As a matter of fact, this is practicable, so far as concerns anything above mere unskilled laboring, in a majority of the organized industries, in which, therefore, piecework prevails by consent of both masters and men. It is, indeed, impossible to decide whether trade unionism has, on the whole, favored or discouraged the substitution of piecework for time wages. On the one hand, every increase in trade-union organization, and especially every extension of the class of salaried trade-union officials, has made more possible the arrangement of definite piecework lists. This process is now extending from trade to trade. The very establishment of these lists has, on the other hand, lessened the employers' desire to introduce piecework, whilst to any method of remuneration involving individual bargaining, such as 'estimate' or 'lump' work, the trade unions have shown implacable hostility."<sup>2</sup>

The long and careful study which Mr. and Mrs. Webb have given to trade unionism in Great Britain, and their wide acquaintance with the officers and members of the unions, make it necessary to give credence to their statements when they enumerate the unions in Great Britain which insist on piecework or prefer it. The expressions above cited indicate, however, that, while the parallelism between Great Britain and the United States in the actual use of the piecework system is remarkably close, the desires of the union leaders in many trades in the United States are by no means such as Mr. and Mrs. Webb allege them to be in the same trades in

<sup>1</sup>The following is a quotation from an employer's argument for a reduction of wages: "During that period 75 loaders in that mine averaged over \$3.25 for every day the mine ran. \* \* \* I took 25 men, because if 25 men can produce such wages others are capable of doing it if they try to work as hard as these 25 did." Official report of fourth annual joint conference of coal miners and operators of Illinois, Indiana, Ohio, and Pennsylvania, held January 31 to February 9, 1901, p. 71.

<sup>2</sup>Industrial Democracy, by Sidney and Beatrice Webb, vol. 1, pp. 303, 304. In addition to Mr. and Mrs. Webb's admirable discussion, see *Methods of Industrial Remuneration* (third edition, 1898), by David F. Schloss, pp. 50-86.

## LVIII INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

Great Britain The principal officers of many of the most important American unions, whose members habitually work by the piece, would, if they had the power, instantly abolish the system.

Doubtless the inferences to be drawn from this fact ought to be modified with reference to possible divergences between the views of the union leaders and the views of the body of the workmen. The secretary of the Boiler Makers, for instance, while objecting to piecework in all branches of the trade, himself admits that the use of it is satisfactory to the shipbuilders, who are paid under it. The explanation of such differences of view is not obscure. The union officer looks exclusively at what he conceives to be the interest of the trade as a whole. Anything which seems to him to diminish the number of men employed, anything which seems to increase the amount of labor which is sold for a given amount of money, appears to him unquestionably bad. The man with the hammer in his hand thinks primarily of his individual gain. If piecework enables him to draw more wages at the end of the week, though by considerably greater exertion, and though he may believe, as the secretary believes, that his higher wages are gained at the expense of unemployment for his neighbor, he is tempted to follow his immediate pecuniary advantage.

### LIMITATION OF OUTPUT.

If the objection to the piecework system is less widespread among British than among American unionists, it is probable that one reason is in the greater commonness and greater strength, among the working people of Great Britain, of the custom of limiting the intensity of their work. The refusal of the British workmen to accomplish all which, by the greatest exertion, they could accomplish, is one of the commonest complaints of British employers and British writers on industrial topics. The accusation of fostering this tendency is one of the standard accusations against the British unions. Speakers and writers, both British and American, constantly contrast the British workman, in this respect, to his disadvantage, with the American. The alleged decline of British trade is attributed, in a great degree, to the refusal of the British workman to do his best. The limitation of output was one of the chief questions at issue in the great engineers' strike of 1897; and the superiority of the Americans in such industries as the manufacture of boots and shoes is laid at the door of British unionism and its discouragement of activity.

There has always been a strong tendency among labor organizations to discourage exertion beyond a certain limit. The tendency does not always express itself in formal rules. On the contrary, it appears chiefly in the silent, or at least informal, pressure of working-class opinion. It is occasionally embodied in rules which distinctly forbid the accomplishment of more than a fixed amount of work in a given time; but such regulations are always felt by employers, and almost always by other persons who are not of the wage-working class, to be obviously unjust, shortsighted, and socially injurious. This adverse public opinion outside the unions themselves has doubtless had some influence in discouraging such applications of the principle. These rules have not by any means, however, absolutely disappeared. The Flint Glass Workers strictly limited the day's work of their members up to 4 or 5 years ago, and they still limit it in some kinds of work.<sup>1</sup> Similar regulations appear locally from time to time in the building trades. Before the great building trades strike of 1900, in Chicago, the plumbers, the gas fitters, and the lathers had rules setting forth in detail the amount of work which a man might do in a day. In the case of the plumbers it was asserted, by employers and others, that some of the specifications did not amount to more than one-third of a good day's work, though others were more than an ordinary man could accomplish.<sup>2</sup>

<sup>1</sup> Reports of the Industrial Commission, vol. vii, Testimony, pp. 833, 835, vol. xv, pp. 425, 426.

<sup>2</sup> *Ibid.*, vol. viii, pp. 170, 313, 407-410, 422, 466.

A substantially similar limitation may be applied, where piecework is used, by specifying the highest amount that a man may earn. Thus the stove mounters' union of Detroit does not permit its members to earn more than \$4.50 a day, the scale for day work is \$2.75. The Amalgamated Association of Iron, Steel, and Tin Workers fixes the maximum charge for a boiling furnace and the minimum time for a heat. It also limits the output of tin-plate rolling mills, and orders that if any crew is found to have surpassed the limit the local union must collect the equivalent of the surplus earning, together with a fine for each offense of 25 cents from the roller and 25 cents from the doubler.

Another form of limitation, where highly automatic machines are used, is to forbid the running of more than one machine by a man. The Machinists provide that "any member introducing or accepting piecework or running two machines in any shop where they do not exist shall be subject to expulsion." In this case, as in many others, the union accepts perforce the existing fact, but undertakes to prevent any change of conditions contrary to its desires.<sup>1</sup> The Pressmen forbid any member to run more than two single-cylinder presses or more than one flat-bed rotary press or one perfecting press. The Lithographers also forbid their members to run more than one press, under pain of expulsion, without possibility of reinstatement except on payment of a fine of \$250.

One defense of the general principle of the limitation of performance rests upon the necessities of the system of collective bargaining. It is a necessary incident of the collective bargain that one man shall not underbid another, and one can as easily underbid by offering more work for the same hourly wage as by offering the normal amount of work for a lower hourly wage. Perhaps the ground on which the principle is oftenest defended, however, by representatives of the unions, is the tendency of employers to seek means of rushing or overcrowding the men. It is often alleged that employers hire particularly able workmen, by a small extra payment, or by some other advantage, to put extra speed into their work, and so to set a pace which all the men can be compelled to strive for. By this means the employers get extraordinary activity out of all the men and pay only one or two for it. Sometimes there are rules directed specifically against this practice. Thus, in 1900, the carpenters of Chicago had the following rule: "Any member guilty of excessive work or rushing on any job shall be reported and shall be subject to a fine of \$5." This further rule of the same organization was directed to a similar end: "Any foreman using abusive language to or rushing the men under his supervision shall be fined not less than \$10 and ruled off the job."

In such work as carpentry the fast man only furnishes an example which the employer or the foreman is able to appeal to in hurrying the others. The case is worse in "team work," in which several men cooperate in a given task, and each is compelled to maintain the pace set by the fastest, or forfeit his place by impeding the operation of the whole. The two bricklayers at the ends of a wall put up the line as fast as they build their portions, and the men between must keep up with it. In making a coat, three men work together—a machine operator, a baster, and an edge baster or finisher. No one may slacken his pace, no matter how weary or sick; for if one slackens, the work of the whole team is balked.

Under a piecework system the men are automatically induced, by their eagerness to earn the highest possible wage, to work with all their energy through every moment of the working day. If the tendency is unrestrained, the ultimate result is, say the workmen, that the piece price is reduced as the output increases, till the most skillful, working their best, can just make good wages. The process results in

<sup>1</sup>The agreement which was made in 1900 between the Machinists and the National Metal Trades Association, and which was abolished in 1901, provided that the union should "place no restrictions upon the management or production of the shop," but should "give a fair day's work for a fair day's wage."

excessive work and overstrain for the ordinary workers, without any reward in increased pay.

The pace which a few set, whether at piecework or at day work, tends to become the normal pace in the trade. The few may be able to endure it, but the average worker, it is said, goes home at night with exhausted body and worn-out nerves, unable to give attention to any recreative pursuit or to enjoy such hours of leisure as he has. A space of a few years wears him out. The speed which he was able for a few years of his youth to maintain by an excessive consumption of nerve force he can maintain no longer. He is thrown over—superannuated.

While these specific reasons for the limitation of output have undoubtedly a considerable degree of validity, and while they have doubtless played a large part in determining the actual course of labor organizations upon this point, it seems clear that the general doctrine that the price of labor power may be increased by diminishing the amount that is brought to market has always had and still has its importance. It is not easy to convince the workman that if A does only half a day's work he does not leave another half day's work for B; and the workman finds it hard to see why the removal of B from the ranks of the unemployed will not diminish the competition of workmen with each other, and tend to raise the price of each specific job, and consequently to increase the portion of the social product which goes to workmen as a class.

In these days, however, the workmen are coming to realize that there is a better way of diminishing the supply of labor power in the market. The deliberate limitation of a man's activity during his working hours alienates the sympathy of everybody outside the wage-earning class. The diminution of the number of hours which a man spends in daily toil is an object which appeals to men of all classes as not only justifiable but admirable and socially beneficial. It is to the limitation of hours that the most intelligent labor leaders are now turning their chief attention.

#### MACHINERY.

It is probably not far wrong to say that trade unionists universally regard the introduction of new machinery as a misfortune. With the possible exception of a very few industries, like the cotton manufacture, in which machine production has already been long and highly developed, a new machine always appears to the workman as a displacer of men, a creator of unemployment, a depresser of wages. Trade-union leaders, even when they express their acceptance of the advance of machine production as a necessary feature of social progress, usually manifest the feeling that, if it is not inevitably at the expense of the workman, it at least increases the difficulty of maintaining his economic position. It is doubtful whether any union which felt strong enough to keep machinery out of its trade ever submitted without a contest to the introduction of it. The experience of long years has taught the unions, however, that in general the introduction of machinery can not be prevented, and direct attempts to keep it out are now comparatively few.

The Stogie Makers still refuse to admit machine workers to their organization, and both the Coopers and the Iron Molders maintained the same attitude up to 1899. It is only half a dozen years since the Coopers appealed to the Federation of Labor to declare against ale and beer packages made by machinery. The Federation, however, did not approve the proposition. The Stone Cutters prevent the use of stone-planing machines wherever they can. When a new machine was invented two or three years ago for blowing lamp chimneys, the Flint Glass Workers proposed to the manufacturers that the machine be bought up and eliminated, and that the selling price of chimneys be advanced to pay the cost. The rules of the Plumbers contain a long list of plumbing goods which were formerly made by hand as they were used, but which are now appearing in the market as products of machinery. The Plumbers declare that this change is taking away the work of their trade, and that the use of

these goods should be stopped. The Plate Printers have always opposed the introduction of steam presses, and have succeeded in keeping them out of the largest plate printing office in America, that of the United States Bureau of Engraving and Printing. The reason given is that the work done on a hand roller press is far better.

The unions that have fared best in their dealings with machinery are those that have frankly and promptly recognized the inevitableness of it, and have devoted their energies, not to the hopeless task of preventing the use of it, but to regulating the manner of use. Probably no union in this country furnishes a better example of a wise policy toward machinery than the International Typographical Union. When the typesetting machines began to be introduced, the union promptly accepted them as inevitable, and only insisted that they be operated exclusively by members of the organization, and on union terms. If the attempt had been made to keep the machines out of printing offices, the fate of the hand compositors might possibly have been comparable with that of the hand weavers, who tried a hundred years ago to compete with the power loom. The union would have been driven out of all important printing offices, the machines would have been run by nonunion hands, wages, both of machine operators and of hand compositors, would have been cut, and hours of labor would have been lengthened. By the policy which the union adopted the number of its members who were thrown out of employment by machines was greatly diminished, wages were maintained and gradually raised, hours were gradually shortened. The union has been able to secure for its members a share of the benefits of the machine, instead of seeing all its benefits, together with a portion of the advantages which they themselves had previously enjoyed, divided between the employing printers and the community at large. The wage scales for machine operators are uniformly maintained at least as high as those of hand compositors, and in many cases higher, and in most places the hours of machine operators are shorter.

The Glass Bottle Blowers have recently had to face the question of machinery. Their president recommended, in his address to the convention of 1900, that no effort be made to oppose the introduction of machines, but that the union try to arrange for the gradual introduction of them, without strikes or lockouts, and for the working of them by members of the union only.

#### PROVISION OF EMPLOYMENT

In the broadest sense, all those policies of trade unions which are directed to diminishing the production of each member, whether by shortening working hours, by lessening the intensity of work, or by reducing the efficiency of it through the exclusion of machinery, have for at least one of their objects the provision of employment for a larger number of men. The whole development of the union is a means of obtaining employment for union men as distinguished from the nonunion. Most unions, however, provide some more specific means for bringing particular members who may be unemployed into contact with opportunities for work.

There are trades in which it would be held disgraceful for a man to ask for employment for himself. Thus, among the hatters a man looking for employment must approach a journeyman who is already employed, and be introduced by him to the foreman as a man of the trade "on turn" and desiring to be "shopped." This is an ancient custom, antedating any general organization of the hatters; but it is sanctioned by the existing union, and any foreman who hires a man in violation of it is liable to a fine of \$25. There are other trades, however, in which it would be regarded as unmanly to seek employment through another instead of asking for it oneself.

Many local unions have regular employment bureaus, where unemployed members register their names. Sometimes employers apply to the union bureau whenever they need help. The Bakers, the Barbers, the Brewers, and the German-American

## LXII INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

Typographia have adopted the policy of requiring this method. Such a policy can only be enforced, of course, where the union has thorough control of the trade.

In many cases, where there is no regular bureau, and perhaps no formal registry of names, it is the duty of some officer of the union to know who is unemployed and to know where places are to be found, and to put the men into the vacancies. Where walking delegates or business agents are employed this is one of their regular duties. Trades which do not employ business agents sometimes have shop stewards, who are expected to report to the officers of the union any vacancies in their shops.

Many unions have devices for a broader dissemination of knowledge of opportunities for employment. Sometimes the official journals of the national organizations publish reports which have this purpose. The Stone Cutters' Journal fills much of its space with reports of the condition of trade in various localities, and with announcements of new undertakings which will make work for stonecutters. The Wood Carvers publish a monthly statistical report, which gives the working hours per week in each town where the union has a branch, the pay per hour, and the number of shops in each town in which trade is good, the number in which it is fair, and the number in which it is dull.

Several unions, when trade is dull, divide the available employment equally among their local members. It is a rule of the Tailors that work shall be equally divided among the members in slack times by means of a "turn list." The Ladies' Garment Workers and the Laundry Workers have similar rules. Among the Plate Printers also it is customary to give each member an equal share of the work in union shops. The German-American Typographia compels employers to take the men in the order of their registration on the union's book of unemployed. It has also adopted a 5-day week in some places, in order that more of its members may have work. The lithographers of New York lie idle on Saturday whenever work is dull, for the same purpose.

One of the most curious efforts to increase employment in a trade is that which was made a year or two ago by the Elastic Goring Weavers. Their trade is the weaving of the elastic web which is put in the sides of congress gaiters. The union is a small and compact one, absolutely controlling the trade; but congress gaiters are so much out of fashion that work has for several years been dull with them. Their constitution requires every member to wear congress shoes; and in 1899 the union sent two members traveling through the country, to induce trade unionists of other occupations to buy congress gaiters in order to help the trade.

### STRIKES, LOCKOUTS, AND BOYCOTTS.

*Necessity of strikes.*—The Union Boot and Shoe Worker of September, 1900, in advocating arbitration and deprecating strikes, said: "In arriving at a decision as to permitting a strike it should always be remembered that a strike is a dead loss to employer, to employee, and to the community." It is not often that so decided a condemnation of the policy of strikes can be found among expressions of trade-union opinion. Many written constitutions of national unions contain statements to the effect that strikes are to be regarded as a last resort, and are only to be undertaken when it is not possible by any honorable means to avoid them. No doubt the necessity of a strike is always regretted, so far at least that the union would prefer to secure its demands otherwise. That strikes are a necessary part of trade-union procedure, however, is an article of the faith of every union man.

The theory of bargaining assumes that the seller will refuse to sell unless he can get a satisfactory price. There is no other means by which a satisfactory price can be got. It is assumed, as a matter of course, that the buyer will give no more than the lowest price at which he can get the commodity. The workman, whether standing alone or organized in a union, appears in the market as a seller of a particular

commodity—labor. He supposes that he has the same right as a seller of steel to determine for himself the price that his commodity ought to bring. He supposes that he has the same right as the seller of steel to refuse to sell unless he can get his price. But the strike is neither more nor less than the refusal of a number of sellers of labor, acting, for the time being, in agreement, to sell their labor below the price which they consider just.

*Inauguration of strikes.*—The whole tendency of the union rules, as they develop with the increasing strength of the organizations, is to put a check upon rash and hasty strikes. Many of the national unions have made no attempt to remove the question in any degree from the control of the local unions. Even where this is the case, or where national organizations do not exist, the local constitutions usually require proper deliberation, and a vote of a majority, often a two-thirds or three-fourths majority, before a strike may begin. The more highly organized national bodies have rules of the following general character. Before any action is taken looking toward a strike, the officers of the local union, or a committee chosen for the purpose, must approach the employers and try to reach a settlement of the existing difference by negotiation. Some unions direct that an effort be made for arbitration, if necessary, with the aid of an umpire. If these primary negotiations are unsuccessful, the local union votes on the question of sustaining the claim of its members, and resorting, if necessary, to a strike. A very large proportion of the national unions which have any elaborate rules at all upon the subject provide that a strike shall not be ordered except by a vote of two-thirds or three-fourths of the members present at the meeting. It is often required that every member be notified of the meeting, and in many unions it is specially provided that the vote be taken by secret ballot. The purpose of this is to leave every member free to vote against a strike if his judgment is against it. If the vote were open men might be ashamed to seem to shrink from standing by their comrades. In some unions no one can vote on the question of declaring a strike until he has been a member of the union three, or four, or six months. In a few a local can not go on strike until it has been affiliated with the national organization for six months, and in one case this period is extended to a year.

If the local votes for striking, its action must be reported to the national headquarters. It is often required that the report not only state in full the reasons for the action of the local, but also give in detail the number of members, the number who would be affected by the proposed strike, the number of nonunion men in the place, the state of the finances of the local, and other detailed information. On receipt of this report it is in many unions the duty of the national president to go to the place where the trouble exists, or send a personal representative there, and join with the local officers in renewing negotiations with the employers and trying once more to effect a peaceful settlement. Only after this renewed effort has failed is it permitted by the constitution of many unions that the national executive board approve by vote the action of the local. In some half dozen unions this power does not rest with the executive board, but with the members at large, and the local strike can be approved only by a referendum vote.

In the Knights of Labor, strikes, like every other important decision of the organization, are under the absolute control of the central authority. The Knights of Labor, however, differ in their centralized form of government from labor organizations in general. The rule is almost universal among the national trade unions that the affirmative decision to declare a strike can be made only by the local body immediately concerned. Only a veto is usually reserved to the central authority.

The national executive board of the Stove Mounters has power to order any local on strike on pain of a fine of not less than \$25. The Broom Makers lodge power to order a strike in the president. In the United Mine Workers the primary decision of strike questions lies with the district officers, or, in case the trouble extends beyond

the limits of a district, in the hands of the national president; subject, in either case, to an appeal to the executive board. The Tin Plate Workers and the Amalgamated Association of Iron, Steel, and Tin Workers lodge the power to order strikes in the executive committees of the districts. One or two other unions give the national executive board power to order a strike by a four-fifths vote, under the exceptional conditions that more locals than one exist in a place, and that a majority of them refuse to sanction a strike on account of a grievance which directly affects one. With these exceptions the rule is believed to be universal that no strike can be ordered except by a vote of the local unions concerned. In many organizations not even a veto power resides in the central executive.

*Control by national officers.*—These detailed regulations are found in only a minority of the national unions, but they are common among the stronger and more highly organized. Even where they exist, however, it is not always easy to enforce them. Thus the president of the Machinists, one of the stronger organizations, lamented in his report to the convention of 1899 the impossibility of inducing the local lodges, and especially newly organized lodges, to comply with the constitution in inaugurating strikes. The lodges, he said, frequently strike without consulting the national officers, as the rules require, and then consider that they ought to receive the support of the national body, and threaten to disband if they do not receive it.

A few national unions specifically authorize the executive board to expel any local which strikes without authorization. This is a power which the executive board would of course regret to use, and would probably refrain from using except in aggravated cases. In the majority of unions no such power exists, and the executive board can do no more than refuse to give financial aid. To make this more effective, some unions forbid the sending of appeals for help by one local direct to others, and require that all such appeals be sent through the national executive board.

Effective control of the locals depends upon control of a common purse. So long as the national officers have nothing tangible to give or to withhold, the locals will often defy them and strike when they please, in spite of union rules. Very few unions have accumulated enough money in the national treasury to give important aid when trouble comes. The Cigar Makers, with over \$300,000, have the largest war chest. Most organizations trust almost exclusively to raising funds as they are needed. The more strongly organized rely upon assessments, and the weaker upon contributions.

If assessments were promptly paid, the power of the national union to assess might replace not ineffectively, in all but the most widespread strikes, a great accumulated fund. A comparatively small fund might bridge over the interval of a few weeks, which would be necessary, at the best, for setting the assessment machinery in motion. But assessments are likely not to be paid promptly, and it is often difficult to get them paid at all. The Stone Cutters are an old and strong organization; but it took them five years to pay the cost of a strike of 1890, which would have been fully covered by an assessment of \$1.50 a member, if the assessment had been paid. Under such circumstances, the financial support of strikers is a matter of some doubt, and no strong feeling of dependence on the central authority can be developed in the locals.

In some of the British unions, though large common funds exist, the central authorities still find it impossible to control the striking propensities of the locals. This is because the union funds, though they are the common property of the whole membership, are distributed among the local treasuries, and are administered, for most purposes, by the local unions.

In the Amalgamated Society of Engineers there is a strike benefit of 5 shillings a week, administered by the central executive; but there is also an out-of-work donation of 10 shillings a week, controlled by the branch, but paid out of the general fund, and paid to men on strike as well as to other unemployed men. If men who are disposed to strike can get the approval of their local fellow-members, they are

sure of the larger part of their strike pay, and they snap their fingers at the central officers.<sup>1</sup>

If the national officers have an actual power to punish, as by the withholding of important financial support, the existence of the power can not but restrain, in some degree, the eagerness to strike; but the actual use of the power is likely to be waived. When a strike is once begun, the officers and members of the union are situated like men whose country is at war. The citizen may condemn the action of the statesmen who brought on the war; he may consider that the official course of his country in the preliminary disputes was indefensible; but, unless his notions of ethics are different from those of most men, when the war is begun he considers it his duty to consent to the measures that are necessary for the successful prosecution of it. So the superior officers of a union, when a strike is an accomplished fact, are likely to consider that their duty to the organization, to their fellow-members, and to their class, will be best done by supporting those to whom they are bound by fraternal ties.

It should be added that the moral power of the national officers is an important factor in the control of the strike situation, and that the effects of it are important whether or not an actual power over the local unions, through control of finances or otherwise, exists. For instance, the Bricklayers have not supported a strike from their national treasury since 1894. Strikes on a large scale have almost disappeared among them. But this result has been obtained through the activity of the national officers in investigating complaints which the local unions have brought to their attention, and in mediating between the local unions and the employers.<sup>2</sup> As is suggested elsewhere, the national officers, by virtue of their greater general intelligence, by virtue of their less direct connection with the local disputes, and by virtue of that conservatism which accompanies the sense of large responsibility, are almost always disposed to minimize the tendency to strike. Their influence, therefore, is on the side of peace.

*Strike pay.*—The relief to be given to strikers is left in many unions to the national executive board, and often depends, of necessity, upon the amount of money that is available. Many of the constitutions, however, fix the amount to which striking members are entitled. The sum named is usually a bare subsistence wage, from \$4 to \$8 a week. Often a distinction is made between married men, or those with families dependent on them, and those who have no one to support but themselves. Thus the Boiler Makers, the Typographical Union, the Pressmen, the Plate Printers, the Bricklayers, all give married men \$7 a week and single men \$5. The Machinists give married men \$6 and single men \$4. There is very little tendency to make the strike pay in any degree proportional to the customary earnings in the trade. The Lithographers, who make good wages, pay \$10 to married men and \$6 to single men, and the \$10 rate is perhaps the highest given by any union. But the Flint Glass Workers, whose wages are very high, pay only \$6, and the Amalgamated Association of Iron, Steel, and Tin Workers, whose average wages are such as very few other workmen can approach, pay only \$4.

The cessation of strike pay is usually in the power of the executive board. In many cases a time limit is fixed by the constitution, though the executive board may even then have power to continue the strike support by a special vote. In some cases the amount of strike pay is diminished after a fixed period. The Cigar Makers pay \$5 a week for 16 weeks, and afterwards \$3 a week as long as the strike continues.

If the funds of the national union are to be properly protected, it is of course necessary that some check be put upon the indolence and greed of some members, and upon the action of local officers. Two common provisions are that if a man refuses

<sup>1</sup> Sidney and Beatrice Webb, *Industrial Democracy*, p. 94

<sup>2</sup> For a description of the policy of this organization, see below, p. 126

to accept employment in an establishment not affected by the strike his name must be stricken at once from the strike roll, and that if a member has worked for 3 or 4 days in any week he is not entitled to strike pay for that week. To make sure that the members are not earning wages and drawing strike pay also, it is often required that in order to draw the strike pay a member must appear each day at the local headquarters and sign a roll. Sometimes the roll is signed in triplicate, and at least one copy is sent to the national headquarters. A detailed report of all payments is required in many organizations to be sent weekly to the national secretary. Sometimes strike pay is disbursed by two members chosen by the local union for the purpose, and known as clerk and paymaster. The clerk makes out the pay rolls and the paymaster disburses the money. In some unions a third person is added, who is known as a receiver, and to whom, as the representative of the local union, all strike funds are turned over.

*Sympathetic strikes*.—Very little mention is made of sympathetic strikes in the written constitutions of the national unions. Two or three except sympathetic strikes from the restrictions imposed in other cases, so far as to permit local unions, though forbidden generally to strike without the previous approval of the national executive board, to join in a sympathetic strike without previous approval, and still to be entitled to the support of the national organization, provided the national executive board is satisfied, after investigation, that the local acted with discretion.

*Boycotts*.—Boycotts are scarcely mentioned in the constitutions of the national unions. A few organizations forbid local unions to declare boycotts under any circumstances.

There is probably no union man, however, who doubts the legitimacy of the boycott as a weapon of labor, or the necessity of using it. The broadest-minded and most conservative of the union leaders defend the right to use it, without hesitation or qualification, and regard the tendency of the courts to condemn it as one of the marks of the injustice with which they believe the working people to be treated by our rulers. The right to deal, or to refrain from dealing, with whomsoever he pleases, and for any reason which may appeal to him, is, they say, one of the most elementary rights of a free citizen. But if one man may select the persons he will deal with, two or a million may do so. The boycott is simply a common refusal on the part of a number of people to deal with a person whose action is believed to be antagonistic to their interest.

The courts and public opinion have sometimes made a distinction between the primary or simple boycott and the secondary or compound boycott, which consists in the refusal, or the threat of refusal, to deal with persons against whom no grievances are alleged, except that they support, by their patronage, persons who have incurred the displeasure of the boycotters. The unionists deny that such a distinction has any validity. The right of refusing to deal with particular persons is conceived as an absolutely general right, and it is denied that the courts or any public authority may properly coerce the individual in this regard. The position of the courts on this subject is more fully stated below, p. cxviii.

The union attitude is set forth as follows by Mr. Samuel Gompers, president of the American Federation of Labor, in his testimony before the Industrial Commission:

We may take it for granted that the most rabid antiboycott agitator will not venture to assert that boycotters may not resort to moral suasion in trying to enlist others, or that outsiders may not heed boycotters' appeals, and of their own free will suspend dealings with persons or firms that have incurred the displeasure of their friends or associates or patrons. Strikers have the right to appeal to their friends to aid them by going out on a sympathetic strike, and their friends have the right to act upon such an appeal. Precisely the same principle applies to boycotters. A sympathetic boycott is as legal and legitimate as a sympathetic strike. Just as men may strike for any reason, or without reason at all, so may they suspend dealings with merchants or others for any reason or for no reason at all. Thus a boycott may extend to an entire community without falling under the condemnation of any moral or constitutional or statutory law.

But I shall be triumphantly told, Boycotters never do confine themselves to moral suasion and appeal, that they resort to threats, intimidation, and coercion, and it is this which makes what is called "compound boycotting"—that is, boycotting which extends to parties not concerned in the original dispute—criminal and aggressive. Under the criminal code of New York and other States, it is a criminal conspiracy to prevent a person or persons "from exercising a lawful trade or calling, or doing any other lawful act, by force, threats, intimidation, or by interfering, or threatening to interfere, with tools, implements, or property, or with the use and employment thereof." Boycotters who try to coerce people into complying with their demands by threats and intimidation clearly come within the definition of conspiracy. Hence, in the last analysis, the objection to boycotting is an objection to threats and intimidation.

This sounds very plausible. It is easy to deduce from such premises that boycotters interfere with property rights and the pursuit of lawful callings, and that under the national and State constitutions, to say nothing about explicit anticonspiracy laws, they are to be held civilly and criminally liable, it is easy to talk about protection of property rights, the tyranny of preventing people from earning a livelihood, the duty of the Government to secure the equal protection of the laws, etc.

But this argument about the employment of threats and intimidation is fallacious and superficial. Its apparent validity disappears when, not satisfied with ugly-looking words, we demand precise definitions. No one pretends for a moment that it would be proper for a boycotter to approach a merchant and say, "You must join us in suspending all dealings with that employer, or newspaper, or advertiser, on pain of having your house set on fire or of a physical assault." This would be an unlawful threat, and people who would try to enlist others in their campaign by threats of this character would certainly be guilty of a criminal conspiracy.

Do boycotters use such threats? Do they contend for the right to employ force or threats of force? Our worst enemies do not contend that they do. They "threaten," but what do they threaten? They "intimidate," but how? Let Judge Tamm, who issued his sweeping antiboycott injunction, be a witness on this point. He said: "As usually understood, a boycott is a combination of many to cause a loss to one person by coercing others against their will to withdraw from him their beneficial interests through threats that unless those others do so the injury will cause similar loss to them."

Thus, then, is the threat—the intimidation. The boycotters threaten third parties to boycott them, if they refuse to join them in the boycott of the original subjects of the campaign. In other words, the boycotters say to others: "If you decline to aid us in our struggles, we will suspend dealings with you and transfer our custom to those who do sympathize with us and will support us." The question which the judges and editors who glibly denounce boycotting have never paused to explain is, how a mere threat to suspend dealings can be a criminal threat, like a threat to assault person or property. No man in his senses will dispute this axiomatic proposition, namely, that a man has a right to threaten that which he has a right to carry out. You may not threaten murder, arson, assault, battery, libel, because these things are crimes or torts. But you may threaten a man to cease admiring him or taking his advice, because he has no claim to your admiration or obedience, and you are at liberty to cease doing that which you have freely and voluntarily done. Similarly, you may tell a man that if he does a certain thing you will never speak to him or call at his house. This is a threat, but it is a threat that you have a right to make. Why? Because you have a right to do that which you threaten.

The same thing is strictly true of boycotting—of suspension of dealings with merchants, publishers, carriers, cabmen, and others. You may threaten to take your custom away from them and assign any reason you choose. They are not entitled to your custom as a matter of legal or moral right, and you are at liberty to withdraw and transfer it any time and for any conceivable reason. It follows beyond all question that you have a perfect right to threaten to withdraw your custom. The principle is the same, whether you threaten one man or a hundred men, whether you are alone in threatening the withdrawal of your custom or a member of a vast combination of people acting together in the premises.

Is not the result coercion of men to do certain things against their will? Very likely, but not all forms of coercion are criminal. Coercion is another term with an ugly and ominous sound which is freely used to intimidate the thoughtless. The legality or illegality of coercion depends on the method used. A man may be coerced by actual force, by the threat of force, or by indirect means which the law can not and does not prohibit. Coercion by a threat to suspend dealings is, to revert to our illustration, in the same category with coercion through a threat to cease friendly intercourse.

With this elementary principle in mind, the case against the boycott utterly collapses. An agreement to boycott any number of persons is not a criminal conspiracy, and, a fortiori, an agreement among any number to threaten a boycott can not be a criminal conspiracy.<sup>1</sup>

#### UNION LABELS.<sup>2</sup>

The union label is a mark or device adopted by a labor organization, and affixed to goods, or impressed upon them, to indicate that they are made entirely by members

<sup>1</sup> Reports of the Industrial Commission, vol. vii, Testimony, pp. 631, 635. For a fuller discussion, see also the context in the volume cited, pp. 633-638.

<sup>2</sup> For account of laws and court decisions on this subject, see p. cxxv.

## LXVIII INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

of the organization. So far as is known, the use of it is peculiar to the American unions. It is a growth of the last quarter of a century, and its importance has increased much faster during the last 10 years than before.

The credit of inventing the union label belongs to the cigar makers. They first used one locally in 1874; the well-known blue label was adopted by the national body in 1880. No organization among the many which have adopted the device has used it more persistently, more skillfully, or more successfully. Indeed, it seems necessary to ascribe the continued prosperity of the Cigar Makers' International Union, in the face of sweat-shop competition, and, of late years, in the face of the invasion of machinery, to the union label, along with a highly developed system of benefits. The Cigar Makers have spent many thousands of dollars in advertising their label and inducing their fellow-unionists of other trades to buy cigars which bear it. They have spent many thousands of dollars in legal actions against label counterfeiters, and they have been active in securing State laws under which union labels may be adequately protected.

One of the weaknesses of the unions, in respect to label protection, is that the trade-mark and copyright laws of the United States are so framed that they do not cover the label of a union, placed upon goods belonging to others.

The aim of the union is, first, to furnish a means of distinguishing cigars, or hats, or shoes, which are made exclusively by union labor, and, second, to induce as many customers as possible to refuse all others. The value of a union label depends, of course, upon the number of purchasers who can be induced to insist on having labeled goods. To induce the customer to demand union-label goods two motives are presented:

First, it is maintained, in many cases, that the goods that bear the label are made under more wholesome conditions, and are free from the danger of carrying infection. This argument is strongly insisted on in the case of cigars. The Garment Workers make similar claims. Their label is supposed to show that the garments on which it is placed have been made under fair conditions and not in sweat shops. It is only in a few trades, however, that such claims for the superiority of union-label goods in respect to wholesomeness are made. The kindred claim that they are made by skilled workmen, and that their quality is likely to be higher than that of goods without the label, is quite generally put forward.

The second method of appeal to the customer, and that which is really important, depends on the customer's sympathy with the aspirations of the wage-earners for improved conditions, and particularly with the policy of trade-union organization. Since this desire to help the unions is the motive which the label chiefly appeals to, it is chiefly to the members of the unions, of necessity, that the appeal is made. Things of which workingmen are important buyers form, therefore, the class of goods on which union labels can be used with greatest prospect of advantage. Cigars and tobacco, hats, shoes, and ready-made clothing are distributed largely among wage-earners, and if any distinguishing mark makes the goods more acceptable to them it unquestionably increases the value of the goods on which it is placed. Accordingly we find labels pushed most actively by the unions whose members are engaged upon such goods. It is only within recent years, to be sure, that the boot and shoe workers and the garment workers have given much attention to this method of bettering their position. Indeed, it is only within recent years that these trades have had such unified organizations as are suitable for the purpose; but both the Boot and Shoe Workers and the United Garment Workers are now devoting energy and money to creating a demand for their labels. Both of them insert many advertisements in labor papers and pursue other advertising methods. The Hatters and the Brewery Workmen show similar activity.

Another class of goods on which it is possible, under some circumstances, to use a label with advantage, consists of materials of building or manufacture, which, though

bought by capitalists, are placed by them in the hands of workmen for further elaboration. If these workmen are strongly organized, they may, by refusing to handle materials which do not bear the label, compel their employers to patronize union-label firms, with much the same effect as if the workmen themselves were the purchasers. Thus the brickmakers in the vicinity of Chicago were able for several years to secure the forcing of union-label bricks into a large part of the buildings constructed there, through the action of the union bricklayers in refusing to lay any other bricks. In the same way the Chicago carpenters compelled the purchase of woodwork got out by union mills.

The technical methods of applying the union label vary with the character of the goods on which it is desired to use it. In most cases a printed label of paper is attached to each article, or, as in the case of cigars, to the package. The Boot and Shoe Workers impress their label on the sole or insole with a steel stamp, or print it on the lining of the shoe with a rubber stamp. In the garment-making trades a cloth label is sewed to each garment. The Hatters sew a paper label inside the hat under the band. The Brickmakers have a brass roller bearing their label attached to the brick machine, which stamps the label into each brick as the soft clay passes under it. The Horseshoers use a steel stamp, with which they impress their label upon the hot shoe. The labels of the printers, furnished in the form of small electrotypes, leave their impression upon the printed sheet. Several unions which render services instead of producing commodities have union cards to hang in places of business where only union men are employed. This is the method of the Barbers, the Retail Clerks, the Hotel Employees, and the Butcher Workmen. The Hotel Employees and the Clerks have also adopted badges to be worn by the members.

#### DISPUTES BETWEEN UNIONS.

Among the labor combats which seem to outsiders most devoid of reason are the struggles of unions with each other for the control of particular work. Most of these disputes, as they now appear among American unions, may be divided into two great classes: First, disputes as to the trade to which certain work belongs, second, conflicts in which the principle of organization by industries is opposed to the principle of organization by trades. The former class has come to be known in Great Britain as demarcation disputes. The latter class seems to be little-known outside of America. Both classes are known in this country as jurisdiction disputes.

*Demarcation disputes.*—In the typical form to which the phrase "demarcation dispute" is most strictly applicable, two unions, the greater part of whose work is well distinguished, meet on a border ground. In Great Britain the contests between the carpenters and the joiners have furnished a well-marked case; but in this country carpentry and joinery have never been organized as distinct trades. The Brotherhood of Carpenters and Joiners has had similar troubles, however, with the Furniture Workers and the Machine Wood Workers. Both of these unions were primarily composed of factory machine workers, while the Carpenters and Joiners were primarily handicraftsmen. The Carpenters, however, were inclined to claim the field of machine work also, at least so far as it replaced hand work which had formerly belonged to their trade. The machine unions, on the other hand, seemed to trespass on the domain of the Carpenters by taking in some hand workers. The Amalgamated Wood Workers, the organization which was formed in 1895 by the union of the Furniture Workers and the Machine Wood Workers, now claims the right to put up saloon, bank, and drug-store fixtures manufactured in shops under its control, while the Carpenters claim jurisdiction over all men engaged in running wood-working machinery.

The constant friction between the Stone Cutters, engaged in cutting soft stone, and the Granite Cutters, belongs to this class of quarrels.<sup>1</sup> Local disputes of the same

<sup>1</sup> For a curious instance, see Reports of the Industrial Commission, vol. viii, p. 335.

character are frequent, especially in various building trades. Many occur between the different workers in iron. Coal bunkers and iron smokestacks have been matters of dispute between the boiler makers and the structural iron workers.<sup>1</sup> Structural iron workers and architectural iron workers have quarreled over the putting up of iron mullions.<sup>2</sup>

A curious instance occurred some years ago in Chicago, when the steam fitters claimed the right to cut holes for their pipes through the wooden floors. The carpenters had previously done this work. The Building Trades Council decided that it should go to the steam fitters, and go to them it did; to the distinct injury, it is maintained on the part of the employers, of the character of the work.<sup>3</sup>

A second kind of demarcation dispute arises when a union is organized to control a particular kind of work, the whole of which is claimed by an existing union. The dispute between the Carpenters and the Amalgamated Wood Workers has now taken on this character, since the whole field of the second union is claimed by the first. The Wood Workers themselves take the same attitude toward the Box Makers and toward the Piano Workers which the Carpenters take toward them. They have opposed the formation of both these unions, have done what they could to break them up, and have been able to prevent the recognition of them by the American Federation of Labor. In the same way the United Garment Workers have opposed the separate organization of the Custom Clothing Makers, the Painters that of the Paper Hangers, the Plumbers that of the Steam Fitters, the Cigar Makers that of the Stogie Makers. A special case of this kind of trouble arises when a branch of a British union is established in this country, and comes into conflict with an American union covering the same ground. The two important instances of such conflict are those of the Amalgamated Society of Carpenters and Joiners, and the Amalgamated Society of Engineers. The latter organization is composed of such workmen as are called machinists in America, and it comes into unavoidable conflict with the International Association of Machinists.

These disputes derive their interest to employers and to the public from the fact that the unions back their opinions with strikes. It seems intolerable that an employer, who is ready to pay the wages and to comply with all the conditions asked for by his workmen, should find his work stopped because two sections of the workmen can not agree between themselves about the boundaries of their fields of work. The workmen themselves seem to lose as much by such stoppages as the masters, and they seem to have no more to gain.

The most obvious motive of the disputants in such cases is the motive which determines so large a part of trade-union policy—the desire to get the greatest possible amount of work to do. The field of work is conceived as divided, on some basis of established custom, among the several groups of workers. Each group has a sense of proprietorship in that which it has occupied. There is a disputed land around its borders, which it feels to be its property, but which is claimed, with equal conviction, by the neighboring groups. The selfishness of each group suffers from the operations of the others within this disputed tract; but its sense of justice is outraged also. The question of the boundary becomes a question of pride and a question of principle; and it is fought over with an eagerness which is out of all proportion to the intrinsic importance of the dispute.

But there is another aspect of such questions, which makes them important to workmen as a whole, and which may sometimes entitle one of the disputants to consider that it represents the interest of the working class. If the employer is permitted, at his pleasure, to choose which of two unions shall do a given work, the effect is the same in kind as if he were permitted to revert to the individual bargain.

<sup>1</sup> Reports of the Industrial Commission, vol. vii, pp. 326, 362.

<sup>2</sup> *Ibid.*, pp. 335, 336, 470, 475.

<sup>3</sup> *Ibid.*, p. 362.

The work of the higher-paid unions may be handed over, little by little, to the lower paid. The higher standard may be nominally maintained; but its field of application is gradually narrowed, and, taking the employment as a whole, there is an insidious and unacknowledged lowering of the standard rate. There is some reason for supposing that when labor tribunals, building trades councils and the like, have opportunity to decide questions of jurisdiction, they are likely to prefer the union which has the higher standard. This is the direction in which they might be expected to lean, if they acted in view of the ordinary trade-union assumptions as to the broad interests of the working class.

*Organization by industries v. organization by trades.*—The original idea of trade unionism involves the notion of a trade, requiring a particular kind of skill or activity, as the basis of common interest and therefore of unity of organization. With the advance of the labor movement the tendency to greater aggregation has increased among the labor unions, as in other departments of industrial life, till such a union as the Brotherhood of Carpenters and Joiners includes all grades of workers, from the highly skilled artisan to the mere feeder of a machine. A few unions have fully abandoned the notion of the trade as the basis of unity, and have substituted the notion of the industry. The United Brewery Workmen undertake to include every wage earner about the breweries, the United Mine Workers every wage earner about the coal mines, the International Typographical Union all wage earners directly connected with printing. The Mine Workers aim to bring all the men at a given mine, under ground and on the surface, firemen, engineers, and all, into one local union. The policy of the Brewery Workmen is to form separate local unions of brewers, maltsters, bottlers, coopers, team drivers, firemen, engineers, etc., all in subordination to the one national body. The printers, somewhat differently situated, do not feel that the engineers and the firemen in their establishments, or other workers who do not possess any kind of skill which is specifically related to printing, form one industrial unit with themselves. They desire, however, to organize under their jurisdiction all workers who do possess such skill—stereotypers, photo-engravers, mailers, type foundrymen, and even newspaper writers. They extend the notion so far as to include the machinists who keep the typesetting machines in order. Their plan of organization, like that of the Brewery Workmen, is to form the followers of each craft, so far as practicable, into separate local unions. The pressmen and the bookbinders have broken away and formed independent national unions of their own.

When an organization claims to control all the workers in a given establishment, without regard to their particular occupations, it is certain to come into conflict with other organizations which claim jurisdiction over some part of the same persons by virtue of their occupations. The Typographical Union, in resolving that all machinists who are employed in the care of linotypes must belong to it, comes into conflict with the International Association of Machinists.<sup>1</sup> The United Mine Workers conflict with the Stationary Firemen, the Steam Engineers, and the Blacksmiths, the Brewery Workmen with the Firemen, the Engineers, the Coopers, the Painters, and the Team Drivers.

The argument for trade organization is based partly on the common interest of the workers at a given occupation. A cooper is a cooper, whether the chief business of his employer is the making of beer or the production of barrels for sale. Whatever the nature of the establishment he may chance to work in, he should, it is said, be governed by the same trade rules, and should stand with his fellow-craftsmen in maintaining common rates of wages and conditions of labor.

To undertake to unite in a single organization workmen of various degrees of skill, various rates of customary wages, and various degrees of economic power against

<sup>1</sup> There is no rule to prevent a man from belonging to both organizations, but not many men care to pay double dues or to owe a divided allegiance.

their employers, must result, it is asserted, in divided counsels and conflicting interests within the organization, and in consequent weakness. Say Mr. and Mrs. Webb: "The whole history of trade unionism confirms the inference that a trade union, formed as it is, for the distinct purpose of obtaining concrete and definite material improvements in the conditions of its members' employment, can not, in its simplest form, safely extend beyond the area within which those identical improvements are shared by all its members—can not spread, that is to say, beyond the boundaries of a single occupation."<sup>1</sup>

The advocates of organization by industries maintain, on the other hand, that the true community of interest exists between those who stand face to face with the same employers. The wages, hours, and other conditions of the fireman who tends the boiler at the coal mine, of the cooper who repairs the kegs of the brewery, of the driver who delivers the beer, can be most effectively promoted by their fellow-workmen who have a common employment with them at the mine or in the brewery, rather than by firemen or coopers or drivers whose work is tributary to quite other occupations. Though such a small minority in an industry be separately organized, and though it deny any allegiance to the organization of the great body of workers in the industry, it is upon that body of workers that it must still depend for effective support in its demands. The strike of the firemen of the anthracite mines in 1901 illustrated the practical effects of such a situation. The United Mine Workers, embracing the great body of the workmen, were under an agreement with the employers providing for the continued operation of the mines until April 1, 1902. The stationary firemen, separately organized, struck. They were conscious that they needed at least the passive support of the United Mine Workers if they were to win. The United Mine Workers, annoyed by the cessation of work, and resenting the separatist policy of the firemen, viewed the strike with half hostile neutrality, and at last with open hostility. It was intolerable, from their point of view, that the firemen should by separate action interfere with the employment of all the men about the mines, outnumbering them by scores to one. Their opposition made failure absolutely certain.

The firemen, seeking an improvement of their condition, tried to impose the burden of obtaining it upon the miners. This was inevitable. No other body of workmen could effectively undertake it. But, say the mine workers, since the firemen of necessity look to us for support, they ought to consult our interest and our judgment in choosing times and methods. They ought to join with us in forming the whole body of mine workers into a single organization, which shall be able to act as one man in the interest of all.

In opposition to this view, the representatives of the smaller crafts within an industry sometimes feel that in a unified organization their interests are overlooked in the interest of the majority. It was a feeling of this kind which led the pressmen and the bookbinders to leave the International Typographical Union, whose policy is controlled by the compositors, the overwhelming majority. Though a considerable degree of autonomy is granted to the minor crafts which are still within the Typographical Union, they often show uneasiness and jealousy of the compositors. In the allied printing trades councils it is not rare for the minor crafts within the International Typographical Union to take sides with the pressmen and the bookbinders against the compositors; and in 1900 the stereotypers and electrotypers asked, unsuccessfully, to be allowed to leave the Typographical Union and form a separate organization.

From the standpoint of the employer there would seem to be a considerable advantage in dealing with a single organization, controlling all the men in his establishment, rather than with half a dozen, any one of which might tie up the whole

<sup>1</sup>Sidney and Beatrice Webb, *Industrial Democracy*, vol. I, p. 139.

business in spite of any understanding which he might have with the others. This was illustrated in the strike of the anthracite mine firemen. Despite an agreement with the organization of the great body of the mine workmen, the whole business of the operators was interrupted by a small independent minority. On the other hand, unity increases the strength of the workers, and a demand which is backed by a whole working force is less easy to resist than a demand which has the direct support of only a fraction.

Until very recently the American Federation of Labor, which may pretend, with a better right than any other authority, to express the general opinion of organized labor in America, has unquestionably stood for "trade autonomy." But the last convention of the Federation—that of 1900—appeared to set its face the other way. It sanctioned the claims of the Brewery Workmen to control their industry, and so seemed to indicate its general approval of the principle of organization by industries rather than by trades. It is maintained by some that the convention did not mean to set up this principle, but only to recognize an existing status, and to maintain the policy of noninterference in disputes between constituent unions, but this view seems hardly consistent with the terms of the resolution which was passed, or with the report of the committee which framed the resolution.

Even if this were the intention of the convention, it may be that the practical result would not be very different. A strong organization, controlling the great majority of the employees of an establishment, can control the small minority if it sees fit. The International Typographical Union has forced the linotype-tending machinists into its own ranks. The United Mine Workers have shown that the mine firemen can accomplish nothing without their countenance. In the absence of strong outside support, such as could hardly be looked for from any other source than the Federation of Labor, the principle of strict trade autonomy can not be maintained, on behalf of scattered members of a trade, in the face of an established industry-union which wishes to set it at naught. It is not to be expected that unions based on the industry will supersede those founded on the idea of the trade; but it seems likely, at the present moment, that they will acquire a relatively increasing importance.

## CHAPTER II.

### COLLECTIVE BARGAINING, CONCILIATION, AND ARBITRATION.

#### I. IMPORTANCE AND GENERAL NATURE OF SUBJECT

Perhaps no other question relating to labor has attracted greater attention in the United States in recent years than that of the methods of securing more peaceful relations between employers and employees. There is a growing feeling on the part of workmen, employers, and the general public that the determination of the conditions of labor by open conflicts, strikes, and lockouts, is in most instances unduly expensive, and that it tends to create unnecessary friction between employers and employees. Not only do both the employers and employees suffer from the loss of working time and interruption of business which come from strikes and lockouts, but the convenience and comfort of the general public are in many instances seriously interfered with. The ill feeling which too often accompanies open rupture between masters and men is not the least of the evils of strikes and lockouts. Widespread and growing interest accordingly is manifested in the subject of methods which shall tend to prevent, so far as practicable, the actual cessation of employment on account of differences concerning the conditions of labor, or which, in case employment is actually interrupted, may facilitate early and peaceful settlement.

The result of this growth of public sentiment in favor of more peaceful methods of determining the relations of employers and employees in the United States is shown by the rapid increase in the number and effectiveness of the organizations and methods seeking this end. One conspicuous movement of recent years has been that toward the enactment of legislation seeking to establish methods of arbitration, conciliation, and mediation. In a considerable number of States laws have been passed providing for permanent State boards of arbitration, and while in some of the States the laws have been almost dead letters, several of the boards thus established have accomplished noteworthy results. In other States the legislatures have passed statutes encouraging the formation of local boards of conciliation and arbitration, a measure, however, which seems to have proved almost uniformly of no avail. Even more important than these legislative enactments is the movement toward the voluntary establishment of methods of "collective bargaining," or conciliation and of arbitration, within the various trades themselves. In many trades the conditions of labor in not a few localities are determined by conferences between employers and employees, or between representatives of organizations of employers and employees. These conferences often result in written agreements prescribing the terms of the labor contract for a given period of time. The practice is also growing of referring disputes, especially those relating to the interpretation of the labor contract, to committees representing the employers and employees, while in many instances impartial umpires or arbitrators are called in to settle matters as to which such committees can not agree. The most conspicuous manifestation of the movement in favor of more harmonious relations between employers and employees is found in the systems of conferences and joint agreements covering trades throughout the entire country, or throughout large sections. In most of the 10 or 12 trades in the United States in which such wide-reaching systems exist they have been established

within the past 15 years, while fully half of the systems date back not more than 5 years.

In view of the importance of this subject and the general interest manifested the Industrial Commission has deemed it wise to make a thorough investigation of the existing methods of furthering the peaceful settlement of differences between employers and employees. In the accompanying report the attempt has been made to describe the organization and working of these methods in the United States and to give some description also, for purposes of comparison, of the experience of foreign countries, both with arbitration and conciliation, by public authorities and with voluntary methods. The opinions of leading authorities, including employers, workmen, public officers, and representatives of the general public, have also been quoted or summarized.

As a preliminary to this investigation a brief discussion of the terms employed and of the general conceptions underlying the practices of arbitration and "collective bargaining" is desirable.

Unfortunately there is no little looseness in the use of the fundamental terms connected with these methods. Strictly speaking, clear distinctions may be drawn between collective bargaining, arbitration, conciliation, and mediation.

*Arbitration* is the authoritative decision of an issue as to which the parties have failed to agree by some person or persons other than the parties.

*Conciliation* is a term applied very commonly by English employers and employees, and by economic writers, to the discussion and settlement of questions between the parties themselves, or between their representatives, who are themselves actually interested. It is also frequently used by State boards of arbitration as identical with mediation.

For reasons more fully explained below it seems desirable to restrict the meaning of the word conciliation to the settlement, by the parties directly, of minor disputes, as to interpretation of the terms of the labor contract, whether that contract be an express one or only a general understanding, and to introduce the phrase "collective bargaining" as covering the remainder of the field above described.

*Collective bargaining*, then, may be defined as the process by which the general terms of the labor contract itself, whether the contract be written or oral, are determined by negotiation directly between employers or employers' associations and organized workmen.

*Mediation* is the intervention, usually uninvited, of some outside person or body, with a view to bringing the parties to a dispute together in conciliatory conferences.

Arbitration in the strict sense implies the rendering of an authoritative decision. Conciliation and collective bargaining imply amicable conference and agreement by the parties themselves.

Mediation is only a preliminary to the settlement of a dispute. Through the intervention of a mediator the parties may be led to conciliate—that is, to reach an agreement among themselves—or they may be led to submit the matter to the arbitration of the person who mediates or to some other person. The action of mediators in meeting with the parties to a dispute and trying to bring them to a peaceful settlement is also frequently called conciliation—a usage, perhaps, more in accordance with the ordinary understanding of the term as applied to other than labor matters.

In order correctly to understand the scope of the subject under discussion and the applicability of terms, it is necessary to bear in mind continually the very important distinction between the two chief classes of industrial differences which may be adjusted by peaceful methods.

(1) Those which concern the interpretation of the existing terms of employment, usually of a minor character.

(2) Those which have to do with the general terms of future employment, and which are usually more important.

The great majority of disputes are of the former class. They relate not to questions of principle, but to details and interpretations. Thus, if there be a general agreement or understanding that a certain price shall be paid to workmen for doing a certain piece of work, a difference may arise in case there is some minor change in the goods to be made. If the employer agrees to employ only union men, there may be a dispute as to the standing of some man whom he employs. Of course, these questions may readily pass over into disputes as to more general matters. On the other hand, from time to time, the question arises between an employer and his men, or between organizations of employers and organizations of employees, as to the general conditions under which labor shall thereafter be performed. Such differences are likely to involve larger numbers of persons than those of the first class and to be more difficult of adjustment. The settlement of such general questions may be likened to an act of legislation; the interpretation and application of the general contract may be likened to a judicial act.

We may now discuss the relation between the different practices named in the definitions above and these two classes of differences as to the labor matters.

It is obvious that "collective bargaining," as above defined, has to do with the second class of questions above distinguished—those relating to the general terms of the labor contract. This phrase is one that has not come into very common use in the United States, and that has only recently been introduced in Great Britain, where it apparently owes its origin to Mr. and Mrs. Sidney Webb. The term seems to describe accurately a practice of very great and constantly growing extent, and of the highest social and economic significance—the determination of the general conditions of labor by peaceful negotiation between employers and organized laborers. The attention of the public is so often directed to the settlement of strikes and lockouts by arbitration, or by negotiation between committees of employers and employees, that the extent to which the practice of direct negotiation between employers and employees regarding the conditions of labor takes place, without strike or lockout, is often overlooked. The terms conciliation and arbitration can not properly be applied to this practice. The actual process by which the general terms of the labor contract are established by negotiations between employers and organized workmen directly, is essentially a process of bargaining. The bargaining is collective because the workmen are organized, and in many instances the employers are organized as well. We can not speak of collective bargaining properly in cases where individual workmen negotiate with employers as to the terms of the labor contract. It is, of course, a familiar fact that the individual laborer is usually in a position of inferior economic strength as against the employer in agreeing upon the labor contract. More and more laboring men are tending to get together, to organize, and to negotiate with employers collectively.

There are distinguishable many different stages and methods of collective bargaining. The most common method of all is the purely informal one in which representatives of labor organizations meet from time to time with employers to present demands and discuss the general terms of labor, without establishing systematic methods of organization and procedure in these conferences, and without adopting written agreements. More formal collective bargaining, which is found most commonly in trades where employers as well as workmen are organized, involves more or less regularly recurrent and systematically conducted conferences between representatives of the employers and the employees. Collective bargaining of this sort is quite frequently termed by those concerned the *joint conference system*. The representatives of the parties are also at times called joint committees and joint boards. In Great Britain the phrase "wages boards" is especially common. Usually these more formal negotiations between organizations of employers and employees result in written agreements regarding the conditions of labor, and the practice is very often, especially in the United States, referred to as the *agreement system*.

Whether the phrase "collective bargaining" will ever become established in common use in the United States is perhaps doubtful. It is, however, clearly desirable that the nature of the practice which it represents should be clearly understood. None of the other phrases in ordinary speech seems accurately to describe all the different forms of peaceful negotiation between employers and organized workmen regarding the general conditions of labor. Certainly the word conciliation, which is largely used in Great Britain and which is somewhat common in the United States, particularly among economic writers, does not to the ordinary mind convey the idea of such bargaining as to the general labor contract. It is not applied to the making of ordinary bargains, such as those between buyer and seller, or between two corporations.

If the word conciliation is to be applied at all in regard to labor matters it would seem desirable to restrict it to the settlement of minor disputes as to the interpretation of the labor contract. Even here it may perhaps best be confined to those cases where the parties *directly interested* meet in a friendly manner to settle differences of this class. In Great Britain there are many trades in which organizations of employers and employees select joint committees to which any dispute of the members of the organization may be appealed. These committees are frequently called boards of conciliation. Of course in many and perhaps most instances the action of these joint committees consists in influencing the parties to a dispute to come to an informal understanding, rather than in rendering authoritative decisions, and their action in this direction may be perhaps accurately described by the term conciliation. As above suggested, State boards of arbitration use the word in a very similar sense. However, the common usage of employers and employees in this country gives to these joint trade boards the name of arbitration boards or arbitration committees. Doubtless mediation is a word more distinctively applicable than conciliation to the intervention of State boards or other outside parties.

As suggested in the definition above, arbitration, strictly speaking, is the authoritative decision of questions at issue by some impartial authority. It is obvious that arbitration may be resorted to with regard to disputes involving the general terms of the labor contract, as well as with regard to disputes concerning its interpretation. The parties to a dispute, whatever its character, may submit it to arbitration after failure to settle it by collective bargaining or by conciliation. Whether it is as wise ordinarily to submit general questions to arbitration as questions of interpretation is perhaps doubtful. It is certainly the case that minor questions are more often arbitrated than those of great importance involving the general conditions of future labor.

It should be noted especially that it is very common, both in the United States and Great Britain, to find boards composed of an equal number of representatives of organizations of employers and employees, with no impartial outsider as an umpire, which have power to decide authoritatively minor disputes between members of the organizations. As already pointed out, in Great Britain these are often called boards of conciliation, but in this country they are much more commonly called arbitration boards or arbitration committees. The term arbitration seems fairly applicable to the decisions of such committees, despite the fact that there is no appeal to any person outside the trade. The settlement of disputes in such cases is not reached by negotiation directly between the parties concerned. It is reached by the binding decision of higher representatives of the organizations to which they belong, representatives supposedly free from the personal bias and from the feelings of animosity which are likely to exist among those immediately concerned in disputes. Perhaps the phrase "arbitration within the trade" or "trade arbitration" may be employed as somewhat more strictly describing this system of settling differences without appeal to outside umpires. These phrases are, however, sometimes used as distinguished from arbitration by State boards, even in cases where umpires are called in.

The practice of mediation is also applicable both to disputes regarding general con-

ditions of labor and to those regarding interpretation. It is obvious, however, that mediation is likely to occur only in regard to disputes which have become conspicuous before the general public, and which involve the public interests as well as those of the disputants. In other words, the intervention of outside parties to bring about a settlement usually takes place only in the case of open rupture between employers and employees, and usually only after prolonged strikes or lockouts.

An important consideration which should be borne in mind in discussing these practices of collective bargaining, conciliation, and arbitration has to do with the question whether they are applied before or after cessation of employment has actually occurred. It is obvious that it is especially desirable that employers and employees should be led to adjust the differences which may arise, whether regarding the general conditions of the labor contract or regarding its interpretation, by peaceful methods before a strike or lockout intervenes. The most important results which have been accomplished by collective bargaining, conciliation, and arbitration have been in preventing cessation of employment. Differences which do not lead to open rupture are less conspicuous to the general public than prolonged strikes and lockouts, and the enormous importance of the settlements which are effected without any cessation of labor is often overlooked. It is the chief aim of those who advocate the establishment of regular and permanent systems of collective bargaining by conferences of employers and employees, and regular and permanent joint boards for the decision of questions of interpretation, that by these means strikes and lockouts may be reduced to the minimum. When once a difference has led to an actual strike or lockout the feeling engendered is likely to delay if not altogether to preclude conciliatory conferences between representatives of employers and employees, or reference to arbitrators. At the same time the importance of collective bargaining, conciliation, and arbitration in the settlement of prolonged disputes is not to be underestimated. Any one of these three distinct practices just named may become applicable to the settlement of a strike or lockout, as well as to settlement of differences not resulting in cessation of employment.

It will be noted, in considering the description of existing methods of securing peaceful relations between employers and employees which follows, that there is not always a clear recognition, on the part of those actually concerned, of the distinction between the two classes of disputes above named, those which have to do with the interpretation of existing contracts, and those which have to do with the general terms of the contracts themselves. In other instances, however, the distinction is recognized. Often machinery exists for the settlement of one class of differences, particularly those of a minor character, in the absence of any provisions of a permanent nature for the settlement of the other class of questions. In some trades, particularly in Great Britain, two different sets of machinery are formally established to handle the two classes of disputes.

## II. LOCAL COLLECTIVE BARGAINING, ARBITRATION, AND CONCILIATION.

### INFORMAL PRACTICES

As already suggested, the great majority of differences between employers and employees, both those relating to the general terms of the labor contract and those which arise as to minor matters of interpretation, are settled by the parties concerned themselves without either appeal to formal arbitration or to the war measures of strikes and lockouts. In most cases these peaceful negotiations are carried on without any formal system of conferences, or of boards of conciliation and arbitration. While undoubtedly there are many advantages in the existence of such more formal systems, especially because they create a presumption in favor of making use of the

agencies offered, much may, nevertheless, be accomplished informally, if employers and employees are only willing to approach one another and to discuss matters in an amicable manner.

We are not here concerned with cases where the determination of the conditions of labor or of matters of interpretation is made simply by negotiations between the employer and his individual employee. In order to speak properly of collective bargaining or of conciliation, as we have already seen, there must be at least a certain degree of organization on the part of workmen. Very frequently, however, all the employees, or one class of the employees, in an establishment act together collectively from time to time even in the absence of regularly established trade unions. An informal committee is constituted to confer with the employer as to some matter of general interest, be it the rate of wages or a question, perhaps, of much less importance. Employers often meet such delegations, or meet the entire body of their men, directly and discuss matters at issue with them. In many instances peaceful settlements are brought about by such altogether informal conferences.

Workmen frequently assert, however, that employers are much more likely to enter into collective bargaining and conciliation if they feel that their men have back of them the power which comes from formal organization. They assert, also, that the advantages gained by the employees in negotiations with employers are likely to vary in a more or less close proportion to the strength of the labor organization. It certainly is true that collective bargaining, conciliation, and arbitration are all much more common where strong labor organizations exist than where they are absent. Of course it is essential under such circumstances that the employer shall recognize the legitimacy of organization on the part of his men, and shall be willing to deal with their duly constituted representatives. Whether the existence of labor organizations tends to increase or to decrease the number of strikes is a mooted question, but there can be no doubt that in trades where strong unions actually exist, strikes and labor difficulties are likely to be much more numerous if the employers refuse to deal with the men in their organized capacity.

A very large number of trade unions, both local and national, have in their constitutions declarations of a general character to the effect that strikes are in themselves undesirable. It is very common to find rules that strikes shall be resorted to only "after the failure of all honorable attempts at peaceful settlement." Moreover, the rules of local and national trade unions, almost without exception, provide for conciliatory negotiations with employers before a strike may be entered upon. If the union feels that it has a grievance it usually directs its regular officers or its business agent—if it has one—or a special "arbitration committee" to present the matter to the employer. Such arbitration committees are sometimes permanently constituted, and in other cases are chosen especially to negotiate regarding the particular matter at issue. These representatives of the union do not perhaps usually have power to make binding settlements upon other terms than those of the original demand. If these terms can not be secured, the propositions of the employer are reported back to the union, and frequently negotiations are continued until a compromise is reached. Before a strike can actually be begun the rules of most unions require that a secret vote of all the members shall be taken, and in general a majority of two-thirds or three-fourths is required to authorize the cessation of employment.

Informal negotiation of this sort between employers and labor organizations is usually developed more highly and works more effectively in those trades in which the local unions are united into strong national bodies. When a national organization pays benefits to the members of local unions on strike, the national officers are naturally given a very considerable degree of control over the inauguration of strikes. The constitutions of well-established national unions usually refuse to sanction any strike unless all the following steps have first been taken. First, thorough efforts at

negotiation on the part of the local unions affected; second, a determination by a two-thirds or three-fourths majority of the local members, on secret ballot, to insist on the demands made; next, approval by the national officers of the position the locals have taken; and finally, the most exhaustive efforts on the part of these officers, in person or by deputy, to obtain a peaceful settlement of the dispute. These national officers are in many cases men of high intelligence and of long experience as to labor disputes. They are largely free from the personal feeling and the narrowness which are apt to characterize the local unions in their conflicts with employers. By their intervention, accordingly, they are often able to prevent strikes or to secure satisfactory settlement of disputes by conciliatory methods. Perhaps the most noteworthy success in this direction has been attained by the conservative and intelligent officers of the Bricklayers and Masons' International Union.

The formation of associations of employers in this country has lagged far behind the development of associations among workmen. Gradually, however, doubtless in part under the pressure of organized labor, employers in not a few trades have come to realize the advantages of systematic action in their dealings with employees, not only in giving additional strength, but also in securing more uniform cost of labor and consequently more equal competition. Where such associations of employers exist conciliatory methods, both formal and informal, are more general than where employers deal as individuals with the unions.

#### MORE FORMAL SYSTEMS OF COLLECTIVE BARGAINING AND AGREEMENTS.

There are very many instances in which the informal methods of collective bargaining between employers and employees give place to somewhat more formal systems of a local character. It is especially common to find such bargaining resulting in written agreements prescribing the conditions of labor for a given period of time or indefinitely. While the existence of a written agreement does not always imply that collective bargaining has been developed to a higher degree than in cases where no such agreements are adopted, it is nevertheless true that usually where the practice of collective bargaining has been most thoroughly and successfully worked out, the results of the bargain are set forth in written agreements. Many of these written agreements also provide for the arbitration of minor disputes arising regarding the interpretation of their terms. The methods by which written agreements are adopted, their contents, and their bearing upon the relations of employers and employees, vary greatly in different cases. The reference of particular disputes to arbitration is not uncommon even where systematic collective bargaining and written agreements do not exist.

Local systems of collective bargaining and agreements between employers and employees have been most highly developed and have worked most successfully in those trades in which the employees are most strongly organized. Among these may be named especially the building trades, in which perhaps the practice is most general and most effective, the brewery, boot and shoe, baking, woodworking, and metal working trades, some branches of the clothing trade, and the transportation business. In the detailed report which follows will be found a description of the systems in force in these and other trades, so far as it has been practicable to obtain information concerning them. Copies of numerous agreements have been reproduced or summarized. It is not claimed that all of the trades in the United States in which the system is employed have been covered by this report. The investigations of the Commission have been necessarily largely confined to those labor organizations which are affiliated with national bodies, although the systems of agreements in the case of a considerable number of local organizations have also been described. From some of the national organizations, also, it has been impossible to obtain full information as to the practice of their affiliated locals in this regard. The precise extent of the practice of making written agreements regarding the conditions of labor, or of carrying on col-

lective bargaining in a formal manner, can not therefore be stated, but there can be little doubt that the conditions of labor are determined by such methods much more commonly than is ordinarily supposed.

*Agreements with organizations of employers and agreements with individuals.* The extent to which a written agreement, regarding the terms of the labor contract, represents the result of genuine collective bargaining, of really conciliatory methods, differs greatly in different cases, depending especially upon the relative strength of the parties to the agreement. Collective bargaining is naturally most successfully developed where both employers and employees are strongly organized. It is a well-known fact, often lamented by employers, that the organization of the employing class has in most trades made much less advance than the organization of workmen. Even where associations of employers do exist, they are often comparatively loose and can not control the actions of their individual members in their dealings with organized labor. Local organizations of employers in this country are most numerous and most vigorous in the building trades. In most of our large cities the masters in the more important of these trades are organized, in many instances with the openly expressed purpose of strengthening themselves in their dealings with labor. The organizations of employers in the bricklaying trade, and in the plumbing, steam fitting, and other closely allied trades, are perhaps especially effective. In the three trades just named the local organizations are to a greater or less extent affiliated with national associations. The National Association of Builders, while nominally covering all of the building trades, is largely composed of local associations of master bricklayers and masons. This organization, however, has not been very successful in attaining its objects or extending its scope.

Central organizations, including the employers' associations of different building trades in a single city, are also sometimes found. In most instances these central associations in the building trades have comparatively little to do with labor questions. In a few cases, however, they have been organized with the express purpose of aiding their affiliated bodies in their dealings with labor organizations. This was conspicuously true in the case of the Chicago Building Contractors' Council, which was established, according to its officers, in view of the necessity of counter-organization to face the powerful Building Trades Council, which had brought together practically all the labor organizations in the building trades of Chicago. A detailed account of the Building Contractors' Council and of its great struggle with the Building Trades Council is given in volume viii of the Reports of the Industrial Commission.

Local organizations of employers which concern themselves with labor questions are found also more or less frequently in several other important trades, such as, for example, the brewery, the granite and stone cutting, and the woodworking trades.

Where such local associations of employers exist over against strong labor organizations, the conditions of labor are very generally determined by collective bargaining and set forth in written agreements. These agreements, moreover, are usually more elaborate, and more often provide for the settlement of disputes as to interpretation by arbitration, than is the case with agreements between individual employers and labor organizations. It has indeed been repeatedly asserted by advocates of peaceful methods of adjusting the relations between employers and employees that it is essential that strong organizations should exist on both sides.

It is nevertheless true that in this country by far the larger number of written agreements prescribing the conditions of labor are made between organizations of workmen on the one hand and employers acting individually on the other hand. Where this is the case, employers often complain that the agreements are in many instances very one-sided—that they represent merely concessions to the demands of strong labor organizations. It is beyond question true, as is evident from the terms of the agreements themselves and from the reports of employers and employees as to the methods of adopting them, that proposals as to the terms of a very large

negotiation on the part of the local unions affected; second, a determination by a two-thirds or three-fourths majority of the local members, on secret ballot, to insist on the demands made; next, approval by the national officers of the position the locals have taken; and finally, the most exhaustive efforts on the part of these officers, in person or by deputy, to obtain a peaceful settlement of the dispute. These national officers are in many cases men of high intelligence and of long experience as to labor disputes. They are largely free from the personal feeling and the narrowness which are apt to characterize the local unions in their conflicts with employers. By their intervention, accordingly, they are often able to prevent strikes or to secure satisfactory settlement of disputes by conciliatory methods. Perhaps the most noteworthy success in this direction has been attained by the conservative and intelligent officers of the Bricklayers and Masons' International Union.

The formation of associations of employers in this country has lagged far behind the development of associations among workmen. Gradually, however, doubtless in part under the pressure of organized labor, employers in not a few trades have come to realize the advantages of systematic action in their dealings with employees, not only in giving additional strength, but also in securing more uniform cost of labor and consequently more equal competition. Where such associations of employers exist conciliatory methods, both formal and informal, are more general than where employers deal as individuals with the unions.

#### MORE FORMAL SYSTEMS OF COLLECTIVE BARGAINING AND AGREEMENTS.

There are very many instances in which the informal methods of collective bargaining between employers and employees give place to somewhat more formal systems of a local character. It is especially common to find such bargaining resulting in written agreements prescribing the conditions of labor for a given period of time or indefinitely. While the existence of a written agreement does not always imply that collective bargaining has been developed to a higher degree than in cases where no such agreements are adopted, it is nevertheless true that usually where the practice of collective bargaining has been most thoroughly and successfully worked out, the results of the bargain are set forth in written agreements. Many of these written agreements also provide for the arbitration of minor disputes arising regarding the interpretation of their terms. The methods by which written agreements are adopted, their contents, and their bearing upon the relations of employers and employees, vary greatly in different cases. The reference of particular disputes to arbitration is not uncommon even where systematic collective bargaining and written agreements do not exist.

Local systems of collective bargaining and agreements between employers and employees have been most highly developed and have worked most successfully in those trades in which the employees are most strongly organized. Among these may be named especially the building trades, in which perhaps the practice is most general and most effective, the brewery, boot and shoe, baking, woodworking, and metal working trades, some branches of the clothing trade, and the transportation business. In the detailed report which follows will be found a description of the systems in force in these and other trades, so far as it has been practicable to obtain information concerning them. Copies of numerous agreements have been reproduced or summarized. It is not claimed that all of the trades in the United States in which the system is employed have been covered by this report. The investigations of the Commission have been necessarily largely confined to those labor organizations which are affiliated with national bodies, although the systems of agreements in the case of a considerable number of local organizations have also been described. From some of the national organizations, also, it has been impossible to obtain full information as to the practice of their affiliated locals in this regard. The precise extent of the practice of making written agreements regarding the conditions of labor, or of carrying on col-

theless, even in the United States, where the system of collective bargaining has been long in operation in any locality, it is usually true that the procedure has become, by custom, more or less systematic and formal. The negotiation is in practice made by representatives of the employers and employees who are more or less recurrently charged with this duty, and have thus acquired experience, and their methods of procedure become by habit somewhat uniform.

In some few instances the written agreements, which from time to time define the terms of the labor contract, contain also provisions as to the method of bringing about their own renewal. Thus the agreement in the bricklaying trade of New York intrusts the formation of the new agreement to the same committee which, under the existing one, has to do with settling minor disputes as to interpretation. The rules provide that this committee, which consists of 8 members on each side, shall hold a special meeting in January for the purpose of considering the agreement covering the year beginning May 1. Local written agreements indeed very often provide for the settlement of minor disputes by a committee consisting of an equal number of employers and employees, frequently with provision for reference of matters as to which they can not agree to an outside umpire. While the agreements seldom contain such a provision as that in the New York bricklaying trade, giving authority to the arbitration committees to establish future agreements, it is sometimes the case in practice that these arbitration committees, without any written rule to that effect, actually get together and act upon the adoption of the general agreements themselves. Such joint committees, where they consist of 4, 6, or more persons, equally divided between employers and employees, occasionally are authorized to act by majority vote, but usually it is expected that each side will act as a unit and that an agreement will be reached simply by compromise. This is, of course, the more likely to be the case where the point at issue is a general and wide-reaching one, so that neither party is willing that a single vote should turn the scale. It is, moreover, seldom true that an independent umpire is called in to decide concerning the general terms of the future labor contract, though this does occasionally happen, and in a few instances is provided for by the agreements themselves. Perhaps most often the adoption of the general agreements from time to time is simply the result of negotiation between representatives of the organizations of employers and employees selected in accordance with no particular rules. Each side sends its best men to represent it. The agreement is a bargain reached in the same way as any bargain between buyer and seller; the process is one of "higgling." The representatives of the two sides do not constitute one board, acting by a majority vote, but each side acts as a unit, and negotiations continue until all are prepared to accept the compromise which is reached. As we shall see, this is the actual form in which the process of collective bargaining usually works itself out in those trades where it has been introduced on a national scale, and apparently the same is true as regards local systems. So far as this is true, it is obviously unimportant whether the two parties to the bargaining process should be represented by an equal number of persons. It is only important that they should be duly accredited and acceptable agents of their respective constituents.

In this connection it should be noted that, in the absence of permanent written rules regarding the methods of collective bargaining, it is often, perhaps usually, the case that the committees or officers who meet for the discussion of the terms of the agreements have not the power to bind their respective organizations. Complaints are made by employers that agreements reached by committees of workmen with whom they negotiate are frequently repudiated by the unions, or that the committees themselves profess not to have any final authority, so that the negotiations are indefinitely prolonged by constant reference to the votes of the unions. Workmen sometimes present a similar complaint as regards the representatives of the employers. There are very few local systems of collective bargaining in which a

definite treaty gives power to the duly chosen representatives of the parties to make binding agreements. In practice, to be sure, where organizations of approximately equal strength confer with one another, and especially where the system of collective bargaining has been long in use, the agreements reached by the representatives of the two sides, who are usually the leading officers and most capable men, are quite generally accepted by the organizations themselves.

It has already been implied that there is no uniformity in the methods by which collective bargaining is carried on and written agreements adopted. The number of representatives of the parties who confer, for example, varies greatly in different cases. The number depends somewhat on the membership of the organizations represented and on many other conditions. Particularly when several local organizations exist, which act jointly in negotiations, full representation of each organization in conference is evidently desirable and is usually provided for. Thus, in the New York bricklaying trade the arbitration committee, which also adopts annual agreements, consists of 1 member from each of the 8 local bricklayers' unions and 8 members from the employers' organization. While there may sometimes be occasion for complaint, as above indicated, because of the delay resulting from constant reference by the conferees back to their organization, there is a counter advantage from such reference—particularly obtainable where the organizations are conservative and have had long experience in collective bargaining—in the familiarity with the proposed terms, and with the arguments pro and con, on the part of the great body of the persons actually interested, which results from such consultation. Apparently there has not yet been developed locally in any trade such a system of conferences as is found in the bituminous coal industry, in which large representative bodies of employers and employees actually meet in joint session for the discussion of the terms of the annual labor contract, although the completion of the negotiations is ordinarily referred to a much smaller committee.

The methods of conducting collective bargaining in Boston, in the bricklaying and other building trades, are, as already suggested, worked out with especial formality and prescribed by definite rules. Permanent agreements have been adopted by the Mason Builders' Association, on the one hand, and the Bricklayers' Union and several other local unions, on the other hand. Each of these agreements provides for a joint committee of not less than 6 members. In the case of the bricklaying trade there are 10 members, 5 on each side. The committee meets annually in January to discuss the working rules and labor contract for the ensuing year. A majority vote decides all questions. This last is an unusual provision, so far as the adoption of the general terms of the labor contract is concerned. Equally unusual is it to find, as in Boston, provision for referring matters of difference as to the general terms of the labor contract, as well as those concerning its interpretation, to an impartial umpire in case they can not be settled between the parties themselves. In practice the umpire has been called in very rarely, and in practice also, beyond question, the annual scales and working rules are adopted usually by unanimous agreement of the committees after negotiation and compromise, rather than by mere majority vote.

*Terms of joint agreements as regards condition of labor* <sup>1</sup>—Local written agreements of the kind to which we have been referring differ very greatly among themselves in their contents and nature. In many instances they are indefinite in their duration. This is especially true when, as not infrequently happens, agreements follow the settlement of a strike and refer primarily to the particular questions at issue in the dispute. It is also often true of concessions obtained from employers by labor organizations without strike. Such agreements are much less important, from the standpoint of industrial peace, than those which are adopted by genuine collective

<sup>1</sup> For a discussion of the policy of labor organizations regarding the various conditions of labor covered in these paragraphs, see pp. XLII-LXXIII.

bargaining. These are generally, though not always, for given periods of time. Agreements of this character are most usually adopted annually, but in not a few instances, especially in the building trades, they run for 2, 3, or even 5 years. Employers, in particular, often prefer to have the conditions of labor prescribed for more than a single year in order that they may count upon the cost of long undertakings. The agreements adopted after the Chicago building trades strike of 1900, which were to a considerable degree dictated by the employers, ran for 3 years. That of the plumbers in St. Louis, for instance, is for a 5-year period. In general, agreements of this sort contain provisions as to the rate of wages, whether by the day or by the piece, and regarding the hours of labor. In most instances they provide for higher rates of pay for overtime. Some agreements contain highly complicated scales of piece prices. In some cases the provisions regarding the beginning and closing of work, night work, Saturday half holidays, and full holidays are very elaborate and specific. Provisions regarding the time and method of paying wages are quite common.

The special terms of the various joint agreements naturally depend largely upon the nature of the trade. In trades where the apprenticeship system is in vogue, the agreements usually regulate the number of apprentices and frequently prescribe somewhat in detail the duration of apprenticeship, the wages of apprentices, and the character of work which apprentices may perform. The most thoroughly worked-out system of apprenticeship in the country is probably that in the Boston brick-laying trade, which is established by a permanent written agreement of masters and men. In some instances the joint agreements contain limitations of various kinds upon the amount of work which shall be performed, or provisions prohibiting or restricting the use of certain tools or machinery, or restricting the employment of unskilled labor on certain classes of work, with a view to securing the performance of this work for members of the union. Often minute details are regulated, such as the payment of carfare in going to and from jobs beyond a certain distance, the payment of extra wages for work of special classes, the allowance of beer in the case of brewery employees, etc.

Especially important are the provisions of these agreements regarding the rights of union men. This subject is discussed also in connection with the account of the general methods and policies of labor organizations.<sup>1</sup> In most cases where a labor organization is strong enough, it demands the employment of union men exclusively, and if it succeeds in enforcing the demand a clause to that effect is inserted in the agreement, if an agreement exists. A very large proportion of the agreements which have been submitted to the Industrial Commission contain this provision. This is especially true in the building trades.<sup>2</sup> In Boston, however, where the system of agreements in the building trades has been perhaps more thoroughly developed than anywhere else, they simply provide that the employers shall give preference to union men, and do not require the entire exclusion of nonunion men. The Building Contractors' Council of Chicago, in its great controversy with the building trades unions in 1900, at first insisted upon the demand that the employers should have the right to employ anyone they pleased, and some of the 3-year agreements, which were adopted in termination of the deadlock, contained provisions to this effect. In some of the agreements, however, notably that in the carpentry trade, it was provided that union men need not work upon buildings with nonunion men in the same trade, but that they should not refuse to work because of the employment of nonunion men on other buildings or jobs or in other trades than their own. Pro-

<sup>1</sup> See p. XLVIII.

<sup>2</sup> See for example the agreements described below of the New York bricklayers, marble workers, roofers and sheet-metal workers, pipe and steam fitters, electrical workers, and bakers, of the St. Louis plumbers, St. Louis brewery workers, of the butchers and meat cutters, clothing makers, hotel employees, and many others.

## LXXXVI INDUSTRIAL COMMISSION:—ARBITRATION, ETC.

visions for the exclusive employment of union men are found also among other trades—for example, the baking, brewing, clothing, and meat-cutting trades.

In connection with provisions requiring employers to hire only union men, there are often detailed regulations in joint agreements regarding the rights of officers of the unions to inspect the working cards of employees or otherwise to transact union business. In some instances officers are granted very considerable liberties, while in others they are restricted from interference with the men while actually at work. In New York the joint agreement in the bricklaying trade, for instance, provides that no member of the union shall be discharged for inquiring after the cards of men working upon any job, and that the walking delegate shall not be interfered with in visiting any building under construction, while if the shop steward is discharged for inspecting the cards of bricklayers he shall at once be reinstated. The agreement of the bricklayers of Chicago after the lockout of 1900, on the other hand, declared that there should be no interference with the workmen during working hours, although another provision permitted the presidents of the unions to visit shops during working hours in order to interview the contractor, steward, or men at work, provided they should in no way hinder the progress of the work. It will be observed that the two agreements just referred to both recognize the steward, the representative of the workmen on particular jobs. Provisions of a similar character recognizing shop committees, stewards, or other shop representatives are quite common in the joint agreements in the building trades and in some other trades. They virtually establish a channel of communication between the employer and his men as to minor matters.

Correlatively with provisions regarding the exclusive employment of union men, not a few joint agreements provide that members of the union shall work exclusively for members of the association of employers. The purpose of such a provision is to hamper employers who are disposed to compete "unfairly" with those in the association, by the cutting of wages or the offering of other inferior conditions of labor. While such outside employers may be able to get part of their work done by non-union men at less than union rates, they are likely to require the assistance of union men on particular kinds of work or at particular times when the supply of nonunion men is insufficient. If employers can then prevent them from obtaining the aid of union men they can often prevent them from extending their business or from undertaking certain tasks at all. Contracts of this sort, usually known as exclusive agreements, have been adopted at different times and at different places in most of the building trades, and occasionally in some of the other trades.<sup>1</sup> They are quite distinctly unpopular with the workmen, who declare that they strengthen the employers' organizations unduly, and tend to produce a monopoly of the business in comparatively few hands. Provisions in the constitutions of the United Brotherhood of Carpenters and of the Bricklayers and Masons' International Union now prohibit local unions from entering into such exclusive alliances, and the plumbers report that the system is gradually being discontinued in their trade.

Somewhat similar to the clauses providing that union men shall work only for members of the employers' associations are those prohibiting union men from working for less than the union rate of wages or under other conditions more unfavorable than are prescribed in the agreements. This arrangement tends to prevent employers who do not belong to the employers' organization, or who refuse to sign agreements, from taking advantage of any oversupply of union labor by employing union men under conditions which give them an advantage in competition over employers who comply with the conditions of the joint agreement. It also tends to prevent employers who are parties to an agreement from secretly violating it. Provisions of this sort are, perhaps, more frequently found than the exclusive-employment clauses.

<sup>1</sup> See, for example, the agreements, described below, of the St. Louis plumbers, the New York pipe fitters, marble workers, and roof and sheet-metal workers. Such provisions were formerly common in the Chicago building trades (see vol. viii, p. lxx).

bargaining. These are generally, though not always, for given periods of time. Agreements of this character are most usually adopted annually, but in not a few instances, especially in the building trades, they run for 2, 3, or even 5 years. Employers, in particular, often prefer to have the conditions of labor prescribed for more than a single year in order that they may count upon the cost of long undertakings. The agreements adopted after the Chicago building trades strike of 1900, which were to a considerable degree dictated by the employers, ran for 3 years. That of the plumbers in St. Louis, for instance, is for a 5-year period. In general, agreements of this sort contain provisions as to the rate of wages, whether by the day or by the piece, and regarding the hours of labor. In most instances they provide for higher rates of pay for overtime. Some agreements contain highly complicated scales of piece prices. In some cases the provisions regarding the beginning and closing of work, night work, Saturday half holidays, and full holidays are very elaborate and specific. Provisions regarding the time and method of paying wages are quite common.

The special terms of the various joint agreements naturally depend largely upon the nature of the trade. In trades where the apprenticeship system is in vogue, the agreements usually regulate the number of apprentices and frequently prescribe somewhat in detail the duration of apprenticeship, the wages of apprentices, and the character of work which apprentices may perform. The most thoroughly worked-out system of apprenticeship in the country is probably that in the Boston brick-laying trade, which is established by a permanent written agreement of masters and men. In some instances the joint agreements contain limitations of various kinds upon the amount of work which shall be performed, or provisions prohibiting or restricting the use of certain tools or machinery, or restricting the employment of unskilled labor on certain classes of work, with a view to securing the performance of this work for members of the union. Often minute details are regulated, such as the payment of carfare in going to and from jobs beyond a certain distance, the payment of extra wages for work of special classes, the allowance of beer in the case of brewery employees, etc.

Especially important are the provisions of these agreements regarding the rights of union men. This subject is discussed also in connection with the account of the general methods and policies of labor organizations.<sup>1</sup> In most cases where a labor organization is strong enough, it demands the employment of union men exclusively, and if it succeeds in enforcing the demand a clause to that effect is inserted in the agreement, if an agreement exists. A very large proportion of the agreements which have been submitted to the Industrial Commission contain this provision. ## LXXXVIII INDUSTRIAL COMMISSION:—ARBITRATION, ETC.

of it than where the parties must first select arbitrators to act regarding their particular dispute.

The number of representatives of employers and employees, respectively, upon such local arbitration committees varies considerably. In perhaps a majority of instances there is one representative of the employer or employers and one of the employees. It is also quite common to have two members on each side. In the various agreements adopted at the close of the great Chicago building-trades dispute of 1900 provision was made for arbitration committees consisting in most cases of 5 members on each side. These Chicago agreements were especially detailed in their regulations regarding the methods of selecting the arbitration committee and the methods of its procedure. Each of the organizations agreed in advance that it would annually elect members of the committee. No person not actively engaged in the trade, no person occupying any other office in an organization of employers or employees except that of president, and no person holding any public office, is eligible as a member of a trade arbitration committee under these Chicago agreements. The umpire must be a person who is neither an employer of labor nor an employee, who is not identified with the building industry, and who is not an incumbent of political office. In general local agreements contain very few such specific provisions as to the arbitration committees. Such committees, however, almost always, either by definite rule or by custom, are composed of actual members of the trade, except, of course, in the case of the odd member or umpire.

Most of the joint agreements which provide for arbitration contain very few, if any, regulations regarding the methods of procedure. Usually it is tacitly assumed, even when there are two or more representatives of each side, that the settlement of disputes will be either by unanimous agreement or by reference to an outside arbitrator or umpire, rather than by mere majority vote of the immediate representatives of the parties. It is assumed that each side will act as a unit and that the decision will be arrived at by discussion. In a few instances, however, there are specific provisions that arbitration committees may act by a majority vote. This is the case, for instance, in the bricklaying trade of Boston, and it is also the case in the various Chicago building trades under the agreements adopted after the great lockout of 1900. These Chicago agreements further declare that the arbitration board shall meet monthly, and also on 3 days' notice of its president. In some agreements are found provisions limiting the time which the arbitration committee may consume in reaching the decision of any matter.

It is a frequent provision of written agreements as to the conditions of labor that no specific clause of the agreement itself shall be subject to arbitration. In other words, the judicial act of interpreting the agreement shall not override the *quasi*-legislative act of establishing the conditions of labor by collective bargaining. We have already pointed out that in some cases the duly constituted arbitration committee acts also as the representatives of the parties in carrying on their collective bargaining for the adoption of the general agreement itself, but it has also been seen that in most cases the arbitration committee proper is not granted this great power.

Agreements frequently declare that, pending the arbitration of disputed matters, there shall be no cessation of employment, and that the decisions of arbitrators shall be binding upon both parties. It is very rare, however, to find any definite method of enforcing the decision in case the parties to a dispute refuse to abide by it. In the absence of any such provisions the decision may be enforced with some degree of effectiveness by the respective organizations, as against their individual members, by the threat of excluding them from membership in the organization. When the refusal to abide by the decision is made by an entire organization, by one of the parties to the agreement as a party, there is obviously no method of enforcement, since such arbitration committees and their decisions have at present no legal standing. The rejection of the decision of arbitrators is indeed by no means uncommon. It occurs

bargaining. These are generally, though not always, for given periods of time. Agreements of this character are most usually adopted annually, but in not a few instances, especially in the building trades, they run for 2, 3, or even 5 years. Employers, in particular, often prefer to have the conditions of labor prescribed for more than a single year in order that they may count upon the cost of long undertakings. The agreements adopted after the Chicago building trades strike of 1900, which were to a considerable degree dictated by the employers, ran for 3 years. That of the plumbers in St. Louis, for instance, is for a 5-year period. In general, agreements of this sort contain provisions as to the rate of wages, whether by the day or by the piece, and regarding the hours of labor. In most instances they provide for higher rates of pay for overtime. Some agreements contain highly complicated scales of piece prices. In some cases the provisions regarding the beginning and closing of work, night work, Saturday half holidays, and full holidays are very elaborate and specific. Provisions regarding the time and method of paying wages are quite common.

The special terms of the various joint agreements naturally depend largely upon the nature of the trade. In trades where the apprenticeship system is in vogue, the agreements usually regulate the number of apprentices and frequently prescribe somewhat in detail the duration of apprenticeship, the wages of apprentices, and the character of work which apprentices may perform. The most thoroughly worked-out system of apprenticeship in the country is probably that in the Boston brick-laying trade, which is established by a permanent written agreement of masters and men. In some instances the joint agreements contain limitations of various kinds upon the amount of work which shall be performed, or provisions prohibiting or restricting the use of certain tools or machinery, or restricting the employment of unskilled labor on certain classes of work, with a view to securing the performance of this work for members of the union. Often minute details are regulated, such as the payment of carfare in going to and from jobs beyond a certain distance, the payment of extra wages for work of special classes, the allowance of beer in the case of brewery employees, etc.

Especially important are the provisions of these agreements regarding the rights of union men. This subject is discussed also in connection with the account of the general methods and policies of labor organizations.<sup>1</sup> In most cases where a labor organization is strong enough, it demands the employment of union men exclusively, and if it succeeds in enforcing the demand a clause to that effect is inserted in the agreement, if an agreement exists. A very large proportion of the agreements which have been submitted to the Industrial Commission contain this provision. This is especially true in the building trades.<sup>2</sup> In Boston, however, where the system of agreements in the building trades has been perhaps more thoroughly developed than anywhere else, they simply provide that the employers shall give preference to union men, and do not require the entire exclusion of nonunion men. The Building Contractors' Council of Chicago, in its great controversy with the building trades unions in 1900, at first insisted upon the demand that the employers should have the right to employ anyone they pleased, and some of the 3-year agreements, which were adopted in termination of the deadlock, contained provisions to this effect. In some of the agreements, however, notably that in the carpentry trade, it was provided that union men need not work upon buildings with nonunion men in the same trade, but that they should not refuse to work because of the employment of nonunion men on other buildings or jobs or in other trades than their own. Pro-

<sup>1</sup> See p. XLVIII.

<sup>2</sup> See for example the agreements described below of the New York bricklayers, marble workers, roofers and sheet-metal workers, pipe and steam fitters, electrical workers, and bakers, of the St. Louis plumbers, St. Louis brewery workers, of the butchers and meat cutters, clothing makers, hotel employees, and many others.

Several, and perhaps the most important, of these wide-reaching systems for promoting industrial peace are those whose chief object is the adoption from time to time of agreements concerning the general conditions under which labor shall be performed, and which only secondarily seek to settle by conciliation or arbitration disputes which arise as to the interpretation of the labor contract, usually leaving these largely to local arbitration and conciliation. Of such a character is the system in vogue in the iron and steel trade in those establishments which recognize the Amalgamated Association of Iron, Steel and Tin Workers and deal with it. This system took its origin in a sliding scale agreement for iron puddlers established as far back as 1865. In the case of several branches of the trade, where the conditions are fairly uniform throughout the country generally, uniform agreements regarding wages and conditions of labor are adopted which cover all union mills; while in other branches, on account of differences in local conditions, separate agreements for individual establishments are made. In the tinning works a system of collective bargaining has been adopted between the associated employers and the recently organized Tin Plate Workers' Protective Association, which is very similar to that in the iron and steel trade proper. Within the past 10 or 15 years the system of conferences and agreements has been put in force in the various branches of the glass trade—flint glass, window glass, green glass, and plate glass. In all of these branches a very large proportion of the establishments throughout the country are "union plants," and are covered by the terms of the uniform agreements.

In the pottery trade local conferences between employers and employees, of a somewhat informal character, have long been held and joint agreements adopted. In 1900, representatives of the National Brotherhood of Pottery Operatives met the leading manufacturers at Pittsburg in conference and adopted a uniform scale of wages for the entire country. The operatives in some of the leading branches at Trenton, N. J.—one of the chief centers of the industry—refused to be bound by this agreement and left the national union. The system is perhaps not yet sufficiently developed to merit detailed discussion.

By far the largest number of persons represented in a single system of collective bargaining are the bituminous coal miners of the four great "central competitive districts"—western Pennsylvania, Ohio, Indiana, and Illinois. Various earlier and less successful attempts were made to establish such an interstate conference system, but the present highly successful system dates only from 1897. State and district conferences and agreements of a similar character, but on a less extensive scale, have also been established in most of the coal-producing regions outside the central competitive field.

The recently formed organization of longshoremen, which is especially strong on the Great Lakes, has been able, during the past two or three years, to bring about annual conferences and written agreements with the managers of the ore and coal docks at Lake Erie ports, with the lumber shippers at the upper lakes and with various other smaller organizations of employers and individual employers.

There are three or four other trades in which wide-reaching organizations of employers and employees have introduced methods for the promotion of industrial peace, which lay much stress on the settlement of particular disputes by arbitration and conciliation, to be at first carried on locally, but with ultimate appeal, if necessary, to tribunals of national scope. The most successful of these systems is in the stove-foundry trade, where it was introduced by an agreement between the Stove Founders' National Defense Association and the Iron Molders' Union in 1891. In this trade there is a system of collective bargaining for the adoption of annual agreements covering wage scales and conditions of labor throughout the country, but a conspicuous feature is the permanent agreement providing for the formal settlement of particular disputes, arising from time to time, by local and national boards of conciliation or arbitration. The arbitration feature of the system was copied closely in an agree-

bargaining. These are generally, though not always, for given periods of time. Agreements of this character are most usually adopted annually, but in not a few instances, especially in the building trades, they run for 2, 3, or even 5 years. Employers, in particular, often prefer to have the conditions of labor prescribed for more than a single year in order that they may count upon the cost of long undertakings. The agreements adopted after the Chicago building trades strike of 1900, which were to a considerable degree dictated by the employers, ran for 3 years. That of the plumbers in St. Louis, for instance, is for a 5-year period. In general, agreements of this sort contain provisions as to the rate of wages, whether by the day or by the piece, and regarding the hours of labor. In most instances they provide for higher rates of pay for overtime. Some agreements contain highly complicated scales of piece prices. In some cases the provisions regarding the beginning and closing of work, night work, Saturday half holidays, and full holidays are very elaborate and specific. Provisions regarding the time and method of paying wages are quite common.

The special terms of the various joint agreements naturally depend largely upon the nature of the trade. In trades where the apprenticeship system is in vogue, the agreements usually regulate the number of apprentices and frequently prescribe somewhat in detail the duration of apprenticeship, the wages of apprentices, and the character of work which apprentices may perform. The most thoroughly worked-out system of apprenticeship in the country is probably that in the Boston brick-laying trade, which is established by a permanent written agreement of masters and men. In some instances the joint agreements contain limitations of various kinds upon the amount of work which shall be performed, or provisions prohibiting or restricting the use of certain tools or machinery, or restricting the employment of unskilled labor on certain classes of work, with a view to securing the performance of this work for members of the union. Often minute details are regulated, such as the payment of carfare in going to and from jobs beyond a certain distance, the payment of extra wages for work of special classes, the allowance of beer in the case of brewery employees, etc.

Especially important are the provisions of these agreements regarding the rights of union men. This subject is discussed also in connection with the account of the general methods and policies of labor organizations.<sup>1</sup> In most cases where a labor organization is strong enough, it demands the employment of union men exclusively, and if it succeeds in enforcing the demand a clause to that effect is inserted in the agreement, if an agreement exists. A very large proportion of the agreements which have been submitted to the Industrial Commission contain this provision. This is especially true in the building trades.<sup>2</sup> In Boston, however, where the system of agreements in the building trades has been perhaps more thoroughly developed than anywhere else, they simply provide that the employers shall give preference to union men, and do not require the entire exclusion of nonunion men. The Building Contractors' Council of Chicago, in its great controversy with the building trades unions in 1900, at first insisted upon the demand that the employers should have the right to employ anyone they pleased, and some of the 3-year agreements, which were adopted in termination of the deadlock, contained provisions to this effect. In some of the agreements, however, notably that in the carpentry trade, it was provided that union men need not work upon buildings with nonunion men in the same trade, but that they should not refuse to work because of the employment of nonunion men on other buildings or jobs or in other trades than their own. Pro-

<sup>1</sup> See p. XLVIII.

<sup>2</sup> See for example the agreements described below of the New York bricklayers, marble workers, roofers and sheet-metal workers, pipe and steam fitters, electrical workers, and bakers, of the St. Louis plumbers, St. Louis brewery workers, of the butchers and meat cutters, clothing makers, hotel employees, and many others.

the following facts holding true as regards most of the important national systems in the United States, though there are exceptions to each of the statements:

(1) It is not required that the representatives of the respective parties shall be equal in number.

(2) Action is taken by compromise leading to unanimous agreement rather than by majority vote.

(3) Persons outside the trade are not called in to decide authoritatively general questions as to which the parties can not agree.

(4) The number of conferees is usually quite large, although part of the more detailed work of reaching an agreement is often referred to smaller committees.

It is obvious that the reason why, generally speaking, the above statements apply to the several systems of joint conferences and agreements is, that neither employers nor employees are usually willing to permit the determination of the general conditions of the labor contract in any other way than by negotiation and agreement of the parties in interest themselves. Each side wishes to feel satisfied that the agreement reached represents the best compromise, which, with all its skill in "higgling," it is able to secure. The representatives of employers and employees, respectively, naturally act as a unit in most cases. While individual representatives may differ as to the position to be taken, their differences are largely discussed with their own associates in private rather than made known in open joint conference. Each side is likely to present in the first instance a general proposition supported by all of its members, and the ultimate terms reached represent a compromise between these two extremes. The process is very similar to that by which any bargain is struck between two individuals or corporations approximately equal in economic power.

Even where, as is usual in the glass trades and the stove-foundry trade, pains are taken to have an equal number of representatives from each side in joint conferences, and where nominally action may be taken by majority vote, in practice the representatives of each side still act largely as a unit, and agreements are reached rather by elaborate informal bargaining, by which ultimately a general consensus is reached, than by formal voting on questions at issue. In the bituminous coal trade it has been specifically provided by the rules of each of the four interstate conventions that all formal actions must be taken, both in the general convention and in the smaller scale committee, by unanimous vote. This is, in fact, the practice in several of the other trades having national systems of collective bargaining. There is little doubt that a satisfactory settlement of differences is quite as likely to be reached under such a provision as where the rules nominally permit action by a bare majority.

The fact that none of the systems of collective bargaining above named provides for the reference of general matters, as to which the conferees can not agree, to the decision of impartial arbitrators is but one of many indications of the very widespread feeling among both employers and workingmen in the United States that such important matters as these should not be intrusted to persons unfamiliar with the conditions; that they are matters for bargaining rather than for judicial decision. The same is true, only to a slightly less extent, in Great Britain.

It is obviously desirable that conferences entrusted with a task so complicated and so important as the determination of the conditions of labor in an entire industry should be thoroughly representative of the employers and employees. Only thus can the positions taken by each side in a conference represent correctly the desires of their constituents; or can the terms of the agreements reached and the motives which lead to their adoption be generally understood and approved by the great body of the workingmen. This is the reason why we find that the conferences in all of the trades, in which the system of collective bargaining is conducted on a large scale, are composed of a very considerable number of delegates. The largest of all is the interstate conference in the bituminous coal industry. This is held immediately

bargaining. These are generally, though not always, for given periods of time. Agreements of this character are most usually adopted annually, but in not a few instances, especially in the building trades, they run for 2, 3, or even 5 years. Employers, in particular, often prefer to have the conditions of labor prescribed for more than a single year in order that they may count upon the cost of long undertakings. The agreements adopted after the Chicago building trades strike of 1900, which were to a considerable degree dictated by the employers, ran for 3 years. That of the plumbers in St. Louis, for instance, is for a 5-year period. In general, agreements of this sort contain provisions as to the rate of wages, whether by the day or by the piece, and regarding the hours of labor. In most instances they provide for higher rates of pay for overtime. Some agreements contain highly complicated scales of piece prices. In some cases the provisions regarding the beginning and closing of work, night work, Saturday half holidays, and full holidays are very elaborate and specific. Provisions regarding the time and method of paying wages are quite common.

The special terms of the various joint agreements naturally depend largely upon the nature of the trade. In trades where the apprenticeship system is in vogue, the agreements usually regulate the number of apprentices and frequently prescribe somewhat in detail the duration of apprenticeship, the wages of apprentices, and the character of work which apprentices may perform. The most thoroughly worked-out system of apprenticeship in the country is probably that in the Boston brick-laying trade, which is established by a permanent written agreement of masters and men. In some instances the joint agreements contain limitations of various kinds upon the amount of work which shall be performed, or provisions prohibiting or restricting the use of certain tools or machinery, or restricting the employment of unskilled labor on certain classes of work, with a view to securing the performance of this work for members of the union. Often minute details are regulated, such as the payment of carfare in going to and from jobs beyond a certain distance, the payment of extra wages for work of special classes, the allowance of beer in the case of brewery employees, etc.

Especially important are the provisions of these agreements regarding the rights of union men. This subject is discussed also in connection with the account of the general methods and policies of labor organizations.<sup>1</sup> In most cases where a labor organization is strong enough, it demands the employment of union men exclusively, and if it succeeds in enforcing the demand a clause to that effect is inserted in the agreement, if an agreement exists. A very large proportion of the agreements which have been submitted to the Industrial Commission contain this provision. This is especially true in the building trades.<sup>2</sup> In Boston, however, where the system of agreements in the building trades has been perhaps more thoroughly developed than anywhere else, they simply provide that the employers shall give preference to union men, and do not require the entire exclusion of nonunion men. The Building Contractors' Council of Chicago, in its great controversy with the building trades unions in 1900, at first insisted upon the demand that the employers should have the right to employ anyone they pleased, and some of the 3-year agreements, which were adopted in termination of the deadlock, contained provisions to this effect. In some of the agreements, however, notably that in the carpentry trade, it was provided that union men need not work upon buildings with nonunion men in the same trade, but that they should not refuse to work because of the employment of nonunion men on other buildings or jobs or in other trades than their own. Pro-

<sup>2</sup> See for example the agreements described below of the New York bricklayers, marble workers, roofers and sheet-metal workers, pipe and steam fitters, electrical workers, and bakers, of the St. Louis plumbers, St. Louis brewery workers, of the butchers and meat cutters, clothing makers, hotel employees, and many others.

the settlement of wage scales to the local districts. It seems not improbable that one of the chief reasons why this system broke down so soon was because this agreement was drawn up by a few executive officers of the respective organizations of employers and employees, and not by a widely representative conference. It appears that some of the terms of the agreement were but little understood by many of the local unions, and certainly were by no means approved by them. It is even asserted by the National Metal Trades Association that the officers of the machinists' organization permitted garbled copies of the agreement, omitting some of the unpopular clauses, to be circulated among the local unions, while it has been suggested by representatives of the International Association of Machinists that there was an understanding with the employers that some of the terms of the agreement were to be kept confidential between themselves. If either of these statements is correct, the disastrous results which followed serve to emphasize the desirability, almost the necessity, that collective bargaining regarding the conditions of labor of scores of establishments and thousands of men should be carried on by the most thoroughly representative conferences, with thorough publicity. Had each local union been represented in the machinists' conference of May, 1900, the very same terms of agreement might perhaps have been reached, but they would have been understood and approved generally, and there would have been much less difficulty in carrying them out.

An interesting question as to the conferences between employers and employees regarding the general terms of labor contracts involves the extent to which the committees on each side are granted authority to reach a binding agreement without further reference to the organizations by which they are chosen. As we have pointed out, there are no written permanent agreements prescribing the powers of these joint committees in the trades under consideration. The constitutions of organizations of employers and employees which participate in these systems usually do not definitely authorize their committees to enter into binding agreements directly, and sometimes specifically deny them that power. The constitution of the Amalgamated Association of Iron, Steel and Tin Workers indeed grants to the conference committees of the union no power to depart from previous instructions of the annual convention, though the committees may refer back questions to general referendum vote. Practically the same is true in the glass trades. In practice the action of conference committees on each side in these trades is more or less independent. The committees of course act under the instructions of their organizations as to the demands which should be presented, but they are permitted to make concessions in order to reach an agreement. Sometimes, to be sure, no agreement is reached and a strike ensues. It is especially convenient in many ways to have the joint conferences themselves, as in the coal mining and longshore industries, so widely representative of their organizations that reference to other methods of ascertaining the will of the constituents shall be unnecessary. The referendum vote by local organizations is apt to be an especially cumbersome affair, tending to delay the reaching of an agreement.

In some, if not all, of the branches of the glass trade an interesting arrangement has been established for ascertaining the will of the respective organizations as to the terms of the annual agreement. The local unions of employees and the individual manufacturers present to their respective organizations, a considerable time in advance of the adoption of the annual agreements, their various propositions for changes in the conditions of labor. Preliminary conferences are then held between the respective committees, in which these demands are discussed. Often the committees virtually agree as to the modifications which shall be made. In other instances matters of difference are developed. In either case the committees report to the separate conventions of their organizations, held usually in June, and the proposed terms of the new agreement are there discussed. Each organization gives instructions to its

bargaining. These are generally, though not always, for given periods of time. Agreements of this character are most usually adopted annually, but in not a few instances, especially in the building trades, they run for 2, 3, or even 5 years. Employers, in particular, often prefer to have the conditions of labor prescribed for more than a single year in order that they may count upon the cost of long undertakings. The agreements adopted after the Chicago building trades strike of 1900, which were to a considerable degree dictated by the employers, ran for 3 years. That of the plumbers in St. Louis, for instance, is for a 5-year period. In general, agreements of this sort contain provisions as to the rate of wages, whether by the day or by the piece, and regarding the hours of labor. In most instances they provide for higher rates of pay for overtime. Some agreements contain highly complicated scales of piece prices. In some cases the provisions regarding the beginning and closing of work, night work, Saturday half holidays, and full holidays are very elaborate and specific. Provisions regarding the time and method of paying wages are quite common.

The special terms of the various joint agreements naturally depend largely upon the nature of the trade. In trades where the apprenticeship system is in vogue, the agreements usually regulate the number of apprentices and frequently prescribe somewhat in detail the duration of apprenticeship, the wages of apprentices, and the character of work which apprentices may perform. The most thoroughly worked-out system of apprenticeship in the country is probably that in the Boston brick-laying trade, which is established by a permanent written agreement of masters and men. In some instances the joint agreements contain limitations of various kinds upon the amount of work which shall be performed, or provisions prohibiting or restricting the use of certain tools or machinery, or restricting the employment of unskilled labor on certain classes of work, with a view to securing the performance of this work for members of the union. Often minute details are regulated, such as the payment of carfare in going to and from jobs beyond a certain distance, the payment of extra wages for work of special classes, the allowance of beer in the case of brewery employees, etc.

Especially important are the provisions of these agreements regarding the rights of union men. This subject is discussed also in connection with the account of the general methods and policies of labor organizations.<sup>1</sup> In most cases where a labor organization is strong enough, it demands the employment of union men exclusively, and if it succeeds in enforcing the demand a clause to that effect is inserted in the agreement, if an agreement exists. A very large proportion of the agreements which have been submitted to the Industrial Commission contain this provision. This is especially true in the building trades.<sup>2</sup> In Boston, however, where the system of agreements in the building trades has been perhaps more thoroughly developed than anywhere else, they simply provide that the employers shall give preference to union men, and do not require the entire exclusion of nonunion men. The Building Contractors' Council of Chicago, in its great controversy with the building trades unions in 1900, at first insisted upon the demand that the employers should have the right to employ anyone they pleased, and some of the 3-year agreements, which were adopted in termination of the deadlock, contained provisions to this effect. In some of the agreements, however, notably that in the carpentry trade, it was provided that union men need not work upon buildings with nonunion men in the same trade, but that they should not refuse to work because of the employment of nonunion men on other buildings or jobs or in other trades than their own. Pro-

<sup>1</sup> See p. XLVIII.

<sup>2</sup> See for example the agreements described below of the New York bricklayers, marble workers, roofers and sheet-metal workers, pipe and steam fitters, electrical workers, and bakers, of the St. Louis plumbers, St. Louis brewery workers, of the butchers and meat cutters, clothing makers, hotel employees, and many others.

the settlement of wage scales to the local districts. It seems not improbable that one of the chief reasons why this system broke down so soon was because this agreement was drawn up by a few executive officers of the respective organizations of employers and employees, and not by a widely representative conference. It appears that some of the terms of the agreement were but little understood by many of the local unions, and certainly were by no means approved by them. It is even asserted by the National Metal Trades Association that the officers of the machinists' organization permitted garbled copies of the agreement, omitting some of the unpopular clauses, to be circulated among the local unions, while it has been suggested by representatives of the International Association of Machinists that there was an understanding with the employers that some of the terms of the agreement were to be kept confidential between themselves. If either of these statements is correct, the disastrous results which followed serve to emphasize the desirability, almost the necessity, that collective bargaining regarding the conditions of labor of scores of establishments and thousands of men should be carried on by the most thoroughly representative conferences, with thorough publicity. Had each local union been represented in the machinists' conference of May, 1900, the very same terms of agreement might perhaps have been reached, but they would have been understood and approved generally, and there would have been much less difficulty in carrying them out.

An interesting question as to the conferences between employers and employees regarding the general terms of labor contracts involves the extent to which the committees on each side are granted authority to reach a binding agreement without further reference to the organizations by which they are chosen. As we have pointed out, there are no written permanent agreements prescribing the powers of these joint committees in the trades under consideration. The constitutions of organizations of employers and employees which participate in these systems usually do not definitely authorize their committees to enter into binding agreements directly, and sometimes specifically deny them that power. The constitution of the Amalgamated Association of Iron, Steel and Tin Workers indeed grants to the conference committees of the union no power to depart from previous instructions of the annual convention, though the committees may refer back questions to general referendum vote. Practically the same is true in the glass trades. In practice the action of conference committees on each side in these trades is more or less independent. The committees of course act under the instructions of their organizations as to the demands which should be presented, but they are permitted to make concessions in order to reach an agreement. Sometimes, to be sure, no agreement is reached and a strike ensues. It is especially convenient in many ways to have the joint conferences themselves, as in the coal mining and longshore industries, so widely representative of their organizations that reference to other methods of ascertaining the will of the constituents shall be unnecessary. The referendum vote by local organizations is apt to be an especially cumbersome affair, tending to delay the reaching of an agreement.

In some, if not all, of the branches of the glass trade an interesting arrangement has been established for ascertaining the will of the respective organizations as to the terms of the annual agreement. The local unions of employees and the individual manufacturers present to their respective organizations, a considerable time in advance of the adoption of the annual agreements, their various propositions for changes in the conditions of labor. Preliminary conferences are then held between the respective committees, in which these demands are discussed. Often the committees virtually agree as to the modifications which shall be made. In other instances matters of difference are developed. In either case the committees report to the separate conventions of their organizations, held usually in June, and the proposed terms of the new agreement are there discussed. Each organization gives instructions to its

## ARBITRATION AS TO SPECIFIC DISPUTES.

In several of the systems designed primarily to secure collective bargaining regarding general labor conditions, provision is also made for the settlement of minor and local disputes arising from time to time, especially as to interpretation of the general agreement. The methods of adjusting these disputes are much less formally provided for in these trades than in the three or four where conciliation and arbitration as to specific disputes are the chief feature in the relations of national organizations of employers and employees, and less formally, too, than is usually the case in those trades in Great Britain where the practice of conciliation and arbitration exists. It is, of course, true that when the general conditions of labor for a given industry are quite minutely regulated by an annual agreement, occasions for dispute between employers and employees are very much less likely to arise than where the conditions of labor are determined between individual employers and their men, or at most by local organizations only. Thus in the glass trades it is stated that disputes as to minor matters are comparatively rare. The joint annual agreements in these trades prohibit cessation of work or violation of their own terms. Differences as to interpretation or as to the prices for newly introduced articles may indeed occur, although the annual agreements are so detailed and specific that such differences are apt to be very few.

In the glass-bottle trade such minor disputes, so far as they can not be adjusted between the parties immediately in interest, are settled informally by the same joint committee which adopts the annual scales. In some of the divisions of the flint-glass trade local committees, composed of an equal number of employers and employees, are provided for by the annual agreements, and minor disputes are settled by these committees. The agreements of the longshoremen and the dock managers provide that local disputes which can not otherwise be settled shall be referred to local arbitration, not by permanent boards, but by boards selected by the parties for each particular difference.

It has been felt as a special lack in the bituminous coal trade that, at least in most mining districts, there is no effective method for disposing of the minor disputes which arise from time to time. There is especially no permanent joint committee for the entire central competitive field to which differences arising in connection with the interstate agreement may ultimately be referred. However, it is especially in regard to conditions in particular sections or localities that differences of this minor character are most apt to occur, and fortunately a growing movement is manifest toward establishing State and local machinery for arbitration in this industry. In the bituminous district of Indiana, as well as in the block-coal district of that State, local agreements provide for the arbitration of all disputes of this character, the procedure being very similar to that adopted by the longshoremen. In Illinois elaborate provision is made for trade arbitration as to local disputes. The joint annual agreement in this State specifically directs that any local trouble shall be referred in the first instance to the local officers of the mine and of the miners' organization, with ultimate appeal, after two or three intermediate stages, to the State officers of the United Mine Workers and the representative of the Illinois Coal Operators' Association. No arrangement is made for the calling in of a disinterested person in case of failure of these officers to agree. Some disputes have been referred to the national president of the United Mine Workers, Mr. Mitchell, in conjunction with Mr. Justi, commissioner of the Illinois Coal Operators' Association.

In the iron and steel trade the constitution of the Amalgamated Association of Iron and Steel Workers directs the formation of mill committees to represent the employees in dealings with employers as to minor matters. Manufacturers who enter into agreements with the organization bind themselves to recognize this mill committee. In case of failure to reach a settlement locally the matter is to be taken

up by the district officers of the Amalgamated Association in connection with the mill management. Although there is no provision for ultimate reference to a formally constituted joint board of employers and employees or to an outside arbitrator, it is stated that the spirit of employers and employees is usually such as not to tolerate a cessation of work on account of local differences in plants where the Amalgamated Association is dealt with. In the manufacture of bar iron an adjuster is employed by the associations of employers and employees, whose duty it is to investigate differences as to the prices of products which become the basis for the sliding scale of wages. This adjuster has very considerable powers of inspecting the accounts of the various plants, and it is stated that his work has usually been very successful. It is of a technical administrative character rather than judicial. Nevertheless, the adjuster seems to be able in many instances to bring about a satisfactory settlement of differences of a somewhat more general character.

The tin workers' agreement with the American Tin Plate Company provides for settlement of disputes by negotiations between the "mill committee" of the men and the employer, with appeal to the district officers of the union and the district manager, and ultimately to the same joint committee which adopts the annual agreements.

As already pointed out, there are four trades in which systems of arbitration as to specific disputes have been established in a formal manner and on a national scale. These are the stove-molding trade, the general foundry trade, the machinists' trade (now not in existence), and the printing trade. It is noteworthy that in all of these cases the system is established by a permanent written agreement between organizations of employers and employees, and does not rest, as in the trades hitherto discussed, on the annual agreements regarding the conditions of labor, or on mere custom or tacit understanding. These permanent agreements in the first three trades named prohibit altogether strikes and lockouts on the part of members of the organizations and provide for the settlement of all differences by joint committees. In the printing trade, on the other hand, the system of arbitration applies only in the case of such employers as enter into contract with unions to be subject to it.

It is noteworthy among the four trades just named that only in the case of the printing trade is there provision for referring to an outside person disputes as to which the direct representatives of the organizations of employers and employees can not agree. In the stove-foundry, the general foundry, and the machinists' trades we find systems of trade arbitration and conciliation in the strict sense. In these trades the agreements declare that the parties to all disputes shall endeavor to come to an amicable understanding among themselves before appealing to a higher tribunal. If they fail to agree, the dispute is to be referred to representatives of the respective organizations in the several large districts into which the country is divided. In the stove-foundry trade the final appeal is to the presidents of the respective national organizations of employers and employees or to delegates designated by them, but if these two can not decide the matter satisfactorily to themselves they may, by mutual agreement, summon a conference committee consisting of three members, previously elected by each organization for an annual term. In the general foundry trade the presidents of the respective organizations, or their representatives, act always, when formal decisions are to be rendered, in conjunction with two other members of each association. Doubtless in practice the presidents attempt to agree between themselves and to influence the disputants to reach a peaceful settlement before calling in associates on the committee. The system which was recently in existence in the machinists' trade was almost precisely similar.

In all three of the systems just mentioned the joint committees of arbitration may act by majority vote. In practice doubtless, as in the case of those conferences which adopt agreements as to the general conditions of labor, action is usually taken by unanimous vote. In fact it is probable that the functions of the joint committees of

employers and employees consist largely in leading the parties to disputes to a reconciliation and compromise between themselves, although they have power to render binding decisions.

In the printing trade the agreement adopted in 1901 provides for formal local boards of arbitration, to be established in connection with each separate dispute. One member is to be chosen by each party and these two select a third. Appeal may be taken from local arbitration to the respective presidents of the International Typographical Union and the American Newspaper Publishers' Association, who, if they fail to agree, may select an impartial person as a third member of the board. The finding of a majority of the board, whether local or national, is binding.

The joint arbitration agreement in the printing trade apparently indicates no tendency toward the adoption of uniform wage scales or uniform agreements regarding the conditions of labor throughout the country. One of the chief motives for entering into the agreement was to provide for the effective enforcement of the contracts between local unions and individual employers, or local associations of employers, which are made in many instances. Since there is no restriction as to the nature of the disputes which may be submitted to arbitration, it is obvious that questions as to the general conditions of labor, so far as localities are concerned, may be submitted to settlement in this manner, as well as mere questions of interpretation, but this is not likely to occur very often in practice. In the foundry and machinery trades, however, as we have seen, there has been a disposition toward the development of collective bargaining on a national basis.

#### IV. COLLECTIVE BARGAINING AND TRADE ARBITRATION IN GREAT BRITAIN

Important as are the systems of collective bargaining and of trade arbitration and conciliation in the United States, they are comparatively insignificant beside those in Great Britain. There the practices date back to a much earlier time, they have been extended much more widely, and they are much more thoroughly systematized.

Because of this longer experience British employers and employees have established very thorough and fairly permanent systems in many trades. It is especially noteworthy that in not a few instances they have adopted standing written agreements containing the constitution and rules of procedure of joint boards and conferences. Such permanent constitutions and rules are almost entirely lacking in the United States. Many of the systems of collective bargaining and arbitration in Great Britain, moreover, are wide reaching in their scope. While there are perhaps not more than two or three trades in which these systems apply throughout the entire country, there are many instances where they cover large districts in which the conditions of competition are approximately similar. The reports of the British labor department show no less than 53 regularly established joint boards or conferences which were in active operation during the year 1899. A large proportion of these cover numerous establishments and many thousands of workmen.

It must not be supposed, however, that these methods for promoting peaceful relations between employers and employees have been universally adopted in Great Britain or have altogether superseded strikes and lockouts. They are still confined to the skilled trades, and apply to by no means all of them. They have been developed most highly, perhaps, in the coal-mining industry and in the non and steel, cotton, boot and shoe, and shipbuilding trades. A number of the leading systems are described in detail in the body of the present report.

Notwithstanding the long history of the development of collective bargaining and of arbitration and conciliation in Great Britain, no single system has been worked out which can be considered typical or the one most generally approved. The methods, indeed, are quite as various as those in the United States. In a large num-

ber of trades the systems have been organized with a reasonably clear recognition of the important distinction, upon which emphasis has already repeatedly been laid, between disputes relating to the general labor contract and disputes which arise regarding the interpretation of that contract. In some of the British trades, boards or conferences are established, usually under the name of wages boards, whose primary function is to decide matters of the first class. Such boards are usually composed of a considerable number of representatives of each side. In some instances provision is made for the reference of disputed matters relating to the general labor contract, in cases where the representatives of the party can not agree, to an impartial umpire—a practice which, as we have seen, is scarcely ever found in the important systems of collective bargaining in the United States. Nevertheless, British opinion generally seems opposed to calling in outsiders to decide important matters of this sort, and even in those trades where the practice is permissible under the joint rules it is comparatively seldom actually resorted to.

In numerous cases in Great Britain we find boards composed of equal numbers of employers and employees, whose duties are confined almost wholly to the settlement of minor disputes, those of the second class above distinguished. These boards are usually known as boards of conciliation. The rules of a considerable majority of these boards provide for reference to independent arbitrators of matters as to which the representatives of the employers and employees can not agree, and their services are in practice quite frequently employed. Thus we find, that during the years 1894 to 1899, in from one-sixth to two-fifths of the cases reported by the British labor department as having been settled by joint boards (of both classes) the process was one of arbitration, while in the other cases settlements were effected by collective bargaining or conciliation directly between the representatives of the parties.

There are a few trades in which separate boards or methods exist for the settlement of questions relating to the general labor contract and of those regarding the interpretation of the contract, respectively. In some other trades a single board has authority over both classes of disputes, although minor matters are in such cases often settled by subcommittees of the main board. In still other trades only a single board exists, which covers only one class of disputes.

The practice of prescribing the terms of the labor contract from time to time by written agreements between employers and employees is also highly developed in Great Britain. The work of wages boards very frequently expresses itself in the form of such agreements, while in many trades having no regularly organized wages boards local agreements are adopted from time to time by less formal conferences between employers and employees. For example, in the building trades of Great Britain we find practices very similar to those which are so common in the building trades in this country. Written agreements are adopted which fix the general conditions of labor and which provide for the settlement of minor disputes by arbitration, either by a permanent local board or by a board specially constituted for the particular dispute.

The sliding-scale system is employed somewhat more extensively in Great Britain than in the United States. It is, however, still confined to relatively narrow limits. In several of the large coal-producing districts wages are fixed on the sliding-scale principle, and the same is true in various branches of the iron and steel industry in particular localities. The system seems to be considered very satisfactory by those trades which have adopted it, but its applicability to other trades is frequently questioned by both employers and employees.

It is impossible to present any general estimate as to the effect of these systems of collective bargaining, arbitration, and conciliation in Great Britain. As is the case in the United States, the practice is most effective in those trades where both employers and employees are strongly organized. The chief service accomplished is in the settlement of disputes before cessation of employment rather than after it—in the

prevention of strikes and lockouts rather than in adjusting differences after they occur. The reports of the British labor department show the number of cases decided by the more permanent and formally constituted joint wage boards and boards of conciliation. The number has varied from year to year since 1894 between the limits of 675 and 1,365. The number of actual strikes and lockouts adjusted by the intervention of these boards, on the other hand, has ranged only from 10 to 19 yearly, and the total number of persons affected by strikes and lockouts settled by these boards for the 6 years from 1894 to 1899 was only 29,337. The number of persons whose wages were changed through the action of these boards was 15,522 in 1897, but rose to 379,285 in 1899, in which year there were general changes in the wage scales in several of the leading coal mining districts. The reports of the British labor department show, further, that even in the absence of such formal methods of collective bargaining most of the changes in wages take place by peaceful negotiations between employers and employees rather than as the result of strikes and lockouts. This is of course true also in the United States, but apparently the proportion of peaceful settlements is considerably higher in Great Britain.

The experience of other foreign countries is so unimportant, as compared with that of Great Britain, as scarcely to need comment in this summary. Reference to the body of the report is accordingly made. It may be noted however that, in the great Belgian coal mines of Mariemont and Bascoup a system of conciliation regarding minor differences has been in successful operation for more than 15 years.

## V. GOVERNMENTAL ARBITRATION.

### STATUTORY PROVISIONS IN THE SEVERAL STATES.

The great injury to the general public interests, as well as to those of the parties directly concerned, which often results from strikes and lockouts has led various governments all over the world to enact legal measures designed to aid in the prevention of such disputes or in bringing about a prompt settlement of them. The councils of experts (*conseils de prud'hommes*), established in France as far back as 1806, can perhaps scarcely be considered as bodies designed primarily for this purpose, since their functions are confined to the adjustment of minor disputes between the employer and his individual employee. England was the first country to provide legal machinery for the settlement of labor disputes of a general character. Her early law, however, simply authorized masters and men, on their own initiative, to establish arbitration boards, and in practice little, if any, use was ever made of the statutory provisions. It remained for the American States, as far as can be ascertained, to take the first step in creating State boards of arbitration, which should furnish machinery always at hand for inquiring into labor disputes, for endeavoring to lead the parties by conciliation to a peaceful settlement, and for rendering authoritative decisions of matters which the parties may agree to submit to such arbitration.

The first State board of arbitration was established by New York in 1886, but the legislature of Massachusetts established a similar board, apparently independently, in the same year. The laws of these two States, which differ in some significant regards, have become the basis for the legislation in 14 other States. The greater number of these—California, Colorado, Idaho, Illinois, Louisiana, Montana, Minnesota, Ohio, Utah, and Wisconsin—have followed in the main the Massachusetts act, while New Jersey, Michigan, and Connecticut have kept more nearly to the line of the New York statute. Indiana has established a State board with a somewhat different composition and method of procedure from that found in other States. It is to be noted at the outset, however, that in several of the States which have passed such laws State boards of arbitration have either never been created or, having been created, have done little or even nothing at all. In fact, the only States in

which the boards can be considered as exercising any important influence upon industrial relations are Illinois, Indiana, Ohio, Wisconsin, New York, and Massachusetts.

The laws of 6 other States—Iowa, Kansas, Maryland, Pennsylvania, Missouri, and Texas—provide for the establishment of local tribunals on the initiative of the parties to labor disputes, without creating State boards, but in practice these laws have been put to no use whatever, as far as can be ascertained. The laws of Missouri and North Dakota authorize the commissioner of labor to intervene in labor disputes.

*Composition of State boards.*—In Massachusetts and in most of the States which have followed its law the State board is to consist of 3 persons appointed by the governor. One of these must be an employer, or selected from an organization representing employers; one must be a workman, or selected from some labor organization, and the third must ordinarily be appointed upon the recommendation of the other two, with the proviso that if these two fail to agree within a certain time the governor shall appoint without their recommendation. Usually also the third must be neither employer nor employee. Utah and Illinois add that not more than two of the members shall belong to the same political party. The New Jersey law originally provided that one of the three members of the board should be a member of a bona fide labor organization, but a later law—1892—increased the board to five, without any regulation as to qualifications of the members. Apparently, however, the governor has followed the practice of appointing at least 1 labor member. The Louisiana board also consists of 5 members instead of the usual 3.

The New York and Connecticut laws originally provided that the board of arbitration should consist of 3 members, one being chosen from the political party casting the highest number of votes, one from the party casting the next highest number, and a third from an incorporated labor organization of the State. By an amendment of 1901 the duties of the New York board were transferred to the commissioner of labor and his two deputies. The Indiana board is peculiarly constituted. The governor is to appoint one person who has been for 10 years of his life an employee and one who has been for 10 years an employer, and they shall not both be members of the same political party. When acting as a board of arbitration these two are to associate with them a judge of the circuit court of the county in which the controversy occurs, and if the parties agree additional members may be chosen for the particular case, one by the employer and one by the employee.

In the great majority of States which have provided for State boards of arbitration the compensation of the members is fixed at so much per day of actual service, usually \$5, with necessary traveling expenses. In several States the secretary is allowed a regular salary, the other members having only a per diem allowance. In the States where the boards have actually accomplished the most, however, one or all of the members are allowed regular salaries, with the understanding that they shall give practically their full time to the work.

*Jurisdiction of State boards of arbitration.*—State boards of arbitration and mediation, as thus constituted, have little authority of an absolute character. None of these boards has power to compel the parties to a labor dispute to submit it to their decision, and even where the parties voluntarily agree to submit their differences there is in most States no effective means of forcing them to abide by the decision rendered.

There are three possible ways in which a dispute may come before a State board of arbitration—on the initiative of one of the parties, on the initiative of both parties, or on the initiative of the board itself. The laws of the majority of the States provide for all three methods, but the third is in practice the one most often employed. There is usually no difference in the procedure for bringing a dispute before the State board on the initiative of one party or on the initiative of both.

The number of persons affected by a dispute in order to give the State board cognizance is 25 in Idaho, Illinois, Indiana, Massachusetts, Ohio, and Wisconsin; 10 in Utah and Minnesota, and 20 in Louisiana and Montana, while in California, Colo-

rado, Connecticut, New York, Michigan, and New Jersey there is no limit. Ohio and Illinois specifically provide that if a dispute affects several establishments, having jointly the required number of employees, the board has jurisdiction, and this is probably implied in the other laws.

The application, whether joint or by one party only, must, according to practically all of the laws, contain a promise to continue without lockout or strike until the decision of the board is made, provided, in most States, that decision is made within a certain time, usually either 10 days or 3 weeks. By most of the laws the names of the employees making the application for arbitration must be kept secret. In Colorado, Connecticut, New York, and Michigan there is no provision for investigation of disputes on the application of one party only, although this would doubtless be covered by the authority of the board to mediate in any strike coming to its knowledge.

*Investigation and mediation on initiative of board.* In all of the States having State boards, except California, it is provided that, whenever it shall come to the knowledge of the board that a strike or lockout is threatened, or has occurred, it is the duty of the board to communicate with the employer and employees, and to try by mediation to effect a settlement or to persuade them to submit the matters in dispute to arbitration. In part of these States it is the duty of mayors or other local officers to give notice of strikes and lockouts.

It is generally provided that the State board may, if it deems advisable, in default of other settlement, investigate the cause of the controversy and publish a report, stating the cause and assigning the responsibility or blame. In Louisiana and Indiana this investigation and report is obligatory where no settlement is reached, and in Ohio it either party desires it. Illinois and Utah have no provision for such an investigation and report. In New York, Connecticut, Michigan, and New Jersey these provisions authorizing investigation on the initiative of the board are less detailed than elsewhere.

The significance of such provisions for authoritative investigation and report depends, to a considerable degree, upon the power given the board to require the giving of testimony and the production of books and papers. Adequate power of this sort is conferred on the boards only in Illinois and Massachusetts. In most of the States, to be sure, power is nominally given to the board of arbitration to summon witnesses and require the production of papers, sometimes within certain prescribed limits, but in the absence of more detailed provisions authorizing an appeal to the courts to enforce the orders of the board it is probable that this nominally compulsory power is of little value. The Illinois law (as amended in 1899) is especially full as to the power of the board of arbitration to obtain testimony. It may summon any person or require a production of any book or paper deemed necessary, and on refusal to attend or to produce such books and papers it is the duty of the circuit court, upon application of the board, to issue an attachment to enforce the order of the board of arbitration. The Indiana law contains practically the same provisions. In these States it becomes possible to ascertain fairly the actual facts relating to any important labor dispute and thus to allow public opinion to bring its powerful influence to bear in favor of a just settlement.

*Effect of decisions.*—In most of the States where the law provides that an investigation shall be made on the initiative either of one or of both parties, it is enacted that the State board shall, after making inquiry, report to the parties what, if anything, ought to be done to adjust the dispute, and shall make this decision public immediately. The decision, of course, has no binding effect unless both parties join in the application. All of these States provide that, where both do join, the decision shall be binding on them, usually for 6 months or until either gives notice that it will not be bound after 60 days from the time of the notice. In several States (Connecticut, Colorado, Michigan, New Jersey, and New York) no limit appears in the laws as to the time the decision shall continue in force. There is usually no specific

provision as to the manner of compelling obedience to the awards of the board, and the mere declaration that they shall be binding probably signifies little where the parties are unwilling to accept them. Only 3 States—Illinois, Indiana, and Ohio—have established definite procedure to compel conformity to the decisions of the State board. The Illinois law provides that in the event of a failure to abide by the decision, when both parties have joined in the original application, any person aggrieved may appeal to the circuit court, which shall summon the party to show cause why the decision has not been complied with, shall hear and determine the questions presented, and may punish for contempt any party refusing to comply, but such punishment shall in no case extend to imprisonment. The Indiana law is essentially the same, but allows imprisonment in case of "willful and contumacious disobedience." In Ohio a joint application by the parties for arbitration may contain a stipulation that the decision shall be binding to the extent stipulated, and it may to that extent be enforced as in the court of common pleas.

*Expert assistants.*—The laws of Massachusetts, Wisconsin, and Montana provide that, if the parties desire, each may appoint one person to act as an expert assistant to the State board in its investigation. These persons shall be familiar with the business affected. They shall obtain information concerning the wages paid and the methods prevailing in similar establishments within the State. They shall be paid \$7 per day and expenses.

#### LOCAL BOARDS OF ARBITRATION AND CONCILIATION.

*Boards in connection with State boards.*—The laws of Colorado, Massachusetts, Minnesota, Montana, Ohio, Idaho, and Wisconsin, in addition to establishing State boards of arbitration, also declare that the parties to any controversy may agree to submit their dispute to a local board, the composition of which may either be mutually agreed upon or the employer may designate one member, the employees another, and the two may select a third, who shall be the chairman. Such boards are given all the powers of the State board, and their jurisdiction is exclusive, although they may ask advice of the State board. The decision is binding to whatever extent may have been agreed upon by the parties in making the submission. These local arbitrators are, usually, paid, by the town or county, \$3 per day, not exceeding 10 days for any one arbitration.

The other States providing for such local boards—New York and New Jersey—have somewhat similar regulations, but permit appeal to the State board. They also recognize labor organizations by allowing the labor representative on the local board of arbitration to be chosen either by the laborers or by the labor organization to which they belong or by the central organization with which it is affiliated.

*Local boards of arbitration without State boards.*—The laws of Iowa, Kansas, Pennsylvania, Texas, Maryland, and Missouri authorize the establishment of local boards of arbitration, but do not create State boards. These laws, while they have apparently never been called into use, are interesting as showing the desire for a peaceful means of settling labor disputes. Iowa and Kansas authorize the institution of more or less permanent boards in particular trades or groups of trades, somewhat after the fashion of the councils of *prud'hommes* found in France and other European countries. The county courts are directed to issue licenses for such boards of arbitration upon proper petition. These tribunals are to consist of equal numbers of employers and employees and of an umpire. They have jurisdiction over any dispute in the establishments originally entering the system, or over any disputes submitted to them. Their decisions are nominally final, but there is no provision regarding the precise method of enforcing them.

In Pennsylvania there is what appears on its face to be a law for establishing compulsory arbitration upon the initiative of either disputant. The statute provides that either party to a labor dispute may apply to the court of the county for the estab-

lishment of a board of arbitration, consisting of 3 persons selected by each party and 3 appointed by the court, or if one party refuses to appoint representatives, of 6 appointed by the court. These boards are given power to enforce the attendance of witnesses and to render decisions, which shall be conclusive and binding, although no definite provisions are made regarding the method of enforcement.

In Maryland the parties to any dispute may jointly agree to establish a board of arbitration in any form, or to apply to any court for its arbitration or for the establishment of a board.

In Missouri the commissioner of labor statistics is directed to mediate in strikes, whenever he considers necessary, and he may order the formation of a local board of arbitration, of which he shall be chairman. The decisions of such a board, however, have no binding effect.

*Work of local boards.*—No use whatever seems to have been made of the legal provisions for the establishment of local boards of arbitration in the six States last named. It is also true in the numerous States which have State boards of arbitration and which also authorize the formation of local boards, that very few local boards have been established under this authority. Occasionally a State board succeeds in persuading the parties to resort to formal arbitration by boards selected by themselves, the disputants preferring this method rather than to submit to the decision of the State board itself. Practically in no instance have such laws been instrumental in leading the parties to labor disputes on their own initiative to establish temporary or permanent boards of arbitration.

It is indeed obvious from the terms of the statutes and from the general nature of the problem involved that in the absence of provisions for compulsory enforcement of the decisions of arbitrators, boards created by virtue of existing State laws occupy no more favorable position than those initiated strictly by the parties themselves, and with no regard to legislation. If the employers and employees desire to establish boards of arbitration and conciliation, there is nothing to prevent them from doing so.

#### UNITED STATES STATUTES

The immensely important influence which labor disputes upon the railway systems of the country exert over the welfare of entire communities has led the Federal Government, by virtue of its constitutional jurisdiction over interstate commerce, to establish machinery for arbitration and mediation as regards strikes and lockouts upon interstate transportation lines. An act of 1888 permitted the parties to any such dispute voluntarily to create a board of arbitration for the settlement of that particular difference. There was, however, no provision for the enforcement of awards. In 1898 a new act was passed, largely in view of the recommendations of the United States Strike Commission, appointed by the President (under a provision of the act of 1888) to investigate the great railway strikes of 1894. By this act either party or both parties to a dispute upon an interstate transportation line may request the intervention of the Chairman of the Interstate Commerce Commission and the United States Commissioner of Labor. These officers shall try by mediation to bring about a peaceful settlement, or, if this attempt fails, they shall urge the parties to submit to arbitration. These officers have no specific authority to intervene on their own motion, but apparently there would be nothing to prevent them from endeavoring to bring the parties into negotiation in the absence of application by either party. The act provides that parties may agree to establish a board of arbitration to settle the particular dispute, one member being named by the employer, one by the labor organization concerned, and the third by the Chairman of the Interstate Commerce Commission and the Commissioner of Labor. The decision of these arbitrators is binding and may be enforced by the United States courts by equity process. Employees shall not quit the service of the employer before 3 months after the award without giving 30 days' notice of their intention to

do so, and the employer is placed under a similar restriction as regards the dismissal of employees. As yet there has been no case of arbitration under this act. In the only instance where an attempt was made to apply it, one of the parties refused absolutely to arbitrate. It may, however, readily happen that if a serious strike should occur on interstate railways public opinion would force the parties to arbitrate under this law.

The act regulating the United States Department of Labor also authorizes the Commissioner of Labor to investigate and report to Congress regarding any strike or lockout which affects the welfare of the people of several States.

#### WORKING OF THE STATE BOARDS OF ARBITRATION.

As already intimated, only a few of the State boards provided for by law have been really active. The failure of the boards in the various other States need not necessarily be attributed to inherent defects in the system itself. Indeed, the legal provisions in these States are usually nearly identical with those in the States where the boards of arbitration have been more successful. In some States where the boards have been inactive the people are engaged primarily with agricultural rather than manufacturing industries, or else the "labor movement" in them has made little progress, so that differences between employers and employees of sufficient magnitude to justify public intervention are few. In other cases the failure of State boards may be attributed to the relatively uneducated attitude of mind, on the part of the employers and workmen and on the part of the general public, as regards the desirability and the possibility of peaceful settlement of labor disputes. Yet, again, political influences may have combined in some cases to make the boards inactive or inefficient. It is especially to be noted that many of the laws provide no compensation for the State board of arbitration, except a per diem rate for the members while actively engaged in the investigation or settlement of a dispute. Under such circumstances, especially since the per diem compensation is usually low, it is but natural that the board should generally refrain from taking the initiative itself in the adjustment of disputes, in the way which has been found by the more active boards necessary in order to accomplish the greatest results.

The State boards of arbitration which have been most active have encountered no little difficulty in accomplishing significant results in the promotion of industrial peace.

A careful examination of the work of State boards of arbitration and mediation, as shown by their reports and by the testimony of their members, shows that in general the following statements hold true of all of them, though in somewhat varying degree.

(1) The action of the board in regard to a labor dispute begins in a large majority of instances on its own initiative without application by the parties.

(2) In nearly all of the remaining cases the application for the services of the State board comes from one party only, more frequently from the employees than from the employers. Only in rare instances do both parties at the outset apply to the board, thus giving it jurisdiction to render an authoritative decision. After the board has intervened by its own initiative or on the application of one of the parties, both are sometimes persuaded to join in an agreement to submit their disputes to formal decision by the board.

(3) The intervention of the board usually takes place only after open rupture between employers and employees, that is, after a strike or lockout has actually taken place. Only rarely do we find it true that the board is invited to conciliate or arbitrate before the dispute has resulted in cessation of employment, while naturally the board finds it difficult to learn of disputes before actual strike or lockout, in order to intervene on its own initiative. State boards frequently express regret that employers and employees have not reached the stage where they are willing to call

in the services of impartial mediators and arbitrators at the outset, instead of waiting until a strike or lockout, with its accompanying bitterness and loss, has occurred.

These statements may be illustrated by a few statistics regarding the work of the leading State boards of arbitration and mediation. It should be noted, however, that the boards themselves do not ordinarily present full statistical accounts of their work, and that the form in which the record of individual cases is presented often makes it very difficult to ascertain precisely what the procedure in the matter has been and what results have been accomplished. The figures as to the work of these boards, given in the body of this report, can therefore claim only a rough degree of accuracy.

As illustrating the comparative rareness of application to State boards of arbitration by the parties to disputes themselves, we may point out that in New York during the year 1899, out of 29 cases in which the State board took action, the initiative came from the board itself in 23 cases, while employees asked for its intervention in only 5 instances, and employers in only one. In Ohio, from 1893 to 1899, there were 89 cases of action by the State board described in its reports, and in only 13 of these was there an application on the part of one of the parties for its intervention, and in only one did both parties join in such application. In Massachusetts apparently the proportion of cases where the parties apply for the services of the State board of mediation is somewhat greater. Out of 232 instances of intervention by the board, reported from 1894 to 1900, there were 48 in which one of the parties applied to the board, and 61 joint applications. It should be observed, however, that the applications of the parties in Massachusetts often in fact result from initial action by the board itself. In Illinois out of 49 cases (apparently these include only the most important ones), reported from 1895 to 1899, there were 12 applications by one party and 13 applications from both parties for the services of the board.

The reasons why State boards of arbitration find the scope of their activities limited in the ways indicated are fairly obvious. Employers and employees alike are usually ignorant even of the existence of such authorities, and still more often ignorant as to what may be accomplished by appealing to them. The boards are not convenient to hand. The employers and workmen are not familiar with them as they would be with boards which they themselves had constituted. There is, moreover, in the United States a natural hesitation to appeal difficulties of any kind to governmental authorities. The result is that parties to labor disputes seldom think of resorting to the conciliatory services of the State board of arbitration before actual cessation of employment, and rarely enough, after they have come to feel the pressure of losses resulting from the dispute, do they turn to it. Even where intervention is sought by one side, it is often because it feels in danger of losing in the conflict, and hopes to retrieve its fortunes by appealing to conciliation or arbitration. The bitterness, which the very existence of a strike or lockout tends to engender, makes it far from likely that both parties will be equally willing to refer to a State board of arbitration and conciliation.

It is obvious, therefore, that the success of State boards in promoting industrial peace depends largely on their skill in learning of the existence of disputes, on their energy in setting promptly to work, and on their tact in persuading the parties to put aside bitterness and to enter into negotiations or to submit their differences to outside arbitration. The boards naturally find it very difficult to learn of disputes before they reach the stage of cessation of employment. Even when strikes and lockouts have actually occurred, it is often no easy thing to obtain knowledge of them. State boards are forced to rely to a considerable degree on newspaper reports of labor disputes, and newspapers do not ordinarily note a strike unless it involves a large number of persons or is otherwise conspicuous. The arbitration laws quite frequently make it the duty of mayors of cities and other local officers to notify the

board of arbitration of the existence of strikes and lockouts. It is but natural, however, that these officers should often neglect their duty in this regard, and, indeed, they have no special facilities for ascertaining the existence of disputes, especially in their earliest stages. Since promptness of intervention on the part of the State board is often an essential condition of success, the inability to secure immediate information of the breaking out of a difficulty is evidently a serious drawback.

(4) The fourth conspicuous fact regarding the action of State boards of mediation and arbitration is the extremely small number of cases in which the boards formally arbitrate disputes and render binding decisions. Figures on this subject are presented a few paragraphs below. The comparative fewness of the cases of resort to arbitration by State boards is not indeed surprising. The work of trade boards of arbitration, such as have been described above, also consists primarily in conciliation in leading the parties to an amicable agreement rather than in the rendering of formal and binding decisions.

The value of the results accomplished by State boards of arbitration and mediation must therefore be judged largely by their success as mediators and conciliators. Unfortunately, the reports of the boards are not sufficiently full to enable us to reach a conclusive judgment as to the precise degree of success. The number of cases of intervention by the board is not ordinarily compared with the number of strikes and lockouts in which it has not intervened, nor is there any means of comparing ordinarily the importance of the disputes with which the board has concerned itself with the importance of the others. Finally, it is especially difficult to judge from the reports the precise nature and importance of the results accomplished in the cases in which the board does succeed in getting into touch with the disputants. Often it is recorded that, some time after the intervention of the board, a settlement was reached by the parties more or less in accordance with the lines recommended by the board, or that under the influence of the board the parties were led to hold conferences. In such instances it is always uncertain whether practically the same conferences might not have been held and the same settlements reached, perhaps with a little more delay, in the absence of intervention. Nevertheless, a careful perusal of the reports of the State boards of arbitration leaves no doubt that in many instances, particularly in Massachusetts, New York, Ohio, Indiana, and Illinois, these boards have been able to bring about conferences and settlements which would either not have taken place at all or which would have been greatly delayed. There can be no question that they have accomplished not a little in the furthering of industrial peace.

For the reasons above indicated, statistics compiled from the reports of individual cases can not be considered to present a really satisfactory view of the work of State boards of arbitration. Nevertheless it will be profitable to notice these statistics in a general way. The Illinois board of arbitration reported a total of 49 cases of its action from 1895 to 1899. In 11 of these cases the board arbitrated and rendered a formal decision of the points at issue. In one instance the employers refused to accept the decision, and in three instances the workmen refused to do so. There were 22 cases in which the mediation of the board was followed by a settlement between the parties without arbitration, while only 13 cases are reported of unsuccessful mediation (it is possible that other minor cases are unrecorded). In three cases the board, at the request of one of the parties, made a formal investigation, taking testimony, and reported publicly its conclusions as to the merits of the dispute. This last is in all the States a comparatively rare form of action, and is, of course, intended to bring the influence of public opinion to bear in forcing the parties to a settlement on lines which seem to the State board just.

The Indiana labor commission, as the arbitration board in that State is called, intervened in about 50 cases during the 4 years from 1897 to 1900, inclusive. In no case apparently was there formal arbitration. In somewhat more than half of the disputes the mediation of the commission was followed by a satisfactory settlement.

The Massachusetts board of arbitration is in some ways the most successful of all. Its reports show no less than 232 labor disputes in which it has been active during the years from 1894 to 1900. Out of the 54 cases in which the board has rendered formal decisions on the application of both parties for arbitration, there has been only one instance of a refusal to abide by the decision. Most of the cases arbitrated by the Massachusetts board, however, are of a relatively minor character, especially having to do with fixing the details of the wage scales in the boot and shoe industry, where the general basis of the scale is understood and agreed upon by the parties. The mediation of the board in cases not accompanied by arbitration seems to have been successful in 72 disputes, while in 106 disputes no particular results followed from the board's intervention. In 6 cases this board held formal hearings and made a public report of its findings.

The New York board of arbitration and mediation has also been quite active. It has reported 157 cases of intervention during the years 1894 to 1900. Its mediation proved successful in 76 cases, and unsuccessful in 50. In only 5 cases did the parties submit to formal arbitration, while in 18 cases the board felt itself forced to make a formal public hearing and a report of its findings. In 10 of these 18 cases apparently the disputes were settled more or less upon the basis of the findings of the board. In 8 cases in New York local boards of arbitration have been constituted, through the influence of the State board, for the settlement of particular disputes.

According to the reports of the Ohio board of arbitration its mediation has been successful in promoting a settlement of disputes in 35 cases during the years 1893 to 1899, while in 44 cases the efforts of the board proved fruitless. In 6 instances the board made recommendations after a formal investigation, but in only 1 instance did it render a decision by agreement of the parties to arbitrate. In 3 cases, however, local boards of arbitration were constituted for the settlement of disputes.

#### GOVERNMENTAL ARBITRATION IN FOREIGN COUNTRIES.

Foreign countries have not followed the example of the United States in establishing central governmental boards of arbitration and conciliation. In two of the three Australasian colonies, to be sure, we have such general boards, but their nature and powers are entirely different from those of the boards in the United States. Doubtless it is felt in the larger countries that a single central board could do little to settle labor disputes throughout an entire country with a population many times as great as that of most of the American States. On the other hand, several European countries, as well as some of the English colonies, have passed statutes for the voluntary establishment of local boards of arbitration and mediation. In most cases these statutes appear to have accomplished little, doubtless for the reasons already set forth as explaining the ineffectiveness of American laws providing for voluntary local boards.

As far back as 1867 Great Britain passed a statute permitting masters and workmen to establish temporary or permanent boards, and making the awards of these boards legally enforceable. Practically no results followed from the operation of this statute. In 1896, however, a law was passed which, in addition to providing for the registration of boards voluntarily formed, also authorized the labor department of the board of trade to inquire into the causes of disputes, or to endeavor to influence the parties to meet together and to effect an amicable settlement, or to submit to arbitration by boards created for that particular purpose by the agreement of the parties. The labor department may also, at the request of either party to a dispute, appoint a person or persons to act as conciliators, and on the application of both parties it may appoint an arbitrator. This law permits the department to exercise a considerable degree of initiative in conciliation and in endeavoring to persuade the parties to disputes to submit them to arbitration. The decisions of arbitrators are not legally enforceable. It appears that, from 1896 to 1899, 26 disputes were settled by concilia-

board of arbitration of the existence of strikes and lockouts. It is but natural, however, that these officers should often neglect their duty in this regard, and, indeed, they have no special facilities for ascertaining the existence of disputes, especially in their earliest stages. Since promptness of intervention on the part of the State board is often an essential condition of success, the inability to secure immediate information of the breaking out of a difficulty is evidently a serious drawback.

(4) The fourth conspicuous fact regarding the action of State boards of mediation and arbitration is the extremely small number of cases in which the boards formally arbitrate disputes and render binding decisions. Figures on this subject are presented a few paragraphs below. The comparative fewness of the cases of resort to arbitration by State boards is not indeed surprising. The work of trade boards of arbitration, such as have been described above, also consists primarily in conciliation in leading the parties to an amicable agreement rather than in the rendering of formal and binding decisions.

The value of the results accomplished by State boards of arbitration and mediation must therefore be judged largely by their success as mediators and conciliators. Unfortunately, the reports of the boards are not sufficiently full to enable us to reach a conclusive judgment as to the precise degree of success. The number of cases of intervention by the board is not ordinarily compared with the number of strikes and lockouts in which it has not intervened, nor is there any means of comparing ordinarily the importance of the disputes with which the board has concerned itself with the importance of the others. Finally, it is especially difficult to judge from the reports the precise nature and importance of the results accomplished in the cases in which the board does succeed in getting into touch with the disputants. Often it is recorded that, some time after the intervention of the board, a settlement was reached by the parties more or less in accordance with the lines recommended by the board, or that under the influence of the board the parties were led to hold conferences. In such instances it is always uncertain whether practically the same conferences might not have been held and the same settlements reached, perhaps with a little more delay, in the absence of intervention. Nevertheless, a careful perusal of the reports of the State boards of arbitration leaves no doubt that in many instances, particularly in Massachusetts, New York, Ohio, Indiana, and Illinois, these boards have been able to bring about conferences and settlements which would either not have taken place at all or which would have been greatly delayed. There can be no question that they have accomplished not a little in the furthering of industrial peace.

For the reasons above indicated, statistics compiled from the reports of individual cases can not be considered to present a really satisfactory view of the work of State boards of arbitration. Nevertheless it will be profitable to notice these statistics in a general way. The Illinois board of arbitration reported a total of 49 cases of its action from 1895 to 1899. In 11 of these cases the board arbitrated and rendered a formal decision of the points at issue. In one instance the employers refused to accept the decision, and in three instances the workmen refused to do so. There were 22 cases in which the mediation of the board was followed by a settlement between the parties without arbitration, while only 13 cases are reported of unsuccessful mediation (it is possible that other minor cases are unrecorded). In three cases the board, at the request of one of the parties, made a formal investigation, taking testimony, and reported publicly its conclusions as to the merits of the dispute. This last is in all the States a comparatively rare form of action, and is, of course, intended to bring the influence of public opinion to bear in forcing the parties to a settlement on lines which seem to the State board just.

The Indiana labor commission, as the arbitration board in that State is called, intervened in about 50 cases during the 4 years from 1897 to 1900, inclusive. In no case apparently was there formal arbitration. In somewhat more than half of the disputes the mediation of the commission was followed by a satisfactory settlement.

In Germany a law of 1890 permits local public authorities to establish tribunals of arbitration and conciliation, the statute regulating their procedure in a general way. The president of such a tribunal is to be appointed by the local authorities, and there are to be an equal number of "associates" selected by employers and by employees, respectively, in the locality or industry concerned. These boards have power to render binding decisions as regards minor matters growing out of the interpretation of the labor contract. Indeed, a large proportion of their work apparently is similar to that of the French councils of experts. These tribunals also, however, have power to act as boards of conciliation when requested by the parties to a dispute jointly. Formal decisions may be rendered if the parties can not be led to agree, but these decisions are not binding.

## VI. COMPULSORY ARBITRATION

The wide-reaching influence of the greater labor disputes upon the general public interests has led many persons to advocate compulsory arbitration, at least as regards certain classes of strikes and lockouts. As yet, however, legislation establishing compulsory arbitration has been enacted only in the Australasian colonies of New Zealand and Western Australia. In both of these colonies the system has been made very wide reaching. The New Zealand act dates from 1894, while that of Western Australia was only passed in 1900. The parliament of New South Wales also had under consideration in 1900 a bill very similar to the New Zealand law, and it was strongly advocated by the attorney-general of the colony and by many others, although it failed of passage. The experience in Western Australia, whose act is almost identical with that of New Zealand, has, of course, been so short as to afford few lessons. The New Zealand experience, however, deserves more careful consideration.

The New Zealand law authorizes the formation of organizations of employers and organizations of employees, or the registration of existing organizations. By registration the organizations become corporate bodies with power to sue and to be sued, and to make enforceable agreements regarding the conditions of labor or other matters. The provisions of the law regarding trade agreements are especially significant. Such agreements, if made between duly organized unions and either individual employers or associations of employers, are enforceable before the court of arbitration, subject to the same penalties as infringement of the decisions of that court.

The law makes provisions for conciliation by local boards and for the authoritative decision of disputes by a central court of arbitration. The colony is divided into several districts, in each of which there is a board of conciliation of 4 or 6 members, half elected by the employers' unions in the district and half by the registered labor unions. Unorganized workmen and employers have no share in the election; and indeed unorganized workmen are not subject to the jurisdiction of the boards at all. The central court of arbitration consists of 3 members appointed by the governor, 1 from candidates recommended by organizations of employers, and 1 from among those recommended by organized workmen, while the third is a judge of the supreme court of the colony.

Any employer or association of employers may apply to a board of conciliation as regards a dispute with duly organized employees, and organized employees have the same right. The boards of conciliation may compel both parties to appear, and have ample power to summon witnesses. Their chief function is to ascertain facts and to endeavor to reconcile the disputants. They can not render binding decisions. If no settlement is reached the board makes a recommendation in writing, and either party may appeal to the court of arbitration for a further investigation and for a binding decision.

If the decision of the court has regard to an organization of employers or employees, all persons who are members thereof at the time, or who thereafter become members, are bound by the decision. Any employer or any organization or member of an organization violating the terms of an award is subject to penalty, the amount to be determined by the court of arbitration. The penalty which may be assessed against any person or organization shall not exceed £500, nor shall the aggregate of penalties against all parties exceed the same amount.

Under this law the New Zealand boards of conciliation and court of arbitration have actually exercised a very powerful influence during the past few years upon the conditions of labor. About 100 cases had been brought before these authorities up to March 31, 1900. It appears that comparatively few settlements have been made by the boards of conciliation, the possibility of appeal to a higher authority leading the parties to give but little attention to the lower boards. In some instances, of course, amicable agreements have been effected through the boards of conciliation or the court of arbitration, but in a very large number of instances binding decisions have been rendered. Many of these decisions are highly elaborate, fixing the general wage scales, hours of labor, and working rules for all organized workmen in a trade in a given locality, and in a few instances decisions have related to a trade throughout a colony.

Opinions as to the advantages and disadvantages of the law differ greatly, and it is practically impossible to form a conclusive judgment. Workmen apparently have been very generally satisfied. They are to a large extent organized and in a position to take advantage of the measure. A very large majority of the cases have been initiated by the laborers, and a large majority of the decisions also have resulted to their advantage. It is, however, to be especially noted that the past few years have been years of great prosperity in New Zealand and of advancing prices. Whether the workmen will be equally satisfied when conditions are less prosperous and when, perhaps, reductions in wages will be made, is more doubtful. Employers have, in many instances, expressed themselves against the arbitration system, but apparently it has gradually increased in favor with them. The fear expressed by the opponents of the law at the outset that it would drive capital out of the colony and close up industries seems not to have been justified, although it is impossible to know whether the prosperity of recent years has been actually enhanced by the system or whether it has been due entirely to other causes, and, perhaps, even in despite of a retarding influence from compulsory arbitration.

It is also to be remembered in judging the significance of the New Zealand experience that the entire population of the colony is only about 800,000 persons, and that its industries are chiefly agricultural, in which labor organizations and labor disputes are not likely to be found in any country. Furthermore, the newness of the country and the relatively small population, as compared with the natural resources, makes the average per capita wealth higher than in most cases, and narrows the gap between the employing and the working classes.

The representatives of employers and workmen, who have testified before the Industrial Commission, have almost uniformly opposed compulsory arbitration. Their arguments are more fully set forth in the digests of testimony of various reports of the commission. (See volume 4, p. 149; volume 7, p. 127; volume 12, p. clvii.) Several State boards of arbitration in the United States have also, from time to time, expressed their opinion against compulsory arbitration as a general principle, and one or two of the boards have specifically opposed it in any form. These boards in New York, Indiana, Ohio, and Illinois, however, have favored compulsion in certain cases, especially as to disputes which, on account of their bitterness and violence, endanger life and the public welfare, or which, like those on great railroad systems or on street railways, entail great inconvenience and loss upon the

people generally. The United States strike commission, which investigated the great railroad strike of 1894, reported against compulsory settlement of labor disputes on railways, but advocated the establishment of a commission with power to investigate such disputes and to recommend terms of settlement to the parties, as well as to make public its opinions as to the merits of the dispute. The board also advocated legal enforcement of the decisions of arbitrators regarding labor disputes, provided both parties agreed in advance to arbitrate. The New York board of arbitration has on several different occasions gone further and recommended that the conditions of labor on steam and street railways should be determined either by mutual agreement between the parties, or by arbitration by a board established by them or by the State board of arbitration, that strikes and lockouts should be prohibited, and that resignation or dismissal from the service should be permitted only after due notice. The Ohio board of arbitration has advocated that, in case any dispute is carried to such a length as to threaten the general public welfare, the State board of arbitration should be permitted to interfere and to render a binding decision regarding the points at issue.

The Indiana labor commission has adopted a suggestion, not infrequently made in other quarters, that the law should require the parties to any labor dispute to attempt conciliation, in accordance with some proper method, before actual cessation of employment. This board also takes the same position as the Ohio board regarding compulsory intervention in prolonged and serious strikes.

## CHAPTER III.

### LAWS AND COURT DECISIONS AS TO LABOR COMBINATIONS.

#### I INTRODUCTION

The subject of the attitude of legislatures and of courts regarding the legality of the acts of workmen and labor organizations is a very interesting and important one. It is often asserted that many acts of workmen in connection with strikes, boycotts, and combinations of labor are tyrannous and violent, and contrary to recognized principles of law. On the other hand, workmen almost universally complain that the attitude of the law, especially as interpreted by the American courts, toward their acts is in many cases unjust, and places them at a great disadvantage in their struggle to secure better conditions of employment. Very numerous cases involving certain acts of strikers and of trade unionists have been brought before the courts, and in a large majority of instances these acts have been held either civilly unlawful or criminal, while in many cases, particularly in recent years, injunctions to restrain them have been issued. Most workmen maintain that such practices as refusal on their part to work with nonunion men, the employment of the boycott against so-called "unfair" employers, or picketing, are not only legitimate but in many cases essential methods of attaining their ends, yet all of these acts are ordinarily held unlawful by the courts.

Perhaps the most fundamental principle applied by courts and legislatures in regard to acts of labor combinations is the principle of criminal conspiracy. The English common-law doctrine held that a combination of two or more persons to accomplish an unlawful purpose by means either lawful or unlawful, or to accomplish a lawful purpose by criminal or unlawful means, was an illegal conspiracy. The element of malicious intent is a conspicuous feature of the doctrine, while the element of combination is also essential. A mere intent on the part of an individual to commit an unlawful act is not criminal unless the act is actually carried out, but in the case of concerted action the combination with unlawful intent is usually held to be criminal, even though no overt acts follow. The thought is that the action of a large body of men is much more powerful for evil than that of a single individual. While this doctrine is very generally upheld and applied very broadly by the American courts, unless it has been modified by statute, there are some judges and legal writers who deny emphatically the justice of the principle that acts which, if done by an individual, would not be punishable become criminal when done by a combination, asserting that such a principle is contrary to the fundamental right of men to act in association, and of the inevitable trend of advancing civilization to render collective action more necessary.

The highest English judicial authorities have in several recent cases declared that the intent of a combination to injure does not render civilly unlawful acts which would not be civilly unlawful if done by an individual, and there seems little doubt that the tendency in Great Britain is to consider the element of combination with unlawful intent less significant also as regards criminal law than was formerly the case.

Court decisions do not always clearly point out the distinction between civil liability and criminal liability, or between the elements contributing to each. It is stated by some authorities that malicious intent is not properly to be taken into account in determining whether an act creates a cause of action for civil damages, though it may be properly considered in criminal law. This position, as just suggested, is now the ruling one in Great Britain, where the famous cases of *Mogul Steamship Company v. McGregor and Allen v. Flood* established it firmly as regards the acts of labor combinations and combinations of business men as well. In the United States, on the other hand, the courts in many cases seem clearly to have held the opinion that the presence of malice makes an act civilly unlawful which would not otherwise be so. Some high American legal authorities, however, dissent directly from this position.

A similar conflict of opinion exists as regards the effect of the presence of combination upon civil liability. Some authorities maintain that acts which would not give a cause of action if done by individuals give no cause of action if done by a combination, but the American courts in several important cases have taken the opposite position.

## II. LEGALITY OF STRIKES IN THEMSELVES.

It is a well-known fact that, in earlier times and up to the end of the first quarter of the present century, mere concerted action of workmen in refusing to continue in employment was held by the British courts to be criminal conspiracy. This common-law doctrine was affirmed in one or two early cases in the United States, but it is now definitely abandoned in both countries. Indeed, in Great Britain a statute passed in 1875 expressly affirms the legality of strikes and of various other acts of labor combinations.

We find occasional expressions of opinion by American judges, somewhat in the nature of obiter dicta, to the effect that in actual practice strikes are always attended by unlawful acts, or even that they are in their very essence unlawful, but in recent years no decisions of courts of ultimate resort have formally taken this extreme ground. In the *Northern Pacific Railway* case of 1894 Judge Jenkins, of the Federal circuit court, issued an injunction prohibiting the employees of the railroad from quitting work, with or without notice, on the ground that thereby great injury would be done to the railroad and also to the general public served by it. This decision was, however, overruled by the circuit court of appeals, and it was declared an invasion of natural liberty to compel any man to remain in the personal service of another, although the court intimated that legislation might perhaps wisely be enacted to restrict strikes on great railway systems. It has also been held that the quitting of employment under certain circumstances, without proper notice, is unlawful, particularly where it results in actual danger to life and property, as in case of railway employees who should leave their trains before reaching the end of the journey. Indeed, in not a few States statutes have been passed prohibiting railway employees, individually or collectively, from so quitting work as to endanger the safety of persons and property. This, however, is evidently an entirely different principle from that of the illegality of strikes in themselves.

Different considerations are involved in strikes which have for their motive not the direct improvement of the condition of the strikers, but some other object, such as that of compelling employers to discharge third persons or of aiding other workmen by a sympathetic strike. As is more fully shown below, strikes with such indirect motives are frequently held unlawful. The case of the sympathetic strike, pure and simple, has apparently never been decided by the higher courts, and it is perhaps doubtful whether such a strike would be held unlawful, unless it involved other elements, such as that of the boycott.

## III. ENTICEMENT OF EMPLOYEES.

By the old English common law it was illegal to entice an employee away from his employer, on the ground of the alleged damage to the employer. This doctrine was long since abandoned in Great Britain and has seldom been applied by the authoritative courts in the United States. In one Massachusetts case, in 1871, workmen who persuaded certain employees to quit and to break a contract were held guilty of illegal conspiracy, and a Federal court took a somewhat similar position in the later case of *Old Dominion Steamship Company v. McKenna*. In several other instances, however, the courts have specifically repudiated the doctrine that peaceful persuasion of employees to quit employment is either actionable or criminal, and there seems little doubt that this would be the ordinary position of the highest courts. A different problem arises where intimidation is involved or where persuasion or coercion is directed toward those not already in employment. These questions are discussed in other connections. The court decisions as to the incitement of strikes on interstate carriers are also referred to below.

In several of the Southern States statutes have been enacted which prohibit enticing away persons who are under contract of employment and which also prohibit laborers themselves from breaking such contracts. These statutes were apparently specifically designed to prevent negro farm laborers from breaking their contracts to "make a crop" by work throughout the season. The defense put forward for such legislation is the irresponsibility of many farm laborers in the South and their tendency to quit work at a time when great loss is entailed upon the employer.

## IV. COMBINATIONS TO PROCURE DISCHARGE OR PREVENT EMPLOYMENT

It is a very common practice of trade unions to refuse to work in the same establishment with nonunion men, and to bring pressure to bear in various ways to compel employers to exclude nonunion men and others who are obnoxious to the union. In a very considerable number, doubtless a large majority, of cases where this practice has been brought before American courts they have held that such attempts of combinations of workmen to procure the discharge or prevent the employment of others are unlawful, amounting to criminal conspiracies, or at least giving ground for civil damages. These decisions assert that such action involves an intent to injure the employer or the employee, without any sufficient motive of securing benefit to the members of the combination. They declare that every man has a right to employ his capital as he pleases, free from the dictation of others, that it is unlawful to coerce an employer as to the persons he shall employ; and, similarly, that every workman has the right to labor and that he may not be hindered by such a combination. It has even been held recently (1897) by the court of appeals of New York that a contract or agreement between associations of employers and of employees that only members of the labor union shall be employed is unlawful, though voluntarily entered into on each side. This decision is striking, in view of the fact that such contracts for the exclusive employment of union men exist in very many trades and localities.

It should be noted, however, that in Great Britain the doctrine that refusal to work with other men for any reason is unlawful has recently been emphatically repudiated by the House of Lords, the highest judicial authority. In the case of *Allen v. Flood* (1898) union men threatened an employer with a strike if he should not discharge certain members of another union employed upon work which the first union held to come within its own sphere. Six of the nine law lords held that this was neither civilly actionable nor criminal. They asserted that the motive of the action had nothing to do with its legality; that every servant is entitled, for any

reason which he sees fit, good or bad, to refuse longer to continue in employment, and that, so long as no absolutely unlawful means, such as intimidation, are used to persuade the employer to discharge other men, the person using such persuasion is within his rights. The judges also specifically held that pressure brought to bear upon employers in this way can not be considered unlawful coercion, or intimidation, or interference with the business of the employer. Such a high authority as Sir Frederick Pollock had indeed earlier, in summarizing the English law for the Royal Labor Commission, declared that intimidation in connection with labor disputes was usually held by the courts to refer only to the threat of acts which are in themselves unlawful, and to no other form of pressure or coercion.

The decision in *Allen v. Flood* has already been quoted with approval and followed in two or three decisions by the supreme court in New York (the highest court of original jurisdiction, and second only to the court of appeals), and this court seems definitely committed to recognition of the right of union men to refuse to work with nonunion men or members of other unions. Whether this position will be affirmed by the court of appeals, which took the opposite stand as late as 1897, is, perhaps, doubtful.

The supreme court of Massachusetts, in 1899, specifically denied the authority of the English precedent in *Allen v. Flood*, holding that the act of members of a labor union in persuading employers, by threat of strike and otherwise, to discharge members of another union or to compel them to join the defendant union, was unlawful. The court declared that such an act is malicious, and that the element of malice must be considered. It was held, also, that coercion need not imply the threat of physical violence or injury to property, if it restrains the liberty of the mind. Judge Holmes, in a dissenting opinion in this case, however, declared that the action of the union could not be considered as malicious and without sufficient motive, for, while the union did not specifically demand an advance in wages, it did demand that which it considered necessary for strengthening the organization in order to enable it to secure better conditions in the future. The judge said:

"I think that unity of organization is necessary to make the contest of labor effectual, and that societies of labor lawfully may employ in their preparation the means which they might use in the final contest."

Judge Holmes thus recognizes, as very few judges have done in their decisions, the actual motive of labor organizations in striving to exclude nonunion men from employment. This motive has already been discussed in the present report in another connection. (See p. XLVIII.)

The legality of refusal to work with nonunion men has also been upheld by the highest courts in Indiana and in New Jersey, although in the latter State the decision was made in view of a statute legalizing strikes and combinations of labor, and specifically permitting persuasion of persons not to enter into employment.

It appears, therefore, that the decisions of American courts on the subject of attempts or combinations of workmen to procure the discharge or prevent the employment of others are exceedingly conflicting, although, perhaps, a majority of the decisions of the courts of ultimate resort have hitherto maintained the illegality of such action.

#### V. PICKETING AND INTIMIDATION.

Cases involving the practices of strikers in endeavoring to persuade or to prevent others from taking their places have come before the American courts more frequently than any other class of cases relating to labor. The use of the injunction against such acts has been especially frequent.

In many States are found statutes expressly prohibiting intimidation of workmen or others in their lawful business, while in those States which have specifically legalized strikes the laws ordinarily except combinations for the purpose of intimidating or coercing others, which are declared illegal. In the absence of statutes the

## CXVIII INDUSTRIAL COMMISSION:—LABOR COMBINATIONS.

courts ordinarily go quite as far under the common law. The decisions on this subject rest on the general principle, frequently enunciated, that it is the fundamental right of every individual to carry on his lawful business or labor without interference. Most commonly the courts, in condemning acts of strikers in influencing others to quit employment or to refrain from seeking it, characterize them as "intimidation" or "coercion." Just how far men may go in addressing other men without "intimidating" them is obviously a difficult matter to decide. Apparently the courts have been generally disposed to employ these terms very widely.

The acts of strikers which are generally considered in this connection are either the placing of "pickets" or "patrols" in comparatively small numbers to accost those seeking employment at the plant struck against, or the gathering together of large bodies of men in the vicinity of the works for a similar purpose. The courts have almost uniformly held that the continued presence of a large body of men is in itself a threat, and especially that, where such an assemblage is accompanied by the use of opprobrious language, cries of "scab," threats of injury, or demonstrations giving ground for fear of physical injury, it constitutes unlawful intimidation. It has been asserted by several courts that, while the bearing of pickets may, in some cases, be such as to amount to intimidation, strikers are within their rights if the number of pickets is small, and if they confine themselves merely to informing men of the existence of a strike and of its cause, and to persuading them not to enter employment. As a matter of fact, however, the courts very often, perhaps usually, discover in the acts of pickets evidences of actual intimidation.

The practice of picketing, apart from open threats or intimidation, has been held illegal by courts of ultimate resort in several States. Injunctions against the practice are not infrequently issued by the lower courts in other States, where, perhaps, the higher courts would not uphold such injunctions. Two or three leading decisions have declared that even entirely peaceful picketing involves a degree of coercion. In one recent case a Federal court enjoined "unlawful persuasion" of persons seeking employment, and, while the phrase is vague, and is coupled with others restraining direct threats and intimidation, it seems to imply the idea that the strikers have no right to persuade men not to take their places, presumably because this would interfere with the conduct of business by the employer. This idea of the illegality of interference with the employer's business is doubtless held also by the various inferior courts which have recently prohibited by injunction even peaceful persuasion of those seeking employment. The supreme court of Pennsylvania has even asserted that it is unlawful to consume the time of men seeking employment by urging them not to do so.

The British law of 1875, which legalizes strikes, legalizes also peaceful picketing, defining it as "attending at or near the house where a person resides or works \* \* \* in order merely to obtain or communicate information." Intimidation is expressly forbidden by this statute and various definitions of it are inserted, such as "persistently following," "watching or besetting," "following with two or more persons in a disorderly manner." The courts in Great Britain seem to have interpreted the act rather strictly, holding that picketing in many, if not in most, cases in which it is actually employed involves a degree of intimidation, and is, therefore, illegal. Nevertheless, the workman of Great Britain consider that there is at least some advantage in the legalization of peaceful picketing for the purpose of giving information.

## VI. BOYCOTTS.

Decisions in the United States almost invariably put the ban of illegality upon the boycott as a means on the part of workmen to force employers to comply with their demands. The boycott is especially condemned when, as often happens, it goes beyond mere concerted refusal of labor organizations, singly or in groups, to

patronize an employer, and extends to the active persuasion of the general public to do the same. In some cases boycotts have been held criminal offenses under the common law, or under statutes prohibiting interference with lawful business or employment, or prohibiting the use of force, threats and intimidation. In a few States boycotts are in terms declared unlawful by statute. In other cases the courts have granted civil damages to employers injured by boycotts, while frequently injunctions have been issued to restrain them.

The element of combination in the boycott is especially emphasized by the courts. They usually hold also that, while a strike has evidently for its primary motive the improvement of the condition of the workmen, the boycott on its face involves malice, desire to injure another. Stress is also laid on the thought that, whatever the motive, the means—by deliberate attempt to destroy a man's business—are unlawful; that the right to conduct a lawful business is a fundamental right of liberty and property, and that a man may not properly be coerced to act contrary to his wishes in the management of his own business.

In no case decided by the higher American courts has a boycott by workmen been specifically held legal. In a few instances dissenting opinions of judges have defended the boycott. This was notably true of the opinion of Judge Caldwell, of the United States court in the recent case of *Hopkins v. Oxley Slave Company*. The judge declared that any individual had the right to refuse to patronize an establishment and to persuade others to do the same, and that the act took on no different character when done by an organization. Moreover, in several leading American cases the trade boycott, that is, boycott of one dealer or manufacturer by the concerted action of other dealers or manufacturers, has been upheld as a legitimate form of competition. Thus, where an association of retail lumber dealers was formed to prevent wholesale dealers from selling lumber directly to contractors, the concerted refusal to patronize a wholesaler who acted contrary to this requirement was upheld by the supreme court of Minnesota. Other courts of ultimate jurisdiction in the United States have, however, taken the opposite stand in almost precisely parallel cases of trade boycott, holding it illegal. In England the House of Lords, several years ago, in the leading case of the *Mogul Steamship Company*, upheld the legality of the trade boycott, while the recent decision of the same authority in the case of *Allen v. Flood*, above referred to, asserting that workmen have the right to refuse to work with nonunion men, or for any other cause, perhaps shows a tendency which will ultimately result in declaring boycotts by workmen, if not accompanied by intimidation, legitimate.

It is very difficult to see any distinction in principle between the boycott when carried on by a group of workmen, and the trade boycott. It is true that the trade boycott is more likely to be confined to concerted action on the part of a group of individuals, without especial attempt to influence those not belonging to the group. Nevertheless, the concerted action of a strong association of traders is more powerful in many cases than that of a body of workmen using their utmost influence to persuade others to cooperate with them in the boycott.

The views of labor leaders as to the justifiability of the boycott are set forth above (p. XLVI).

## VII. RAILROAD STRIKES AND BOYCOTTS

During the past few years there have been numerous important cases in which labor disputes on railways have been brought before the courts, especially the Federal courts. The many cases centering around the great strike of the American Railway Union in 1894 attracted widespread public attention. The injunction has been employed with especial frequency and in the most far-reaching manner in connection with these disputes affecting transportation lines.

## CXX INDUSTRIAL COMMISSION:—LABOR COMBINATIONS.

The same general principles on which the courts base their decisions in regard to labor combinations in other employments apply also to those in the transportation business. In addition other considerations have been brought forward. Most emphasis is perhaps laid by the courts on the thought that the protection of interstate commerce is the peculiar duty of the Federal Government, and that certain acts of workmen which tend to obstruct interstate traffic are particularly to be condemned or to be restrained by injunction. Frequently allusion is made to the great seriousness of the effect which railway strikes may have upon the business and even upon the lives of great bodies of the people. The antitrust act of 1890, which is directed against "any contract, combination . . . or conspiracy in restraint of trade or commerce," while apparently designed by Congress primarily to apply to combinations of capital, has been invoked by the Federal courts in numerous instances against combinations of workmen. Again, the courts have sometimes held the acts of strikers illegal on the ground that they interfere with the transportation of the mails, which is by United States statute a criminal offense. Finally, in one or two cases, the interstate-commerce act of 1887 has been applied against combinations of workmen, particularly that section which prohibits refusal on the part of any railway or its agents to furnish proper facilities for the forwarding of cars from connecting lines.

The specific acts of combinations of workmen which have been condemned on the basis of these general principles are numerous. Most frequently injunctions have sought primarily to restrain direct interference with the operation of railways by disabling tracks, switches, and rolling stock, by congregating in large numbers on railway tracks, by preventing men from entering into or remaining in employment through intimidation, threats, or violence, and other similar extreme methods. That those engaged in some of the recent great railway strikes have at times resorted to such practices can scarcely be denied. The courts have, however, gone further in many cases in seeking to restrain interference with the operation of railways. The injunction issued on July 2, 1894, which became the basis for the famous *Debs* case, prohibited even the persuasion of those in employment to quit or to refuse to perform their duties. It also prohibited the doing of any act "in furtherance of any conspiracy or combination to restrain either of the said railroad companies or receivers in the free and unhindered control and handling of interstate commerce, and from ordering, directing," etc., any other person to commit any of the acts prohibited. Such a wide-reaching injunction would seem practically to prohibit striking itself, and certainly to prohibit the acts of officers of labor organizations in urging a strike. To be sure the use of the words "conspiracy or combination to restrain" might be so interpreted as to apply only to a conspiracy in the technical legal sense, with the specifically unlawful purpose of restraining interstate commerce, without applying to the mere ordering of a strike for the betterment of conditions and not having such illegitimate purpose as its chief motive. Under this injunction *Eugene V. Debs* was imprisoned for contempt of court on the ground that he had encouraged and incited employees to quit service and to refuse to perform their duties, and on the ground that the entire strike of the American Railway Union, because of its interference with interstate commerce and of its character as a boycott, was an illegal conspiracy.

In several cases the Federal courts have issued injunctions commanding employees of railways to perform their customary duties so long as they remain in employment. These injunctions have been especially directed against the practice of refusing to handle certain classes of cars. Thus an injunction was issued to prohibit refusal by the employees of various railroads to handle cars coming from the Toledo, Ann Arbor and North Michigan Railway, on which there was a strike. The court declared that men could escape the injunction by leaving employment—though even this might perhaps be the ground for action for civil damages or for criminal prosecution—but that while remaining in employment they were bound to perform their

ordinary duties. A few court decisions have gone even further and have held that the quitting of employment itself, under certain circumstances, is illegal. Thus the quitting of employment by railway employees to compel the Pullman Company to grant concessions to its employees was condemned by several Federal courts because of the element of boycott. In the cases growing out of this Pullman strike injunctions were not issued directly prohibiting workmen from leaving employment. As already stated, however, in the Northern Pacific Railway case, somewhat earlier in the same year (1894), Judge Jenkins prohibited absolutely, by injunction, the quitting of employment in such a way as to cripple the service of the railway, although this part of the injunction was stricken out by Judge Harlan of the circuit court of appeals. In several other cases Federal judges have used language, rather in the nature of obiter dicta than of rulings, to the effect that strikes, particularly on railways, are extremely reprehensible and even illegal in themselves, whatever their motive. Such statements as these, however, can not be considered to represent the general attitude of the highest judicial authorities.

The subject of railway boycotts has already been several times alluded to in the preceding discussion as to railway strikes. The railway boycott, in the sense of refusal to handle certain classes of cars, is peculiar in its character, inasmuch as it involves usually only concerted action by the workmen themselves, without attempt to influence the public to refuse patronage. Again, the boycott is effected often by means of a strike, by quitting employment, in order to avoid handling cars. On the other hand, a railway boycott conducted in this way is even more effective than one which consists merely in refusal of patronage. If the cars of a railway company can not be hauled at all, because of the refusal of the employees, the willingness of the public to patronize the railroad is a matter of no significance. The Supreme Court of the United States in the Debs case seems to hold quite distinctly that the mere cessation of employment is illegal when it is in pursuance of a wide-reaching combination of railway employees to refuse to handle certain cars, with the design of so injuring the railways and the public as to lead them to bring influence to bear upon another person to carry out a particular line of action. It is, however, impossible to dissociate the single element of boycott in this case, or the single element of quitting employment, from the elements of violence, intimidation, and interference with interstate commerce, which were supposed to be connected with this great dispute.

#### VIII. INJUNCTIONS IN LABOR DISPUTES.

As already seen in the preceding discussion, a conspicuous feature of recent cases before the courts regarding labor disputes has been the employment of the extraordinary equity process of injunction. By the injunction a court commands certain persons to refrain from doing specified acts. A violation of the order becomes then contempt of court, subject to summary punishment, in fine or imprisonment, by the court itself after hearing. During the past decade the courts have issued such injunctions against workmen with especial frequency, particularly during strikes. The employment of this process during the great railway dispute of 1894 caused exceedingly widespread discussion. There can be no doubt that injunctions have been employed much more extensively in labor disputes in the United States than in Great Britain. Workmen are almost uniformly opposed to the recent extended employment of this process, and many lawyers and other citizens not directly concerned with labor have taken a similar position.

One serious ground of objection is that ordinarily not sufficient opportunity for hearing is given before the injunction is issued. Judges may issue injunctions either in open court or in chambers, and a temporary injunction may be granted with no notice whatever to those affected by it. Before an injunction is made permanent an

## CXXII INDUSTRIAL COMMISSION:—LABOR COMBINATIONS.

opportunity for hearing is given, but in many instances the hearing is a considerable length of time after the preliminary injunction has been granted, and the object of the restraint may already have been effected. Of course, where an injunction is issued against unknown defendants, or against all persons in general, as sometimes happens, no possible opportunity can be given to all those affected to put in an appearance.

Complaint is made especially that the injunction has in many instances been directed against the commission of acts which are held by the courts to be in themselves criminal, and that it has thus taken away the right of trial by jury from those resorting to such acts. In almost innumerable cases injunctions have been issued prohibiting boycotts, intimidation, violence, picketing, and other practices which the courts regularly treat as ground not merely for civil damages, but for criminal prosecution. The issuance of injunctions of this character has been defended by the courts in elaborate opinions, and in the *Debs* case the Supreme Court of the United States placed the sanction of its approval on the practice. It is argued that, while the acts referred to may be criminal, they also result in direct injury to private individuals, in their property or pecuniary rights. This injury is a continuing one and is irreparable by civil suit, because the parties causing the injury are usually financially irresponsible. It has always been the practice of the courts to restrain a continuing and irreparable pecuniary injury by injunction, and it is maintained that the mere fact that the same act is also a crime does not affect the matter.

Some of those who oppose the extended use of the injunction are inclined to admit the validity of its occasional use to protect the property rights of a private individual, even against acts which are criminal, but they assert that in many cases the courts have considered the public injury rather than the injury to a single individual as the chief ground for issuing the injunction. Where this is the case, the injunction, according to these writers, adds nothing to the force of the ordinary criminal law. The only penalty which it can threaten is fine or imprisonment of the same nature as that which follows criminal prosecution. The fact that the punishment for violation of injunction may be inflicted somewhat more promptly, without the prolongation of a trial, is, it is maintained, no justification for its use. The fundamental object in the use of the injunction, in the opinion of such legal writers, as well as in the opinion of workmen generally, is to make punishment more sure by avoiding trial by a jury, which might perhaps be influenced by sympathy or class feeling in favor of the defendant. It has always been the principle of English and American criminal law that every man is entitled to a fair trial by a jury of his peers. The summary character of hearings before judges regarding violation of injunctions, giving less opportunity to the defendant to present his case fully, is also complained of, as well as the absence of the right of appeal.

Labor organizations generally favor the enactment of legislation which shall restrict the power of the courts to issue injunctions or which shall at least provide for jury trial in case of violation of them, except under certain special circumstances. A bill of this sort has been laid before Congress and before various State legislatures, and the legislature of Virginia actually placed it upon the statute books. This measure declares that all contempts, not actually in the presence of the court or committed by court officers or witnesses, shall be known as indirect contempts, and that the person accused shall be entitled on his demand to a trial by jury, which shall fix the amount of his punishment in the verdict. This measure also permits appeal in contempt cases. The supreme court of Virginia has held an act of this sort unconstitutional, on the ground that the State constitution establishes the courts as an independent branch of the government not subject to the control of the legislature, and that they are entitled to exercise the immemorial functions which have belonged to courts under Anglo-Saxon governments; that the courts have an inherent right of self-preservation, and must have authority to issue orders properly falling within their sphere and to enforce them directly.

Another practice in connection with the injunction which has led to much criticism is the issue of orders directed not merely against specified persons, parties to a suit, but against unnamed persons, and even against all persons in general. The famous *Debs* injunction, for example, was by its terms made binding upon "all other persons whatsoever who are not named herein from and after the time when they shall severally have knowledge of such order." It is objected that all court traditions and rules have required that each person affected by an order of court shall be specifically named and shall have the order served personally upon him. The courts have usually treated this criticism lightly, declaring that it is as proper to issue an injunction against many persons as against one, that there must be no inadequacy in equity remedies because of technical points. This was the position taken by the Supreme Court of the United States in the *Debs* case.

Objection has also been raised by workmen against the issue of injunctions by the Federal courts. Many labor cases, some involving injunctions and others not, have indeed in recent years been brought before these courts. Often such cases have been connected with interstate commerce, but in other cases the ground on which the Federal courts have claimed jurisdiction is apparently the fact that the litigants are citizens of different States. Workmen often complain that the Federal courts are more disposed to favor capital and its interests than the State courts. Legal writers have also sometimes questioned the right of the Federal courts to issue injunctions regarding labor disputes as freely as they do.

In the *Debs* case the Supreme Court of the United States specifically decided that the Federal courts had the authority to issue injunctions to protect interstate commerce and prevent obstruction of the mails. Other Federal courts have often invoked the antitrust act of 1890, which permits the use of injunctions to prevent restraint of trade, but the Supreme Court held that, even in the absence of such provisions, the constitutional authority of the Federal Government regarding interstate commerce justified it in using any legal measures for preventing interference with such commerce.

Especial criticism has been brought against several injunctions issued by the Federal courts which sought to compel the performance of specific services by workmen. This subject has already been discussed in connection with the summary of court decisions regarding labor disputes on railways.

## IX. LEGAL POSITION OF LABOR ORGANIZATIONS

The position of labor organizations under statute law and court decisions is a somewhat uncertain and anomalous one. Their powers and responsibilities are not clearly defined, and in general are not probably very great. Numerous American States have passed laws legalizing combinations of workmen and strikes, so that trade unions, in the absence of statutes regarding incorporation, become legitimate as voluntary associations. In many States they may doubtless incorporate under the nonstock or membership corporation laws. In New York, Pennsylvania, and a half dozen other States special laws authorizing the incorporation of trade unions have been enacted, and a similar law has been enacted by Congress, but most of these are far from being specific regarding the powers and obligations of such incorporated unions. In most States very few labor unions have incorporated, although the number in New York is quite large.

Occasionally even unincorporated unions are sued in the courts, while somewhat more frequently those which are incorporated have been sued or have brought suit. The question as to the legal enforceability of agreements between employers and employees regarding the conditions of labor, or of the awards of arbitrators under such agreements, is one of special importance. Suits bearing on this question have

#### CXXIV INDUSTRIAL COMMISSION:—LABOR COMBINATIONS.

very seldom been brought before the courts, although in New York agreements between incorporated unions and employers in the clothing trade have been enforced at law. It is possible that courts in other States would take a similar position were employers or employees disposed to attempt to enforce the terms of collective agreements by legal process. In general, however, unionists have preferred to enforce agreements by the threat of strike; while employers have felt that, even if judgments for damages should be obtained against unions, it would in many cases be impossible to collect them.

There has been much discussion as to the desirability of legislation extending the powers and responsibilities of labor organizations in their dealings with employers. Some form of incorporation with this view is often advocated. In Great Britain a special enactment of 1875 permits the registration of labor organizations and gives them certain powers as regards the handling of property and the control of their funds, but specifically provides that unions shall not be financially responsible for agreements with employers. In New Zealand and two other Australian colonies recent legislation has permitted unions, at discretion, to enter into binding agreements regarding the conditions of labor, which may be enforced against them by fine upon the union as such, the individual members also being liable to the amount of £10 each. Some such legislation as this has been strongly advocated by some persons both in Great Britain and the United States.

Workingmen in both of these countries have very generally opposed the incorporation of labor organizations, or the rendering of them financially responsible for all their acts as organizations. It is objected that, if unions as such were subject to suit for injury through all sorts of acts, such as boycotting, picketing, etc., their funds would never be safe and their entire position would be unstable. As a matter of fact a recent decision of the British House of Lords (1901), even under the existing statute in that country regarding labor organizations, has held that the funds of a union may be levied upon to collect damages for injury inflicted upon an employer by an unlawful act—a decision which has raised consternation among British workmen. The proposition has been made in some quarters to give unions the power to enforce their agreements with employers regarding the conditions of labor by legal methods, and to make them legally responsible for carrying out those agreements, without extending their responsibility so as to cover all of their acts. Some unionists appear to be favorably disposed toward such a limited extension of responsibility, in exchange for added privileges before the courts.

It is evident that even if labor organizations were made nominally responsible, it would often be difficult to collect damages from them. Their funds are frequently small and often their individual members have little financial responsibility. Nevertheless not a few labor organizations possess funds of considerable importance, while in the absence of such funds assessments upon members within reasonable limits could often be collected, the threat of suspension from the union for failure to pay being sufficient power of compulsion.

*Legislation prohibiting discrimination against union labor.*—In most of the Northern States statutes have been passed prohibiting employers from demanding that the workman shall not be a member of a labor organization as a condition of entering or continuing in employment. The supreme court of Missouri has held such a law unconstitutional, as being class legislation and as limiting the rights of employers in making contracts. Such statutes have not usually been questioned in other States. On the other hand, there have been but few attempts to enforce them before the courts, and apparently they have had comparatively little effect upon the actions of employers. In a case involving the Reading Railroad Company a Federal circuit court held under the common law that the railroad had a right to make it a rule that members of labor organizations should not be employed.

*Protection of trade-union labels.*—Nearly all of the American States have within the last few years adopted statutes permitting the registration of union labels and trademarks and providing for the punishment of the infringement of such labels. Some such statutes apply only to labor organizations, while others apply to any organization which desires to adopt a label to designate the products of its labor or that of its members. Such statutes have usually been upheld by the courts as constitutional, and even when applying only to labor organizations the charge that they were class legislation has been declared unfounded. The objection that the label is not placed upon goods which are the property of the union or of the employee, but which are the property of another, has not been considered a valid reason for refusing to protect the use of the label.

## CHAPTER IV.

### STATISTICS OF STRIKES AND LOCKOUTS.

For some time past the United States Department of Labor has presented elaborate statistics regarding strikes and lockouts, and similar statistics are prepared by governmental authorities in the leading European countries. An analysis and comparison of these statistics is given in Part V of the present report.

#### I. NUMBER OF DISPUTES AND OF PERSONS AFFECTED

The statistics prepared by the United States Government, as well as by nearly all other authorities, draw a distinction between strikes and lockouts. A strike is said to occur when the employees of an establishment refuse to work unless some demand is granted, while a lockout is defined as the refusal of the management to allow employees to work except under conditions dictated by the employer. It is generally recognized that the distinction between the two classes of disputes is not a sharp one. In fact, strikes not infrequently arise out of resistance to demands of employers, while lockouts may also occur in resistance to a movement first begun by employees. Public opinion is sometimes unfortunately influenced against workmen by the fact that strikes are much more numerous than lockouts, as ordinarily distinguished. It is, to be sure, true that more demands for changes in conditions of employment come from workmen than from employers, as is naturally to be expected in an advancing state of society, but the proportion of disputes due to the initiative of the employees is not as great as would appear from the number of strikes as compared with lockouts.

The Sixteenth Annual Report of the Department of Labor, which appears approximately contemporaneously with the present report, covers the statistics of strikes and lockouts in the United States for the twenty years from 1881 to 1900, inclusive. The total number of strikes reported for this period is 22,793, the number of establishments affected 117,509. The actual number of strikers, or persons making demands, was 4,694,849, while 6,105,694 persons were thrown out of employment as the result of strikes, since it often happens that a strike throws out a number of employees who have themselves no grievance. The number of lockouts during the same period was 1,005, affecting 9,933 establishments, and throwing out of employment 504,307 persons. Lockouts thus appear to affect less than one-twelfth as many persons as strikes.

The number of strikes and of persons affected thereby has varied greatly from year to year. The largest number of persons thrown out of employment by strikes is found in 1894, 660,425, while the number for 1900 is also especially large, 505,066. A careful analysis fails to show any broad influences affecting strikes in all trades alike. There does not even appear to be any close parallelism between the number of strikes and strikers and the condition of business prosperity or depression, although it is perhaps worthy of note that the number of strikers in each of the two highly prosperous years, 1899 and 1900, was considerably greater than in any preceding year of the decade, except 1894, in which latter year the number of strikers was greatly increased by the wide-reaching railway disputes. The number of employees affected by lockouts has varied much more widely from year to year than the number affected by strikes, ranging from only about 7,000 in each of the years 1896 and 1897 to 62,653 in 1900 and 101,980 in 1886. The large number in 1900 was due primarily to the great building-trades lockout in Chicago.

To appreciate more clearly the significance of the figures regarding the persons thrown out of employment by labor disputes, a comparison with the total number of persons employed in industries likely to be affected by strikes must be made. Eliminating the agricultural population, domestic servants, employers, and certain other classes, we find that according to the census of 1890 there were 9,843,466 persons employed in industries—especially in manufacturing and mechanical industries, mining and transportation—where there is some possibility of strikes. The average number of persons thrown out of employment by strikes at some time during each year from 1881 to 1900 was 305,285. Thus for every thousand persons employed 31.02 persons have been thrown out of employment by strikes at some time each year. For strikes and lockouts combined the number of persons thrown out of employment yearly is 33.6 per thousand employed. Of course it often happens that the same persons are thrown out of employment more than once in a single year, in which case they would be duplicated in the calculations.

## STRIKES ACCORDING TO INDUSTRIES

A table in the body of the report shows the number of strikes and lockouts, establishments affected, and persons thrown out of employment, in each trade from 1881 to 1900. With regard to strikes a comparison has been attempted between the number of persons affected and the number employed in the industry according to the census of 1890. As is pointed out in detail, it is impossible to be sure to what extent the grouping of workmen in the respective industries by the census authorities is parallel with the grouping adopted by the Department of Labor. Nevertheless, at least as to various important industries, the comparison is fairly accurate.

An attempt has also been made to compare the tendency toward strikes on the part of workmen in strongly organized trades with the tendency on the part of workmen in trades which are either unorganized or weakly organized. While it is difficult to know definitely whether a trade is relatively strongly organized or otherwise, it is believed that the following table is reasonably correct in its classification.

*Number of strikers in strongly organized and weakly organized industries, 1881-1900*

	Strikes ordered by organ- izations	strikes not or- dered by organ- izations	Persons thrown out yearly by strikes per 1,000 per- sons em- ployed, 1890
<b>STRONGLY ORGANIZED INDUSTRIES</b>			
Glass trade . . . . .	188	186	140.5
Tobacco . . . . .	1,102	107	118.1
Shipbuilding . . . . .	83	68	76.6
Stone quarrying and cutting . . . . .	642	241	56.8
Transportation . . . . .	551	708	52.5
Brewing . . . . .	73	8	45.8
Building trades . . . . .	1,989	151	30.2
Machine trades . . . . .	300	152	25.7
Printing . . . . .	657	108	15.5
Total . . . . .	7,558	2,342	162.17
<b>WEAKLY ORGANIZED INDUSTRIES</b>			
Coal and coke . . . . .	1,303	1,209	297.3
Carpeting . . . . .	15	92	121
Silk goods . . . . .	133	154	83
Cotton goods . . . . .	106	106	68
Brick . . . . .	96	88	54.7
Rubber . . . . .	13	45	46.7
Woolen . . . . .	37	252	36.8
Boots and shoes . . . . .	629	223	32.5
Paper . . . . .	8	35	2.8
Total . . . . .	2,380	2,502	182.88

<sup>1</sup> Average.

## CXXVIII INDUSTRIAL COMMISSION:—LABOR DISPUTES.

The statistics of the Department of Labor indicate the proportion of strikes which are ordered by labor organizations as compared with those not so ordered. About 63½ per cent of all strikes from 1881 to 1900 were due to the action of labor organizations. By comparing similar figures for the two groups of selected trades, it is evident that in the more strongly organized trades the proportion of strikes ordered by trade unions is much larger than in the weakly organized trades, more than three-fourths of all strikes in the first group and less than one-half of all in the second group having been due to the initiative of unions. This, of course, is not necessarily an indication of an inclination on the part of labor organizations to strike, but may be mainly due to the fact that a large proportion of all the workmen in the trades of the first group belong to labor organizations, while only a small proportion of the workers in the second group are organized.

It will be observed from the last column of the table that in the nine strongly organized trades named, on the average, during the 20 years from 1881 to 1900, 62.47 persons were thrown out of employment yearly per 1,000 persons employed. The corresponding proportion for the weakly organized trades is 82.88 persons per 1,000 employed. The industry in which strikes are most prevalent of all is the coal and coke industry, where not less than 297.3 persons were thrown out on the average each year by strikes. The workmen in the coal mines were, till about 1897, very weakly organized. It should be remembered, however, that this industry has always been overcrowded, that the demand for its product is seasonal, and that accordingly the workmen are almost always out of employment a considerable portion of each year. It is doubtful, therefore, whether the amount of unemployment is actually increased through strikes by anything like the aggregate duration of the strikes themselves. To some extent it may be said that the workmen merely select the time for unemployment which seems to them most favorable for obtaining better conditions. If this trade should be eliminated from the weakly organized group, we should find the proportion of strikes to persons employed approximately the same in each of the two groups of trades, and it is impossible to draw any conclusion from the figures as to whether labor organizations tend to increase the number of strikes. It is doubtless true on the one hand that the more strongly organized workmen, with experienced and conservative leaders, are less apt to rush into hasty strikes than comparatively ignorant and unorganized men would be. On the other hand, organized workmen have usually a better chance of winning their strikes, as is more fully shown below, and are therefore at times more disposed to enter into them than unorganized men. Further discussion as to the reasons for the frequency or infrequency of strikes in the respective trades is given in the body of the report.

### STRIKES AMONG WOMEN

An interesting feature of the strike statistics has to do with the distinction among the strikers according to sex. It is frequently supposed that women are, because of their weaker economic position as well as because of their alleged dependence and timidity, less apt to strike than men. The statistics presented by the Department of Labor regarding strikes from 1887 to 1900 do not bear out this view. The employment of women is most marked in the boot and shoe trade, the manufacture of carpets, cotton goods, silk, rubber goods, cigars and tobacco, and woolen and worsted goods. The proportion of women employed in these trades ranges from 15.8 per cent to 59.3 per cent of the total number of persons employed. The percentage of females among the total number of strikers in these trades ranges from 22.3 per cent to 50.3 per cent. In four of the trades named the proportion of strikers who are females is larger than the proportion of the total number of employees who are females.

# NUMBER OF STRIKES AND LOCKOUTS.

CXXXIX

## COMPARISON WITH FOREIGN COUNTRIES.

The foreign countries which have presented strike statistics for any considerable number of years are Great Britain, France, Austria, and Italy. Germany began the presentation of such figures in 1899, and a report for that year only is available. In the text the statistics of the number of strikes and strikers from year to year in each country are given, together with some discussion as to the significance of the figures. It will be sufficient here to compare the various countries with the United States as regards the prevalence of strikes in proportion to the industrial population. It can scarcely be hoped that the elimination of those classes which are not subject to strike has been made in precisely a parallel fashion for each country, since the census methods employed by different governments vary somewhat. Nevertheless, it is believed that the figures in the following table represent fairly the industrial population engaged in manufacturing, mechanical, mining, and transportation industries differs very greatly in different countries. Only in the United States, Great Britain, and Germany is a distinction made between the number of strikers and the number thrown out of employment as the result of strikes, and it is uncertain whether or not in the other countries the figures given include all thrown out of employment.

### *Comparative prevalence of strikes.*

Country.	Years.	Annual number of strikers or persons thrown out of employment by strikes and lockouts	Industrial population. Censuses of 1890 or 1891	Number of strikers, etc., per 1,000 of industrial population.
United States .....	1881-1900	330,500	9,843,466	33.6
Great Britain .....	1890-1900	295,220	10,689,018	27.6
France .....	1890-1899	92,148	4,779,787	18.3
Germany .....	1899	117,750	10,619,731	11.1
Austria .....	1894-1899	149,139	3,264,188	15
Italy .....	1889-1898	141,462	3,001,344	13.8

<sup>1</sup> Not including lockouts, which in each country, according to the reports, are so few as not to affect the figures to any material extent.

From this table it appears that in proportion to the industrial population a larger number of persons are thrown out of employment yearly by strikes and lockouts in the United States than in any other country presenting strike statistics, no less than 33.6 being out of employment at some time each year per thousand of the working population. In Great Britain the corresponding figure is next highest, 27.6 per thousand of the population. The British statistics seem to show a distinct decrease in the number of strikes and strikers during the past few years, and there is reason to believe that the increased employment of methods of collective bargaining, conciliation, and arbitration for the settlement of the relations between employers and employees has contributed to this result. France shows the next largest proportion of strikers, 18.3 per thousand of the population, or about two-thirds of the proportion of Great Britain. The German statistics cover only a single year, and are therefore less significant, but for that year the number of persons thrown out by strikes and lockouts was less in proportion to the industrial population than in any other country covered by the table, 11.1 per thousand. The proportion of persons thrown out of employment by strikes yearly in Austria is 15 per thousand and in Italy 13.8 per thousand of the industrial population.

The prevalence of strikes by industries exhibits some degree of parallelism in the different countries. Thus the mining industry shows an especially large proportion

of strikers in Great Britain and in Austria, both important mining countries, as well as in the United States, although in Germany, where many mines are owned by the Government, the proportion of strikers in this industry is low, while in France the proportion is not conspicuously high. The textile trades show a high proportion of strikers in the United States, France, Italy, and Austria, but in Great Britain peaceful methods for the settlement of differences in these trades have been introduced to such a large extent that the proportion of strikers is less than in all industries combined. Building trades in the United States show about the same proportion of persons thrown out of employment by strikes as do all trades combined, and the same seems to be true in Great Britain; but in the continental countries the workers in the building trades seem especially disposed to strike.

It is probable that the reason why strikes on the whole are less prevalent in continental countries than in Great Britain and the United States is that workmen feel less independent, have less individual initiative, and are more disposed to accept the paternal rule of the Government and of the employer, than is the case among the more democratic Anglo-Saxon peoples. It is certainly true that working men are much less strongly organized in the continental countries than in the United States and Great Britain, and that their condition is on the whole much less satisfactory. On the other hand, labor organizations are beyond question stronger in Great Britain than in the United States, and yet the proportion of persons thrown out of employment by strikes and lockouts is lower in that country than in our own, so that a comparison between countries does not seem especially instructive as to the effect of organization *per se* in increasing strikes.

## II. CAUSES OF STRIKES.

The statistics presented by the Department of Labor enumerate no less than 1,403 different causes of strikes. Many of these causes, however, consist of two or more distinct demands. The number of entirely separate classes of demands is therefore very much less, probably not exceeding 100. Moreover, it seems possible to group the different demands with a reasonable degree of accuracy under a few large heads. This attempt has been made in the body of the report. The statistics are based on the number of establishments affected by strikes involving the respective causes. In the preparation of the table in the text each distinct demand, even though combined with other demands as a single cause, has been enumerated separately. The number of causes thus ascertained is accordingly greater than the number of establishments affected by strikes. Strikes in which demands were made for the adoption of new scales, of union scales, and for various other similar concessions have been grouped together with those seeking directly an increase of wages. Other groupings have been made in a similar way, and while it can not be expected, especially because of the vagueness of some of the demands enumerated, that they have all been satisfactorily grouped, it is believed that a fairly accurate view of the extent to which different motives enter into the cause of strikes has been obtained.

It appears that no less than 41.3 per cent of the entire number of causes of strikes in the United States from 1881 to 1900 involved the desire for higher wages in one form or another. About 6.9 per cent of the entire number of strikes were directed against decrease of wages, so that very nearly one-half of the entire number of causes related to rate of compensation. The next most important cause of strikes is the demand for a shorter working day, for more satisfactory adjustment of hours, for overtime pay, and other changes connected with the hours of labor. Demands of this sort account for 25.8 per cent of the entire number of strikes. A very considerable variety of demands of strikers relate to the methods of calculating wages or of paying them. Under this head may be grouped grievances relating to such matters as time and piecework, time of paying wages, cash payment of wages, fines and deductions,

screening of coal, etc. These various demands constituted 5.3 per cent of the entire number of causes of strikes during the 20 years.

The demand for the recognition of labor organizations, or for the adoption of union rules and regulations, appears quite frequently, causing no less than 6.4 per cent of all strikes. Sympathetic strikes are scarcely as common as is perhaps sometimes supposed, motives of sympathy appearing as only 3 per cent of the entire number of causes of strikes. A rather frequent demand of strikers is for the discharge or the exclusion of nonunion men, while somewhat less often strikers seek to exclude members of other unions, unpopular foremen, foreigners or persons of particular nationality or race, and other obnoxious persons. Strikes covering all these objects combined affected 5.3 per cent of the establishments in which strikes occurred from 1881 to 1900. A little more than 1 per cent of the causes of strikes arise from demands for the reinstatement or retention of employees, especially of union men and those most active in the work of organization. Strikes regarding apprenticeship are comparatively few, only .78 of 1 per cent, while those regarding the introduction or use of machinery and appliances for work are very much fewer still, only .14 of 1 per cent of all. The causes of strikes enumerated cover all except about 4 per cent of the causes. The remaining minor causes are very numerous and scarcely merit detailed discussion.

In the body of the report will be found a table comparing the number of strikes (covering the years 1887 to 1894 only) for leading groups of causes in nine of the most important trades, part of which are recognized as being strongly organized and others as being weakly organized. It appears that among the more strongly organized trades the demand for higher wages is a somewhat less common cause of strikes than among the more weakly organized. In these trades, moreover, it is comparatively rare that workmen find it necessary to strike against a proposed decrease of wages, while this is a very common cause of strikes in the less strongly organized industries. The demand for a reduction of hours or a more satisfactory adjustment of them appears very much more frequently among strongly organized workmen than among those weakly organized, and the same is true, naturally enough, of the demand for exclusion of non-union men and other obnoxious persons. It is scarcely possible to draw any conclusions as to relative prominence of other causes of strikes in the strongly organized trades as compared with the weakly organized. For a further analysis of the statistics regarding causes of strikes in the individual trades, reference is made to the body of the report.

#### FOREIGN COUNTRIES

It is impossible to make a detailed comparison between the causes of strikes in the United States and in foreign countries on account of the differences in the methods of grouping causes in the various reports. It is, however, possible to make a rough comparison as to the proportion of strikes which are due to demands regarding wages and to demands regarding hours of labor, these being distinguished alike by all countries. Unfortunately there is a further difference in the basis of the statistics, since in the United States the causes are reported according to the number of establishments affected by each, while in Great Britain and France the number of strikers presenting the respective classes of demands is the basis of the statistics, and in the other continental countries the separate strike, which may involve several establishments and many employees, is taken as a basis. The British figures for strikes regarding wages include not merely those as to the rate of wages but those as to methods of payment, piecework, etc., which are perhaps 10 per cent of the entire number of strikes.

## CXXXII INDUSTRIAL COMMISSION;—LABOR DISPUTES.

*Relative number of strikes due to different causes.*

Countries.	Years	Percent of strikes regarding rate of wages	Percent of strikes regarding hours of labor
United States .....	1881-1900	48.2	25.8
Great Britain .....	1893-1900	171.5	3.4
France .....	1890-1899	41.1	9.7
Germany .....	1899	53.6	18
Austria .....	1894-1899	54.9	21.8
Italy (average) ..	1892-1899	60.2	7

<sup>1</sup> Includes also strikes as to method of paying wages, etc., roughly 10 per cent of all.

From this table it appears that demands regarding wages cause a larger proportion of strikes in all foreign countries except France than in the United States, although the difference in the case of Germany and Austria is not great, and might be due largely to the different basis of the statistics. The number of strikers in France who seek changes in the rate of wages or who resist reductions is comparatively low, 41.1 per cent of all strikers, but it is to be noted that in France a very large number of strikes grow out of demands regarding the methods of paying wages, fines, deductions for insurance funds, and similar matters connected with wages, no less than 24 per cent of all strikers being concerned with demands of this sort. It is possible, as explaining the general differences between the United States and the other continental countries in regard to causes of strikes, that in this country, where workingmen are more strongly organized than in the most of the continental countries of Europe, they feel warranted in striking more frequently for less directly necessary objects, such as the recognition of the union, exclusion of nonunion men, etc., than workingmen abroad. In Great Britain, however, the unions are more strongly organized than in the United States, and the high proportion of strikers who make demands regarding wages, 71.5 per cent (and over 60 per cent even if strikes as to methods of payment be eliminated), is probably explicable largely by the fact that, at least in many trades, the British workingmen have secured hours of labor which seem to them satisfactory and strike comparatively seldom to secure reduction of hours. This is seen in the last column of the table, which shows that strikes regarding hours of labor are a larger proportion of the total number of strikes in the United States than in any other country, and especially than in Great Britain. While 25.8 per cent of strikes in the United States have to do with hours of labor, overtime, etc., the proportion of strikers in Great Britain making demands regarding hours is only 3.4 per cent. In Italy where the labor movement has made little progress as yet, workingmen probably feel less able to insist on demands for shorter hours, and only 7 per cent of all strikes are due to this cause. In Austria strikes regarding hours of labor are very common, no less than 21.8 per cent of all strikes being due to this cause, while the corresponding proportion in France is 12 per cent and in Germany 18 per cent.

### III. DURATION OF STRIKES AND LOCKOUTS.

The report of the United States Department of Labor shows that, for the years 1881 to 1900, 65.73 per cent of the establishments in which strikes occurred were closed by them, while 71.95 per cent of establishments in which lockouts occurred were closed. The average number of days during which establishments closed on account of strike remained closed was 20.1, while in the case of lockouts the period of time closed averaged 52.4 days.

Other tables of the Department of Labor show the average length of time elapsing from the beginning of strikes to the time when strikers in the respective establishments are all either reemployed or replaced by others. This shows the duration of strikes in the most satisfactory manner in which it can be ascertained. The average duration for the twenty years, 1881 to 1900, was 23.8 days. The average duration of lockouts was 97.1 days, this number being especially increased by the very great prolongation of the Chicago building trades lockout in 1900, which brought up the average duration of lockouts in that year to no less than 265.1 days.

In order to appreciate the significance of the figures regarding the duration of strikes and lockouts, it is desirable to ascertain the aggregate amount of time lost by them and to compare this with the possible number of days of working time. By comparing the average duration of strikes with the number of persons thrown out of employment by them, it appears that the time lost by strikes each year from 1881 to 1900 was equal to the labor, during 300 days of the year, of 24,219 persons, out of a total industrial population of 9,843,166 by the census of 1890. It seems that, supposing the working time to amount to 300 days per year, the average workman will lose only 1 day out of 106 as the result of strikes, or 1 out of 380 days as the result of strikes and lockouts combined. Moreover, it is commonly maintained by workmen that the amount of unemployment is not increased so greatly by strikes as would appear at first glance, since often the workmen merely seize occasion to quit employment at a time most favorable to them, instead of waiting until depression in the industry closes the establishments temporarily without strike.

#### FOREIGN COUNTRIES

The reports of most foreign countries give, not the duration of strikes strictly, but the number of days lost by each striker on the average. This figure probably does not differ greatly from that for the average duration of strikes as presented in the American statistics. In Great Britain the average number of days lost per person affected by strikes and lockouts from 1881 to 1900 was 34.9, or very considerably more than the average duration of strikes in the United States. In France, on the other hand, strikes are much shorter, the average number of days lost per striker from 1890 to 1899 being 14.2. In Austria the statistics present the duration of strikes on the same basis as in the United States, the average for the years 1894 to 1899 being a little over 13 days.

#### IV. LOSSES FROM STRIKES AND LOCKOUTS.

The United States is the only country which endeavors to present statistics regarding the losses of employers and employees as the result of labor disputes. It is admitted by the Department of Labor that these figures are apt to be somewhat misleading. It is, for example, very difficult to ascertain precisely the daily rate of wages which strikers lose by being out of employment, while it is still more difficult to know precisely how much is the loss in profits to the employer. Moreover, it is true, especially in some trades, that periods of unemployment are likely to occur from time to time even in the absence of strikes. The aggregate amount of time and earnings lost by employers and employees during a year may not be materially increased by a strike, and neither the employers nor the employees may suffer much more from the quitting of work on account of the strike than they would have suffered in any case. While the figures presented must therefore be taken with proper caution, they are nevertheless interesting.

The loss in wages to employees as the result of strikes and lockouts from 1881 to 1900 is calculated at no less than \$306,683,223. While this amount looks large at first blush, it represents an average of only a little over \$15,000,000 yearly, a rela-

tively small sum in comparison with the aggregate amount paid out in wages. The fact already shown, that only 1 day out of 406 is lost by the average workman through strikes, shows that the money lost can not be so excessive as is frequently supposed. The loss to employers through strikes and lockouts from 1881 to 1900 is stated to be \$142,639,104, somewhat less than one-half of the amount lost by strikers. It is perhaps to be expected that the losses of employers will be less than those of employees, since the aggregate of profits is usually less than the aggregate of wages in a given establishment. No attempt has been made to estimate the value of the results obtained by strikers in cases where they were successful or the length of time during which higher wages or better conditions would have to be enjoyed in order to offset the losses of strikes and lockouts.

## V. RESULTS OF STRIKES AND LOCKOUTS

The reports of the Department of Labor show the number of establishments in which strikes proved successful, partly successful, or unsuccessful, together with corresponding figures regarding lockouts. They also indicate the degree of success as shown by the number of employees affected by strikes and lockouts. These two different methods of comparison give somewhat varying results. During the years 1881 to 1900 strikes were wholly successful in 50.77 per cent of the establishments in which they occurred, while only 35.02 per cent of strikers were entirely successful in attaining their objects. This would seem to indicate that strikes are more apt to result advantageously to the workmen in smaller establishments than in larger establishments. A failure of a strike in a large establishment would affect the proportion of success as regards the number of establishments comparatively little, but would affect the proportion as regards the number of strikers to a very considerable degree. The number of establishments in which strikes resulted in partial success was 13.04 per cent of the entire number, while 16.72 per cent of strikers were partly successful in obtaining their objects. There can be little doubt that it is proper to consider partly successful strikes as being decided victories for workmen. Their condition is made better as the result of the strike than it would have been in its absence. It appears, therefore, that in 63.81 per cent of establishments in which strikes occurred employees gained some advantage, while 51.74 per cent of strikers found their condition improved as the result of the dispute. On the other hand, in 36.19 per cent of establishments strikes failed entirely, while 48.26 per cent of strikers were unsuccessful.

While the proportion of success attained by strikers seems comparatively low, and while it is often urged that the advantages gained by no means offset the losses, it must not be forgotten that the most able labor leaders, while deprecating strikes where they can be avoided, nevertheless believe that in general they are a necessary and advantageous means of promoting the welfare of the workingclasses. It is urged that the failure of a strike does not ordinarily mean that the condition of the workman is worse than before, while any advantage gained by striking is very apt to become a permanent one. As already suggested, workmen maintain that the losses from unemployment during strikes are really much less than appears at first, for the reason that often, in the absence of strikes, unemployment would have occurred for other reasons, perhaps fully as great in duration as that brought about by strike. Finally, workmen argue that only by striking from time to time can their strength be demonstrated. Even though nothing may be gained at the time, the employer learns, they hold, to recognize the losses which may be brought about by the action of his workmen and becomes often more disposed to make concessions the next time demands are presented. It is asserted that, in many instances, employers can be led to negotiate with their men on a peaceful basis only because of the threat of ultimate resort to the more warlike measure of the strike.

The statistics regarding lockouts show results much less favorable to the employees than those regarding strikes. This might indeed be expected. In only 42.93 per cent of the establishments in which lockouts occurred were the workmen successful in opposing the position taken by the employer, while compromise resulted in only 6.28 per cent of the establishments, a little more than half of the total number of lockouts resulting to the advantage of the employers.

## EFFECT OF LABOR ORGANIZATIONS.

The tables prepared by the Department of Labor seem to show very clearly the effect of labor organization in strengthening workmen in their demands for improved conditions. In establishments in which strikes were ordered by labor organizations, from 1881 to 1900, the workmen were successful in 52.86 per cent of their strikes, while in establishments in which the strikes were not ordered by labor organizations the percentage of success was only 35.56. A larger proportion of the strikes ordered by labor organizations also show partial success than in the case of strikes not so ordered; while of strikes ordered by labor organizations only 33.54 per cent failed entirely, as compared with 55.39 per cent in the case of strikes not ordered by organizations.

The effect of strong organizations of labor is also seen by comparing the results of strikes in those trades which are known to be strongly organized with the results in those which are known to be largely unorganized or only weakly organized. The same trades which were selected for comparison as regards the relative prevalence of strikes are compared in the body of the report as regards the results. The brewing, building, glass, machinery, printing, shipbuilding, stone quarrying and cutting, tobacco, and transportation industries are believed to be somewhat more strongly organized than most others. Taking the average for these industries as regards strikes ordered by labor organizations, the workmen were successful in obtaining their objects in 48.07 per cent of the establishments, while they succeeded partly in 12.77 per cent of the establishments and failed altogether in 39.15 per cent. It is true that, for various reasons, these figures seem to show somewhat less favorable results for the strikers than are shown by the figures for strikes of all classes of workmen combined. At the same time the proportion of success in these strongly organized industries is very much higher than in the case of those which are known to be weakly organized—the boot and shoe, brick making, carpeting, coal and coke, cotton, paper, rubber, silk, and woolen industries. Taking the average of these, the workmen were successful in only 28.82 per cent of the establishments in which strikes were ordered by organizations, while they failed altogether in 53.48 per cent of the establishments in which strikes were so ordered.

At the same time it is noteworthy that the widest possible variations in the degree of success are manifested as among the trades which may be classed as strongly organized, and there is even a wider variation as among the weakly organized trades themselves. The trades in which the workmen were most successful among those which may be considered strongly organized are the building, machinery, stone-cutting, and transportation industries, while in the brewing, printing, and tobacco industries, although labor organizations are strong, the proportion of success in strikes is comparatively low. Among the weakly organized industries the most unfavorable results for strikers are shown in the cotton, coal and coke, and rubber industries.

## RESULTS OF STRIKES ACCORDING TO CAUSES.

As may be expected, the results of strikes for different classes of causes differ materially. In the body of the report a table is presented showing the entire number of causes of strikes, and the number of cases in which the workmen were successful,

partly successful, or unsuccessful in securing the objects sought. The figures have been analyzed and grouped in the same way for this purpose as already explained under the head of causes. From this comparison it appears that strikes seeking increase of wages present approximately the same percentages of success and failure as are presented by all classes of strikes combined. Strikes regarding hours of labor are distinctly more successful than those regarding most other causes. While the percentage of entire failure for all classes of strikes combined (on the basis of establishments) is 33 per cent, for strikes regarding hours it is only 26.5 per cent. Sympathetic strikes are peculiarly unsuccessful, no less than 72.9 per cent of such strikes proving wholly unsuccessful. Strikes against the employment of nonunion men and other obnoxious persons are also somewhat more unsuccessful than the average, the proportion of entire failure being 43.9 per cent, while the proportion of partially successful strikes for these causes is very small.

## FOREIGN COUNTRIES.

The following table shows for each of the leading countries which present strike statistics the proportion of strikers, during the years for which the figures are available, who were successful, partly successful, or wholly unsuccessful in securing their demands. The German figures cover only a single year, but for each of the other countries we have statistics covering a period of several years as a basis of comparison. The figures for the United States extend over a longer time than those of any other country:

*Comparison of results of strikes*

Country.	Years	Proportion of persons affected who were—		
		Successful	Partly successful.	Unsuccessful.
		<i>Per cent</i>	<i>Per cent</i>	<i>Per cent</i>
United States .....	1881-1900	35.02	16.72	48.26
Great Britain .....	1889-1898	37.6	33.2	29.3
France .....	1890-1899	18	43.3	38.6
Germany .....	1899	18.8	52.2	29
Austria .....	1894-1899	9.4	57	33.5
Italy (average) .....	1892-1898	30	33.1	36.7

The most noticeable fact with regard to this table is the relatively small proportion of strikers in the United States engaged in partially successful strikes as compared with foreign countries. While only 16.72 per cent of strikers in this country are reported as being partly successful, the proportion in Great Britain is 33.2 per cent, and in the other countries it is even higher, reaching 57 per cent in Austria. It is quite possible that this apparent marked difference in the number of partly successful strikes is to some extent due to difference in the methods of reporting the results of strikes. In the United States strike statistics are usually obtained a considerable length of time after the end of the dispute, and it may be that the minor points at issue, which may have been compromised, meanwhile have been forgotten, so that the outcome would be reported as wholly successful or wholly unsuccessful for the employees. In most foreign countries strike statistics are obtained after a shorter interval has elapsed since the end of the strike, and the fact of settlement by compromise may perhaps thus be more readily ascertained. It is, however, probably true that in the United States the parties to disputes are more inclined to "fight to a finish" than in foreign countries. As already suggested, partly successful strikes must be considered on the whole as victories for the workmen, although of course they represent usually less advantage to the strikers than wholly successful strikes.

From this table it will be further observed that the United States shows a proportion of wholly successful strikers a little lower than is found in Great Britain, considerably higher than in Italy, about twice as high as in France or Germany, and nearly four times as high as in Austria, where, from 1894 to 1899, less than one-tenth of all strikers were wholly successful. If, however, we compare the different countries as regards the number of wholly unsuccessful strikes, it will be seen that in the United States the workingmen, according to reports, have been less successful than in any other country. No less than 48.26 per cent of all strikers in this country, from 1881 to 1900, failed wholly to gain advantages, while in Great Britain only 29.2 of all strikers were wholly unsuccessful, and in France, which has the highest percentage of failure among the European countries, it is only 38.6 per cent.

partly successful, or unsuccessful in securing the objects sought. The figures have been analyzed and grouped in the same way for this purpose as already explained under the head of causes. From this comparison it appears that strikes seeking increase of wages present approximately the same percentages of success and failure as are presented by all classes of strikes combined. Strikes regarding hours of labor are distinctly more successful than those regarding most other causes. While the percentage of entire failure for all classes of strikes combined (on the basis of establishments) is 33 per cent, for strikes regarding hours it is only 26.5 per cent. Sympathetic strikes are peculiarly unsuccessful, no less than 72.9 per cent of such strikes proving wholly unsuccessful. Strikes against the employment of nonunion men and other obnoxious persons are also somewhat more unsuccessful than the average, the proportion of entire failure being 43.9 per cent, while the proportion of partially successful strikes for these causes is very small.

#### FOREIGN COUNTRIES.

The following table shows for each of the leading countries which present strike statistics the proportion of strikers, during the years for which the figures are available, who were successful, partly successful, or wholly unsuccessful in securing their demands. The German figures cover only a single year, but for each of the other countries we have statistics covering a period of several years as a basis of comparison. The figures for the United States extend over a longer time than those of any other country:

*Comparison of results of strikes*

Country.	Years	Proportion of persons affected who were—		
		Successful	Partly successful.	Unsuccessful.
		<i>Per cent</i>	<i>Per cent</i>	<i>Per cent</i>
United States .....	1881-1900	35.02	16.72	48.26
Great Britain .....	1889-1898	37.6	33.2	29.3
France .....	1890-1899	18	43.3	38.6
Germany .....	1899	18.8	52.2	29
Austria .....	1894-1899	9.4	57	33.5
Italy (average) .....	1892-1898	30	33.1	36.7

The most noticeable fact with regard to this table is the relatively small proportion of strikers in the United States engaged in partially successful strikes as compared with foreign countries. While only 16.72 per cent of strikers in this country are reported as being partly successful, the proportion in Great Britain is 33.2 per cent, and in the other countries it is even higher, reaching 57 per cent in Austria. It is quite possible that this apparent marked difference in the number of partly successful strikes is to some extent due to difference in the methods of reporting the results of strikes. In the United States strike statistics are usually obtained a considerable length of time after the end of the dispute, and it may be that the minor points at issue, which may have been compromised, meanwhile have been forgotten, so that the outcome would be reported as wholly successful or wholly unsuccessful for the employees. In most foreign countries strike statistics are obtained after a shorter interval has elapsed since the end of the strike, and the fact of settlement by compromise may perhaps thus be more readily ascertained. It is, however, probably true that in the United States the parties to disputes are more inclined to "fight to a finish" than in foreign countries. As already suggested, partly successful strikes must be considered on the whole as victories for the workmen, although of course they represent usually less advantage to the strikers than wholly successful strikes.

# NATIONAL LABOR ORGANIZATIONS IN THE UNITED STATES.

---

## CHAPTER I.

### EARLY GENERAL LABOR ORGANIZATIONS.

---

**National Labor Union.**—On August 20, 1866, a meeting was held at Baltimore by several representatives of organized labor, at which a general organization was formed, to be known as the National Labor Union. No formal platform was adopted, but several resolutions were passed indicating the desire of the delegates for particular reforms. One of these resolutions was as follows: "That the first and grand desideratum of the hour, in order to deliver the labor of the country from this thralldom, is the enactment of a law whereby 8 hours shall be made to constitute a day's work in every State of the American Union." Other resolutions recommended cooperation; urged the support of newspapers devoted to the interests of the industrial masses; pledged the support of the members to the "sewing women and daughters of toil;" expressed a desire for the reform of the evils of tenement houses; declared that the public lands should be disposed of only to actual settlers; recommended the organization of all workmen into unions of their trades, and the association of those who had no trades into general labor unions; advocated a more rigid enforcement of the apprenticeship system to prevent filling shops with "botch mechanics," and recommended the establishment of workmen's gymnasia and reading rooms. The committee on strikes reported as its "deliberate opinion that, as a rule, they are productive of great injury to the laboring classes; that many have been injudicious and ill advised and the result of impulse rather than of principle and reason; that those who have been the fiercest in advocacy have been the first to advocate submission." On these grounds the committee recommended that "they be discountenanced, except as a last resort and after all means of effecting an amicable settlement have been exhausted." The committee also recommended that each trade organization appoint an arbitration committee or the settlement of all disputes between employer and employed, "by the early adoption of which means we believe the majority of the ill-advised so-called strikes would have been prevented." The report of the committee gave rise to a long discussion, but the convention adopted it.

While the National Labor Union was formed by trade unionists, the idea of a general union of workmen does not seem to have appealed to trade unionists in general. The National Labor Union met again in 1867, at Chicago, but it was found that no considerable progress had been made. Perhaps no considerable progress could, in any case, have been expected, since the Baltimore convention had made no provision for the raising of a revenue for organizing purposes. This lack of practical effort was not remedied. A third convention was held in August, 1868, at New York. The existence of the organization had, by this time, been considerably advertised, and the organization had obtained a certain importance in the public mind from the probability that it might undertake to make itself the nucleus of a new political party. In June, 1868, Congress had passed a law making hours a day's work for all laborers, workmen, and mechanics employed by or on behalf of the Government of the United States. The National Labor Union had carried on a certain agitation to this end, and it claimed that the law was the result of its efforts. This success probably increased the apparent importance of the organization.

A formal platform was adopted by the convention of 1868. It devoted the greatest attention to the money question. Some of its utterances on this point are as follows. "The law enacting the so-called national banking system is a delegation by Congress of the sovereign power to make money and regulate its power to a class of irresponsible banking associations, thereby giving to them the power to control the value of all the property in the nation, and to fix the rewards of labor in every department of industry. \* \* \* This monopoly is the parent of all monopolies—the very parent and root of slavery." The platform affirmed that the securing of the natural rights of labor, the giving to the wealth-producing class of the time and means necessary for social enjoyments, intellectual culture, and moral improvement, and the compelling "of the nonproducing classes to earn a living by honest industry," were to be "effected by the issue of Treasury notes made a legal tender in the payment of all debts, public and private, and convertible, at the option of the holder, into Government bonds, bearing a just rate of interest, sufficiently below the rate of increase in the national wealth by natural production, to make an equitable distribution of the products of labor between non-producing capital and labor, reserving to Congress the right to alter the same when, in their judgment, the public interest would be promoted thereby; giving the Government creditor the right to take lawful money or the interest-bearing bonds, at his election, with the privilege to the holder to reconvert the bonds into money or the money into bonds at pleasure." Another resolution declared for a system of general organization in which each branch of industry should organize itself in its own way, subject only to such restraint as might be necessary to bring the action of each into harmony with the rest. Support was again pledged "to the sewing women and daughters of toil." Cooperative stores and workshops were recommended. It was demanded that "the labor performed by convicts shall be that which shall least conflict with honest industry outside of the prison, and that the wares manufactured by convicts shall not be put upon the market at less than the common market rates." It was declared that "the experience of the past has proved that vice, pauperism, and crime are the inevitable attendants of the overcrowded and ill-ventilated dwellings of the poor." The formation of mechanics' institutes, lyceums, and reading rooms was recommended. Workmen out of employment were advised to become settlers upon public land. It was declared that "where a workman is found capable and available for office, the preference should invariably be given to such persons."

The year 1868, in which this platform was adopted, was the year of the greatest importance of the National Labor Union. Its convention at Cincinnati in 1869 showed a marked decline, and an insignificant meeting at St. Louis in 1870 barely called attention to its death.

Some additional resolutions were adopted at Cincinnati and St. Louis. Among them were the following:

"*Resolved*, That the claim of the bondholders for payment of it (gold for that class of indebtedness known as 5-20 bonds, and the principal of which is legally and equitably payable in lawful money) is dishonest and extortionate, and hence we enter our solemn protest against any departure from the original contract, by funding the debt in long bonds, or in any increase of the gold-bearing and untaxed obligations of the Government.

"That the protection of life, liberty, and property are the three cardinal principles of government, and the first two more sacred than the latter: therefore money, necessary for prosecuting wars should, as it is required, be assessed and collected from the wealth of the country, and not be entailed as a burden on posterity."

"That we view with apprehension the tendency to military domination in the Federal Government, that standing armies are dangerous to the liberties of the people; that they entail heavy and unnecessary burdens on the productive industries, and should be reduced to the lowest standard."

Other resolutions called for the establishment of a Department of Labor at Washington, opposed "the importation of servile races, by which the Chinese were meant; and declared that women were entitled to equal pay with men for equal services.

**The Industrial Brotherhood.**—The presidents of the Machinists and Blacksmiths' Union, the Coopers' International Union, and the Molders' International Union issued a call in 1872 for "an informal meeting of the presidents of the national and international trades organizations of America, in Cleveland, Ohio, on the 19th of November, 1872, for the purpose of taking the initiative steps looking to the formation of an industrial congress of North America, to be composed of bona fide representatives of bona fide organizations." When the 19th of November came, two of the three signers of the call appeared, and no one else. The effort was renewed, however, and a larger convention was got together in Cleveland on July 15, 1873. The Brotherhood of Locomotive Engineers was the only labor organization which pro-

nounced against the movement. The convention sat for several days, elected officers, and adjourned to meet at Rochester, N. Y., on April 11, 1871. At that time and place a constitution was adopted under the title of the Industrial Brotherhood. A preamble or declaration of principles of 18 items was put out. The preamble which was adopted several years later by the Knights of Labor, and which is summarized on page 5, was copied almost word for word from this preamble of the Industrial Brotherhood. The brotherhood demanded a monthly pay day for corporations, and the Knights in their platform made it weekly. Four resolutions of the brotherhood were not repeated by the Knights. They related to the organization of a system of public markets to facilitate the exchange of productions of farmers and mechanics, tending to do away with middlemen and speculators, to the inauguration of cheap transportation to facilitate the exchange of commodities, to Chinese immigration, and to "the enactment and enforcement of equitable apprentice laws." Only one new demand was added by the Knights, that for the prohibition of the employment of children under 14 in workshops, mines, and factories.

Though somewhat elaborate preparations were made for the extension of the organization, though deputies were appointed for 31 States to organize local lodges, the Industrial Brotherhood had not vitality enough even to hold a second convention. Its programme seems to have contemplated the organization of the members of the several trades into separate though allied bodies, but Mr. Powderly attributes the death of the brotherhood to the dislike of trade unionists for the idea of unity with men outside their own trades, and in particular with common laborers.

## CHAPTER II

### THE KNIGHTS OF LABOR.

**History.** In December, 1869, the local union of garment cutters in Philadelphia, after a period of dissension following several years of successful life, resolved to dissolve and divide its funds. Several of the leaders had for some time been preparing for this event and elaborating the plan of a new organization. They and a few of their associates whom they called in began at once to put their plans into effect. On December 28, 1869, the name of the Knights of Labor was adopted, and also a further local name of the body, the Garment Cutters' Assembly. This is the statement of Mr. Powderly, and seems to imply that the notion of an all-embracing organization had already arisen. Yet Mr. Powderly says in another place that "the idea of extending the benefits of the organization to others than the garment cutters was first introduced at a meeting of the assembly on July 28, 1870."

On January 6, 1870, the first regular officers were elected. According to Mr. Powderly, they bore at that time the same titles which the local officers of the Knights bear still—venerable sage, master workman, worthy foreman, worthy inspector, unknown knight, etc.

The very existence of the new society was shrouded in the deepest mystery. On July 11, 1870, the following motion was debated and voted down: "To allow members to disclose to such persons as they wished to propose the existence of this order." On August 11, 1870, it was resolved "that a member of this assembly have the privilege to reveal his membership in this organization to those he desires to obtain for members, provided always, however, that he does not reveal the name or names of any other person or persons who are members of this organization, according to the terms of the obligation." For several years it was forbidden to speak the name of the organization anywhere or at any time above a whisper. The name was represented in all documents by a line of stars, usually five.

On October 20, 1870, the first person not a garment cutter was proposed as a "sojourner" in the assembly. The idea was to initiate good men of all callings and allow them the benefit of the association on the same footing with the garment cutters, except in deciding trade matters. These sojourners were to be missionaries in their own crafts. When enough had been secured in any one trade, they were to form a new assembly of their own.

At the end of the first year 70 men had been initiated into the order. On July 18, 1872, Assembly No. 2, composed of ship carpenters and calkers, was organized. Assembly No. 3, shawl weavers, was organized on December 21, 1872. No. 4, carpet weavers, a little later. No. 5, riggers, was founded on March 27, 1874, and

No. 6, carpet weavers, at Kensington soon after. Before the end of 1873 more than 80 assemblies were in operation.

When 5 assemblies had been formed, a joint committee was established, consisting of three members from each. In the fall of 1873 this machinery seemed insufficient. Assembly No. 1 appointed a committee of progress, consisting of 5 members, and asked each of the other assemblies to do the same. When the joint committee met, they thought it advisable to form a permanent central organization. They accordingly established a district assembly. It was organized on Christmas Day, 1873. On October 11, 1874, District Assembly No. 2 was organized in Camden, N. J. District Assembly or "D. A. No. 3" was founded on August 8, 1875, at Pittsburg. From this second center the order spread with very great rapidity. D. A. No. 1, at Philadelphia, was the recognized head of the order, but D. A. No. 3 sent out so many branches that a feeling of jealousy arose between it and D. A. No. 1. Not only assemblies, but even district assemblies, were established by the authority of D. A. No. 3 without consultation with D. A. No. 1, and were in some cases given duplicates of the numbers that No. 1 had given to other assemblies and district assemblies.

The use of the letters "D. A." for district assembly and "A." for assembly was at first a part of the mystery which was made to surround all the proceedings of the Knights. Mr. Powderly says: "In order to save space in writing and to keep the names of the separate organizations as secret as possible, even among members, it was decided that the assembly should be known as 'the A.' while the district assembly should be known as 'the D. A.'"

No effort was made to establish a national head for the Knights of Labor until 1875. In that year discussion arose among the members as to the difficulties which the extreme secrecy of the organization placed in the way of getting new members. This discussion led to the issue of a call by D. A. No. 1 for a national convention, to be held at Philadelphia on July 3, 1876. The convention met and adopted a constitution, which gave to the national body the name of National Labor League of North America. The ordinary official titles of president, vice-president, treasurer, and secretary were adopted for the national officers. Supreme authority, between conventions, was to be vested in an executive committee of five. It was resolved that members in good standing be assessed 5 cents a year for the support of the central body. It was voted to hold another convention in July, 1877. Though the call for the convention had originated in the discussion of the proposal to publish the name of the order, no action looking to that end was taken.

D. A. No. 3, of Pittsburg, had not favored the holding of this convention. With the concurrence of the assemblies west of the Alleghenies, it called another national convention at an earlier date than that to which the Philadelphia meeting had adjourned. A meeting was held in Pittsburg in May, 1877, in pursuance of this call, and a rival national constitution was established.

The disjointed character of the organization up to this time is indicated by Mr. Powderly's statement that "no notice of the Philadelphia convention had been given to the Scranton assembly in 1876, and although a large and powerful district assembly flourished in the Lackawanna and Wyoming valleys when the Pittsburg conference was called, the officers of that district were not notified until the proceedings of the conference were mailed to them by the corresponding officer of D. A. No. 3, who had by the merest accident learned of the existence of the Scranton district." This looseness and lack of mutual knowledge seems to have resulted, in great part, from the extreme secrecy which surrounded all the operations of the order. After much correspondence between members in various parts of the country, the secretary of the Pittsburg D. A. furnished the addresses of such districts as he had organized to the secretary of D. A. No. 1 at Philadelphia, and a circular was issued under the authority of the Philadelphia body, to all local bodies whose addresses could be obtained, calling a new convention to be held in Reading, Pa., on January 1, 1878, for the purpose of forming a central assembly, and also for "the creating of a central resistance fund, a bureau of statistics, providing revenue for the work of the organization, establishment of an official register, giving the number, place of meeting of each assembly, etc." The subject of making the name public was also mentioned.

The convention met and adopted for itself the title of General Assembly of the Knights of Labor of North America. At this meeting the name local assembly was first adopted for the local bodies. The titles of the national officers were formed by prefixing the word "grand" to the titles already in use for the local officers—grand master workman, etc. Under the influence of Mr. T. V. Powderly and Mr. Robert Schilling a preamble was adopted, which was copied chiefly from

the constitution of the Industrial Brotherhood of 1874. The objects proposed in this preamble are "to bring within the folds of organization every department of productive industry, making knowledge a standpoint for action, and industrial and moral worth, not wealth, the true standard of national greatness," "to secure to the toilers a proper share of the wealth they create" and "all those rights and privileges necessary to make them capable of enjoying, appreciating, defending, and perpetuating the blessings of good government," the establishment of bureaus of labor statistics, cooperation; the reserving of public lands for actual settlers; the removal of legal technicalities, delays, and discriminations; and the abrogation of laws which do not bear equally upon capital and labor, provision for the health and safety of those engaged in mining, manufacturing, and building pursuits; a compulsory weekly pay day for corporations, with payment in lawful money, a first lien for mechanics and laborers on the product of their work, abolition of the contract system on public works; the substitution of arbitration for strikes, whenever and wherever employers and employees are willing to meet on equitable grounds; prohibition of the employment of children under 14 in workshops, mines, and factories; abolition of the letting out of the labor of convicts by contract; equal pay to both sexes for equal work, the eight-hour day, legal-tender paper money, issued without the intervention of banks.

A revenue was provided for as follows. For each charter to a D. A. or L. A., \$5; for each traveling, transfer or final card, 10 cents, and a per capita tax of 10 cents a quarter. The salary of the grand master workman was fixed at \$200 a year, that of the grand secretary at \$800, and that of the grand treasurer at \$50.

The first grand officers were: Grand master workman, U. S. Stephens, grand worthy foreman, Ralph Beaumont, grand secretary, Charles H. Latchman, grand assistant secretary, John G. Lang.

The adoption of a seal was left to the grand master workman and the grand secretary. The principal devices of the seals of the order are an equilateral triangle within a circle to designate a local assembly, a pentagon to designate a district assembly, and a hexagon to represent a State assembly. The "great seal of Knighthood" embraces all these designs, around the inner edge of the circle, outside the hexagon, runs the motto of the order, "That is the most perfect government in which an injury to one is the concern of all," and from the circumference of the circle radiate the points of a 5 pointed star.

The extreme secrecy which surrounded the order in its early days was defended on the ground that open and public associations of workmen had proved to be failures, and that if the society worked openly its members would be exposed to the suspicion and dislike of their employers. This mystery doubtless contributed to the anxiety and dread with which the order seems to have been regarded, particularly in regions which had recently had sad experiences with secret societies. The days of the Molly McGuires in Pennsylvania were scarcely over. Those who had seen the Molly McGuires only from the outside and only at their worst, naturally supposed that a new secret organization among workmen was likely to develop a similar character. Those who believed that the detectives who had gained admission to the Molly McGuires had instigated many of their crimes and had sworn away the lives of innocent men were suspicious on their side, of a new order surrounded with mystery. The name of the Knights of Labor seems to have been permitted to leak out in the coal regions under the influence of these reminiscences of the Molly McGuires. It seemed best to call a special session of the General Assembly on June 6, 1878, for the purpose of discussing the expediency of making the name of the order public for the purpose of defending it from the fierce assaults and defamations made upon it by the press, clergy, and corporate capital. In the call for this special session the name of the order was still represented as had been the custom, by a line of 5 stars. The question of the publication of the name was referred back to the local assemblies. The popular vote was not decisive. The second regular General Assembly, without decreeing a general abolition of secrecy, voted to allow such local bodies as wished to work openly to do so. Some assemblies began to work openly under this authorization.

The second regular session of the General Assembly met at St. Louis on January 14, 1879. Only 23 representatives were present, although 26 district assemblies were in existence.

The third regular session met at Chicago on September 2, 1879. In the interval four new district assemblies had been organized. Grand Master Workman Stephens was unable, by reason of ill health, to attend this convention or further fill his office. Mr. T. V. Powderly was elected in his place. The salary of the grand master workman was continued at \$400 a year and that of the grand secretary at \$800.

A resolution was introduced to provide that working women might become members and form assemblies under the same conditions as men. It received a majority vote, but not the two-thirds necessary for amending the constitution.

The fourth session of the General Assembly met in Pittsburg on September 7, 1880. The committee on credentials reported 44 representatives, of whom 41 were present. Forty-two district assemblies were represented, besides over 200 local assemblies which were attached directly to the General Assembly. The report of the secretary showed receipts of \$6,121 and payments of \$6,050. A committee was appointed to prepare a ritual for the government of assemblies of women, and a resolution was adopted that women be admitted as soon as the ritual was printed. The salary of the secretary was raised to \$900 and that of the assistant secretary was fixed at \$750. That of the grand master workman remained as before.

The fifth session met at Detroit September 6, 1881. It was reported that the number of local assemblies had increased over 60 per cent during the year and the number of members over 70 per cent. One new district assembly had been organized. Up to this time the name of the order was officially treated as a profound secret, though many local assemblies had been working openly under the permission given in 1879. On the letter heads and all other printed matter of the order the name had always been represented by five stars. The unknown name had been characterized by the phrase "noble and holy." At this session of the General Assembly it was voted to drop these adjectives and to make public use of the name of the order. The grand master workman was instructed to issue an address to the world on January 1, 1882, proclaiming that the order of the Knights of Labor existed. The pledge of absolute concealment of the business of the order had been enforced by an oath. The oath was dropped and replaced by a word of honor. The charter fee was raised to \$10 and the per capita tax to 2 cents a member a month.

The committee appointed the year before to prepare a ritual for assemblies of women made no report. The master workman had decided that women should be admitted on an equality with men. They were admitted accordingly from this time.

The sixth session of the General Assembly was held in New York on September 5, 1882. Six new district assemblies were represented, making a total of 49. Among them was the first national trade district assembly ever organized in the order. It was composed of telegraphers. It went on a strike during the following year, and the strike resulted in the practical destruction of it.

A plan of benefit insurance was adopted at this session and placed in charge of Mr. Charles H. Litchman as insurance secretary. Mr. Litchman had been succeeded the year before, in the office of grand secretary of the order, by Mr. Robert D. Layton. The salaries of the grand secretary and the assistant secretary were raised to \$1,200 each. The grand treasurer received \$100. Mr. Powderly refused to accept any increase of his own salary as grand master workman. The receipts from September 1, 1881 to August 31, 1882, were \$16,935, the expenses were \$15,028.

The seventh meeting of the General Assembly was held on September 4, 1883, at Cincinnati. Fifteen new district assemblies had been organized during the year. The titles of the officers were changed at this meeting from grand to general—an adjective which was thought to smack less of aristocracy and to accord better with the spirit of the order. The salary of the general master workman was raised to \$800. The general secretary was authorized to appoint a chief clerk, at a salary of \$1,000. The secretary of the general executive board was directed to devote his whole time to the work of his office and his salary was fixed at \$1,200. The general statistician was given a salary of \$300 a year.

The eighth regular convention met at Philadelphia on September 1, 1884. Twelve district assemblies had been organized during the preceding year. The salary of the general master workman was raised to \$1,500, and he was directed to spend 16 weeks in the field, 4 weeks in each section of the country.

The ninth session was held at Hamilton, Ontario, on October 5, 1885. No important changes were made in the laws of the order. Much discussion of cooperation took place, but no definite advance in this direction was made and the convention was depressed by the failure of the Cannelburg mine.

Mr. Powderly attributes the enormous growth of the order between the latter part of 1885 and the early part of 1886 to two circumstances for which the order itself was not responsible. One was the movement for the establishment of the 8-hour day on May 1, 1886. The other was the spread of an extravagant idea of the strength of the order, which is attributed by Mr. Powderly primarily to an article published in the New York Sun, enlarging upon the absolute control of the actions and the livelihood of "500,000 workmen" which the 5 men who constituted the executive board of the Knights of Labor were alleged to possess.

The Federation of Trades, at its annual session in 1885, suggested May 1, 1886, for the adoption of the 8-hour system by as many of its subordinate organizations as were prepared for it. The 8-hour day was a part of the programme of the

Knights of Labor. Mr. Powderly declares that he and the leaders of the order did not regard May 1, 1886, as a suitable time for an effort to establish it. He did not consider that either the workmen or their employers had obtained such an understanding of the grounds on which the demand for an 8-hour day rests as would justify the attempt to put it in practice. His secret circular of March 13, 1886 said that it was nonsense to think of such an undertaking. Yet the fact that the order had declared for the 8-hour day, together with the knowledge of the resolution of the Federation of Trades, led the public, which did not discriminate between two very different organizations to believe that a strike had been ordered by the Knights, to take place on May 1, for the purpose of shortening the hours of labor. Because of this belief and the exaggerated popular opinion of the power of the Knights hundreds of thousands joined the order, who hoped to get profit from it without having any of that desire to give as well as get, which Mr. Powderly regards as the foundation principle of the Knights.

This combination of circumstances led to a great number of strikes among the Knights of Labor in the early months of 1886. The tone of Mr. Powderly in regard to these strikes in his book published 3 years later, is one of deep regret. The implication of his statements there is that the strikes resulted from the ignorance and impatience of a mass of new members whom the old officers could not control. He says: "The officers were taken up in the vain attempt to assimilate and educate the incoming tide of humanity which looked to the organization for relief, rather than to their own efforts in the organization in behalf of all." A special session of the general assembly was called chiefly to deal with the mass of strikes and lockouts. It met at Cleveland on May 25, 1886. It approved the course of the officers, including the master workman's opposition to the May 1st 8-hour movement. Six members of the convention were chosen to assist the general executive board of.

The tenth regular convention met at Richmond on October 1, 1886. The year before the number of members reported in good standing was 104,335. The number now reported was 502,921. Mr. Powderly says that the actual number was probably not over 90,000 in 1885 or 600,000 in 1886. Membership in the general assembly was based on the number of members reported in good standing, and, according to Mr. Powderly, some assemblies in both years paid taxes on more members than were in good standing in order to increase their representation. Seventy-six new district assemblies had been organized during the year. The number in existence seems to have been about 170. The troubles between the order and the trade unions occupied much of the time of the session. A resolution was passed which obliged members of the Organ Makers International Union to leave the order. The offices of secretary and treasurer, which had been consolidated in 1881 were again separated. Mr. Charles H. Litchman, who had been the first grand secretary, became general secretary. The salary of the general master workman was raised to \$5,000 a year. Those of the secretary and the treasurer were fixed at \$2,000 each. Four dollars a day when on duty was allowed to members of the general executive board. The membership of the board was increased from 5 to 7. The terms of all the general officers were lengthened to 3 years.

Over 400 documents were presented, far more than it was possible to consider in the 16 days of the session. A committee was appointed to sit during the recess, to go over the documents relating to changes in the laws, and prepare a constitution to be submitted to a general vote. At the request of the women who were present as representatives, Mrs. Leonora M. Barry was elected general investigator of women's work, a title which was afterwards changed to general instructor of women's work. The purpose of this office seems to have been particularly the organization of women.

The general executive board was ordered to spend \$50,000 in buying a headquarters, and also to buy a home for the family of Mr. Stephens, the first grand master workman of the order, at a cost of not less than \$5,000. The headquarters, at Philadelphia, was bought for \$45,000, and the rest of the \$50,000 appropriated for the purpose was made to cover the cost of repairing and fitting up. This headquarters was sold in 1895 and a new one was built at Washington.

Several strikes and lockouts were in progress at the time of the Richmond convention, and votes were passed which took over \$100,000 out of the treasury for dispute purposes within the next year. Mr. Powderly laments this action, and declares that the funds of the order were never meant to be spent on strikes. He adds: "The results of that convention convinced all who attended it that a smaller representation was necessary in order to secure good order, harmony, good legislation, and good results." The scale of representation was changed at this meeting from 1 representative for every 1,000 members in good standing to 1 for every 3,000.

The next convention met at Minneapolis on October 1, 1887. The number of

representatives present was 188. At the previous convention the number had been 658. One hundred and forty-two members had sat in the convention of 1885, and 126 in that of 1881. The reduction of numbers in 1887 was, of course, chiefly due to the changed basis of representation. Forty-six new district assemblies had been organized during the year. The headquarters of one of them was at Birmingham, England. A considerable number of them were national trade assemblies.

A resolution was presented reciting that the taking of human life by judicial proceeding has come to be generally considered a relic of barbarism, and on this ground expressing sorrow that the "Chicago anarchists" had been condemned to death, and pledging the convention to use every endeavor to secure the commutation of the sentence. The master workman ruled the resolution out of order, and was sustained by the convention. This led to the secession of several old members.

Mr. Litchman resigned as general secretary September 8, 1888, and Mr. John W. Hayes was appointed by Mr. Powderly, the general master workman, to fill the vacancy for the remainder of the term.

The next convention met at Indianapolis on November 13, 1888. The officers reported that during the fiscal year ending July 1, 1888, the membership had decreased, according to the receipts from the per capita tax, by about 300,000. The number reported as of July 1, 1888, was 259,518.<sup>1</sup> Thirty-two new district assemblies had been formed during the year, many of which were national trade assemblies. One of the new assemblies had its headquarters in England. A representative of the order from the Old World appeared for the first time. This was Alberto Delwarte, of Charleroi, Belgium. The consolidated office of secretary-treasurer was again created, and Mr. John W. Hayes was elected to it, with a salary of \$2,000. The general master workman was given power to nominate 8 members of the convention, from whom the convention was to choose 1, who, with the general master workman were to constitute the general executive board.

At the fourteenth regular session of the General Assembly, held at Denver in November, 1890 the salary of the general master workman was fixed at \$3,500 a year, that of the general secretary-treasurer at \$2,000, and the pay of members of the general executive board at \$1 a day and expenses. The following resolution was adopted: "We favor the acceptance by our general officers of city, State, county, or national nominations, believing it good policy to use both parties where the best interests of the order can be served. Mr. Powderly in his report of the next year, commented on this resolution as unnecessary, since the order does not interfere with the rights of its members as citizens, and suggested the dangers to the organization which would be involved in permitting it or its officers as such to become connected with politics. He recommended that the danger of the use of the order by politicians for their selfish purposes be diminished by requiring that any member of the order who should accept office from either party should at once resign any office which he might hold in local, district, national trade, or State assembly."

The fifteenth regular session of the General Assembly was held at Toledo in November, 1891. The general executive board reported "a growing feeling among our brothers in Great Britain and Ireland in favor of their being placed in a position to more fully control their own affairs," and the board suggested the desirability of action to grant home rule to organizations of the Knights in various countries outside of America.

The general officers, as trustees of the order, were authorized to sell the headquarters at Philadelphia provided the sale should be approved by a majority vote of the General Assembly before it should be consummated, and provided notice of intention to sell should have been sent to all assemblies entitled to elect representatives to the General Assembly at least 10 days before the session.

A resolution was passed recommending "that, as a rule, assemblies throughout the order refrain from electing or maintaining in office any member who seeks or holds a political position."

The sixteenth regular session met in St. Louis in November, 1892. The general master workman said in his address: "To-day the membership is on the increase, and it is gratifying to know that through the exciting times incident to a Presidential election we have steadily grown in membership and influence."

Authority was given to the general officers without restriction, to sell the general headquarters at Philadelphia.

The seventeenth regular session of the General Assembly was held in Philadel-

<sup>1</sup> Report of general secretary, 1888, p. 2. Report of general treasurer, p. 23.

<sup>2</sup> Report of General Master Workman, 1891, pp. 2, 3.

<sup>3</sup> Proceedings of General Assembly 1891, pp. 6, 26, 36, 37.

phia in November, 1893. The basis of representation, which had been made 3,000 members in 1886, was reduced again to 1,000. The report of the general master workman gave much space to the religious controversies in which he, and the order as represented by him, had been involved through false accusations of the subjection of the order to the Roman Catholic Church.

The report also referred to disputes and troubles within the order, and declared that all things pertaining to the welfare of the order should be thoroughly discussed and settled by the General Assembly. A large part of the session was occupied with discussion of disputes between General Master Workman Powderly and his supporters on the one hand and General Secretary-Treasurer Hayes and his supporters on the other. A resolution was ultimately adopted to the effect that the assembly was satisfied that no possible dishonesty could be charged against any of the general officers, but that the antagonism between them rendered it impossible for them to do effective work for the order and that all offices were therefore declared vacant. In the new election, however, Mr. Powderly was reelected general master workman by 26 votes, against 19 for J. R. Sovereign and 1 for T. B. McGuire, and Mr. Hayes was reelected secretary-treasurer by 35 votes against 21 for Charles R. Martin. The general master workman had authority to nominate candidates from whom members of the general executive board might be elected. With a single exception the persons whom he nominated were unsatisfactory to the majority of the delegates, and repeated ballots failed to show a choice. Mr. Powderly resigned his office. The resignation was at first rejected, but afterwards, on reconsideration, was accepted. Mr. Sovereign was then elected general master workman by a vote of 23 to 11 for other candidates. It was resolved "that for the present year the salary remain as it is, but after this year it is the sense of this general assembly that the salary of the general master workman be \$2,500 a year." The following resolution was unanimously adopted and ordered to be engrossed, framed and presented to Mr. Powderly: "That this general assembly on behalf of the order at large, which he has represented so long, tender him our heartfelt thanks for his efforts in behalf of humanity, and hope to long have him in the ranks as an earnest worker and supporter of the principles he has so long enunciated."

Mr. Sovereign, as general master workman, attended the national convention of the American Railway Union in June, 1894. The convention, after giving him an enthusiastic welcome, unanimously passed resolutions tendering the hearty alliance of the American Railway Union to the Knights of Labor "in all movements brought about for the elevation and benefit of the laborers," and declaring that "we express these sentiments that the whole laboring world may know that two of the greatest labor organizations that it has ever known, namely, the Knights of Labor and the American Railway Union, have affiliated and joined their interests for the purpose of placing the members of both organizations in the close bond of harmony to the best interests of the world of labor."

When the General Assembly met at New Orleans, in November, 1894, the report of the general secretary-treasurer said that from October, 1892, to October, 1893, 383 local assemblies had been organized, reorganized, or reinstated, and 883 had ceased to work, giving a net decrease of 500; and from October, 1893, to October, 1894, 506 local assemblies had been organized, reorganized, or reinstated, and 580 had ceased to work, giving a net decrease of 74. Ten district assemblies had been organized during the latter year. The report of the general executive board said that the loss of membership from 1888 to 1893 was at an average rate of 10 per cent a year, and the total loss was over 500,000 members.

Upon the motion of Mr. Sovereign the general master workman the salary of his office was reduced from \$3,500 to \$2,000 a year. The pay of members of the general executive board was fixed at \$1 a day and expenses when actually engaged in work.<sup>1</sup>

During 1895 General Master Workman Sovereign issued a boycott on the notes of national banks. In his report to the General Assembly of the following November he declared that this was the most righteous act of his life. "It exposed the unsound money of the sound-money advocates, threw plutocracy on the defensive, and forced the national banks into a humiliating confession of preposterous acts of bad faith with the people." The General Assembly approved the action.<sup>2</sup>

After trying for more than a year to make a more advantageous sale, the general officers, in their capacity as trustees, sold the headquarters at Philadelphia for \$10,000. They paid some of the debts of the order out of this sum, bought a lot in

<sup>5</sup> Proceedings of General Assembly, 1895, pp. 4, 104.

Washington for about \$5,600, of which \$1,500 was paid, and put up a modest building.<sup>1</sup> The order was not yet free from pressing indebtedness. Among other demands was \$500 lent to the General Assembly on May 6, 1895, by the Franklin Association of Pressmen and Assistants of New York, Local Assembly No. 2228, under an agreement, it was said, that payment should be made in 60 days. Payment had not been made at the time of the convention in November, and the creditor assembly was demanding it.<sup>2</sup>

In the General Assembly of 1895 a motion to declare the office of general secretary-treasurer vacant was defeated by a vote of 21 to 23.<sup>3</sup>

The General Assembly unanimously adopted a resolution condemning "the unwarranted and unconstitutional methods employed in the trial, conviction, and punishment of Eugene V. Debs and associates," extending to them "most heart-felt sympathy in their unlawful imprisonment," and denouncing "the high-handed and autocratic methods pursued in this case by a pronounced judiciary."<sup>4</sup>

A resolution was also adopted declaring that the courts of the United States, by their action upon various legislative measures passed to ameliorate the condition of the wealth producers, had forfeited the confidence of a large majority of the citizens, and that their action in "issuing blanket injunctions without the slightest excuse or authority is subversive of the liberties of the people." The assembly declared, therefore, for "the election of all judicial officers directly by the people so frequently as to preclude malfeasance in that high office, and provide for its swift punishment when the offense is committed."

Representatives of the Knights of Labor attended the convention of the Farmers' Alliance in February 1896, with a proposal that this body join the Knights as a national district assembly. It was reported that the idea was favorably received, but that the constitution of the Alliance required reference of it to a popular vote.<sup>5</sup>

During 1896 there was a sharp struggle for possession of the organization and funds of Local Assembly 300, the association of the window-glass workers. The representatives of the local assembly gave a "the reason distrust of the general officers of the order, but the general officers declared that the real trouble was a quarrel between members of the local assembly as to who should control its property, amounting to \$100,000 or more in cash and securities." The local assembly expelled Simon Burns, its master workman, without a hearing, and while he was absent, it is said, on business of the order. The civil courts were appealed to and reinstated Mr. Burns, declaring his expulsion from his office to have been "manifestly wrongful, illegal, and in palpable violation of the laws governing the association." The assembly, with Mr. Burns at its head, withdrew from the order in August, 1896, but joined it again in 1897.<sup>6</sup>

The General Assembly of 1896 met immediately after the Presidential election. The general master workman declared in his report: "The autocratic holders of idle money have subverted the principles of free government by forcing political service from the poor as the tenure of employment."<sup>7</sup> "The struggle just passed has demonstrated that pecuniary dependence is political slavery. How to prevent the complete overthrow of our civil liberty is the problem of the hour." He proposed to center the immediate demands of the order upon "an equitable income tax, the free and unlimited coinage of silver without the consent of any other nation, the payment of all Government bonds according to present contract, and the Government issue of all of the paper money of the country." The report of the general executive board congratulated the order that some important planks of its platform, including the money plank, the plank in opposition to Government bond issues and the income-tax plank had become the commanding issues of American politics. The General Assembly at first adopted a resolution to the effect that the free coinage of silver at the ratio of 16 to 1 is important as a step toward such a complete reform of the monetary system as the platform of the order demanded. This action was afterwards modified by adding to the seventeenth section of the preamble the clause which has since stood as the second half of it, so as to increase the importance apparently attributed to the free coinage of silver.<sup>8</sup>

The general executive board reported that it had adopted a policy of rigid economy, and had begun by cutting off its own salaries and ordering that no member of the board should receive pay except when specially ordered on work absolutely necessary for the preservation of the order. By this action the board expenses had

been reduced to less than one-fourth of what they had been for many years before. The number of employees had also been decreased in the general secretary's office and in the journal department. Much indebtedness existing at the time of the previous General Assembly had been paid off, and the financial outlook had been much improved. Yet the order owed the general master workman about \$2,200, the general secretary-treasurer about \$1,500, and the four members of the executive board about \$2,250. Mr. Sovereign, the general master workman, desired it to be entered on the minutes that he gave \$1,000 of his salary of the past year to the General Assembly, and that the amount then due was to be considered his only salary for the coming year, and that \$400 of it was to be devoted to clerk hire. The General Assembly voted to make the salaries of the general master workman and of the general secretary-treasurer \$1,500 each, but it deducted the pay of the general master workman's clerk from his salary.<sup>1</sup>

An appeal was received in a controversy between two local assemblies in New Zealand. The General Assembly referred the dispute back to the provincial assembly for investigation and trial.

The General Assembly of 1897 consumed more than three days in determining who should be permitted to sit as members of it. It deposed from office the general master workman, Mr. Sovereign, the general worthy foreman, and two members of the executive board. Mr. Henry A. Hicks, of New York, was elected general master workman.

Regulations were made for the Philosopher's Stone Degree, and the special services which should entitle a member to receive it were defined. Among such services were the bringing in of ten new members within one year or the organization within one year of two or more local assemblies.

A resolution was passed protesting against our Government entering into any general treaty of arbitration with England, as the policy of that nation proves, without historical contradiction, that she is a coward in her dealings with nations who are her equal and a vindictive oppressor and exterminator of those nations and people over whom she can dominate with impunity.<sup>2</sup>

The twenty-second regular session of the General Assembly met at Chicago, November 15, 1898. The general master workman declared that the cause of Knighthood has never been brighter than it is at the present day. "Great strides have been made with the work of our order in the various portions of the world, more particularly in the Australian and New Zealand colonies. More than 190 new assemblies were reported to have been organized. The number of assen-<sup>3</sup>ties lapsed was not given. The term of Mr. Hicks as general master workman expired, since he had been elected to fill out the unexpired term of Mr. Sovereign. Mr. John N. Parsons, president of the National Association of Letter Carriers, was chosen to the office. Mr. Hicks reported that every general officer had been working at his calling during the preceding year instead of living at the expense of the order. The general secretary-treasurer, whose time was entirely devoted to the work of the order, should apparently be excepted from this statement. Mr. Hicks had drawn only \$110 from the treasury of the Knights during the year. The convention appropriated \$1,500 for his services and expenses, and directed that this amount, less what he had already received, be paid to him as soon as the funds of the order should permit. Not quite all of it was paid to him during the next 2 years.

The treasurer reported that while the order was in debt at least \$10,000 the year before, over \$6,000 had been paid off by the end of the fiscal year, September 30, 1898, and that the order was nearly free from debt, excepting what was due to the general officers, past and present. Four thousand dollars of the receipts of the year came from the sale of the Candelburg coal mine. An assessment of 25 cents was levied to meet the expenses brought upon the order by the suits of Mr. Powderly and other former officers and members.<sup>4</sup>

The General Assembly reaffirmed the resolution of the previous assembly as to alliance with England, and added the following: "And that this General Assembly be placed on record as opposed to annexing any of the foreign islands, control of which has been secured by the recent war with Spain."<sup>5</sup>

A resolution was adopted declaring that nearly all of the principles of the Knights of Labor are antagonistic to the Republican party platform, and stating: "Our continued belief that the success of our reforms included in the plat-

<sup>7</sup> Proceedings of General Assembly, 1898, p. 83.

form adopted at Chicago in 1896 is essential to the welfare and continued growth of the Republic."<sup>1</sup>

Another resolution of this assembly says: "We should profit by the example of our competitors for the world's trade, and help establish and sustain steamship lines until sufficient business is developed to make them self supporting."

The twenty-third General Assembly met in Boston, November 14, 1899. The secretary-treasurer reported that, though the year had been a trying one, the order had made a creditable gain in membership. The assessment of 25 cents a member levied by the preceding assembly had not been paid by more than one-third of the members. The secretary-treasurer renewed his recommendation that the per capita tax be increased from 6 cents to 10 cents a quarter.

A motion was made to declare all offices vacant, but it was amended so as to apply only to the general executive board. Three new members of the board were elected.<sup>2</sup> The terms of the officers were reduced to one year, but the reduction did not take effect until after the expiration of the current term, in 1900.

The general secretary-treasurer reported that while the order had in recent years followed the plan of submitting constitutional amendments to the general vote of the members, the working of the referendum was most unsatisfactory. The general office had never received more than 1 or 5 per cent of the vote of the membership on any proposition, and it had been necessary to wait for months before even such a vote was returned.

The general secretary-treasurer presented an elaborate plan for a school of civics, with a 3 years course, to be conducted by the Knights of Labor on the correspondence plan. The General Assembly adopted a report favorable to the scheme, but took no active measures for carrying it out.<sup>3</sup>

A resolution was passed calling attention to the use of troops "to crush organized labor at Wardner, Idaho," and also to prevent the organized work people of Habana, Cuba, from establishing the 8-hour day. It continued "We therefore must recognize William McKinley as the bitter enemy of labor and ask labor to use its votes against him and his associates."<sup>4</sup>

Another resolution adopted is as follows: "That this General Assembly of the Knights of Labor condemn the foreign policy of the National Government in its efforts to subjugate the Philippines by conquest, and oppose the extension of our territory or Government beyond the limits of this continent as contrary to American principles, contrary to the American people's interest, contrary to the interests of the great masses of the working people."<sup>5</sup>

After condemning the bill then pending for increasing the advantages of national banks in the issue of circulating notes, the General Assembly of 1899 declared its opposition to the issue of interest-bearing bonds by the Government for any purpose whatever, and asked Congress to provide for "the unlimited coinage of silver at the present legal ratio, and further legal tender issues of paper money to give a per capita circulation of \$10." It further asked for laws establishing Government "postal deposit and savings banks, authorizing the Government banks, on proper security, to loan money direct to the people, with interest at not to exceed 1 per cent per annum."<sup>6</sup>

The year 1900 witnessed perhaps the most serious of the many internal conflicts which have rent the Knights of Labor. It is alleged by the opponents of John N. Parsons that he failed after he was elected general master workman to hold the usual meetings of the general executive board or otherwise actively to carry on the work of the order. The General Assembly of 1899 seems to have changed the membership of the general executive board by his desire, and without openly expressed reasons. On May 16, 1900, Mr. Parsons and two other members of the executive board, constituting a majority, obtained an injunction restraining Mr. Hayes, the general secretary-treasurer, from acting in his official capacity, drawing money, receiving mail, or "from interfering with, molesting or hindering the complainants, or any of them, or such person or persons as may be designated by the complainants, or a majority of them, in the possession and control of the seals, books, papers, records, and private works of the General Assembly or Order of the Knights of Labor." Afterwards, late in the afternoon of the same day, they notified Mr. Hayes to appear before them at 1 o'clock the next day for a hearing on certain charges relating to his conduct of his office. Mr. Hayes procured a temporary injunction restraining them from proceeding to try these charges. The

final action of the court left Mr. Hayes and his supporters in possession of the machinery and the property of the order. In a subsequent suit brought by them Mr. Parsons and his supporters were enjoined from using the name of the Knights of Labor or representing themselves to be officers of it.

Mr. Chamberlain, the general worthy foreman, who, by virtue of his office, was a member of the executive board, took no part in the proceedings of the majority of the board, and alleges that he had no proper notice of the meeting at which the action was taken. Mr. Bostock, the remaining member of the board, was also absent and took no part in the proceedings. Mr. Chamberlain, as general worthy foreman, issued a call on May 26, 1900, for a special meeting of the General Assembly, to be held at Washington on June 18. Mr. Parsons and his sympathizers did not present themselves. The assembly voted to expel Mr. Parsons and one of his associates on the executive board, together with some other persons who had supported him in the contest. The third member of the majority of the executive board, Mr. O'Keefe, was declared not to have been a member of the Knights of Labor since his expulsion from the State assembly of Alabama some years before. Mr. Parsons continued to contest the legality of his expulsion and removal from the office of General Master Workman and the final settlement of the case and the status of all parties concerned remained undetermined at the time this report was printed.

By the expulsion of Mr. Parsons from the order Mr. Chamberlain, general worthy foreman, succeeded to the office of general master workman. His salary was fixed by the special session of the General Assembly at \$1,500 a year.

The General Assembly of 1900, meeting in regular session in November, elected Mr. Simon Burns, the head of the Window Glass Workers' Association, Local Assembly 300, as general master workman. It directed the general executive board to dispose of the headquarters at Washington for the best price obtainable.<sup>1</sup> The previous owner of the lot, holding a mortgage, had offered, in March, 1900, to buy the equity of the order for \$8,000, but this offer was not accepted.

This General Assembly denounced the antiscalpings bill, then pending in Congress, as "a strictly corporation measure, designed to crush competition, make easy of maintenance the pool and illegal traffic associations and combinations, and to force those who pay railway fares to submit to the prices fixed by these trusts."

The General Assembly also passed the following resolution: "We are unalterably opposed to a large standing army, and we urge the friends of organized labor and of the Republic in both Houses of Congress and the people at large to use every honorable means to defeat the contemplated large increase in the permanent forces of the United States."

Some account of the relations between the Knights and the American Federation of Labor is given below, pp. 37-41.

<sup>3</sup> Special session.

**Seceding branches.**—Various attempts have been made by dissatisfied or defeated members of the order to establish new organizations under modified names. In 1882 certain members who were dissatisfied with the actions of the assembly of that year founded what was known as the Improved Order of the Knights of Labor. In the following year the same organization appeared as the Independent Order of the Knights of Labor, and it was declared in one of its circulars to be "founded with a view to honest and economical management." This organization had a very short life. Another Independent Order of the Knights of Labor was started at Binghamton, N. Y., before the close of 1883. This seems to have lived about a year. In 1885 a circular letter was issued "requesting the local assemblies of Cook County to cooperate in the work of reorganizing the order of the Knights of Labor on an honest and substantial basis." Nothing seems to have come of this attempt.

In 1888 Mr. Turner, a former general treasurer of the order, together with several of the original founders, established a new organization, which they called "The Founders' Order." It appears to have lived less than 6 months.

A far more formidable effort than any that had preceded it was made after the General Assembly of 1891. Its life, however, was only about 2 years.

After the General Assembly of 1895, a group of socialists, led by Mr. De Leon, disappointed in their attempt to control the order as a whole, undertook to carry out of it District Assembly No. 19, of New York, whose machinery was in their hands. They weakened the order in New York City by a somewhat formidable secession, but District Assembly No. 19 was reorganized and they were expelled.

**Political platform.** The preamble to the present constitution of the Knights of Labor is as follows.

"The alarming development and aggressiveness of the power of money and corporations under the present industrial and political systems will inevitably lead to the hopeless degradation of the people. It is imperative, if we desire to enjoy the full blessings of life, that a check be placed upon unjust accumulation and the power for evil of aggregated wealth. This much desired object can be accomplished only by the united efforts of those who obey the divine injunction, 'In the sweat of thy face shalt thou eat bread.' Therefore we have formed the Order of the Knights of Labor for the purpose of organizing, educating, and directing the power of the industrial masses.

"It is not a political party—it is more, for in it are crystallized sentiments and measures for the benefit of the whole people—but it should be borne in mind when exercising the right of suffrage, that most of the objects herein set forth can only be obtained through legislation, and that it is the duty, regardless of party, of all to assist in nominating and supporting with their votes such candidates as will support these measures. No one shall, however, be compelled to vote with the majority.

"Calling upon all who believe in securing 'the greatest good to the greatest number' to join and assist us, we declare to the world that our aims are

"I. To make industrial and moral worth, not wealth, the true standard of individual and national greatness.

"II. To secure to the workers the full enjoyment of the wealth they create, sufficient leisure in which to develop their intellectual, moral, and social faculties; all of the benefits, recreations, and pleasures of association, in a word, to enable them to share in the gains and honors of advancing civilization.

"In order to secure these results we demand at the hands of the lawmaking power of municipalities, States, and nations

"III. The establishment of direct legislation—the initiative, referendum, imperative mandate, and proportional representation.

"IV. The establishment of bureaus of labor statistics and their operation in such manner as to impart a correct knowledge of the educational, moral, and financial conditions of the laboring masses, and the establishment of free State labor bureaus.

"V. The land, including all the natural sources of wealth, is the heritage of all the people and should not be subject to speculative traffic. Occupancy and use should be the only title to the possession of land. The taxes upon land should be levied upon its full value for use, exclusive of improvements, and should be sufficient to take for the community all unearned increment.

"VI. That the buying and selling of options, the gambling in farm produce or other necessities of life, be made a felony by law, with adequate punishment for such offense.

"VII. The abrogation of all laws that do not bear equally upon capitalists and laborers, and the removal of unjust technicalities, delays, and discriminations in the administration of justice.

"VIII. The adoption of measures providing for the health and safety of those engaged in mining, manufacturing, and building industries, and for indemnification to those engaged therein for injuries received through lack of necessary safeguards.

"IX. The recognition, by incorporation, of orders and other associations organized by the workers to improve their condition and to protect their rights.

"X. The enactment of laws to compel corporations to pay their employees weekly, in lawful money, for the labor of the preceding week, and giving mechanics and laborers a first lien upon the product of their labor to the extent of their full wages.

"XI. The abolition of the contract system on national, State, and municipal works.

"XII. The enactment of laws providing for arbitration between employers and employed and to enforce the decision of the arbitrators.

"XIII. The prohibition by law of the employment of children under 15 years of age, the compulsory attendance at school for at least 10 months in the year of all children between the ages of 7 and 15 years, and the furnishing at the expense of the State of free text-books.

"XIV. That a graduated tax on incomes and inheritances be levied.

"XV. To prohibit the hiring out of convict labor.

"XVI. The establishment of a national monetary system in which a circulating medium in necessary quantity shall issue directly to the people without the intervention of banks, that all the national issue shall be full legal tender in payment of all debts, public and private, and that the Government shall not guarantee or recognize any private banks or create any banking corporations.

"XVII. That interest-bearing bonds, bills of credit, or notes shall never be issued by the Government, but that when need arises the emergency shall be met by issue of legal-tender noninterest-bearing money, and that gold and silver, when thus issued, shall be by free and unlimited coinage at the ratio of 16 to 1, regardless of the action of any other nation.

"XVIII. That the importation of foreign labor under contract be prohibited.

"XIX. That, in connection with the post-office, the Government shall provide facilities for deposits of savings of the people in small sums, and that all banks, other than postal savings banks, receiving deposits shall be required to give good and approved bonds as security in twice the sum of all deposits received.

"XX. That the Government shall obtain possession, under the right of eminent domain, of all telegraphs, telephones, and railroads and that hereafter no charter or license be issued to any corporation for construction or operation of any means of transmitting intelligence, passengers, freight, or power.

"That to favor the merit system and merit tenure of office in civil service or ordinary service of the Government.

"And while making the foregoing demands upon State and National Governments we will endeavor to associate our own labors.

"XXI. To establish cooperative institutions, such as will tend to supersede the wage system, by the introduction of a cooperative industrial system.

"XXII. To secure for both sexes equal rights.

"XXIII. To gain some of the benefits of labor-saving machinery by a gradual reduction of the hours of labor to 8 per day.

"XXIV. To persuade employers to agree to arbitrate all differences which may arise between them and their employees in order that the bonds of sympathy between them may be strengthened and that strikes may be rendered unnecessary."

This preamble shows a considerable advance in radicalism from the position of 1878, though not all the changes are in that direction. The demand for the application of the merit system to the public service can hardly be called radical; neither can the demand for the incorporation of workmen's associations, in which the Knights have departed from the opinions of a large proportion of the labor organizations. The greater part of the changes, however, show a distinct "forward movement." The ideas of the initiative, the referendum, the imperative mandate, and proportional representation were not familiar to many American reformers at the time of the formation of the Knights, and were probably not then familiar to any of the founders of the order. To the demand for the establishment of bureaus of labor statistics, which has now been to a considerable degree complied with, there has been added the demand for free State labor bureaus, by which employment bureaus seem to be intended. The question of the injury which is supposed to be done by the buying and selling of options in farm produce and other necessities of life is new in the preamble.

Arbitration was originally demanded "whenever and wherever employers and employees are willing to meet on equitable grounds;" the Knights now demand laws for compulsory arbitration and for the enforcement of decisions of arbitrators.

1. The limit of age for the industrial employment of children was at first fixed by the Knights at 11; they have advanced it to 15. With these demands they have joined the demand for compulsory school attendance of at least 10 months in the year and for the supply of text-books by the State. To the money plank there have been added demands for the absolute cessation of the issue of interest-bearing Government obligations, and for the free and unlimited coinage of gold and silver at the ratio of 16 to 1, regardless of the action of any other nation. Postal savings banks are desired. The Knights seem to be looking chiefly after the interests of other classes than wage workers in their demand that commercial banks shall be required to give bonds for twice the amount of their deposits. Upon the land question the Knights have advanced from a demand for the reservation of the public lands for the use of actual settlers—a demand which time and events have robbed of its importance—to the declaration that occupancy and use shall be the only title to the possession of land, and that taxes on land shall be levied upon its full value for use, exclusive of improvements, and shall take all the unearned increment for the community. Telegraphs, telephones, and railroads are to be taken by the Government under the right of eminent domain.

It has always been the official doctrine of the Knights of Labor that no great and permanent improvement of the condition of the working people can be obtained except through political action. The present constitution says: "Strikes, at best, afford only temporary relief, and members should be educated to depend upon thorough organization and political action, and through these the abolition of the present system." Again in the preamble: "It should be borne in mind when exercising the right of suffrage that most of the objects herein set forth can only be obtained by legislation, and that it is the duty, regardless of party, of all to assist in nominating and supporting with their votes such candidates as will support these measures." The formal documents of the order have continually expressed, however, the intention to avoid making the order a political party or making it subservient to the interests of any political party. The preamble declares that no one shall be compelled to vote with the majority, and it is provided in the constitution that "any officer or organizer of this order who allows his name to be attached to any document favoring any political party shall be removed from his office, on conviction, by the executive board of the assembly of which he is an officer or organizer."

*Government telegraph.* During 1888 the officers of the Knights of Labor had a bill presented in the House of Representatives for the establishment of postal telegraph lines, and supported it with elaborate statistics, estimates, and maps. It was proposed to build experimental lines to the extent of nearly 15,000 miles, at an estimated cost of about \$5,600,000.<sup>1</sup>

The report of the general worthy foreman in 1896 lamented that the order had recently neglected its demands for Government ownership and control of telegraphs and telephones to such an extent that the International Typographical Union had taken the place of the order in the fight, and had appropriated the data and statistics gathered in past years by representatives of the Knights.

*Imported contract labor.—Immigration.*—The National Labor Union declared that it was "unalterably opposed to the importation of a servile race" as long ago as 1869. The Congress of the Industrial Brotherhood, in 1873, demanded "the prohibition of the importation of all servile races." This declaration, as well as that of the National Labor Union, related especially to the Chinese. The clause was not copied into the preamble of the Knights of Labor when the greater part of the platform of the Industrial Brotherhood was taken over in 1878. The doctrine of the Knights then was that the order should recognize neither race, creed, nor color, and that nothing should be put into the preamble which would seem to discriminate against any portion of humanity. The great increase of European immigration in the succeeding years, and the deterioration of the character of it, overcame the scruples of the leaders.

In the latter part of 1882 a dispute arose between Local Assembly 300, comprising practically all the window-glass workers in the United States, and their employers. The manufacturers proceeded to import a considerable number of European workmen, chiefly Belgians, under contract. Many of the Belgians were induced to join the union, and the union ultimately recovered a position of strength not inferior to that which it had before the strike; but it was declared about January 1, 1883, while the trouble was still at its height, that the importation of the Belgians had cost Local Assembly 300 between \$10,000 and \$50,000. Local Assembly 300, under the pressure of experience with imported contract labor, prepared a bill, and presented it to the General Assembly of the Knights of Labor in 1883, to forbid the importation of foreign workmen under contract.

<sup>1</sup> Report of Legislative Committee, 1888, pp. 5, 9, 10.

The General Assembly unanimously indorsed the bill, and when a committee of Congress considered it representatives of the Knights, of the various unions of glass workers, and of the Amalgamated Association of Iron and Steel Workers appeared to advocate it. The bill was passed by Congress in February, 1885. A clause which the promoters of it had set much store by had, however, been amended out of it, a clause which provided for a fine of \$1,000 for violation of the law, to be divided between the Treasury and the person who should bring suit to recover it. The law lacked proper administrative provisions, and those who had got it passed considered it comparatively worthless. The legislative committee of the Knights of Labor continued its efforts, and in 1887 an amendment was passed which authorized the Secretary of the Treasury to adopt and enforce regulations to prevent the landing of improper persons. In 1888 the Secretary of the Treasury was authorized to pay to an informer such share of the penalties recovered, not exceeding 50 per cent, as he might consider reasonable and just.

The General Assembly of 1896 indorsed the so-called Lodge-Corliss bill, then pending in Congress, forbidding the immigration of all persons over 14 years of age who could not read and write, except aged persons, being parents or grandparents of admissible immigrants. This bill was advocated before Congress by other labor organizations as well as by the Knights, and was passed by both Houses, but was vetoed by President Cleveland.<sup>1</sup>

The General Assembly of 1900 passed the following resolution: "That it is the sense of the General Assembly that Congress should reenact the Chinese exclusion act, about to expire by limitation in 1902, and that when it is reenacted provision should be made for the exclusion of aliens from the Philippine Islands and the Sulu Islands or other so-called colonial possessions." This resolution was passed with the understanding that it did not deny the rights of citizenship to people living under the American flag, but did deny "the right of this Government to own foreign territory without being governed by the Constitution."

**Present organization.**—The general governing body of the Knights of Labor, known as the General Assembly, meets annually in November. It is composed of 1 delegate for the first 1,000 members of each of the bodies directly subordinate to it, and an additional delegate for each additional 1,000 members or majority fraction thereof. The local body at the base of the organization is called a local assembly. Some local assemblies are attached directly to the General Assembly, but most are organized into district assemblies, national trade assemblies, and State assemblies. Each local assembly attached directly to the General Assembly is entitled to its representative, except that, when there are two or more such locals within 50 miles of each other, then membership is combined in determining their right to representation and they must elect their delegates in a joint convention. Representatives to the General Assembly must have been 18 months members of the order and 1 year members of the assemblies they represent, provided the assemblies have existed so long. Representatives and officers, whose duty is to attend the convention, are paid their actual car fare, by the nearest traveled route, from the treasury of the General Assembly. There is a provision in the constitution for junior assemblies "for the education of the youth of either or both sexes between the ages of 14 and 21 years." Such a junior assembly is intended to be under the care of a preceptor appointed by the master workman of the district assembly having jurisdiction.

A State assembly, when formed, has jurisdiction over all of the territory of its State which is not assigned to mixed district assemblies already existing, together with such territory as may be surrendered by any such district assembly. A national trade assembly may be organized through a properly called convention of the local assemblies of the trade, followed by an application by two-thirds of such locals, not less in any case than 10. No local assembly whose delegates in convention voted against the formation of a national trade assembly can be compelled to join such an assembly if it is formed.

A district assembly may be composed of delegates from at least 5 local assemblies within the jurisdiction assigned by the national executive board. A district assembly may be subordinate to a State assembly or to a national trade assembly or only to the General Assembly. District assemblies may be composed entirely of workers in one trade or may be mixed, including members of the order in general in a given territory.

In order to be eligible as delegates to a State, district, or national trade assembly a member must have been in good standing in the order for six months, if his local

<sup>1</sup> Proceedings of General Assembly, 1896, pp. 18, 80, 81.

<sup>2</sup> Proceedings of General Assembly, 1900, pp. 56, 58.

assembly has existed so long, and must have been a faithful attendant at the meetings of the local.

The constitution of the Knights contains a special article for the government of Local Assembly 300, the Window Glass Workers' Assembly, and another for that of District Assembly 253, composed of building constructors in New York and vicinity. District Assembly 253 has jurisdiction over all local assemblies engaged in the construction of buildings within 25 miles of the general post office of New York. Local Assembly 300 formerly comprised practically all the workmen in window glass in the United States. The Window Glass Cutters and the Window Glass Flatteners seceded from it some years ago and have been in affiliation with the American Federation of Labor. As the outcome of a contest during the summer and autumn of 1900 the cutters have returned to Local Assembly 300.

**Constitutional amendments.** That part of the constitution which governs the General Assembly and its officers may be amended by a two-thirds vote of the General Assembly after 30 days' notice, or a similar vote without notice if the General Assembly first resolves by a three-fourths vote to consider the proposition. Other parts of the constitution may be amended by a two-thirds vote of the General Assembly, confirmed by a majority in a subsequent popular vote.

**Officers.** The elective officers of the General Assembly are a general master workman, a general worthy foreman, a general secretary-treasurer, and a general executive board, consisting of the master workman, the worthy foreman, and three other members. All these officers are elected by the General Assembly for terms of 1 year. The ballot is secret and a majority is necessary to elect.

The general master workman performs the ordinary duties of a president. Among his powers is the decision of all questions of law subject to appeal to the General Assembly. The general worthy foreman occupies the place of a vice-president. The executive board have general supervision and control over the order and decide appeals, other than those upon questions of law from the decisions of the general master workman, or of any subordinate court as well as all controversies arising between assemblies or members of the order. The board may remove any general, State, national trade or district officer for cause, after a hearing, may suspend or revoke any charter, and suspend or expel any member.

Among the officers of the local assemblies are a master workman whose office corresponds to that of president, a worthy foreman, corresponding to a vice-president, a recording secretary, a financial secretary, who receives the dues of members, a treasurer, to whom the financial secretary turns over the money, a statistician, an inspector, and an almoner. In the early days of enthusiasm the duty of the statistician was to learn the names and locations of all members, and not only the amount of money which they received and spent, but also the amount received and spent by the concerns which they worked for. The duty of the inspector was to keep a record of the unemployed, to give the number of them and their names at each meeting, and to ask where employment could be found. He was not only to know how many were not employed, but why they were not employed. The almoner, if he found a brother member in distress, was authorized to relieve him, and was not obliged to report his name. The almoner simply reported how much he had spent, and no questions were asked. His honor and the care taken in selecting him were regarded as sufficient safeguards for the money which he handled.<sup>1</sup>

The statistical projects of the Knights were comprehensive. In 1881 the grand statistician published an open letter, in which he set forth a list of subjects, with regard to which he urged all district and local statisticians to give him exact figures. The subjects were "Wages, hours of labor, cost of living, treatment by employers, diseases produced by certain occupations, causes of accidents in mines, factories, etc.; cooperative enterprises; complaints of all kinds, rents and the increase or decrease of value of real estate, new enterprises of capitalists and corporations; bankruptcies and their causes, how many wage workers are unable to buy houses or real estate, adulteration of food; mortality of children in factories; results of introduction of new inventions upon the labor interest; suggestions of every kind intended to improve the condition of the working masses."

**Membership.**—The present definition of the qualifications for membership reads as follows: "At the option of each local assembly any person over the age of 16 years is eligible to become a member of the order, except employers in the manufacture or sale of intoxicating drinks, and no banker, professional gambler, or a lawyer can be admitted." At least three-fourths of the members of each local union must always be wage workers or farmers. Physicians were formerly excluded, but they have been admitted since 1881.

<sup>1</sup> Powderly, *Thirty Years of Labor*, pp. 158-160.

From the beginning saloon keepers were ineligible to membership, and an early decision of Grand Master Workman Stephens made it necessary for any member who went into the liquor business to apply for a final card or honorable discharge. Another decision of Mr. Stephens, made a little later, however, permitted the admission of men 'of good report, respectable and honorable keepers of roadside inns, for the bona fide entertainment of travelers and their animals, with bed and board for the same, connected with the real interests of the locality in which they live, on the ground that they should not be classified as saloon keepers or liquor dealers. It was also decided afterwards that the initiation of improper persons must stand as a fixed fact and could not be annulled, and that liquor dealers could only be expelled for cause or crime committed after admission. After Mr. Powderly became grand master workman, in 1879, these decisions, favorable to liquor dealers, were reversed and the whole policy of the order was strenuously directed against the admission or retention of persons connected with the liquor traffic. The law of the order received successive amendments in this sense until it provided that 'no person who either sells or makes a living on any part of it, by the sale of intoxicating drinks, either as manufacturer, dealer, or agent, or through any member of the family or who tends bar permanently or temporarily, can be admitted into or remain in membership in this order.' Scandal was given for a time by the sale of liquors under the auspices of the order at picnics and similar occasions. This also was forbidden. It was provided that 'no local or other assembly or member shall, directly or indirectly, give, sell, or have any ale, beer, or intoxicating liquors of any kind 'at any entertainment of the order. Any member guilty of violating this law was to be suspended for not less than 6 months or expelled. An offending assembly was to be suspended during the pleasure of the general executive board, or to have its charter revoked.

In 1891 it was voted to admit waiters who handle liquor, and no one who is not an employer is now excluded on account of connection with the liquor traffic.

**Cards**—The Knights of Labor now issue no traveling or transfer cards, but only a single form of membership card. With this card, together with the traveling password, which is issued quarterly, a member may visit any local assembly, and may also apply for membership in any. Such an application must be voted on, like any other, and must be approved by a majority vote. No admission fee can be exacted from a member admitted by card except that a member who comes from a mixed local assembly to a trade local assembly may be required to pay 'at least the difference, if any, between the initiation fee of the one assembly and that of the other.

**Discipline**—The Knights have a machinery for the trial of disputes and offenses somewhat different from that of any other labor organization in the country. There is commonly a provision in the constitution of trade unions for the trial of accused members before a special committee, whose verdict must be confirmed by vote of the local union before it is executed. The constitution of the Knights provides that each local assembly shall at the annual election of officers in each year, elect a judge, a judge advocate, and a clerk of court, who shall hold office through the year, and shall constitute a local court for the trial of grievances, misdemeanors, and violations of the laws of the order. Charges against a member are to be presented, in the first instance, to the judge. He is to try to effect a friendly settlement if the grievance is only personal, but if a serious violation of the laws of the order is charged, or if a personal grievance can not be amicably settled, he is to convene the court and direct the judge advocate to prepare an indictment. At the trial the judge-advocate acts as prosecuting attorney, and the clerk of court performs the duties indicated by his title: serves summonses, and secures the signature of each witness to his testimony. The judge hears the evidence, decides the case and fixes the sentence. The local assembly has no power to hear or review, but is obliged to execute the mandate of the court. Each district assembly has a court similarly constituted, and to it appeals lie from the local courts. From the district court an appeal lies to the general executive board. An appeal does not operate as a stay, and no appeal can be entertained or considered unless the findings of the court appealed from have been complied with. Neglect of duty or violation of the laws of the order by a district assembly officer in his official capacity is tried by the district court in the first instance; but a district assembly officer is tried by the court of the local to which he belongs for any violation of the laws of the order as a member. The district court has power to try a local assembly which refuses to pay an assessment levied on it by the district assembly.

Any officer of a court may serve in a similar capacity, on occasion, in any other court of the same rank. If a court officer is sick, or is interested or implicated in

a case and so disqualified from sitting, his place is to be filled by a like officer from another court.

**Finances.** The revenues of the General Assembly are derived from the following sources: Charter for a State, national trade, or district assembly, \$10; charter and supplies for a local assembly, \$8; for a local assembly composed wholly of women, \$5; for a junior local assembly, \$5; supplies for a reorganized local assembly, \$5; a new or duplicate charter, \$2; other supplies ordered or authorized by the General Assembly, such price as may be fixed by the secretary-treasurer and approved by the executive board. A per capita tax is levied of 6 cents per quarter per member on each local in the United States and Canada which is attached to a State, national trade, or district assembly, and 10 cents per member per quarter on each local attached directly to the General Assembly. In addition an extra levy of 5 cents per member is made on the 1st of July of each year to pay the transportation of representatives to the General Assembly.

A special appropriation of any of the funds of the General Assembly requires a two-thirds vote.

The initiation fee of local assemblies in the United States or Canada may not be less than \$1 for men and 50 cents for women. A local assembly may, at its option, charge more for the initiation of a skilled mechanic than for that of a laborer.

**Strikes.** The following resolution was passed by the Assembly of 1880: "It is the opinion of our order that strikes are, as a rule, productive of more injury than benefit to working people, consequently all attempts to foment strikes will be discouraged." Provision was made, however, for the support of strikes which might appear to the officers of the order to be unavoidable, by the accumulation of a defense fund at the rate of 60 cents a year for every member in good standing. Thirty per cent of the fund was to be at the disposal of the grand officers for the support of approved strikes. Ten per cent was to be available for printing and circulating among members of the order educational literature dealing with cooperation, organization, political economy, and allied subjects. The remaining 60 per cent was to be reserved for productive and distributive cooperation, and was to be kept intact until the next session of the General Assembly. The General Assembly of 1881 ordered that each local should retain its own defense fund subject to appeals from the executive board, and that locals should have credit on their per capita tax for amounts which they had paid into the defense fund.

The great Missouri Pacific strike of 1886, from which the decline of the Knights may be dated, was ordered without Mr. Powderly's knowledge and continued against his advice. He declared to Governor Martin, of Kansas, that it was "without need or cause." Indeed, Mr. Powderly seems to have been opposed to strikes in general. He once said that he had "never yet gone willingly into a strike," and in 1881 he said, "Strikes are a failure."<sup>1</sup>

Up to the time of the Missouri Pacific strike the general officers had no official control over district and local assemblies in regard to strikes. It was left to the district assemblies to adopt "such rules and regulations as they deemed best." At a special session of the organization held two months after the strike a temporary rule was adopted providing that no strike could be ordered by an assembly except by a two-thirds secret vote of all the members to be involved, that a similar vote upon the advisability of continuing the struggle might be taken while it was going on, and that no assembly could ask official aid from other assemblies unless the strike had been sanctioned by the general executive board.

This temporary rule was never made a part of the constitution, but in 1892 the constitution was so amended as to restrict the power of the local assemblies and to give a measure of control to the general executive board.

According to the existing regulations, where there is only one local assembly it is to choose an executive board, to which any grievance against any employer may be referred. If there are more assemblies than one in a place, they are to have a joint executive board for the same purpose. The local executive board, if it is unable to adjust any grievance, is to make a full report of the facts and its action to the secretary of the district assembly or other superior body to which it is attached. The grievance is to be taken up by the executive board of this body, and ultimately if it is not settled by the general executive board. No local assembly nor any members of it can legally declare a strike without the sanction of the executive board of the higher assembly to which the local is attached. If a local assembly engages in a strike without the permission of its district assembly, it forfeits its charter. If a district assembly engages in a strike without the permission of the national trade assembly, supposing it to be attached to one, the national

<sup>1</sup> Hall, *Sympathetic Strikes and Lockouts*, p. 81.

<sup>2</sup> Hall, *Sympathetic Strikes and Lockouts*, pp. 83, 84.

trade assembly is to give it no assistance. If any branch of the order, working directly under the authority of the General Assembly, engages in a strike without the sanction of the general executive board, it is to receive no assistance from any other branch of the order. The general executive board is declared to have complete authority to settle any strike participated in by members of the order, provided the settlement is reached by the unanimous vote of the board.

The constitution provides that no strike shall be entered into or authorized until every possible effort has been made to settle the difficulty by conciliation and arbitration.

**Cooperation.** Pursuant to the clause in the preamble recommending cooperative establishments, the General Assembly of 1881 provided for a cooperative fund, to be raised by the payment of 10 cents a month by every male member of the order and 5 cents a month by every female member. A certificate of stock in the Cooperative Association of the Knights of Labor of North America was to be issued for every 30 cents so paid, and these certificates were to be exchangeable in amounts of \$1 or multiples thereof for \$1 working capital certificates of the order. At the next General Assembly a cooperative board was established, which was to take charge of the establishment of cooperative enterprises, productive and distributive.

In 1882 there was a strike or lockout of coal miners at Cannelburg, Ind. The employing firm refused to employ members of the Knights of Labor and required an individual agreement from each man that he would not join the order. Eight men without any capital bought the lease of a 40-acre tract for \$100 and gave their note for the money. They sunk a shaft, found coal, and succeeded by hard work in making a living. They appealed to the Knights of Labor to buy and equip their mine. The executive board bought it in 1884 and spent some \$10,000 in necessary improvements.

In February, 1886, the mine was leased at a rental of 25 cents for each ton of 2,240 pounds extracted. The receipts of the order under this lease up to September 18, 1888, were \$2,664.79, which, together with a balance due of \$307, was paid by the general secretary to show a net profit on the investment of about 15 per cent. A representative of the general executive board, who examined the mine about this time, recommended that it be sold, provided not less than \$13,000 could be got for it. The leasing company was willing to buy, but was not willing to pay over \$10,000. In 1897 the mine was sold for \$1,000 cash.<sup>1</sup>

In the issue of the Journal of United Labor for November, 1883, Henry E. Sharpe, president of the cooperative board of the order, sketched a programme for the development of cooperation which he hoped to see made effective, in the following terms:

"1. Every local assembly interested starts a cooperative store under control of the cooperative board. The goods are sold at the same prices as prevail in the ordinary store, but good weight and quality are guaranteed. All profit goes to the colonization fund to the credit of the purchasers at the store, it being credited to the individuals in proportion to their purchases.

"2. Land is bought and a colony established.

"3. A shoe factory, a canning factory, where all kinds of vegetables, meats, and fruits are canned, a hat factory, etc., are established.

"4. The produce of the colony, its flour, potatoes, shoes, hats, canned goods, are all sold at the local assembly stores, and every brother of the order feels in duty bound to patronize those stores.

"And this goes on until by and by the order is an immense cooperative institution, producing all that its members require to make their lives comfortable. Thousands are taken to the colony, schools are established, asylums and homes established, and a reliable, yet cheap, insurance provided."

In 1881 the cooperative board called in the cooperative funds in the possession of the local assemblies, with the intention of investing them in some cooperative enterprise. It was expected that some thousands of dollars would be received. The actual amount paid in was \$1,033.97. This was not thought sufficient to justify embarking in any enterprise, and in 1888 the general treasurer recommended that the fund be returned to those who had contributed it.

Other cooperative institutions were, however, established from time to time with the encouragement of the Knights. Mr. Powderly laments, in his book published in 1889, that these attempts were generally made hastily because of a lockout or a strike, and declares that every dollar invested under such circumstances is a dollar lost, so far as testing the value of cooperation is concerned. Several

<sup>1</sup> Report of General Treasurer, 1888, pp. 22, 23; Report of General Executive Board, 1888, p. 135; Proceedings of General Assembly, 1897, p. 34.

<sup>2</sup> Report of General Treasurer, 1888, pp. 23, 24.

cooperative stores, bakeries, and manufactories were being successfully managed by the Knights of Labor, Mr. Powderly says, at the time of the publication of his book, "but they were instituted after careful planning and much deliberation, all others have proved to be failures." It is not known that any of these enterprises are now in existence.

In 1889 the general cooperative board reported that it had determined "to give its main attention for the time to the matter of organizing a live, active demand for the labor products of the members of our order." The board had undertaken to prepare a register of firms which were giving employment to members, and had already gathered about 800 names of such concerns. It reported a steadily increasing number of local assemblies as "being brought together for the purpose of pledged reciprocal support in their respective markets of the labor products of their members."<sup>1</sup>

The General Assembly of 1897 appointed a special committee of five to devise a plan of cooperation, which was expected to include the acquirement of land, the establishment of a colony, and the issue of checks or receipts to serve as a medium of exchange.

In the General Assembly of 1898 the committee on cooperation recommended that a committee be appointed to carry into effect the establishment of a cooperative colony or a home. No action was taken beyond referring the report to the general executive board with instructions to publish.<sup>2</sup>

In the General Assembly of 1899 attention was called to the window-glass factories owned and operated by the members of Local Assembly 300, window-glass workers, on the cooperative plan, as it was said, "although in a sense they are stock companies."<sup>3</sup>

The present constitution provides that any district or local assembly may collect not less than 5 cents a month for every member in good standing, as a cooperative fund. Until 1900 it was provided that one-third of the profits arising from the investment of this fund should go to the General Assembly and two-thirds to the employees of such enterprises might create the profit. This clause seems to have been a relic of the former provision for a cooperative fund to be administered under the direction of the General Assembly. The General Assembly and general officers seem never to have undertaken any cooperative enterprise except the Cannelburg coal mine.

**Journal.**—The official journal of the Knights of Labor was established in May, 1880, under the name of *Journal of United Labor*. It started as a monthly paper of from 8 to 16 pages, 9 by 12 inches. Its subscription price was \$1 a year. Each subscriber was required to agree that none but members should see it. During the first five months it obtained 267 yearly subscriptions, with shorter subscriptions and orders for single copies equivalent to 51 yearly subscriptions more. It seemed not unlikely that the journal would have to be discontinued.

In 1882, after the extreme secrecy of the order had been mitigated, the Journal made the following editorial remarks: "In the beginning the Journal was almost fatally handicapped by the extreme secrecy thrown around it. Many members wanted it, but refused to be troubled with the care of it after having read it." The meaning of these words will be in some degree appreciated if one remembers that it was forbidden even to let the Journal come under the eyes of the wife or children of a member.

The paper was made a semi-monthly in 1884, and a weekly in 1887. The General Assembly of 1887 directed that the paper be enlarged by one column on each page, that the price be fixed at a dollar a year, and that a printing office be established for printing the Journal and doing the job printing of the general office. About \$9,000 was accordingly invested in type and machinery and in fitting up a printing office on the premises of the order. At the General Assembly of 1892 the general master workman reported that the circulation of the Journal was more than 50,000.

In 1898 the executive board changed the Journal from a weekly to a monthly. The board recommended to the next General Assembly that the per capita tax be raised to 12 cents a quarter, that the Journal be sent free to all members, and that its price be fixed at 25 cents a year to individual subscribers. No action seems to have been taken on these recommendations.

The name has now been changed to *Journal of the Knights of Labor*. The price has been reduced to 50 cents a year, and the printing of the Journal, as well as of all the printed supplies of the order, is done in the order's own printing

office. Every local assembly is required to subscribe for at least one copy, and all matters of official instruction or information from the general master workman or the general secretary treasurer contained in it are to be read to the assembly as official communications.

**Union labels.** In the Journal of United Labor of January, 1883, it was remarked that the cigar makers and broom makers were reaping a large harvest from the use of the union labels. A letter in the same paper mentioned a union label adopted by the Coopers' Assembly, No. 1712, of the Knights of Labor, at Rochester, N. Y. In 1884 the executive board of the Knights gave notice that they were prepared to furnish copies of a label adopted by the order for use upon all goods having the indorsement of the Knights of Labor.

The policy of a universal label for all products was soon abandoned, and particular labels were adopted for particular trades, such as the cigar makers, the hatters, the shoemakers, the printers, and the brewers. In 1886 a sharp conflict arose between the Knights and the Cigar Makers' International Union. It seems to have begun with complaints by the International Union that the Knights were receiving scab cigar makers. The chief officers of the Knights denied this, or at least asserted that it was not done with their consent, and that they would correct it. The International Union refused to recognize the cigar label of the Knights as marking fair goods. The Knights, on the other hand, denied in a circular issued on July 2, 1886:

"We have never discriminated in the past in favor of our label as against theirs, only asked that our members see that cigars bear a union label, assuring them that the goods were made by honest labor. The position we have always occupied, and still adhere to, is that our cards be received on an equality with theirs, that our members be allowed to work in shops under the control of the International Union, and vice versa. In other words, we are willing to place our organization with its hundreds of thousands of members, on the same footing with their organization, containing but 18,000."

It is to be noted that this declaration of the policy of the Knights was made at the moment of their greatest prosperity, when they seemed to be gaining an indisputable domination of the labor world. It was not, therefore, as some of their later declarations in the same sense might be alleged to be, the plea of the weaker combatant for peace. So far as the course of the Knights at this time was determined by considerations of policy, the grounds of it seem to have been similar to those which lead the Federation of Labor at the present time to offer sympathy and support instead of opposition to the labor organizations which have not affiliated with it. The Knights of Labor doubtless hoped by gentle and friendly measures to gather into itself all outside organizations of labor.

It was resolved in 1888 to adopt a general store label, to be displayed in all stores where none but members of the order are employed and where preference is given to K. of L. made goods. In 1889 complaint was made by the national trades assembly of the cigar makers that some assemblies in the New England States were boycotting the cigar label of the Knights, and it was thought necessary to notify them that such action must cease. The general executive board recommended about this time that efforts be made to secure legislation for the proper protection of union labels, and also that the cooperation of all organizations of labor be invited in the advertising before the public of the unfairness of some one firm, to be selected from among those which used counterfeit labels.

At the General Assembly of 1892 a conflict of union labels on shoes was discussed and a resolution was adopted of which the following is a part: "We denounce the methods adopted by fake unions to introduce a fake label, and would warn all fair-minded consumers against allowing themselves to be used to assist in destroying the only original and fair shoe label upon the market—the yellow label of the Knights of Labor."

In 1898 the general master workman again proposed a plan of a universal label, but no action was taken upon it by the General Assembly.

**Insurance.**—In 1882 the General Assembly provided for the establishment of a voluntary insurance association, to be organized when 3,000 persons had applied for membership in it. The number of applications received up to June, 1883, was reported as 2,800. The number of 3,000 was not attained, however, before the convention in October. The convention ordered that the insurance association begin to do business on November 1, 1883, without regard to the number of applications. Many of the applications made on condition that 3,000 be obtained seem to have been allowed to lapse. The whole number of effective applications up to January 30, 1884, was reported as 2,095. 3,683 applications were received up to October 31,

<sup>1</sup>Proceedings of the General Assembly, 1882, pp. 75, 77.

1884, the end of the first year. Seven assessments of 25 cents each had been levied, and benefits had been paid on account of 13 deaths, amounting altogether to \$3,197.

The general treasurer reported to the General Assembly of 1888 that the membership in the insurance department was 429. The plan then in use involved an increase of assessment on each member with his increasing age.<sup>1</sup>

The General Assembly of 1890 established a new system, providing for the issue of three grades of certificates, for \$100, \$250 and \$500, respectively. The amount of the assessment varied with the member's age, from \$5 at age 18 to \$22 at age 55 for the first grade, and from \$15 at age 18 to \$64 at age 55 for the third grade. On the death of a member a benefit was to be paid equal to the full amount received from an assessment, but not more than the face of the certificate which the member held.

The secretary reported at the next General Assembly that the changes ordered had at once been made operative, the old policies had been recalled and canceled, and new ones had been issued in their place. The expected increase of interest had not, however, shown itself. Only 26 applications for policies had been received during the year, and this number was not enough to make up for losses through lapses and refusals to accept the new certificates. The secretary said that when those who had signified their intention of receiving the new certificates should have done it the number in good standing would be 265. The receipts of the insurance association for the year were a little over \$1,100, and the expenses were \$849, of which \$38 went to pay a death claim, and \$514 for expenses.

In 1892 the secretary reported continued decay. Four death claims had been paid during the year, amounting to \$898, and the expenses of administration had been \$525. The aggregate receipts had been \$1,150.<sup>2</sup>

## CHAPTER III.

### THE AMERICAN FEDERATION OF LABOR.

**History.**—The Federation of Labor originated in a convention at Terre Haute, Ind., August 2, 1881, called by two secret orders, the Knights of Industry and the Amalgamated Labor Union. The latter was composed of disaffected members of the Knights of Labor. The real object of the call is said to have been the establishment of a new secret order by which the Knights of Labor might be supplanted. The trade-union delegates, however, preferred to form a federation on the model of the British trades union congress. They called another convention to meet at Pittsburg in November, 1881. This meeting at Pittsburg is now officially recognized by the Federation as its first annual session.

It is noticeable that the names of the delegates, as published in the proceedings, are arranged by States. The consciousness of State boundaries, which scarcely manifests itself now in the proceedings of the Federation, appeared repeatedly in the early years. When the clause of the constitution determining the basis of representation for future sessions was under consideration at the first convention, one delegate desired it to be "so changed as to give every State full and fair representation, irrespective of national or international unions."

The name adopted at the Pittsburg session was The Federation of Organized Trades and Labor Unions of the United States of America and Canada. About 100 delegates were present, representing 95 labor organizations with an estimated membership of 262,000. It was not till 1890 that another convention of the Federation called together so many. From 1882 to 1885 the number ranged from 18 to 27. The falling off was chiefly in the representation of assemblies of the Knights of Labor.

A convention of representatives of trade unions, independent of the Federation, was called to meet at Columbus, Ohio, on December 8, 1886. The legislative committee of the Federation changed the time and place of the meeting of its convention to the same city and to the preceding day, with a view to a union of forces. The session of the Federation was attended only by representatives of

<sup>1</sup> Report General Treasurer, 1888, pp. 15, 16.

<sup>2</sup> Report General Secretary-Treasurer, 1890, pp. 57-59, 1891, p. 12, 1892, p. 9.

the Brotherhood of Carpenters and Joiners, the Tailors, the Furniture Makers, the Cigar Makers, the Typographical Union, the German-American Typographical and the Granite Cutters, with five city central unions. The members of the convention transferred themselves in a body to the conference of trades unions independently called and returning for a final sitting under the old constitution, resolved to merge the Federation of Trades and Labor Unions into the new Federation of Labor. The conventions of 1886, 1887, and 1888 were called the first, second and third conventions of the American Federation of Labor; but the convention of 1889 resolved "that the continuity of the American Federation of Labor be recognized and dated from the year 1881, in all future documents issued; and the convention of 1881 has since been counted as the first."

The aggregate attendance at the remodeled convention of 1886 was 12 delegates, representing 25 organizations (13 national, 6 local, 6 city central), with a membership, as reported, of 316,169 members in good standing. At the convention of 1887 58 delegates were present, representing 40 organizations, with 2,121 subordinate unions or branches, and a total membership, as reported, of 600,310 members in good standing, including the federal clubs and local unions which did not send delegates to the convention. In 1888 51 delegates appeared, representing 31 organizations, with 2,397 subordinate unions or branches, and a total membership of 587,000 in good standing, not including federal clubs and local unions which did not send delegates. In 1889 there were 71 delegates, representing 53 organizations (26 national and international, 13 local, 2 State, and 12 local central bodies), with 3,263 subordinate unions or branches, and a total membership of 600,000 in good standing, not including State branches, trade and labor assemblies, central labor unions, and local bodies which did not send delegates. Since 1889 the Federation has not published official estimates of its membership.

During the year preceding the convention of 1898 the Federation issued 203 charters, of which 9 were granted to national unions, 12 to city central bodies, and 182 to local trade unions and federal labor unions. Fifty affiliated national unions reported 527 charters granted to locals and the organizers of the Federation reported 150 locals organized by them and attached to other national unions. This makes 859 locals organized during the year. The number of organizations affiliated with the Federation at the time of this convention was as follows: National and international unions (with 10,500 local unions attached), 67; State federations, 10; city central labor unions and trade assemblies, 82; local trade unions having no nationals, 315; federal labor unions, 109.

During 1899 150 charters were issued by the American Federation of Labor; 9 to national and international unions, 35 to central labor unions, 1 to a State branch, 303 to trade locals, and 101 to federal labor unions. The new local unions affiliated directly with the American Federation of Labor had about 36,500 members. The whole number of local unions directly or indirectly added during the year was 2,261, and the aggregate gain in membership was reported as 141,400. The secretary said that if complete reports had been secured the increase would have been shown to be 225,000.

The number of local unions added during the fiscal year 1900 by affiliation directly to the Federation or to affiliated national unions was 3,743. The reported gain in membership was 390,446. Of this number 12,658 is contained in the membership of local trade and federal unions chartered directly by the American Federation of Labor during the year.

The following table gives the number of charters issued by the American Federation of Labor during each of the last 4 years and the reported gain in membership:

Year	Gain in membership	Charters issued				Total
		National and international	State	Central	Federal and trade unions	
1897	62,292	8	2	18	189	217
1898	31,280	9	12	1	182	203
1899	141,400	9	1	35	405	450
1900	390,446	14	5	36	743	819

<sup>1</sup> Convention Proceedings, 1889, p. 27.

<sup>2</sup> Convention Proceedings, 1886, p. 7.

<sup>3</sup> Convention Proceedings, 1899, pp. 23, 24. The sum of the numbers of charters reported as issued to the several sorts of unions is 449 instead of 450, and the sum of the members reported as issued to trade locals and federal labor unions is 404 instead of 405, as in the table below. The discrepancies exist in the original report.

## 26 THE INDUSTRIAL COMMISSION:--LABOR ORGANIZATIONS.

The number of charters issued, as given in the table, is not the same as the net increase of the number of affiliated organizations:

### *Unions directly affiliated with the American Federation of Labor.*

	National and international	City central	Local trade unions	Federal labor unions	State federations
October 31--					
1898	67	82	315	109	10
1899	73	118	795	202	11
1900	82	206	1,051		16

### *Date and place of the sessions, number of delegates and organizations represented, and financial condition of the American Federation of Labor.<sup>1</sup>*

Year	When held	Where held	Number of delegates present	Number of organizations represented						Financial statement	
				National trade unions	Local trade unions	City central unions	State branches	Fraternal federations		Receipts	Expenditures
1881	Nov. 15-18	Pittsburg, Pa.	96	10	75	10				\$171.95	\$136.20
1882	Nov. 21-24	Cleveland, Ohio	19	8		10				175.00	252.55
1883	Aug. 21-24	New York, N. Y.	25	7	8	5	1			690.19	351.32
1884	Oct. 7-10	Chicago, Ill.	25	8		6	1	1		357.42	515.20
1885	Dec. 8-11	Washington, D. C.	18	7		6				521.04	430.78
1886	Dec. 8-12	Columbus, Ohio	42	13	6	6				471.11	510.63
1887	Dec. 13-17	Baltimore, Md.	58	23	5	10	2			1,039.82	2,074.39
1888	Dec. 11-15	St. Louis, Mo.	51	20	5	8	1			1,512.55	3,933.67
1889	Dec. 10-14	Boston, Mass.	74	26	14	12	2			6,838.40	6,578.33
1890	Dec. 8-13	Detroit, Mich.	103	27	41	14	2			23,819.71	21,050.57
1891	Dec. 14-19	Birmingham, Ala.	70	25	14	14	1			17,702.36	13,190.07
1892	Dec. 12-17	Philadelphia, Pa.	89	30	21	12	2			17,834.51	18,321.69
1893	Dec. 11-19	Chicago, Ill.	95	38	18	15	1			20,864.62	21,383.36
1894	Dec. 10-18	Denver, Colo.	77	30	12	11				15,316.14	17,302.08
1895	Dec. 9-17	New York, N. Y.	96	31	24	15	3			13,751.55	15,612.12
1896	Dec. 11-21	Cincinnati, Ohio	117	38	35	15	3	1		16,290.18	15,152.95
1897	Dec. 15-21	Nashville, Tenn.	97	42	12	16	4	1		18,639.92	19,113.83
1898	Dec. 22-20	Kansas City, Mo.	135	45	40	18	3	2		18,891.15	19,197.17
1899	Dec. 11-20	Detroit, Mich.	189	55	65	31	5	3		36,757.14	30,599.22
1900	Dec. 6-15	Louisville, Ky.	221	63	61	44	11	2		71,125.82	68,353.39

<sup>1</sup> This table is taken from the handbook prepared by the Federation for the Buffalo Exposition of 1901. The report of the proceedings of the convention of 1881 gives the names of 107 delegates. No clear explanation of the appearance of the number 96 in this table seems to be obtainable. The fiscal year ended November 30, up to 1889. Beginning in 1890, it has ended October 31.

The revenue for 1890 includes over \$12,000 raised by special assessment and given to assist the carpenters in their strike for 8 hours, that for 1891 includes over \$7,000 voluntarily contributed by individuals and unions to the cost of legal defense of workmen arrested during the Homestead strike, that of 1897 includes over \$2,000 the proceeds of a special assessment of 1 cent a member, levied by the previous convention to provide funds for sending a committee to Congress to promote 8-hour legislation. That of 1899 includes over \$5,000, the proceeds of an assessment of 2 cents a member, levied by the convention of 1898 for the purpose of sending organizers into the Southern and Rocky Mountain States, that of 1900 includes over \$9,000, the proceeds of an assessment of 2 cents a member, levied in aid of a strike of the cigar makers.

Beginning with 1890 the published convention proceedings of the Federation have contained a statement of the number of votes to which each affiliated organization represented in the convention was entitled. The aggregates, excepting State and city central bodies, are given in the following table:

Year	Votes of national organ- izations	Votes of locals with 1 vote each	Votes of locals with more than 1 vote each	Total
1890	1,941	33	21	1,995
1891	1,958	13	0	1,991
1892	2,255	20	9	2,284
1893	2,430	11	28	2,469
1894	1,713	5	43	1,763
1895	1,930	12	39	1,981
1896	2,396	31	12	2,439
1897	2,408	10	4	2,422
1898	2,485	32	59	2,576
1899	3,136	52	41	3,229
1900	4,961	48	35	5,044

The votes of State branches or federations and of city central organizations are omitted because their members are for the most part represented through the national and the local unions. The national and the local unions are entitled to one vote in the convention for each 100 members or majority fraction thereof for whom the organization has paid a per capita tax to the Federation during the preceding year. The estimate is based upon the average payments for the several months of the year. The whole number of votes which the delegates are entitled to cast in the convention, multiplied by 100, may be assumed to be a little less than the number of members for which per capita tax has been paid. Some small locals of less than 100 members are represented in the convention, but many more, large and small, are unrepresented. The Federation had 1,017 local unions on October 1, 1900. Only 63 sent delegates to the convention. Occasionally, even some of the smaller national bodies send no delegates. The number of members represented in the convention, however, in each year since 1890, seems to be as follows: 1890, 199,500; 1891, 199,100; 1892, 228,100; 1893, 245,900; 1894, 176,300; 1895, 207,100; 1896, 213,900; 1897, 232,200; 1898, 251,600; 1899, 323,200; 1900, 504,100.

It is not intended to present this as a fair estimate of the actual membership of the Federation or of the organizations affiliated with it. While the constitution of the Federation simply levies a tax at so much per member, the officers of the contributing organizations may be expected to assume that only members in good standing are properly referred to. Members in good standing in any labor organization are only those whose dues are paid to some definite time. The number of members in good standing at any moment is smaller than the actual number of members who contribute their force and their money to the organization. In the case of a national organization it is necessary to the maintenance of a member's standing, not only that he pay his dues to his local union, but that the officers of the local union remit promptly to the national office. Local officers are frequently remiss, and it results that the number of members in good standing, as shown by the books of the national union, is even smaller than the number of members who have actually made their payments.

Officers of labor organizations are not fonder than other people of paying taxes. They are likely to report, for purposes of taxation, the smallest number of members that they can reconcile with their consciences. The officers of the locals report the smallest possible number to their national organizations. The officers of the national organizations report the smallest possible number to the Federation of Labor. Reasons are given below, (pp. 28, 16), for supposing that the payments of per capita tax do not, by any means, represent the actual aggregate membership of the organizations. Moreover, convention votes are based on average membership for a year, and if a union grows fast, its membership at the close of the year is far above the average. The Mine Workers may have increased by 70,000 during the last 2 months of the Federation's fiscal year, 1900, ending October 31. If they did, this growth could not raise their average membership for the year by so much as 10,000.

The figures given above may be taken, however, as indicating roughly, not the membership of the Federation, but the ups and downs of the membership. There seems to have been growth in 1892 and 1893; and in considering the latter year we should remember that the figures show the average paying membership for years ending with October. The full force of the depression of 1893 was not felt before the summer, and it shows itself in the membership returns of the fiscal year 1893-94. Recovery began the next year. The previous high-water mark was nearly reached in 1896, and was not much departed from in 1897 and 1898. In the next 2 years the convention votes nearly doubled.

In the secretary's report for 1900, for the first time, the amount of tax received from national and from local unions is stated separately. This makes it possible to reckon the exact average membership on which tax was paid during the fiscal year ending October 31, 1900. The national unions paid \$20,050.53 and the locals \$20,923.79. This indicates an average membership of 501,268 in the national unions and 31,873 in the locals, or 533,141 in all. But it was a time of very rapid growth, and the membership at the end of the year must have been much greater than the average membership.

It is interesting to notice that the publication of the amounts paid by the locals and by the national bodies stirred up discontent among the members of the locals. They had known that each man of them was paying 15 times as much to the Federation of Labor as each member of a national union was paying. They had not known that they, few in number as they are, were contributing as much as the whole of the great national bodies. When the matter was set before them in that way, they made such a protest that the report will probably never be issued in that form again. The feeling of injury seems, however, to be hardly justified. The tax of 5 cents a month would be a low tax to pay to a national union. The general officers of the American Federation of Labor hold the same relation to the local unions directly chartered by it which the general officers of the national unions hold to their locals. The members of the executive council do a great deal of work for them—traveling to places where trouble is pending or is threatened and adjusting disputes.

Though no official estimates of membership are made by the Federation, the secretary expresses the personal opinion that the actual membership of the affiliated organizations was as much as 900,000 at the close of the year 1900. The growth in 1901 seems likely to be quite as large as that of the preceding year. One hundred and eighty-nine dollars was spent for clerk hire in the fiscal year 1887, in 1897, a little over \$1,500, in 1900, nearly \$7,500. In 1897 four persons in addition to the officers, were employed at headquarters, in 1900, 12. During the year ending October 31, 1900, there were sent from headquarters 150,672 letters, circulars, and packages, or an average of 492 a day. About 71,000 of these pieces were letters in 2-cent envelopes, and 69,000 were circulars in 1-cent envelopes. The cost of postage was about \$2,300, and the cost of expressage was over \$1,200.

The following table gives the number of members for whom the American Federation of Labor had actually received per capita tax from each affiliated national and international organization up to July 1, 1901. The latest payment by each organization is the basis of calculation. The months covered by each payment are specified in the table. In some cases, where the payment covers more months than one, a larger number of members was reported for the later months than for the earlier. In such cases, however, the table shows the average. This gives a result somewhat less than the actual membership at the time of the payment. In many cases the latest payment was made some months ago, and in several such cases the organizations are known to have grown considerably in the interval. Finally, several important organizations pay per capita tax on a much smaller number of members than they claim to possess. Thus the Brotherhood of Carpenters claimed 68,463 members at the close of 1900; they paid tax for February, 1901, on 20,000.<sup>1</sup> The Iron Molders claim 35,000 members; they have paid tax on 15,000.

It will be seen that the latest payments of the national unions indicate a membership greater by 228,513, or 45 per cent, than the average membership which they paid on in the last fiscal year. A single organization—the Mine Workers—contributed 114,000 of the increase, but nearly all the important unions have shared in it. When allowance has been made for understatement and for growth, it seems certain that the membership of the affiliated organizations, including locals, exceeded 900,000 on July 1, 1901. It may have approached 1,000,000.

*Membership for which per capita tax has been paid to the American Federation of Labor, last payments before July 1, 1901.*

Organization	Months covered by payment	Members paid for
Actors	October, 1900-June, 1901	280
Allied Metal Mechanics	November, 1900-February, 1901	3,000
Bakers	February-April, 1901	6,251
Barbers	November, 1900-January, 1901	8,672
Blacksmiths	November, 1900-March, 1901	4,700
Boiler Makers	February-April, 1901	7,078

<sup>1</sup>The carpenters have changed their policy, perhaps in consequence of a change of fee-retainers. For July, 1901, they paid tax on 80,000 members.

*Membership for which per capita tax has been paid, etc.* Continued.

Organization	Months covered by payment	Members paid for
Bookbinders	December 1899-November 1900	8,730
Boot and Shoe Workers	January-March 1901	8,037
Brewery Workmen	April-June 1901	25,000
Brickmakers	May-June 1901	1,500
Bridge and Structural Iron Workers <sup>1</sup>	July, 1899-October, 1900	380
Broom Makers	February-June 1901	1,400
Boat Blowers	February-April 1901	2,500
Carpenters, Amalgamated Society	February 1901	20,000
Carpenters, United Brotherhood	August-December, 1900	2,025
Carrriage and Wagon Makers	April-May, 1901	2,017
Carpenters, Wood	May, 1901	165
Cloth Makers	December, 1901	33,951
Clock Makers	May-October, 1900	25,000
Clerks	November, 1900-March, 1901	4,181
Coppers	January-April, 1901	1,174
Cone Makers	April-June, 1901	373
Cotton Operatives	March-April 1901	9,600
Drivers, Team	April-June 1901	7,000
Electrical Workers	January-March, 1901	950
Engineers, Coal Hoisting	March-April 1901	4,409
Engineers, Steam	February-May 1901	1,779
Engineers, Amalgamated Society	May-July 1901	500
Engineers, Stationary	April, 1901	3,600
Fitters, Steam and Hot Water	March 1901	1,400
Grain Mill Workers	do	15,000
Glass Workers, Lathes	January-March 1901	2,000
Glass Flatworkers	August-September, 1900	122
Glass Workers, Amalgamated	February-April 1901	278
Grape Cutters	do	6,500
Gummers, Table Knib	April-September, 1900	240
Hatters	June, 1901	7,500
Horse Hoors	November 1900-March 1901	2,100
Hotel and Restaurant Employees	May, 1901	10,962
Iron, Steel and Tin Workers	May-October 1900	8,000
Jewelry Workers	May-June 1901	1,000
Lathers	April-September, 1900	1,700
Laundry Workers	May, 1901	3,005
Leather Workers on Horse Goods	do	3,002
Longshoremen	November, 1899-October, 1900	20,000
Machinists	November 1900-April 1901	30,000
Meat Cutters	December 1900-February, 1901	1,400

### 30 THE INDUSTRIAL COMMISSION;—LABOR ORGANIZATIONS.

**Political demands and general aims.**—The original platform of the Federation of Organized Trades and Labor Unions, adopted in 1881, contained the following demands

1. The passage of laws by Congress and the State legislatures for the incorporation of labor unions.
2. Compulsory education.
3. Prohibition of employment of children under 14.
4. Uniform apprentice laws, providing for an apprenticeship of from three to five years and for the furnishing by the employer of proper facilities for the acquirement of the trade.
5. The enforcement of the United States 8 hour law in the spirit of its designers.
6. Abolition of the contract system of prison labor, "so as to discontinue the manufacture of all articles which will compete with those of the honest mechanic or workman."
7. Laws imposing fine and imprisonment upon employers who maintain the truck or store-order system
8. Laws to insure workmen the first lien upon the products of their labor in all cases.
9. Repeal of all conspiracy laws so far as they apply to labor organizations
10. The establishment of a national bureau of labor statistics and the appointment of a proper person, identified with the laboring classes, to the management of it.
11. The adoption of such laws by Congress "as shall give to every American industry full protection from the cheap labor of foreign countries."
12. The prohibition by Congress of the importation of foreign laborers under contract
13. That the trade and labor organizations "secure proper representation in all lawmaking bodies by means of the ballot."

The same session adopted supplementary resolutions demanding laws for the entire prohibition of Chinese immigration, State laws for licensing stationary engineers, laws for the inspection and ventilation of mines, factories, and workshops, and sanitary supervision of all food and dwellings, and stricter laws fixing the liability of employers for accidents, "resulting from their negligence or incompetency to the injury of their employees."

The eleventh section of the platform, favoring a protective tariff, gave rise to a lively discussion. It was repealed the next year.

In 1882 two new planks were added to the platform—one in opposition to letting out Government work by contract, and one recommending that trades and labor organizations secure proper representation in all lawmaking bodies. The demand for a change in the employers' liability laws was embodied in the platform, and was changed to a specific demand that employees have the same right to damages for personal injuries that all other persons have. The demand for the prohibition of Chinese immigration was dropped from the supplementary resolutions in 1883. In 1881 a demand for the enactment of 8-hour laws by the State legislatures and municipal corporations was added to the first plank of the platform, and a demand for the resumption of the forfeited land grants was added to the supplementary resolutions. In 1885 the supplementary resolutions were embodied in the platform. The whole platform disappeared in the reorganization of 1886.

For 7 years there was no serious effort to frame a political programme for the reorganized Federation. In 1893, however, a resolution was reported to the convention, reciting that the trade unionists of Great Britain had adopted, with great success, the principle of independent labor politics as an auxiliary to their economic action, and had based their political action upon the following programme.

- "1. Compulsory education
- "2. Direct legislation.
- "3. A legal 8-hour workday.
- "4. Sanitary inspection of workshop, mine, and home
- "5. Liability of employers for injury to health, body, or life.
- "6. The abolition of the contract system in all public work.
- "7. The abolition of the sweating system.
- "8. The municipal ownership of street cars and gas and electric plants for public distribution of light, heat, and power.
- "9. The nationalization of telegraphs, telephones, railroads, and mines.
- "10. The collective ownership by the people of all means of production and distribution.
- "11. The principle of the referendum in all legislation."

The committee on resolutions proposed that the convention indorse this political programme and recommend it as the basis of a political labor movement to

request that their delegates to the next annual convention of the American Federation of Labor be instructed on this most important subject." By a vote of 1,253 to 1,182 the word "favorable" was stricken from the resolution; so that the programme, as a basis of independent political action, while recommended to the consideration of labor organizations, was not recommended to their favorable consideration. Only 30 delegates voted to strike out the word, and 54 voted to retain it. Of the delegates of city central bodies, 4 voted to strike out and 13 to retain.<sup>1</sup>

When this programme came up in the convention of 1894, the first action taken upon it was to strike out the preamble which commended "the principle of independent labor politics." The several planks were then adopted separately, with amendments, which brought the whole into the following form:

- "1. Compulsory education.
- "2. Direct legislation through the initiative and referendum.
- "3. A legal workday of not more than 8 hours.
- "4. Sanitary inspection of workshop, mine, and home.
- "5. Liability of employers for injury to health, body, and life.
- "6. The abolition of the contract system in all public work.
- "7. The abolition of the sweating system.
- "8. The municipal ownership of street cars, water works and gas and electric plants for public distribution of light, heat and power.
- "9. The nationalization of telegraphs, telephones, railroads and mines.
- "10. The abolition of the monopoly system of landholding and the substitution thereof a title of occupancy and use only.
- "11. Repeal of all conspiracy and penal laws affecting seamen and other workmen incorporated in the Federal and State laws of the United States.
- "12. The abolition of the monopoly privilege of issuing money, and substituting thereof a system of direct issuance to and by the people."

The motion to adopt the platform as a whole was lost, but it seems to have been held that this action did not negative the adoption of the several parts of it.

Planks 8 and 9, providing for municipal ownership of certain industries and national ownership of others, were passed without opposition. The liveliest discussion was caused by the tenth plank, demanding the collective ownership by the people of all means of production and distribution. The Typographical Union had voted, in its convention, in favor of substituting the anarchistic plank, which appears in the amended platform as No. 10, for the socialistic proposition of the original draft. The substitute was carried in the convention of the Federation by an overwhelming majority. In the debate the opposition to the original plank was directed almost entirely to two points: the danger of dividing and destroying the unions by adopting it and the antagonism of the active socialists to the trade-union movement. The vote was 1,217 to 913.

The convention of 1895 adopted the following resolution: "Inasmuch as doubt exists as to whether the so-called political platform was adopted or not by the Denver convention,

*Resolved*, That this convention declare that the failure to adopt the planks as a whole was equivalent to a rejection, and therefore we declare that the American Federation has no political platform."

The chair decided that this resolution did not do away with the resolutions separately passed by the preceding convention, except as a political platform. It was directed by the convention that the resolutions be kept standing in the Federationist as legislative demands.

The latest attempts to obtain a socialistic pronouncement from the Federation have been defeated far more overwhelmingly.

In the convention of 1900 a socialist delegate introduced a resolution recommending that workmen study the development of trusts and monopolies "with a view to nationalizing the same." The committee to which the resolution was referred reported a substitute without the final clause. The substitute was adopted in place of the original resolution by a vote of 1,552 against 349. On another resolution, of which one of the socialist members said in the debate that an affirmative vote would be a vote against collective ownership and a negative vote would be a vote for collective ownership the affirmative vote was 1,200 and the negative vote was 687. Some of the delegates voted on opposite side in these two cases and in each case some delegates whose personal opinions are socialistic voted on the antisocialistic side because they thought that political questions ought to be excluded from trade-union gatherings.<sup>2</sup>

The preamble to the present constitution bases the necessity of a general federa-

tion of trade and labor organizations upon the proposition that "a struggle is going on in all the nations of the civilized world between the oppressors and the oppressed of all countries, a struggle which grows in intensity from year to year, and will work disastrous results to the toiling millions if they are not combined for mutual protection and benefit." The constitution says, however, that "party politics, whether they be Democratic, Republican, Socialistic, Populistic, Prohibition, or any other, shall have no place in the conventions of the American Federation of Labor."

The objects of the Federation are declared in the constitution to be

"1. The encouragement and formation of local trade and labor unions and the closer federation of such societies, through the organization of central trade and labor unions in every city, and the further combination of such bodies into State, Territorial, or provincial organizations to secure legislation in the interest of the working masses.

"2. The establishment of national and international trade unions, based on a strict recognition of the autonomy of each trade and the promotion and advancement of such bodies.

"3. An American federation of all national and international trade unions, to aid and assist each other, to urge and encourage the sale of union label goods and to secure national legislation in the interest of the working people, and influence public opinion, by peaceful and legal methods, in favor of organized labor.

"4. To aid and encourage the labor press of America."

The scores of resolutions which every convention passes cover every imaginable kind of topic, from the free coinage of silver to street car franchises and from the freedom of Cuba to the unjust imprisonment of two or three sailors for mutiny. The Federation maintains a legislative committee, in the nature of a lobby, at Washington, and it is also active, chiefly through the state branches, at the capitals of the several States. It has fought the recent development of "government by injunction," and has tried hard to get bills passed by Congress for restraining it. It has been active in procuring legislation for ameliorating the condition of seamen, both by requiring better food and accommodations for them and by repealing the laws which put them in a condition of involuntary servitude to the shipmasters. It has fought the anti-trust bills which have been considered in Congress, on the ground that they were really directed against the labor organizations and not against capitalist combinations. It has fought antiscabping bills on the ground that they propose to give an unnecessary and unjust advantage to railroad monopolies. It has worked for the stricter enforcement of the laws which restrict immigration, it is moving for the renewal of the Chinese exclusion act, and for the extension of it to Japanese. It has opposed ship subsidies; it has declared in favor of legal-tender paper money. It repeated annually for several years a declaration in favor of free coinage of silver at 16 to 1, without waiting for the approval or consent of any other nation. There was a sharp contest over the reiteration of this resolution in December, 1896, after the silver question had been made a question between parties, but the resolution was reiterated, and as recently as 1898 the old position of the Federation was once more reaffirmed.

One of the questions which the Federation has always given the greatest attention to is that of the 8-hour day. It has constantly worked for the better enforcement of the law which gives the 8-hour day to employees of the United States, and for the extension of it to new classes of employees. It has worked for similar laws for the employees of State and local governments. It has advocated an amendment to the Constitution of the United States which should give Congress power to regulate the hours of labor in all factories.

The Federation has not, however, depended chiefly on political action for this reform. Its leaders constantly impress it upon their followers that the 8-hour day is the most important goal before the workingman, and that it must be fought for, on the large scale or on the small, at every opportunity. Three times the Federation has proposed great simultaneous movements in this direction. The conventions of 1884 and 1885 set May 1, 1886, for a general demand for the 8-hour day by all the working people of the United States. The plan was so far effective that many workers got their hours reduced from 12 or 11 to 10, or from 10 to 9, and some from 10 or 9 to 8. The next proposal was for an attack in detail: one union to be selected, at its own request, to make a general demand for the 8-hour day in its own trade, and to be backed by the whole force of the affiliated trades. The trade chosen was the Carpenters and the day was May 1, 1890. There was a widespread strike of the carpenters, for the support of which over \$12,000 was contributed by other trades through the Federation of Labor. In a large number of towns, though only in a minority of all, the 8-hour day was gained. The next

trade selected was the Miners. There was some miscarriage in their case, and the movement was a failure. Again a general effort was proposed, to be undertaken on May 1, 1898. It aroused less enthusiasm than the movement of 12 years earlier, and gave only a moderate impulse to the general movement for shorter hours.

**Affiliated organizations**—The American Federation of Labor is strictly a federal body, to which its individual members have, for the most part, no direct relation. Four kinds of organizations are affiliated with it—local unions, national unions, city central unions, and State federations.

**Local unions**—The policy of the Federation is to gather its members into national unions of particular trades so far as that is possible.<sup>1</sup> But it devotes its energies largely to the organizing of the unorganized, and necessarily gathers them first into local unions. The locals are required to join the national unions of the trades, so far as national unions exist. In trades which have none the locals are of necessity affiliated directly with the Federation. But when a small number of unions, say 7, have been formed and affiliated in any one trade, the policy of the Federation is to encourage them to unite in a national organization.

The organizers of the Federation gather many workers who can not be formed into local unions of particular trades for lack of numbers. In such cases federal labor unions are formed. These are simply local unions of miscellaneous workers. Not more than three federal labor unions may be chartered in any one city. A request for a certificate of affiliation for a federal labor union must in all cases be indorsed by the nearest local or national trade union officials connected with the Federation. If a chartered central labor union exists in the place, the request is referred to it.

The convention of 1890 changed the provision for federal labor unions so that one could be established by "any 7 wage workers in one trade of good character," instead of by "any 7 wage workers of good character," as before. This seemed to make the federal labor union a local trade union. It does not seem to have been meant to do so, and it was interpreted by the officers according to their understanding of the intention of the convention. Charters continued to be issued to federal labor unions composed of workers of different crafts. In 1893 the clause was made to read "seven wage workers of good character following any trade or calling."

The federal labor unions are recruiting stations for the labor movement. As soon as a sufficient number of members of one trade or calling, skilled or unskilled, are gathered they are required to form a union of the occupation. President Gompers said, however, in his report of 1897 that there were several federal labor unions with a membership of more than 2,000 each. The possible growth and activity of a particularly prosperous one are illustrated in the following statement from Canton, Ill.

"In January, 1898, the cigar makers of the city were confronted with a cut in wages of \$2 a thousand. To resist this they formed a union, and this was the real starting point in the history of Canton's trade unions. From this union and that of the Carpenters grew the local federal labor union, which was organized on July 18, 1898, in a room on the east side of the square. Seven and eight was the average attendance at first, and the members were afraid to go up boldly to the meetings, but went through alleys and up back stairways. Confidence and a sense of independence came later and the union grew rapidly, until last year it numbered more than 1,300 members. Out of this federal body there were organized the various trade unions; but even now the federal labor union has 700 or 800 members."

The article by Homer Whalen, of the Carpenters' Union of Canton, from which this is taken, mentions a large number of trades in which the local working hours are alleged to have been reduced by one or two a day and wages to have been increased from 10 to 25 per cent through the action of the labor organizations.<sup>2</sup>

The constitution limits membership in federal labor unions to wage earners. It sometimes happens that "through a false notion inculcated during the existence of the Knights of Labor," as President Gompers said in 1897, the federal labor unions are disposed to admit to membership employers, superintendents, foremen, and business men who show a spirit of friendliness to the organization. The charters of several federal labor unions were revoked during 1898 for admitting such persons. The exclusion of them by the authorities of the American Federa-

<sup>1</sup> President Gompers said in his address to the convention of 1900 "I am persuaded that the formation of one local union, placed under its proper jurisdiction is of greater consequence and importance to the safety and progress of the labor movement than the issuance of 20 charters for local unions to be affiliated directly with the American Federation of Labor." Convention Proceedings, 1900, p. 7.

<sup>2</sup> American Federationist, August, 1900, p. 243.

tion of Labor is sometimes felt as an injustice. It is held, however, to be necessary. "Experience shows that workmen, when others than wage-earners are members of the union, are reluctant in expressing their true sentiments, or are prevented from taking such action as would tend to protect them against any wrongs inflicted upon them by their employers, in a word, have been placed practically in their unions in the same defenseless position as they are in their employment. Again, business men, for the simple purpose of advancing their own business interests, have joined the union, and consequently created divisions and schisms and diverted the purpose of the organization."<sup>1</sup>

The convention of 1900 requested all affiliated unions to acknowledge cards issued by federal labor unions, and to give their holders the support usually offered to holders of trade union cards.<sup>2</sup>

*City central bodies and State branches.*—All local unions connected with the Federation, either directly or through national organizations, are urged to join such central labor unions as are chartered by the Federation. The central labor unions are directed to use all possible means to organize local trade unions in their vicinity and to insure their connection with the national or international bodies of their trades, and to organize federal labor unions where the number of craftsmen precludes any other form of organization.

State organizations exist chiefly for the purpose of watching and influencing legislation. The city central unions have a much wider field of activity. They bring the strength of all their members to the support of any one union which may have a trade dispute, as the Federation itself aims to bring the support of the whole labor body to the point where it is needed. State branches usually bear the name of the Federation, with the addition of the names of their States, as the Illinois State Federation of Labor. City central bodies adopt various titles, such as Chicago Federation of Labor, United Labor League of Philadelphia, Central Trades and Labor Council of St. Louis, Central Labor Union of Boston.

The constitution forbids central labor unions, or city or State federations, to admit delegates from any local organization which owes allegiance to any national body hostile to the American Federation, or which has been expelled by a national organization of its trade. It has not always been practicable to enforce the rule strictly. City central bodies insist on judging for themselves the merits of disputes between local trade unions and their national unions. The Federation convention of 1891 adopted resolutions censuring the Central Labor Union of New York for excluding a local of the National Brotherhood of Electrical Workers, which was affiliated with the Federation and receiving a seceded local union, "thus depriving members of an organization affiliated with the American Federation of Labor of the right to work in New York City." It also disapproved the action of certain locals of the Organmakers', the Machinists', and the Furniture Workers' International Unions in supporting the Central Labor Federation of New York in its antagonism to the International Union of Bakers and Confectioners.<sup>3</sup>

The convention of 1900 adopted a resolution instructing all State and city central organizations to expel every dual or seceding organization connected with them before June, 1901, on pain of revocation of their charters.<sup>4</sup> It also directed the secretary to obtain from central bodies, from time to time, the names of locals, either of national organizations or of the Federation itself, that are not affiliated with the central bodies. The secretary is then to ask the national unions to instruct their locals to establish such affiliation, and is also to insist that locals chartered directly by the Federation shall affiliate with central bodies chartered by it "before affiliating with any other central body in name or pretensions."<sup>5</sup>

*National unions.*—The Federation has always followed a cautious and conciliatory policy in dealing with its national trade unions. It has steadily refused to assume jurisdiction over their internal disputes. Except when both parties have agreed to submit their claims to its decision, it has not gone further than to offer counsel. For instance, at the session of the executive council in July, 1900, a case came up in which the national officers of the Boilermakers had suspended a local union because a member of the union had preferred charges against the officers. The

<sup>1</sup> Report of President Gompers. Convention Proceedings, 1897, p. 7.

<sup>2</sup> Convention Proceedings, 1900, p. 121.

<sup>3</sup> This law was passed by the convention of 1890, in consequence of the admission of a local of the Brewery Workmen, which had been suspended by its national body for nonpayment of assessments, to the Trades and Labor Assembly of San Francisco. The original dispute related to an assessment of 10 cents per capita. (Convention Proceedings, 1890, p. 32.)

<sup>4</sup> Convention Proceedings, 1894, p. 56.

<sup>5</sup> Convention Proceedings, 1900, p. 61.

<sup>6</sup> Convention Proceedings, 1900, pp. 117, 123.

council of the Federation gave its judgment that this was unfair, and "respectfully advised" the officers of the Boilermakers to reinstate the local.<sup>1</sup>

In the case of the Painters, where there was an actual division into two rival bodies, the Federation recognized one of them as the legitimate organization to the exclusion of the other, but this was because only one was willing to appoint a committee, at the request of the Federation, for the purpose of arranging an amalgamation.<sup>2</sup>

President Gompers expresses the opinion that one of the greatest factors in the growth and influence of the Federation is the fact that its officers do not have arbitrary power to decide disputes between unions or between unions and employers. It acts as an advisor and mediator, and in this way has been able to adjust innumerable disputes. Its power depends on the good will and respect of the workers.

Even when national unions have quarreled with each other, the Federation has steadily refused to make itself a judge or a divider over them. It has been asked innumerable times to examine disputed questions and to issue peremptory decisions. The conventions have sometimes shown a disposition to magnify the authority of the Federation, but the responsible officers have never wavered from their safe and cautious course. The convention of 1893 instructed the executive council "to take a decided stand against the many internal fights among affiliated organizations and exert its authority whenever such trouble arises."<sup>3</sup> When a resolution was introduced in this convention providing that the executive council be empowered to settle all disputes between affiliated bodies, the committee to which it was referred amended it by inserting the words "when requested by both parties in dispute," and the resolution was passed in this form. Yet the same convention passed a resolution empowering the executive council "if it should be unable to bring about an agreement for amalgamation between two affiliated national unions claiming jurisdiction over the same branches of industry, to draw up a plan of amalgamation which should be binding upon both organizations." The council never took any such action as this resolution suggested to it. At the convention of 1899 a proposal was made that an arbitration committee of five should be elected, which should hear all disputes between affiliated organizations and should make final and binding decisions. The proposal was lost.<sup>4</sup>

The action of the Federation in various disputes is mentioned in the later pages of this volume, in the accounts of the unions concerned. For its recent policy in matters of trade jurisdiction, the chapters on the Brewery Workmen (pp. 71, 275) and the Typographical Union (pp. 82, 83) should especially be consulted.

In dealing with local unions directly chartered by it, the Federation acts with an authority which it does not assume over the national unions. Thus the local unions of Water Department Workers and Pavers in Boston accepted members who rightfully belonged to the national unions of the granite cutters and the machinists. When complaint was made the executive council of the American Federation of Labor ordered them to cease the practice on pain of forfeiting their charters.

The convention of 1899 adopted a resolution providing that each national union which should seek a charter from the Federation in the future should clearly define its jurisdiction, and if it claimed branches of trades already covered by charters of the Federation the charter desired should be denied until the convention of the Federation should have passed upon it. If the Federation should grant a charter for a branch of a trade previously controlled by another body, the parent body should thereafter be estopped from receiving members or unions of the branch or trade so chartered.<sup>5</sup> The convention of 1900, however, receded from this broad claim of judicial power, and amended the constitution so that the jurisdiction claimed by an existing affiliated union can not without its written consent, be trespassing on by a new charter. This convention also instructed the president to correspond with the executive officers of all affiliated national and international unions, requesting them to define their claims of trade jurisdiction in written statements. These statements are to be a guide in the future issuance of charters.<sup>6</sup>

<sup>1</sup> American Federationist, August, 1900, p. 258. See also the action of the Federation in the case of the Hotel Employees, p. 363. In that case the dispute was submitted to the Federation by consent of both the contending parties.

**Unaffiliated unions.**—The American Federation of Labor denies that it makes war upon bodies which are not affiliated with it, but it has sometimes formed local unions in trades in which independent national unions exist. It formed independent locals of machinists before the machinists' national union joined it. It formed independent locals of musicians when the National League of Musicians refused to affiliate with it. In past times it has formed independent locals of bricklayers.<sup>1</sup> The executive council resolved in March, 1900, to instruct affiliated unions "to hold the work as against unaffiliated unions."

Yet it seems to be true that the Federation has usually followed a policy of courtesy and even of helpfulness toward outside organizations except when they have come into direct conflict with organizations which belong to it. The Western Federation of Miners is independent and half hostile, but the American Federation of Labor paid hundreds of dollars into its treasury for the defense of its imprisoned members in the Cœur d'Alene. The bricklayers refuse to give their support to the Federation, but the organizers of the Federation, whenever they are able to form local unions of bricklayers, turn them over to the national union, and the latest report of the secretary of the national union makes grateful acknowledgment of the high value of these services.

The Federation hesitates to take to itself independent locals in such trades, partly out of faithfulness to its great principle of trade autonomy, but more, perhaps, because its officers realize that more flies are caught with molasses than with vinegar. As President Gompers said in his report to the convention of 1891:

"We hope to obtain the affiliation of these organizations by earning and deserving their confidence and respect. Let us put on a show of arrogance and attempt to force them and we shall drive them further from us. I recommend that this policy be continued toward all unaffiliated trade unions."

The course of the Federation has not been uniform, whether or not it can fairly be called inconsistent. In the case of the Machinists, just referred to, there was trouble over the exclusion of negroes by their constitution. This perhaps justified the authorities of the Federation in their own eyes in establishing a new organization of machinists in which the color line should not be drawn. At the present time the Federation holds locals of building laborers, though there is an unaffiliated national organization of the craft. In this case, according to the statement of the Federation officers, the national body was largely built up out of locals which the Federation had established having been so nurtured, and having attached itself to the Federation, it refused or neglected to pay its per capita tax. The Federation feels justified, therefore, in retaining such locals as it forms, and it will perhaps establish another national organization. In other cases, however, the grounds of the action of the Federation are less evident.

**The negro question.**—It has always been regarded as one of the cardinal principles of the Federation that "the working people must unite and organize, irrespective of creed, color, sex, nationality, or politics." The Federation formerly refused to admit any union which, in its written constitution, excluded negroes from membership. It was this which kept out the International Association of Machinists for several years, till it eliminated the word "white" from its qualifications for membership. It was said at one time that the color line was the chief obstacle to an affiliation of the Brotherhood of Locomotive Firemen with the Federation. The Federation seems, however, to have modified the strictness of its rule. The Railroad Telegraphers and the Railway Trackmen have both been welcomed, and both restrict their membership to whites.

In a considerable degree the color line has been actually wiped out in the affiliated organizations. Great unions controlled by Northern men have insisted in Southern cities on absolute social equality for their colored members.<sup>2</sup> Many local unions receive whites and blacks on equal terms. Where the number of negroes is large, however, national unions usually organize their white and their colored members into separate locals. Most central labor unions, even in the South, receive delegates from colored locals. In 1898 the Atlanta Federation of Trades declined to enter the peace jubilee parade because colored delegates were excluded.<sup>3</sup>

The convention of 1897 adopted a resolution condemning a reported statement of Booker T. Washington that the trade unions were placing obstacles in the way of the material advancement of the negro, and reaffirming the declaration of the Federation that it welcomes to its ranks all labor without regard to creed, color,

sex, race, or nationality. One delegate from the South declared, however, that the white people of the South would not submit to the employment of the negro in the mills, and that the federal labor union of which he was a member did not admit negroes. President Gompers said that a union affiliated with the Federation had no right to debar the negro from membership.

With increasing experience in the effort to organize the wage workers of the South, the leaders have become convinced that for local purposes separate organizations of the colored must be permitted. President Gompers said, in his report to the convention of 1900 that here and there a local had refused to accept members, simply on account of color. In such cases, where there were enough colored workers in one calling, an effort had been made to form a separate colored union, and a trades council composed of representatives of the colored and the white. This had generally been acquiesced in. In some parts of the South, however, a more serious difficulty had arisen. Central bodies chartered by the Federation had refused to receive delegates from local unions of negroes. The Federation had not been able to insist that they be received, because such insistence would have meant the disruption of the central bodies. President Gompers suggested that separate central bodies composed of negroes be established where it might seem practicable and necessary. The convention accordingly amended the constitution to permit the executive council to charter central labor unions as well as local trade and federal unions composed exclusively of colored members.

**Relations with the Knights of Labor.** Conflict between the Knights of Labor and the Federation of Labor was inevitable, because each aspired to universal dominion of the labor world. The attitude which the Federation has assumed in the conflict has depended, however, upon the differences of organization and methods between them.

The Knights of Labor began as an organization of trades. The first assembly was a trade assembly of garment workers, and when workers of other trades began to be admitted they were admitted only as "sojourners," with the understanding that as soon as enough members of one trade had been gathered they should swarm and form an assembly of their own.

The fundamental thought of the Knights, however, was that of the unity of interest of all productive workers. This unity of interest was felt to require a united control of their organization. All the representative bodies above the local assembly were at first established on a territorial basis. It was not until after the Federation of Trades and Labor Unions had been formed—some 12 years after the foundation of the Knights—that the Knights established their first national trade assembly. Even among the local assemblies the union of all sorts of workers in one body was a normal proceeding, and such mixed assemblies had an importance incomparably greater than that of the federal labor unions which the Federation has established.

The Federation of Labor admits readily enough the declaration of the Knights, that an injury to one is the concern of all, but this is not its primary and central thought. The Federation is based rather upon the idea that the interests of all will be best served if each trade looks out in the first place for its own interests. Its fundamental principle is trade autonomy. Its desire is to see all workers organized in national or international unions of their particular crafts. It forms local unions of miscellaneous workers corresponding to the mixed local assemblies of the Knights of Labor, but it does this avowedly as a measure of temporary necessity. These federal labor unions are regarded as recruiting stations, out of which local trade unions and then national trade unions are to be developed. Even from these federal labor unions the Federation excludes all but wage workers. Some of them have been suspended for admitting employers and other persons who have professed a desire to join out of friendliness to the cause of labor. The Knights, on the other hand, distinctly declare that any local assembly may, at its option, admit any person over 16 years old who is not engaged as an employer in handling intoxicating drinks, and who is not a banker, a professional gambler, or a lawyer. The only further restriction is that three-fourths of the members of each local assembly must be wage workers or farmers.

Associated with this difference in principle of organization is a radical difference in centralization of control. The Federation of Labor disclaims any authority over its constituent national unions. They are at liberty to strike or to boycott, or to decline to strike or boycott, as they please. The Federation assumes no jurisdiction over their internal quarrels. Even when a dispute arises between one and another, the Federation has been very slow to make itself a judge. Unless its action in the jurisdiction disputes of the Brewers at the convention of 1900 may

be called an exception, it has constantly refused to go farther than to recommend a course of action except in cases which have been submitted to it by agreement of both parties. The government of the Knights, on the other hand, is centralized and absolute. That which seems good to the central officers is ordered to be done. Disobedience is followed by prompt cutting off from the order.

On the basis of these differences the Federation has set itself up as the especial champion of the principle of organization according to trades. It has been disposed to deny to the Knights the right to maintain trade organizations even when they have desired it.

Of the 107 delegates which formed the first convention of the Federation of Organized Trades and Labor Unions, 18 represented local and district assemblies of the Knights of Labor. The Knights did not appear as such in subsequent conventions, except that one assembly was represented in 1881. The Knights had an indirect representation, however, through central labor unions in which their assemblies were represented, and for years many members of the trade unions were also members of the Knights. The convention of 1887 refused to admit delegates from the Federation of Labor of Washington, D. C., on the ground that this body "was not fully in sympathy with the trades-union movement, as it was overwhelmingly composed of Knights of Labor assemblies." The convention of 1886, at which the Federation was re-organized, excluded a representative of the Window Glass Workers, on the ground that their organization was "affiliated with the Knights of Labor, and not a trade union within the meaning of the call for the convention." But the Hatters and the Brewers retained for many years a dual affiliation in their organized capacity, with the Federation and with the Knights; not to speak of the thousands of cases of individual dual membership.

The open rupture between the Knights of Labor and the trade unions which made up the Federation seems to have begun with the quarrel between the Knights and the Cigar Makers early in 1886. The Cigar Makers' International Union declared that such cigar makers had been received and organized by the Knights. The principal officers of the International Union met the executive board of the Knights on March 3, 1886, and discussed these complaints. The executive board, according to their own subsequent declaration, "promised, as soon as time and opportunity would permit, to go to New York, make an investigation, and, if proven that such charges were well founded, to revoke their charter for this organization will not be made a refuge for unprincipled and unfair people." The Knights afterwards complained that, though they were well known to be embarrassed at the time by labor difficulties, including the great railway strike in the Southwest, the Cigar Makers' International Union did not give them any proper opportunity for investigating and correcting any abuses that might exist, but began circulating the charge that the Knights of Labor were organizing seals and undertook to boycott cigars which bore the Knights of Labor label.

At a conference of chief officers of trade unions, held in Philadelphia in the spring of 1886, a committee was appointed to confer with the Knights and try to effect an agreement with them. It visited their General Assembly in May, 1886, and afterwards, in September, conferred with their executive board. At the May meeting the representatives of the trade unions proposed a treaty, providing that the Knights should not initiate any person or form any assembly of persons following a calling which had a national organization without such organization's consent, that no person should be admitted to the Knights who worked for less than the scale of wages fixed by the union of his craft, nor anyone who had ever been convicted of ratting, embezzlement, or any other offense against his union, until his union had exonerated him, that the charter of any Knights of Labor assembly of any trade having a national union should be revoked, and the members of it should be requested to join a mixed assembly or form a local union under the jurisdiction of the national trade union, that any organizer of the Knights who should endeavor to induce trade unions to disband or tamper with their growth or privileges should lose his commission, that when a union was on strike no assembly of the Knights should interfere until the strike was settled to the satisfaction of the union; that the Knights should not issue any trade-mark or label in competition with any trade-mark or label of any national trade union.<sup>2</sup>

The General Assembly of the Knights declined these terms and proposed a mutual exchange and recognition of working cards. The convention of the Federation in the following December adopted a resolution reciting that the Knights of Labor had "persistently attempted to undermine and disrupt the well-established trade unions, organized and encouraged men who had proven themselves untrue to their trade, false to the obligations of their union, embezzlers of moneys,

<sup>1</sup> Convention Proceedings, 1887, p. 9.

<sup>2</sup> Convention Proceedings, American Federation of Labor, 1886, pp. 18-20.

and expelled by many of the unions, and conspiring to pull down the trades unions which it has cost years of work and sacrifice to build." On the other hand, the conference committee of the Knights reported to the executive board that an atmosphere of sincerity seemed to surround the actions of some members of the committee of the trade unions, and that in its opinion "the so-called grievances, if they do exist, are rather acceptable than otherwise to some persons in their organizations, and are used by them to accomplish selfish purposes." The committee of the Knights further complained that the representatives of the trade unions rigidly refused to consider any terms except those of the treaty which they brought with them ready-made upon their first appearance. In answer to the complaint that the Knights of Labor were trying to destroy the unions by absorbing their members, and in answer to the assertion that it was necessary to oppose this tendency in order to preserve the autonomy of the several trades, the Knights replied: "Such arguments are but an evidence of the ignorance of those who advance them of the principles and workings of our order, which has given opportunity to any trade to organize within the order and perform its functions as a trade organization when the conditions involved would justify." The existence of the following trades organizations within the order was referred to: Window glass workers, bottle blowers, hat makers and finishers, coal miners and mine laborers, telegraphers, ax and edge tool workers, potters, lithographers, carpet weavers, and machine constructors.

The principal counter proposition of the Knights—that the working card of any trade union should entitle the holder to work in any Knights of Labor shop, and that the card of the Knights should entitle the holder to work in any union shop, seems not illiberal, considering that it was made at the moment of the greatest power and most rapid growth of the Knights.

President Gompers said in his report to the convention of 1887: "There is no conflict necessary between the trades unions and the Knights of Labor." \* At the formation of the old Federation of Organized Trades and Labor Unions of the United States and Canada, at Pittsburg, in 1881, the Knights were largely represented. Let us hope that the near future will bring them back to the fold, so that all having the grand purposes in view as understood and advocated by the American Federation of Labor may work for their realization.<sup>1</sup>

The General Assembly of the Knights in 1888 passed a resolution providing that "the shop or working card of any other organization shall be received and recognized in like manner [as that of the Knights] whenever said other organization grants the same privilege to members holding a shop or working card issued by the Knights of Labor."<sup>2</sup>

During 1889 there were renewed efforts for harmonious action between the Knights and the Federation. After some difficulty a joint manifesto on the 8-hour question was signed and issued. At subsequent conferences the Knights asked for mutual recognition of cards and labels. The Federation made the counter proposition that trade districts and locals be discontinued by the Knights, and promised that in return the trade unions would encourage their members to become Knights in mixed locals. The next convention of the Federation sanctioned the actions of its representatives and formally resolved to insist on the position they had taken.<sup>3</sup>

The General Assembly of the Knights of Labor in 1889, replying to a communication from President Gompers, of the Federation of Labor, with regard to the proposed general demand for the 8-hour day to be made on May 1, 1890, expressed its concurrence with Mr. Gompers in the opinion that a general strike at that time would be unwise, and added its confident belief that the Knights of Labor would lend their moral support to any trades which might be prepared to embark in the 8-hour movement.<sup>4</sup>

The convention of the Federation in 1891 received propositions from the Knights, which were in substance as follows: First, the working cards of the Knights and of the unions affiliated with the Federation should be mutually recognized and respected. Second, labels of the Knights, of the Federation, and of bodies attached to it should be mutually recognized and officially indorsed. Third, no person suspended or expelled from one body, or in arrears for dues or assessments, should be admitted to another body, a party to the agreement. The convention of the Federation in reply said, first, that its affiliated bodies were entirely free to recognize such cards and labels as they might think proper, and that the Federation could not under any circumstances deviate from its policy of allowing self-

#### 40 THE INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

government. "The platform of the Knights of Labor shows clearly," continues the Federation, "that it was never intended to be other than an educational organization. Thus it can have no legitimate place in the field occupied by trade unions. Wishing, however, to bring to an end any cause for division or discord in the ranks of organized labor, we submit the following basis for an amicable adjustment of differences between the American Federation of Labor and the Knights of Labor:

"1. That the Knights of Labor shall revoke and issue no more charters to local trade assemblies or national trade assemblies.

"2. In return the American Federation of Labor shall revoke and issue no more charters to mixed Federal unions.

"3. The American Federation of Labor will recommend to affiliated unions that they urge their members to become members of mixed assemblies of Knights of Labor.

"The acceptance of these conditions will necessarily obviate any future conflict regarding the recognition of labels or the relations of expelled or suspended members."

President Gompers, in his report to the convention of 1892, said that these resolutions had been transmitted to the general officers of the Knights of Labor, with a courteous note suggesting that a conference might be held to discuss the propositions from the two sides, but that the answer of the Knights was discourteous, and that nothing had since been heard from them. The action of the executive board of the Federation was approved by the convention.<sup>1</sup>

At the General Assembly of the Knights of Labor in 1893 Mr. Powderly, in his report as general master workman, recommended that when the General Assembly adjourn it name no day or place for its next meeting, but authorize the general executive board "to consult the officers of other organizations with a view to having the next session of the General Assembly, the convention of the American Federation of Labor, and the conventions of other industrial organizations, held at the same time and in the same city. 'I do this with a view to bringing the active men of these organizations into closer fellowship, and to hold a joint session of all the delegates while the conventions are in session. If this is done much good will follow, even though nothing may be done in the way of amalgamation.'

This suggestion was not accepted by the General Assembly. A resolution was, however, passed instructing the general officers "to cordially invite the officers of the national labor organizations of America to select three representatives each, to meet at some place early in the coming year to discuss the condition of working people in this country, and to suggest and further some plan whereby the various labor organizations will be brought into closer touch with each other, so as to work in harmony for the amelioration of the condition of the masses." The convention of the Federation of Labor which met the next month, appointed Samuel Gompers, P. J. McInure, and Frank Foster to meet the representatives of the Knights.<sup>2</sup>

The conference met in June, 1894. There were present representatives of the Knights of Labor, the Federation of Labor, the Locomotive Engineers, the Locomotive Firemen, the Railway Conductors, the Railway Trainmen, the Green Glass Workers, and the Farmers' Alliance. The Knights desired and the representatives of other organizations except the Farmers' Alliance and the Railway Trainmen opposed, a recommendation that all organized working people vote against the two old political parties and give their support at least for the time being, to the People's Party. The Knights also asked for joint control of the management of strikes, for mutual recognition of the working cards of all bona fide labor organizations represented in the conference, and for the appointment of joint committees, where two or more organizations of the same craft might exist, to arrange wage scales and hours of work. The Federation considered that these demands were contrary to the principles of trade autonomy. The report of the Federation committee to the next convention closed with the following paragraph: "We believe in harmony; but that harmony, in our judgment, can only be brought about by a firm insistence that the trade union shall be permitted to occupy unmolested its natural and historic field of labor for the benefit and advancement of the wage-earning classes."

The convention added this resolution: "That the American Federation of Labor holds itself in readiness to meet at all times with sincere men in the reform movement, but refuses to meet with the Knights of Labor as at present constituted and until that body recognizes the principle of trade autonomy and ceases to encourage dual authority in any one trade."

<sup>1</sup> Convention Proceedings, 1891, pp. 47, 48.

<sup>2</sup> Convention Proceedings, 1892, pp. 16, 30.

<sup>3</sup> Report of General Master Workman, 1893, p. 40.

<sup>4</sup> American Federation of Labor Convention Proceedings, 1893, pp. 52, 58.

<sup>5</sup> American Federation of Labor Convention Proceedings, 1894, p. 66.

The general officers of the Knights of Labor, who had represented the order at the conference, concluded their report with a recommendation that the Knights give no further attention "to the American Federation of Labor as a body, as it is at best but an advisory board, with no power to enforce its decisions, but that we define our exact position upon all matters at issue and send direct to all national and international labor organizations, with a request that all who favor reciprocity upon the lines proposed should send accredited delegates to a conference, fully authorized to discuss, arrange and ratify all necessary details for a thorough understanding."

The later actions of the Federation show an increased intensity of opposition to the Knights. Thus in April, 1896, the executive council passed the following resolution:

"Whereas it appearing from the evidence submitted that the Knights of Labor in St. Louis are hostile to the trade-unionists, it is hereby decided that, according to article 12, section 1 of the constitution of the American Federation of Labor, the Trades and Labor Union of St. Louis is justified in demanding that all unions desiring representation in said Trades and Labor Union must withdraw from the Knights of Labor, as well as the individual members of said unions, on pain of expulsion from said Trades and Labor Union."

While this is not a general decree of exclusion, requiring every member to make his choice between the two organizations, it sanctions such a decree of exclusion, enforced by a subordinate body within its own field.

The principal instance of membership in both the Federation and the Knights on a large scale was that of the Brewery Workmen. Some account of it is given below, on page 274. There was for a time a similar connection between the Hatters and the Knights. It was in connection with the case of the Brewery Workmen that a resolution was introduced in the convention of the Federation, in 1899, providing that no member of any affiliated union should be allowed to hold membership in the Knights. The resolution was referred to the executive council, and did not receive their formal approval, but the spirit of it is the spirit of the Federation. Resolutions of similar character, requiring all members of the Knights who were also members of trade unions to leave one body or the other, have repeatedly been introduced in the General Assembly of the Knights, but have uniformly been defeated, though the General Assembly of 1886, under the acute irritation of a quarrel, took action which excluded members of the Cigar Makers International Union.

The unionism which characterizes the general relations between the two organizations does not appear at all times and in all places in the relations between their members. Thus the New York State congress of the Knights of Labor supported the boycott laid on the New York Sun by the Typographical Union from 1899 to 1901. Attention was called by a resolution passed in the General Assembly of 1899 to the fact that the printers employed in the Knights of Labor printing office are members of the International Typographical Union, and that the office could use the label of the Allied Printing Trades Council if it desired.<sup>1</sup>

**Other rival organizations.**—Since the Federation aspires to include all trade unions in the United States and Canada, it can not but look with disfavor on any attempt to establish another federation of trade unions outside of it, either on grounds of trade affiliation or on grounds of geographical position. There exist at present two rival organizations severally representing these principles of alliance. The National Building Trades Council has undertaken to gather together all the unions of the building trades. The Western Labor Union has undertaken to form a separate federation of the labor organizations of the far Western States.

The alliance of the metal trades, formed in 1901, does not raise any question of rivalry with the Federation. All its constituent unions are affiliated with the Federation, and the alliance itself will be treated as a branch of it.

**Conventions.**—The original constitution of the Federation of Organized Trades and Labor Unions gave one delegate to each national or international union of 1,000 members or less, two delegates for 4,000 members, three for 8,000, four for 16,000, and so on. Local trades assemblies or councils were to have one delegate each without reference to size. The next year it was enacted that State and provincial federations of trades unions should have two delegates; one delegate each was given to local trades assemblies or councils, district assemblies of the Knights of Labor, and local trades unions. In 1885 the provision for the smaller national unions was made clearer by changing it to read: "For less than 4,000

<sup>1</sup> Proceedings of General Assembly, 1894, p. 116.

<sup>2</sup> American Federationist, vol. 3, p. 55.

<sup>3</sup> Typographical Journal, January 15, 1901, p. 62.

<sup>4</sup> Proceedings of General Assembly, 1899, p. 78.

members, 1 delegate.' No substantial change was made, however, until the reorganization and the adoption of the name American Federation of Labor in 1886. The new constitution then adopted retained the old basis of representation for national unions, and continued 'and from each local or district trades union not connected with or having a national or international head affiliated with this federation, 1 delegate.

A much more important change was made in 1887 by the addition of the following clause: "Questions may be decided by division or a show of hands, but if a call of the roll is demanded by one-tenth of the delegates present, each delegate shall cast 1 vote, for every 100 members or major fraction thereof he represents, but no city or State federation shall be allowed more than 1 vote." This is the existing provision. By this device, while the number of delegates is kept small enough to enable the convention to remain a deliberative body, the democratic principle of "1 man 1 vote" is maintained by giving each organization a weight in proportion to its membership in the decision of all disputed questions.<sup>1</sup>

The geometrical ratio basis of representation of the national unions gives them a relatively small number of delegates. They have some 95 per cent of the membership of the affiliated bodies, but they sent only 102 of the 221 members of the convention of 1900. The most, however, of the 55 representatives of State and city central bodies were members of the national organizations. It is also true that the national bodies frequently send less delegates than they are entitled to. The Mine Workers, with 110,000 votes, might have sent 6 delegates; they sent only 4. The Cigar-makers, with 31,100 votes, sent only 3 delegates instead of 5. The Longshoremen and the Retail Clerks, with 20,000 votes each, sent each 2 delegates instead of 4. The Flint Glass Workers and the Amalgamated Association of Iron and Steel Workers sent 1 apiece, they were entitled to 3 apiece. But on a roll call, which 10 per cent of the members could demand, the national and international unions were entitled to 1,961 votes, while State and city central bodies cast 55 votes, and local unions 85. The great majority of the local unions were entitled to only 1 vote apiece, indicating a paying membership of 150 or less. About a dozen had 2 or 3 votes apiece, and one, the Watch Workers Union, of Elgin, Ill. had 8, showing a paying membership of about 300. The votes allowed to the several organizations are based upon the average membership during the year ending October 31, as shown by the per capita tax paid to the Federation. The number of votes is not affected by the number of delegates an organization sends, if it is represented at all. In the convention of 1900, the 1 delegate of the Flint Glass Workers cast the 80 votes of the organization if the union had chosen to send 3 delegates, the votes would have been divided among them.

City and State federations have only one vote each, because their members are already represented for the most part by the delegates of the national and local unions. Fraternal delegates from foreign bodies have the same rights as delegates from central bodies. Thus, in the convention of 1900, the two delegates from the British Trades Union Congress and the one from the Canadian Trades and Labor Congress had each a vote. No organization which has seceded or been suspended or expelled from any national organization connected with the Federation may be represented.

The convention meets annually on the first Thursday after the first Monday in December.

The secretary prepares a printed programme containing resolutions which have been submitted to him before the convention. This plan has long been used by the British Trades Union Congress, and was doubtless copied from the Congress by the Federation. Since 1896 the constitution has provided that "no resolution or constitutional provision shall be considered unless printed in the programme, without a two thirds vote of the convention." In spite of this, the Federation has not yet brought the plan into effective working. Custom has proved too strong for the written law. Only 16 resolutions appeared on the printed programme of the convention of 1900, 220 resolutions were introduced.

Resolutions introduced in the convention, through the printed programme or otherwise, are regularly referred to their appropriate committees without debate. Very rarely a resolution of a special character is considered and passed by unanimous consent without reference to a committee. There were two or three such

<sup>1</sup> Mr. Morton A. Aldrich, in his sketch of the American Federation of Labor published by the American Economic Association in 1898, strangely overlooks this feature of the constitution of the Federation. Indeed his statement of the composition of the convention seems to be taken from the old constitution of the Federation of Trades and Labor Unions and from a copy of it published before the convention of 1887, since it retains the clause allotting 1 vote each to unions of 1,000 members or less, which was eliminated in that year. See *Economic Studies*, Vol. III, No. 4, p. 230.

instances at the convention of 1900. The committees are appointed by the president, not excepting even the committee on the president's report.

The committees report resolutions referred to them, favorably or unfavorably, and with or without amendment. The smothering of proposals in committee seems to be unknown. In a great majority of cases the action of the committee is accepted by the convention. It is not unusual, however, for the convention to make some modification in the resolution as reported, and occasionally the decision of the committee is entirely overruled.

Of the 220 resolutions introduced in the convention of 1900, 107 were passed, either with or without amendment. Besides these, 26, proposing to lay boycotts upon particular establishments, and 28 others on various subjects, were referred to the executive council. In nearly all these cases the executive council was given full power to act, though in one or two cases it was directed to report to the next convention.

**Constitutional amendments and referendum.** The constitution of the Federation of Trades and Labor Unions never contained any specific provision for its own amendment. The constitution of the American Federation of Labor, as adopted in 1886, provided that it could be amended at a regular session of the convention by a two-thirds vote of the delegates, but that any amendment must be ratified by a majority of the members of the constituent societies. The provision for a referendum was stricken out the next year, and a two-thirds vote in the convention has since been sufficient to adopt any measure.

Two propositions were submitted to popular vote by conventions of the Federation of Trades and Labor Unions. In 1881, a provision for the approval and management of strikes by the legislative committee of the Federation and for the levying of assessments by the committee, not exceeding 2 cents a member a week, for the support of strikes, and, in 1885, a provision to make the legislative committee a general board of arbitration and boycotting. In each case the convention ordered that the proposal should not take effect unless it was adopted by a two-thirds vote. The two-thirds vote was not obtained in either case.

The convention of 1888 adopted a provision for the support of strikes by the Federation, giving the executive council power to levy assessments of 2 cents a member a week on national and international unions in support of strikes ordered by such unions and approved by the executive council. The proposition was submitted to popular vote of the national and international unions affiliated, the vote being counted on the basis of the number of delegates each union was entitled to in the convention. The provision was carried.

Though the Federation has repeatedly passed resolutions urging the introduction of the initiative and the referendum by the State, these are the only instances in which it has decided any question by general vote of its own membership. The proposed political programme was referred to the affiliated unions in 1893, but only for instructions to the delegates who would make up the next convention, and in the actual result some delegates had no instructions, and some who had instructions did not follow them. In 1897 President Gompers raised the question of the election of officers by popular vote. In 1898 a resolution to this effect, providing also for a popular vote on any political demands, was introduced, but it was rejected almost without debate. The truth is, it would hardly be practicable for the Federation to introduce the referendum. The vote would have to be conducted through the machinery of the constituent unions. Save in the case of the few unions which themselves use the referendum, the machinery is lacking. Direct legislation must be generally adopted by the affiliated organizations before the Federation can well adopt it.

**Officers.**—The Federation of Trades and Labor Unions began without a president and without paid officers. Its executive head was a legislative committee, which chose from its own members a chairman, a first and a second vice-chairman, and a treasurer. The convention elected a secretary, who was ex officio a member of the legislative committee. The secretary, as well as other members of the committee, served without pay, except \$3 a day for time lost in attending to the business of the Federation. In 1883 a provision was made for a president, and the legislative committee was made to consist of the president, six vice-presidents, the secretary, and the treasurer. The provision for payment was unchanged. When the new constitution of the American Federation of Labor was adopted in 1886 the name of the legislative committee was changed to executive council, and the size of it was reduced to five by providing for only two vice-presidents.

The present officers are a president, six vice-presidents, a secretary, and a treasurer. These officers constitute the executive council. The vice-presidents in spite of the title they bear, have no right of succession to the presidency. In case of a vacancy in the office of president the constitution provides that the secretary shall

temporarily perform the president's duties, and shall within 6 days issue a call for a meeting of the executive council to fill the vacancy.<sup>1</sup> All officers are elected by the annual convention.

The secretary collects all money due the Federation, and turns it over to the treasurer, except that he may retain a sum not greater than \$2,000 for current expenses, to be paid out on the approval of the president. The president and the secretary have their office at the national headquarters at Washington, D. C., where they were fixed by the convention of 1896. The treasurer is not at the headquarters, and the lightness of his duties may be judged from the fact that his salary is \$200 a year. Up to the end of 1900 it was only \$100.

The financial statement for the year 1886, the last year of the old Federation, shows payments of only \$66 for the services of the secretary and \$25.85 for the "services and expenses of the president." The new constitution, however, gave the president a salary of \$1,000 a year. The secretary and the treasurer were still unpaid except for time lost, and the actual conduct of the business of the Federation in all its departments seems to have fallen largely into the hands of the one salaried officer. The president's salary was raised to \$1,200 by the convention of 1887. The convention of 1889 fixed the president's salary at \$1,500 a year, and the secretary's at \$1,200. That of 1892 made the president's \$1,800 and the secretary's \$1,500. That of 1899 made the president's \$2,100 and the secretary's \$1,800.

The policy of the Federation with regard to its officers is one of permanency of tenure, though the offices are filled by new elections every year. Mr. Samuel Gompers was elected chairman of the legislative committee a position substantially corresponding to that of president, in 1882. The office of president was established in 1883. Mr. Gompers was an unsuccessful candidate for it both in 1883 and 1884. In 1885, however, he was elected president, and he has held the place since with a break of only a single year. In 1893, 1891, and 1895 he had close contests with Mr. John McBride, but he was successful except in 1891. Beginning with 1896 he has been reelected year after year without opposition, and there is no sign that the Federation may not continue its work for an indefinite time under his direction. The present secretary, Mr. Morrison, has also been elected without opposition for 5 successive years.

The executive council is the governing body of the Federation in the intervals between the conventions. The first duty assigned to it by the constitution is to watch legislative measures which directly affect the interests of working people, and to initiate such legislative action as the convention may direct. It is instructed to use every possible means to organize new national trade unions, and also to organize local unions and connect them with the Federation until they are numerous enough in any trade to form a national union; then it is the duty of the president to see that a national union is formed. The executive council decides upon the sanctioning of boycotts, and is required to present to the convention in printed form a precise statement of the details leading up to every boycott approved or pending. The council is authorized to send out trade union speakers in the interest of the Federation. Before any local union directly affiliated with the Federation can strike it must submit its grievance to the executive council for approval; otherwise it forfeits all claim upon the Federation or allied organizations for support.

The council uses a broad discretion in the discharge of its duties. Its authority within its sphere may be compared with that which the British Government has exercised from time to time in the name of the King in Council. Where the convention has not legislated the authority of the council is unquestioned, and in emergencies it even ventures to set aside the written laws of the organization. Thus, the constitution, adopted when the annual income and outgo of the Federation were \$6,000 or \$7,000, allowed the secretary to keep not more than \$250 in his hands for current expenses. During the last year or two the income and the outgo have risen by great leaps to \$30,000, \$40,000, \$70,000 a year; but the provision for the current-expense fund was not changed till the convention of December, 1900. In March, 1900, the executive council, on its own responsibility, authorized the secretary to keep \$1,500 in his hands.

Besides meetings during the sessions of the annual convention and immediately before and after it, the executive council usually holds two or three meetings during the year, at the headquarters of the Federation or elsewhere. A considerable part of its business is done by mail. It acted on more than 100 different topics during the year ending with the convention of 1900. Sixty-six circular letters were sent to the members by the president, containing 77 propositions and questions, which were decided by votes transmitted by mail or telegraph.<sup>2</sup>

<sup>1</sup> This provision was adopted in 1891. Up to that time there were a first and a second vice president, and they had a right of succession to the presidency in their order.

<sup>2</sup> Convention Proceedings, 1900, pp. 65, 75.

Vacancies in the council occurring between conventions are filled by the council itself by a majority vote. The members of the council and speakers engaged by it are paid \$3.50 a day for time lost in attending to the business of the Federation, besides traveling and hotel expenses.

**Organizers.** For many years the Federation has issued commissions to "general organizers," who are expected to push the organization of wage workers in their neighborhoods. They receive no pay, except such sums, ranging from \$5 to \$20 for each new local organized and affiliated, as may be offered by the several national unions. They cost the Federation nothing, except in some cases small sums for expenses. They do their organizing in such leisure as they have. Their commissions are simply credentials, which give them some prestige in the eyes of their fellow-workers. Eighty such organizers were commissioned during 1888. In 1894 the number was nearly 100. In 1897 there was a general revocation of commissions to facilitate a process of weeding. Those who were active and efficient were reappointed. The number was about 120 at the close of 1898, 680 at the close of 1900, and over 800 in August, 1901.

In recent years, as the growth of the Federation's funds has made it possible, "special organizers" have been appointed, for longer or shorter times, on salary. During 1899 there were 17 such appointments, varying from 1 month to 10 months, the majority for 2 or 3 months. There were 20 during 1900. The convention of 1896, and again that of 1897, directed the executive council to send special organizers into the intermountain country of the West. The council did not act, for lack of money. The convention of 1898 levied an assessment of 2 cents a member to be used in sending organizers into the intermountain country and the South. The assessment produced over \$5,000, and it was spent in the regions specified. The greatly increased regular income of 1900 made it possible to carry on the work of organization and to increase it, without assessments. The convention of 1900 instructed the executive council to appoint 4 permanent organizers to be employed during the ensuing year in the Southern, intermountain, and Pacific coast States and Territories, and it seems probable that 20 or 25 organizers, under pay, will be regularly employed throughout 1901.

**Finances.** The original constitution of the Federation of Trades and Labor Unions provided for an annual tax on the affiliated unions of 3 cents for each member. The next year this tax was reduced to 1 cent for national and international unions, trades assemblies or councils, and district assemblies of the Knights of Labor. Local trade unions were now to pay \$10 a year, and in addition 1 cent a member on all members above 500. State and provincial federations were to pay \$10 for each delegate sent to the convention. The convention of 1883 left the provisions for local and State organizations untouched, but changed the tax upon the more important classes to \$10 for 1,000 members or less, \$20 for 1,000 to 1,000, \$25 for 1,000 to 8,000, \$30 for 8,000 to 12,000, \$40 for 12,000 to 20,000, and \$50 for a membership above 20,000. In 1884 a rule was adopted which seems to mean 1 cent a member a year for all organizations, with a minimum of \$10, and, for local or State trades assemblies and assemblies of the Knights of Labor, a maximum of \$25. The need of more money was sharply felt during the next year, and at the convention of 1885 the committee on finance recommended a special tax of 10 cents a member. On motion of Mr. Gompers the more cautious policy was adopted of appealing to all labor organizations "to pay into this Federation such sums as they can afford, to carry out the objects of this body." This appeal produced no noticeable effect. The financial statement for the following year shows one donation from an individual of \$10 and two donations from trade unions, one of \$5 and one of \$8.11.

The new constitution of the American Federation of Labor, adopted in 1886, laid a uniform tax of one-half cent a member a month on national, district, and local organizations. The president reported to the next convention that several national trade unions had failed to join the Federation because they thought this tax too high. While he thought it no higher than it should be, he believed it wise to lower it rather than let it be an obstacle to membership. It was accordingly reduced to one-fourth of a cent a member a month for national and local unions, with a uniform tax of \$25 a year on each central labor union and each State federation. In 1886 the latter tax was reduced to \$10, with an additional charge of \$10 if a delegate was sent to the convention. In 1888 the per capita tax on local unions was made 1 cent a month.

The secretary said in his report to the convention of 1897 that the per capita tax received by the Federation was inadequate to meet many of the urgent demands, and that, moreover, it was sometimes difficult to induce local unions affiliated directly with the Federation to join the national unions of their crafts, because of the increase of per capita tax which the change involved. For both these

reasons he recommended that the per capita tax for local trade and federal labor unions be increased from 1 cent to 5 cents a month. The convention compromised on 2 cents, and raised the tax on national and international unions to one-third of a cent a member a month. In 1898 the 5 cent tax on locals was adopted, and the tax on central labor bodies and State federations was made \$10 a year for 1,000 members or less and \$20 a year for more than 1,000 members. In 1899 the contribution was fixed on the existing basis. National unions, one third of a cent a member a month, local unions, 5 cents a member a month, central and State bodies, \$10 a year, payable quarterly. A fee of \$5 is charged for each certificate of affiliation.

Any organization whose tax is not paid in full to October 31 is not entitled to a seat in the convention. If any organization falls 3 months in arrears the constitution provides that "it shall become suspended, and can not be reinstated except by a vote of the convention. This law is not strictly carried out in practice. The weak are nursed along, as circumstances seem to require. The financial reports of the secretary show settlements of dues for 6 months, a year, even 3 years back, and the officers receive them gladly without any vote of the convention.

There has been much complaint by the officers of the Federation that the affiliated organizations understate their membership to diminish their payments. There is sometimes a marked difference between the membership which organizations report for the purpose of the per capita tax and the membership which they report for general information. For instance, the United Mine Workers claimed 91,019 paid-up members at the close of 1899. The number of members reported as of January 1, 1899, was 51,771. The proceeds of the per capita tax levied by the National Union upon the locals at 10 cents a month, was reported as \$74,264 for the year 1899, which would indicate an average membership, taking the year as a whole, of nearly 62,000. The delegates of the Mine Workers to the convention of the Federation of Labor in December, 1899 were given only 100 votes. The Mine Workers, therefore, seem to have paid taxes to the Federation on only 10,000 members.<sup>1</sup>

In 1900 the officers of the Federation felt compelled to send a circular letter to the affiliated organizations, calling attention to the too small membership which some of them reported. The executive council referred publicly, in its report to the convention of 1900, to the fact that some of the affiliated organizations do not pay their full per capita tax. It said: "It is injurious to our general movement to find officers reporting upon one membership to the American Federation of Labor and a much larger number in their official reports."

Previous to the convention of 1894 the executive council had power to appoint 3 delegates from among those chosen to the convention, to meet 3 days before the convention, and audit the accounts of the Federation for the year. That convention made it the duty of the executive council to direct the chief executive officers of 3 national or international unions to appoint each 1 delegate, who should make up the auditing committee. The auditing committee is still made up in this way, but since 1891 the 3 national unions have been chosen by the president. The auditing committee acts also as a committee on credentials.

Special assessments and appropriations in aid of particular individuals and associations are discussed below, under "Strikes" (pp. 46-48).

A table of annual receipts and expenditures in the aggregate is given on page 36.

**Strikes.**—The Federation does not undertake to control its affiliated organizations in the management or the conduct of strikes. It is provided that no central labor union or other central body of delegates shall have authority to order any organization affiliated with it to strike without the approval of the national organization of the trade, provided such a national organization exists.

While the Federation has always considered it the right and the duty of working men to enforce their demands by strikes, its official action has been moderate and conservative. It approves the principle of the sympathetic strike so far as the sympathetic strike seems likely to produce an effective pressure upon the employers and not to react too severely upon the working men themselves. The notion of a general sympathetic strike, however, has received no support from it. When the great railroad strike of 1894 was in its later and more hopeless stages the supporters of it tried hard to extend it far beyond the railroad world, in the desperate hope that widespread public inconvenience would produce a pressure upon the employing companies which might lead them to make terms with the strikers. The executive council of the American Federation of Labor met at Chicago. Mr. Debs, president of the American Railway Union, appeared before it. There was a long discussion, extending far into the night, but the council ultimately issued a statement declaring that it would be unwise and disastrous to the

<sup>1</sup> See p. 28 for other similar instances. It should be added that the recent payments of the Mine Workers seem to cover the full number of their members in good standing.

interests of labor to extend the strike further, and asking the unionists who had already gone out in sympathetic strike to return to work.

At first the Federation had no power to grant money in aid of strikes, but the constitution of 1887 gave the executive council the right to call on the unions for voluntary contributions in aid of strikes which it approved.

The convention of 1889 was the first which gave authority for assessments in support of strikes. This convention directed the executive council to levy a strike assessment of 2 cents a member on all affiliated national and international bodies on January 1, 1890, and authorized it to make an assessment of 2 cents a member a week on the same bodies in aid of any affiliated national or international organization which might have to call on the Federation for help in a strike or lockout, "by reason of financial distress." Such an assessment could not be continued more than 5 weeks unless by vote of the national and international unions. Any body which failed to pay an assessment within 30 days was to be suspended until payment was made in full, but any organization whose delegates to the convention of 1889 had been instructed to oppose the levying of an assessment was not to be liable to suspension until the matter had been acted on in its next convention. In 1892 local unions were made subject to the assessment and eligible for aid from the strike fund.

The convention of 1898 abolished the assessment law and provided for a defense fund to which affiliated organizations were at liberty to contribute or not, with the understanding that only those which should have contributed for at least a year should be entitled to assistance. The contribution proposed was 5 cents a member a month. The plan was a failure, the unions did not respond. The next convention adopted the present law. The executive council now has power to levy an assessment of 1 cent per member per week on all affiliated unions, for not more than 10 weeks in any one year, in support of any affiliated organization engaged in a protracted strike or lockout. Any union which fails to pay such a levy within 60 days must be deprived of representation in the convention of the Federation and in city central bodies affiliated with it.

The power to assess has been used by the council very sparingly. In 1890 there was an assessment in aid of the Carpenters' general movement for the 8-hour day. The proceeds were nearly \$12,500, the rate was probably 1 or 6 cents a member. No other has been levied by the council, except one of 2 cents a member in 1900 in aid of the Cigar Makers, and one of 5 cents a member, in June, 1901, in aid of the Machinists' strike for 9 hours. The former yielded over \$10,000; the latter had just been levied when this report went to press.

Considerable sums have, however, been disbursed by the Federation to striking organizations, either as loans or as gifts. The executive council named December 13, 1892, as "Homestead Day," and invited the laboring people of the country to contribute a part of their earnings on that day to the proper defense of the workers at Homestead who were indicted and imprisoned for the assertion of their manhood rights and noble resistance to the onslaught of organized capital.<sup>1</sup> The convention of 1892 gave \$1,000 for this defense, and the total amount of the subscriptions from unions and individuals was over \$7,000. The convention voted an additional \$500 to help men who struck work to aid the iron and steel workers. It also gave \$500 to the Coeur d'Alene coal miners and \$500 to the Tennessee miners.<sup>2</sup>

During 1892 the executive council made loans in aid of strikes to several affiliated organizations: \$1,500 to the Furniture Workers, \$500 to the Tanners, \$500 to the Furriers, \$500 to the Quarrymen, \$500 to the German-American Typographers, and \$2,500 to the Brotherhood of Carpenters. The Carpenters repaid their loan in 60 days. The Furniture Workers, the Quarrymen, and the Tanners appealed to the convention to have their loans made gifts. The matter was referred to the executive council. President Gompers recommended in his report that the making of loans to organizations on strike be adopted as a regular policy, and that the Federation accumulate a large fund for the purpose. The recommendation was not approved by the convention.<sup>3</sup>

The executive council determined, after the question of changing its loans to gifts was thrown back upon it, to give \$200 each to the Furniture Workers and the Tanners, and to ask for payment of the remainder of the loans. At the time of the convention of 1893 there were still outstanding loans as follows: Tanners and Curriers, \$500, Furriers, \$500, Furniture Workers, \$500, besides \$2,000 lent during 1893 to the United Garment Workers. The fate of these loans was not specifically mentioned in the reports to the convention of 1894, but the financial statement of the secretary did not indicate that any of them had been repaid.

<sup>1</sup> Convention Proceedings, 1892, pp. 21, 22.

<sup>2</sup> Convention Proceedings, 1892, pp. 14, 18, 25, 28, 29.

<sup>3</sup> Convention Proceedings, 1893, p. 21.

During 1894 the executive council made donations amounting to more than \$3,500. The purposes of these donations are not specified, but it is probable that all of them, or nearly all, were in aid of strikes or strikers. Far the largest item was \$1,300 to the United Mine Workers. Five hundred dollars was given for the defense of Eugene V. Debs. A further item of \$250 for this purpose appears in the accounts of 1895. In 1895, also, \$250 was spent in efforts to secure the pardon of two imprisoned Homestead men, \$200 was given to the Metal Polishers' International Union, and there were several smaller donations. During 1896 \$262.50 was contributed to the United Mine Workers, and \$200 each to the United Garment Workers, the Street Railway Employees, and the strikers at the Brown Hoisting Company's works, Cleveland, Ohio. Two hundred dollars also went during this year to help the families of the imprisoned Homestead men. In 1897 \$560 went to the United Mine Workers, \$200 to a local union of engineers, firemen, and mine mechanics, and \$105 to the Northern Mineral Mine Workers. In 1898 over \$400 was given to the Textile Workers, and smaller sums to two or three other trades. During 1899 \$300 was given to the Boot and Shoe Workers, \$2.40 to the Street Railway Employees, \$150 to two local unions, and about \$250 to the Metal Polishers. Five hundred dollars was contributed to the legal defense of imprisoned miners in the Coeur d'Alene district of Idaho. Two hundred and fifty dollars more was given to the Western Federation of Miners for this purpose during the fiscal year 1900. During this year loans of \$258 to the Boot and Shoe Workers, and \$75 to the Hotel and Restaurant Employees were made and repaid. But the important expenditures in this line were contributions of \$2,120 to the Granite Cutters, and \$9,200 to the Cigar Makers.

The personal activity of the officers of the Federation is perhaps not less valuable to its members, when they are involved in disputes, than its contributions of money. They are constantly called on to act as mediators, both for the prevention of strikes and for the ending of them. Less often they are called in to support and encourage the contestants. Thus, during the great strike of the bituminous coal miners in 1897, the president of the Federation and several members of the executive council spent sometime in the coal fields, advising the leaders in private, addressing the rank and file in public, and defying injunctions which they believed to be issued unjustly and oppressively for the purpose of breaking the strike.<sup>1</sup>

The financial aid of the Federation has not been confined to strikes in our own country. During 1892 a great strike or lockout of printers occurred in Germany and Austria. The funds of the union are said to have been tied up by governmental interference. The union sent delegates to America to get help, and the executive council of the American Federation of Labor voted a gift of \$500 and gave the delegates letters of recommendation to labor organizations. Several thousand dollars was raised and cabled to the striking printers.<sup>2</sup> Five hundred dollars was also given to the British engineers during their great strike of 1891.

For several years the secretary of the Federation has undertaken to get reports from the affiliated national organizations of the number of strikes in which they have been involved, and the results. The statistics gathered in this way are remarkable for the favorable character of the reported results, as compared with statistics otherwise obtained. Thus, for the year ending October 31, 1898, 260 strikes were reported, of which 160 were won, 29 compromised, 36 lost, and 35 pending at the date of the report; 22,311 persons were involved, 19,367 persons were benefited, and 3,102 did not receive substantial benefit.<sup>3</sup>

For the next year 601 strikes were reported, of which 425 were won, 39 compromised, 48 lost, and 89 pending at the date of the report. The number of persons affected was not tabulated. For the year ending October 31, 1900, 688 strikes were reported, of which 455 were successful, 106 were lost, 74 were compromised, and 53 were pending at the time of the report, 213,190 persons were involved; 217,493 persons were directly benefited, while 11,257 were involved in lost or compromised strikes.<sup>4</sup> During the last year 140,000 gained by the great strike in the anthracite mines. This is a partial explanation of the remarkable number of persons reported as benefited.

**Boycotts.**—The Federation has always stoutly maintained the legitimacy and the value of the boycott. It has fought to the best of its ability against attempts to suppress boycotting by law or by the action of the courts.<sup>5</sup> President Gompers suggested, in his report to the convention of 1897, that if a court should issue an

<sup>1</sup> See the testimony of Mr. Gompers before the Industrial Commission. Reports, Vol. VII. Testimony, pp. 611, 612.

<sup>2</sup> Convention Proceedings, 1892, p. 15.

<sup>4</sup> Convention Proceedings, 1900, p. 10.

<sup>5</sup> See the testimony of President Gompers before the Industrial Commission. Reports, Vol. VII. Testimony, pp. 606, 610, 633-638.

injunction against a boycott the labor interests should issue such notices as might be necessary, giving the name of the concern and the grievance complained of, and adding the words: "We have been enjoined by the courts from boycotting this concern."

In former years many boycotts were indorsed by the conventions of the Federation without any investigation of the reasons for them, beyond what an over-worked committee could make in the midst of the sessions of the convention. It was inevitable that, by this method, boycotts should be laid somewhat freely. Yet, even so, the conventions were sometimes more conservative than the organizations by which boycotts were demanded.

Thus, at the convention of 1889 the Journeymen Brewers' Union asked for a boycott upon 31 nonunion breweries, besides the New York pool. The convention considered that the effect of the boycott would be weakened by such lavish use of it. It was thought wiser to concentrate it upon a few leading breweries. Only four, besides the New York pool, were ultimately named.<sup>1</sup>

The committee on labels and boycotts of the convention of 1892 lamented that boycotts that were levied did not receive attention enough to make them effective, and called attention to the fact that the power of the boycott was greatly lessened by the indiscriminate use of it. It recommended that the attention of the affiliated bodies be called to existing boycotts in connection with all official documents of the Federation, so far as possible, and by way of hunting the number it recommended that future sessions of the convention refuse to consider a request for a boycott unless it came from an affiliated body under its seal.<sup>2</sup>

At the convention of 1897 the executive council was instructed to ascertain how long each firm on the Federation's "We don't patronize" list had been there, and what efforts were being made in each case, by the organization directly interested, to push the boycott and bring the dispute to a successful termination. In all cases where no effort was being made by the organization directly in interest, or where no sufficient reason was given for not removing the firm from the list, it was to be removed. The council was further instructed that in future, before granting a request to place a firm upon the list, it should notify all organizations having members working for the firm to show cause why the request should not be granted. Amplifying the last of these instructions, the next convention passed the following resolution:

"Whereas the placing of a boycott upon any product the manufacture of which is participated in by 2 or more crafts may, and often does, work an injury to union workers: Therefore, be it

*Resolved*, That the American Federation of Labor shall indorse no boycott where the products of several organized unions will be affected thereby, until every possible effort has been made to secure a settlement, and all organizations to be affected shall be given a hearing and an opportunity to assist in securing a settlement of the existing grievance."<sup>3</sup>

The executive council adopted the following resolution in 1898:

"Inasmuch as the continuous and overwhelming flood of boycott circulars, sent to local unions indiscriminately without authority of the American Federation of Labor, leads to confusion and ineffectiveness in pushing unfair firms to settlement on union terms: Therefore, be it

*Resolved*, That we disapprove of any local, national, or international union sending out any circular calling for a boycott unless the same is first indorsed by the American Federation of Labor, and in case a boycott circular is sent out without such indorsement the executive council will feel justified in refusing to sustain the boycott."<sup>4</sup>

The policy of the council has been to concentrate the declaration of general boycotts in its own hands. Experience has approved this policy to the leading members of the affiliated unions, and it appears to have become the settled policy of the Federation. Though many resolutions for the declaration of boycotts were introduced in the convention of 1900, not one was passed, except mere reaffirmations. All new proposals were referred to the executive council.

The following resolutions had been referred to the executive council by the convention of 1899, adopted by the council as the basis of its policy, and recommended by it to the attention of the affiliated unions:

*Resolved*, That no boycott shall be indorsed by any central labor union chartered by the American Federation of Labor unless the local union desiring the same has, before declaring the boycott, submitted the matter in dispute to the

<sup>1</sup> Convention Proceedings, 1889, p. 41.

<sup>2</sup> Convention Proceedings, 1892, p. 41.

<sup>3</sup> Convention Proceedings, 1897, pp. 51, 99.

<sup>4</sup> Convention Proceedings, 1898, p. 131.

<sup>5</sup> Convention Proceedings, 1898, p. 56.

central body for investigation, and every effort at amicable adjustment has been exhausted.

*Resolved*, That no boycott shall be indorsed by the executive council of the American Federation of Labor unless the same has been requested by the national or international union directly interested, where such a one exists, or, otherwise, by a central labor union, or by a union chartered direct by the American Federation of Labor where there is no central body, and then only after full investigation, a notification to every organization, local or national, affected, and the exhaustion of every effort at amicable settlement.

*Resolved*, That no boycott inaugurated otherwise than in accordance with these provisions shall be recognized by the executive council or the convention of the American Federation of Labor.

*Resolved*, That no resolution of motion the intent or effect of which is to declare unfair or to boycott, directly or indirectly, any person, firm, or corporation shall be in order at any convention of the American Federation of Labor except the matter has been investigated and reported upon by the executive council.<sup>1</sup>

The council has always made an independent investigation of the reasons for every boycott that it has had occasion to pass on, and an independent attempt to settle the dispute. Its regular procedure is to refer the matter to the president, with authority to act. The president writes to the firm complained of, states the alleged grievance, mentions the action which the Federation is desired to take, and asks if an understanding can not be reached. President Gompers said, in 1897, that fully one-third of the cases presented were settled amicably in this way, through the intervention of the Federation, without boycotts. It is only when he is convinced that a firm will not make concessions which, from his point of view, seem fair, that the boycott is applied.

The convention of 1899 adopted the following resolutions

*Resolved*, That all the names of the 'We don't patronize' list of the American Federation of Labor be dropped.

*Resolved*, That this shall not debar an organization from renewing the application, and that an effort at adjustment be made before the concern can again be placed on the unfair list.

*Resolved*, That national or international organizations are strongly advised to have no more than one concern upon the unfair list at the same time.<sup>2</sup>

The executive council in its report the next year gave high praise to the wisdom of this course. When the affiliated organizations had made applications for the replacement of firms upon the unfair list, the usual course of communicating with the firms had been followed, and by this means a large number of adjustments had been effected.<sup>3</sup>

**Union labels.**—The convention of 1899 adopted the following resolution:

*Resolved*, That any product represented to be union made shall not be considered union unless it bears the label of the craft producing such commodity.<sup>4</sup>

Up to December, 1900, 37 labels and 3 cards had been indorsed by the American Federation of Labor. The labels are as follows: Cigar Makers, Printers, Boot and Shoe Workers, Hatters, Wood Workers, Garment Workers, Tobacco Workers, Tailors, Molders, Horse Nail Makers, Salmon Fishermen, Bakers, Coopers, Tanners and Curriers, Teamsters, Leather Workers, Brewery Workers, Mattress Makers, Broom Makers, Carriage and Wagon Makers, Brick Makers, Bicycle Workers, Bottle Blowers, Brush Makers, Metal Polishers, Machinists, Horse Shoers, Piano Makers, Can Makers, Engravers, Ladies' Garment Workers, Musicians, Upholsterers; Wood, Wire, and Metal Lathers; Stove Mounters, Trunk Makers, Flint Glass Workers. The Clerks, Barbers, and Waiters have cards. To help in bringing the various labels to public notice, the Federation has furnished cuts of them to many labor papers, which have published them without charge. The Federation has also encouraged the organization of union-label leagues as auxiliaries to the local central bodies.<sup>5</sup>

In the convention of 1900 a proposition was introduced that in future no delegate should be allowed a seat in a convention unless all his wearing apparel bore the union labels of the appropriate crafts. The convention rejected the proposition as impracticable, but declared that the principle is sound and ought to be regarded not only by delegates of American Federation of Labor conventions, but by all organized wage workers.<sup>6</sup>

Since 1889 the Federation has had a label of its own. It is of small importance, however, compared with the labels of many of the unions. It is used only by locals attached directly to the Federation. The use of it is reported to be considerable, however, and to be increasing.

<sup>1</sup> Convention Proceedings, 1900, p. 74  
<sup>2</sup> Convention Proceedings, 1899, p. 162

<sup>3</sup> Convention Proceedings, 1898, p. 13  
<sup>4</sup> Convention Proceedings, 1900, p. 113

For several years there has been talk of a universal label, to take the place of all the labels of the trades. The convention of 1898, and again that of 1899, directed the executive council to consider the feasibility of the plan and to confer with the unions which have labels of their own. The council has taken legal advice as to the possibility of protecting a universal label issued by the Federation. It seems not entirely clear that such a label could be protected. There seems to be a possibility of trouble from the federal character of the organization.

**Journal.**—When the new constitution was adopted, in 1886, it was made one of the duties of the president to publish a monthly journal. A journal called the *Union Advocate* was accordingly issued for a few months, beginning in June, 1887. The provision for it was abolished, however, by the convention of 1887, and the president was directed to "publish a small quarterly circular."

The convention of 1893 authorized the President to issue a monthly magazine for the discussion of labor and its interests in all its phases. Under this authority the *Federationist* was established in January, 1894. It is a monthly magazine containing from 32 to 40 pages of reading matter. It prints every month a detailed statement of the receipts and expenditures of the Federation, many pages of condensed reports from national union officers and from organizers in the field, editorial comment, and contributed articles on matters of interest to labor. It also prints the Federation's "We don't patronize" list, or list of boycotted firms.

In the convention of 1897 a resolution was introduced providing that the *Federationist* should not receive any advertisement from any person, firm, or corporation which did not employ union labor in all branches of its establishment. President Gompers declared that if such a rule were adopted for all labor publications it would put every labor paper out of existence. The resolution was defeated.<sup>1</sup>

## CHAPTER IV.

### LABOR ORGANIZATIONS IN THE TEXTILE, CLOTHING, AND ALLIED TRADES.

#### BOOT AND SHOE WORKERS' UNION.

**History.**—The first great organization of the boot and shoe workers was the Knights of St. Crispin, formed in 1867. It reached the zenith of its power in 1869. It had a monthly journal and various cooperative stores, and it won a large number of strikes. In its best estate it had between 10,000 and 50,000 members. It took part in the political discussions of the seventies, and dissensions over political questions doubtless contributed to its downfall. By 1874 its power had departed, although lodges of it continued to exist a dozen years longer.

The Lasters' Protective Union was formed at Lynn in 1879. This organization maintained a continuous existence till it joined the Boot and Shoe Workers' Union, in 1895, although many members of it were Knights of Labor during the flourishing period of the Knights.

The shoe workers were among the first to join the Knights of Labor, and they always furnished the principal strength of the order in New England. Up to 1884 the Knights had comparatively few other members in that region, and even in their most flourishing period, about 1886, nearly half of the New England Knights were said to be shoe workers. In 1889, after the power and prestige of the Knights had greatly decayed, the Boot and Shoe Workers' Union was formed and affiliated with the American Federation of Labor. In 1895 the Lasters' Protective Union was amalgamated with it. At this time the constitution was remodeled and a substantially new organization was created. There was a strenuous contest between the advocates of high dues and benefits and the advocates of low dues. The low dues won. The payments were fixed at 10 cents a week. No benefits were provided for. It is said by Mr. George E. McNeil, in an article published in the official journal of the union for June, 1900, that the old organizations which amalgamated contained approximately 12,000 members, but that it was about a year before the new organization had that number; that in 1896 the membership approached 14,000, and that the membership declined in 1896 and 1897, in conse-

<sup>1</sup> Convention Proceedings, 1897, pp. 29, 35, 97.

quence of large and unfortunate strikes, until only about 4,000 members in good standing remained. These figures are apparently inconsistent with those given in the secretary's report for 1899. The secretary says that on May 31, 1896, the membership was 12,153; on May 31, 1897, 12,229; on May 31, 1898, 9,727; on May 31, 1899, 8,766.

The president and the general secretary believed that a radical change was needed in the constitution and financial methods of the organization. They prepared a draft of an entirely new constitution, with high dues and benefits, and presented it ready-made to the convention of 1899. A few members protested against the consideration of it, because it had not been submitted beforehand to the locals, as the old constitution required. The president ruled, however, that consideration of it was in order under the clause which permitted amendments to be considered by the convention without previous submission to the locals in cases of emergency. The president was sustained by the convention, and the new constitution was adopted substantially in the form in which the general officers had prepared it.

**General aims.** The preamble to the new constitution is in part as follows.

"For the protracted periods of idleness on the one hand and the prolonged hours of labor on the other, for low wages or no wages, for conditions and methods of work that are essentially destructive of morality, of health, of happiness and life, we are clearly indebted to the competitive wage system.

"We therefore declare for the ultimate abolition of the competitive wage system and the substitution thereof of the collective ownership by the people of all means of production, distribution, transportation, communication, and exchange.

"Organization being necessary as the first step toward the amelioration and final emancipation of labor, and realizing the necessity of weapons both offensive and defensive, socially, economically, and politically, we call upon all shoe workers to unite with us for the following immediate purposes:

"To thoroughly organize our craft: to regulate wages and conditions of employment, to establish uniform wages for the same class of work regardless of sex, to control apprentices; to reduce the hours of labor, to abolish convict and contract labor; to abolish child labor, prohibiting the employment of children under the age of 16; to promote the use of our 'union stamp' as the sole and only guaranty of 'union-made' footwear; to support the union labels of all other bona fide trade unions, and to assist them in every other way to the full extent of our power."

The president, in his address to the convention of 1899, said: "The final mission of the working class is through their organization to educate the workers to the point that they will use their ballot for the total abolition of the competitive system, and in its place, through the working class political machinery, establish democracy."

**Conventions and constitutional amendments.**—The constitution provides that a convention be held on the third Monday in June, provided a majority of the locals have voted in the preceding January in favor of holding one. Each local is entitled to one delegate and to an additional delegate for each 200 members or major part thereof.

Conventions have authority to amend the constitution. The constitution may also be amended by a referendum vote on the proposition of any local, seconded by one-third of the whole number of locals. A two-thirds majority of the members voting is necessary to carry an amendment, and the vote is of no effect unless 10 per cent of all the members take part in it.

**Officers.**—The officers are a president, a vice-president, a secretary-treasurer, and an executive board. The executive board consists of the three officers already named and seven other members, of whom not more than two may be from the same State. Vacancies are filled by the president, with the approval of the local to which the member nominated belongs, and subject to confirmation by the executive board. The executive board has general control of the organization, decides appeals from the decision of the general president, and has power to levy assessments.

The president decides constitutional questions, subject to appeal to the executive board. He is ex officio a member of all committees and boards, local and general. He is the custodian and manager of the union stamp. His salary is \$22.50 a week.

The secretary-treasurer is also ex officio a member of all committees and boards, local and general. He is editor and manager of the journal. He has power to hire such clerical assistance as he thinks necessary. His bond is \$5,000 and his salary \$22.50 a week.

<sup>1</sup>Convention Proceedings, 1899, p. 5.

The officers are elected annually by popular vote. A majority of all votes cast is necessary to elect. The constitution provides elaborate rules for nomination by the several locals, for the furnishing of official ballots by the secretary-treasurer, and for the casting and counting of the votes. If no candidate receives a majority of the votes cast for any office, the secretary-treasurer is to issue a second ballot, which is to contain only the names of the two candidates for the office who have received the highest votes.

**Local unions.**—Any seven or more bona fide shoe workers, regularly organized by an organizer authorized by the president, may receive a local charter. There is no charter fee. A local may be either mixed, containing workers in various branches of the shoe trade, or it may contain only workers in a particular craft. Only one charter for one branch of the trade can be issued in any one city. The only passport to meetings of local unions and councils is a due book showing that the member is in good standing. All necessary printed supplies are furnished to locals by the general secretary-treasurer without charge. If the charter of any local is revoked or surrendered the constitution provides that all its money and property is the property of the general union, and must be surrendered to the general president.

**Joint councils.**—In any town or city where two or more local unions exist they may establish a joint council. Joint councils may also be formed by local unions in adjoining cities or towns, or, local unions of the same branch of the trade in different sections. The rules of joint councils must be approved by the general executive board.

**Membership.**—Any boot or shoe worker, male or female, over 16 years of age and actively employed at the craft, is eligible. Each applicant for membership must sign an application, and the application must be filed at the general headquarters. Admission is by majority vote of the members of the local union. If an applicant is rejected, he may appeal to the general executive board, and if the board considers that the rejection was without sufficient cause, it may accept the applicant as a member at large. Members of a local union whose charter is given up, and members who are at work where there is no local union, may also maintain their standing as members at large. Members at large are subject to the same dues and assessments and have the same benefits as if they were members of a local union. They are regarded as collectively constituting a local union.

**Discipline.**—Charges against any member must be brought in writing, and the accused is entitled to have full opportunity for defense, and upon written application, to receive a copy of the charges. Appeals may be made from the local union to the general executive board. The sanction of the executive board is necessary to expulsion.

**Finances.**—The initiation fee is uniformly \$1 and the dues are uniformly 25 cents a week. The framers of the new constitution which fixed these dues in 1899, remembering the earlier experience with an organization which had started with dues of 25 cents a week and had presently reduced them to 10 cents, to its weakening and destruction, inserted the following provision: "It shall forever be unconstitutional to seek to reduce the amount of dues as provided in this section." Two-thirds of all receipts from initiation fees, dues, and national fines go to the general organization. One-third of such payments and the whole of any local assessments and local fines which may be levied belong to the local unions. The weekly dues and all assessments are receipted for by adhesive stamps, which are affixed to due books of the members. Any member who is in debt for dues or for any assessment or fine for more than 13 weeks is suspended, and in order to be reinstated must pay a reinstatement fee of \$1. He is not entitled to sick or death benefits until he shall have been again in good standing for 6 months continuously.

The Union Boot and Shoe Worker for March, 1900, declares that under the old system of 10-cent weekly dues it was almost impossible to induce the members to pay up; but that under the new policy of comparatively high dues and liberal benefits more than 95 per cent of the members were, at the time of writing, in good standing.

One-third of all money received by the general secretary-treasurer is to go to the sick and death benefit fund until that fund amounts to \$1 for each member entitled to benefit. Thereafter so much is to be transferred to this fund from the general funds on the first of each month as shall replenish it to \$1 for each beneficiary member. After the necessary amount has been placed to the credit of the sick and death benefit fund the remainder of the receipts is to be divided equally between the strike fund and the general expense fund. The general executive board has power to levy assessments at its discretion, and it is specially empowered to raise the strike fund by a series of assessments to \$5 per capita.

The total receipts and expenditures of the general office for successive fiscal years ending May 31, were as follows:

Year	Receipts	Expenditures
1901	\$12,272	\$10,578
1902	17,446	17,558
1903	8,352	9,468
1904	5,858	6,151

**Benefits.**—The sick benefit is \$3 a week. It is not paid for sickness or disability that is caused by intemperance, debauchery, or other immoral conduct, or which results from military service, or which occurs outside of the United States and Canada. It is not paid for the first 7 days of sickness. No member can receive more than 13 weeks' benefit during one fiscal year.

A death benefit of \$50 is paid on the death of a member who has been 6 months continuously in good standing. After 2 years of continuous good standing the benefit is \$100. Each member may designate a person to whom his death benefit shall be paid. If no designation is made the local union decides.

Members who have any chronic disease, or who were over 60 years of age when initiated, are entitled only to half benefit for either sickness or death.

The constitution recommends that the locals provide out-of-work benefits, "to the end that from the experiences gained a national plan for relief of unemployed members may be developed."

**Strikes.**—The Union Boot and Shoe Worker, in advocating arbitration and deprecating strikes, says: "In arriving at a decision as to permitting a strike, it should always be remembered that a strike is a dead loss to employer, to employee, and to the community. . . . Members should not contemplate or undertake a strike unless satisfied, first, that the cause is absolutely just, and, second, that the chances are in favor of success."<sup>1</sup>

Discussing the wisdom of sympathetic strikes, the Union Boot and Shoe Worker for June, 1900, says: "Ten per cent of the earnings of 10,000 who are employed will pay standard wages to 1,000 strikers, but if the 10,000 quit work, it then requires 10 per cent of the earnings of 100,000. Our advice to those who contemplate joining in a sympathetic strike is to consider the matter carefully and determine whether they can assist the strike more by contributing even one-half of their wages than they can by rendering themselves idle altogether."

The constitution says: "We recognize strikes as dangerous and costly, and believe they should not be inaugurated except as a weapon of last resort, after every resource and expedient has been exhausted in an attempt to adjust disputes without strikes." In order to make strikes less frequent and more effective, the union declares that it will not give financial support to any strikes but those which have been sanctioned by the general executive board before being ordered. Local unions may strike upon their own responsibility, but can not in such case receive aid from the general body. The general executive board may declare any strike off at its discretion, upon petition of 10 members in good standing. It can not order one; that can only be done by the local union.

The action of a local union upon a proposed strike must be by secret ballot of the members. It is forbidden to order a strike in any union-stamp factory without concerted action of all the local unions involved and the approval of the executive board.

No financial aid is to be given for the first 7 days of a strike. At the end of the second 7 days the local executive board is to send to the general office a list of the names of all persons on strike, and of the names and registered numbers of the members involved. The general secretary treasurer is then to "forward to the local treasurer such percentage of the total strike fund as the members in good standing who are on strike is of the total membership of the general union in good standing. At the end of the third 7 days another statement shall be forwarded and percentage allotted, and so on each 7 days until the strike has been won or declared off." The amount received each week is to be divided equally among the members in good standing, and each member's dues are to be deducted from his share. It will be seen that this rule effectively prevents the exhaustion of the strike fund. It would be impossible to pay out the whole fund unless all the members were simultaneously on strike. At the same time, by making the payment to each member depend upon the aggregate amount of the strike fund, it

<sup>1</sup> Union Boot and Shoe Worker, September, 1900, pp. 5, 6.

offers the possibility of excessively large strike benefit if a large fund has been allowed to accumulate, and makes the benefit exceedingly small when the fund happens to be small. If the fund were brought up to \$5 per capita, the amount to which the executive board has authority to raise it by assessments, the strike benefit would then be \$5 a week.

A local union is to be cut off from support if its officers fail to make the weekly report required by the constitution, or if the secretary-treasurer becomes satisfied that the assistance has been expended illegally. It is specially provided that the money of the organization shall be used only to relieve the wants of members in good standing. There does not seem, however, to be anything to prevent the taking in of nonunionists after a strike is declared, and the paying of benefits to them after they join.

The boot and shoe workers strictly limit the notion of a lockout. The constitution provides that neither a reduction of wages nor an "ironclad" notice shall constitute a lockout. By an ironclad notice is apparently understood a notification that members must abandon the union.

No local union is permitted under any circumstances to declare a boycott.

The union reported to the Federation of Labor in the fall of 1900 that it had won three strikes, compromised one, and lost one during the preceding year. Three hundred and eighty persons were involved, of whom 330 were benefited. The Union Boot and Shoe Worker for October, 1900, said that there was not then a single strike in the shoe trade under the jurisdiction of the union, and that this was the first time in the history of the organization when a month had gone by without a strike.<sup>1</sup>

A member victimized or blacklisted for activity in the union may receive temporary assistance from the executive board.

**Journal.**—The official journal, known as the Union Boot and Shoe Worker, is published monthly. The subscription price is 50 cents a year, but members in good standing receive the journal without charge. The cost is charged to the general fund.

**Union label.**—The union stamp of the boot and shoe workers was adopted in April, 1895. It was originally meant to be used only on the bottom of the shoe, but experience showed that some people would refuse to buy a shoe which bore it.<sup>2</sup> This led to using it on the insole or lining. It is impressed on the sole or insole with a steel stamp, or printed on the lining with a rubber stamp.

From 1895 to 1899 the progress of the stamp was slow, because, the secretary says, the union was "one of the cheap-dues species." Yet 50 stamps were issued during those years to 50 factories and individuals. In September, 1899, the system of high dues and benefits was inaugurated. About January 1, 1900, the revenue became sufficient to permit money to be spent in advertising the union stamp. From that time, it is asserted, the demand for stamped shoes and the readiness of manufacturers to use the stamp increased rapidly. The Union Boot and Shoe Worker for April, 1900, in offering evidence of the value of the union label and of the union-label agitation which the union was carrying on, said that the secretary had within a short time received three unsolicited applications from manufacturers for permission to use the label. Six new factories were unionized in June, 1900, and 7 in July. The total number of union stamps issued up to August, 1900, was 78.<sup>3</sup>

The form of the contract usually made with manufacturers who use the stamp is given on p. 103.

The Union Boot and Shoe Worker, in discussing the question of the terms on which the union stamp and label ought to be granted to manufacturers, says that it has lately heard of one instance in which the stamp was refused by the local union, except on condition of an increase of wages, which would increase the labor cost of the shoe. The editor considers this bad policy. A little advance in wages here and there is of slight importance, because it can not be made permanent unless the movement is general. The true policy of a labor organization, in his judgment, is to get control of the trade. The label ought to be used simply to forward this purpose. When control has been got, the general movement for higher wages may be made.<sup>4</sup>

<sup>1</sup> Union Boot and Shoe Worker, October, 1900, p. 17.

<sup>2</sup> The editor of the Locomotive Firemen's Magazine declared in 1899 that he had been told by a Peoria shoe dealer that the union label on a shoe injured its sale, that antiunion patrons objected to it, and union men did not inquire for it. Peoria, said the editor, is above the average as a union town. Then what must be the conditions elsewhere? (Locomotive Firemen's Magazine, December, 1899, p. 625.)

<sup>3</sup> American Federationist, September, 1900, p. 281. Union Boot and Shoe Worker, April, 1900, p. 20.

<sup>4</sup> Union Boot and Shoe Worker, October, 1900, pp. 5-7.

The boot and shoe workers have complained that attempts have been made to diminish the value of their union label by the issue of other labels, countenanced by small independent unions of lasters and other shoe workers. By the request of the union, the American Federation of Labor convention of 1900 passed a resolution reiterating its indorsement of the Boot and Shoe Workers' Union stamp, and promising to assist in driving out of the market any goods which bear another device in place of it.

The convention of 1896 enacted that any member who should buy goods of any kind without the union label, when union-label goods could be got, should be fined \$2. The convention of 1897 reaffirmed the law,<sup>1</sup> and it is reenacted in the new constitution of 1899.

### THE UNITED HATTERS OF NORTH AMERICA.

**History.**—The union known as the United Hatters of North America was organized in 1896. It was formed by the amalgamation of the Hat Finishers' National Association, organized in 1854, and the Hat Makers' National Union. In August, 1900, the secretary reported the number of locals as 23 and the number of members as about 6,000. In June, 1901, 8,127 members were reported.

**Convention.**—The convention meets once in 3 years. Locals are entitled to one representative for the first 200 members, and to one additional representative for each additional 200 or majority fraction thereof. The expenses of the delegates are borne by the general treasury. Each delegate receives \$5 a day and railroad fare. On all questions, except the election of officers, each local casts one vote in the convention for each 10 members or majority fraction thereof. The vote of each local is divided evenly among its delegates.

**Constitutional amendments.** The constitution may be amended either by a majority vote in the convention or by a two-thirds majority on referendum.

**Officers.**—The officers are a president, a vice-president, a secretary, and a treasurer constituting together the executive board. There is also a board of 10 directors. All these officers are elected by the convention. The president, the vice-president and the treasurer receive \$5 a day and expenses when engaged on union business. The secretary receives \$1,200 a year. The secretary is to collect all money and pay it over to the treasurer, to keep the statistical records and financial accounts of the association, and to issue a semiannual financial report, together with a full copy of the report of each local. The secretary and the treasurer must be bonded by a security company at the expense of the association.

The executive board has power to remove local officers for failure to perform their duties. It also has power to appoint and remove local secretaries in places where less than 10 journeymen are employed, who are not connected with an organized local.

The board of directors has power to determine appeals from the decisions of locals, and to remove general officers for cause. It has power to fix the terms on which persons who have committed offenses against the association may be admitted or readmitted to membership. "Any person not a member of this association, in sending his case to the board of directors, shall deposit \$25 with the national secretary before any action is taken. If no card is granted, or if no fine or initiation fee is imposed, or the terms are not accepted by the applicant, \$20 shall be returned to him."

**Central labor unions.**—The constitution instructs all locals to join the central labor organizations in their localities, and provides that half of the per capita tax levied by such central bodies shall be paid from the general treasury.

**Membership.**—The constitution recites in great detail the operations involved in making and finishing hats, as these terms are technically understood, and says that in union shops these operations must be performed exclusively by members of the union or by registered apprentices.

When a local association gives cards to a shop crew of "foul men" (that is, non-union men) the secretary must transmit a list of their names to all the other locals, and any other local which has a claim against any one of them may levy a fine upon him. The fine must be collected by the local which has received him, and transmitted to the local which levies it.

"All men coming from Germany, France, Denmark, Norway, Sweden, Great Britain, and Ireland, or other foreign countries, must bring a book or traveling

<sup>1</sup> American Federationist, vol. 4, p. 168.

card or other voucher from a hatters' association in their respective countries, stating that they are hatters, or else they will not be recognized nor admitted to membership in the association.

**Apprentices.** Union shops are allowed 1 apprentice for 10 men or less, 2 for 20 men, 3 for 30 men, and 1 additional apprentice for each additional 20 men. The average number of men employed during the year is the basis of reckoning. Apprentices may work by the week on such terms as may be agreed upon by the local association and the employer. They may not work by the piece for less than a journeyman. The apprenticeship lasts 3 years and continues in all cases until the apprentice is 21 years old. The secretary declares that these rules are fully enforced.

**Traveling and withdrawal cards.**—Traveling cards are issued by the general office through the local secretaries. Any member who holds a traveling card over 30 days must pay 25 cents for each month the card is held, the money to go to the national treasury. If a member is in debt to his local for fines or for borrowed money when he asks for a traveling card, the indebtedness is to be indicated on the card, and the local with which the card is deposited must collect the indebtedness and remit it to the local to which it is due. The collecting local retains 10 per cent, half of which goes to the steward.

A member who wishes to leave the trade may receive a withdrawal card on paying all fines, assessments, and other indebtedness. This card entitles the holder to readmission to the association at any time.

**Finances.** The per capita tax is 1 per cent of the wages of the members. One-half of this amount is placed in a separate fund, known as a reserve fund, and may not be used for any purpose but the support of strikes and lockouts and the placing of men on the road to agitate for the union label. A member holding a traveling card and not at work pays 25 cents a month.

The local officers appoint a steward in each shop, whose duty it is to collect the assessment before noon on Monday of each week and turn it over to the local secretary before Wednesday. The local secretary must immediately forward the amount to the national secretary and notify the national treasurer of the amount sent. The steward retains 10 per cent of his collections for his services, and the local secretary retains 10 per cent of the amount which he receives. If the steward fails to collect the assessment within the specified time, he is to be fined \$5. If he fails to make his payment within the specified time, the local secretary is to suspend him from the union and notify the local officers to elect another steward. If the steward retains any part of the assessment, or absconds, he is to be expelled. It is also provided, however, that whenever any local officer or steward has defaulted the association may place the amount of the defalcation and any additional penalty upon his card when he leaves the district; and upon his going to work in another place, the local there must collect 10 per cent of his earnings and remit it to the local to which the money is due until the debt is canceled.

Nearly all the local unions levy their local dues in the form of a percentage of earnings.

**Death benefits.**—Death benefits are usually paid by the locals. One who holds a traveling card is not regarded as a member of any local, and if he dies under such circumstances, the expenses of his burial, not exceeding \$100, are to be paid by the national association, provided he is not three months in arrears at the time of his death. A member three months in arrears is not entitled to benefit until one month after the arrears are paid.

**Strikes and arbitration.**—The constitution provides for the settlement of disputes with employers by arbitration committees, on which each side shall be equally represented, with the assistance of a disinterested umpire if his services are necessary. It is declared that a dispute must be settled within ten days, and that if it relates to prices, whether the question is one of reduction or one of increase, the members must remain at work at the old prices until a settlement is reached. No employer "who receives work from or weighs out work to the employer who has the dispute, and no journeyman working in the shop where the dispute occurs, shall serve on the committee."

Arbitration is constantly used for the settlement of disagreements, and the results of it are described as excellent. The hatters agree with their employers upon written bills of prices, usually for six months, but sometimes for longer periods. The secretary says: "A fine of \$10 is imposed on any man who shall go on strike or quit his work pending arbitration. The general executive board alone have the right to order men on strike or to quit their work. We believe that a shop trouble can be settled much easier if the men remain at work and the shop committee (two or three) investigate the matter. The employer is in better temper than if his

business is stopped, his boilers and engines at a standstill, and his customers complaining that they can not get their goods on time. The employees are not losing their time and money, they are not suffering from a loss in their wages, and they are in better temper. When the shop committee makes its report to the shop's crew the latter are in a more judicial frame of mind than if they had been idle, and trouble is generally averted."

Each shop has power to regulate its own prices with the consent of the local executive board, and the constitution forbids the annulling of any agreement before its expiration, provided the employer lives up to it.

The union reported to the Federation of Labor in the fall of 1900 that it had won one strike and compromised one during the preceding year. About 300 persons were involved, and the cost was about \$25,000.

**Obtaining employment**—An ancient custom of the hat trade forbids a journeyman to apply for work directly to an employer or a foreman. He must approach a journeyman already employed and be introduced by him to the foreman as a man of the trade "on turn" and desiring to be "shopped." The constitution provides that "any foreman who shall shop any person upon the recommendation of an employer or superintendent, or in any manner other than that laid down by our laws, shall, upon conviction by the board of directors, be fined \$25 for each offense." It is also forbidden to bring "any secret or undue influence to bear upon any employer or superintendent in order to obtain employment, instead of simply going on turn in the manner prescribed by our laws," on pain of a fine of \$25.

**Hours of labor.** The convention of 1900 adopted a resolution that no member shall work more than 55 hours per week, being 10 hours per day for the first 5 days, and 5 hours on Saturday. The local associations have power to make provision for cases of emergency; but it is said that the 55-hour rule is generally observed.

The convention also adopted a resolution recommending local associations to adopt the 8-hour rule.

**Piece work.**—The hatters work almost entirely by the piece. At the convention of 1900 the following amendment to the constitution was referred to the local unions: "No man shall be allowed to work by the week where the piece system is possible."

**Convict labor.**—The constitution declares that any journeyman is foul who has instructed or superintended convicts, or has worked on a prison hat contract in any capacity, clerical or otherwise. Such a person can be received into the union only by a two-thirds vote of the board of directors.

**Union label.** The board of directors of the Hat Finishers' National Association and the Hat Makers National Union met together in 1885 and adopted a union label, which they called the label of the United Hatters of North America. The expenses of the label, as well as the expenses of joint action on certain legislative matters, such as convict labor and the tariff, were shared between the two organizations, but there was no other connection between them until they amalgamated in 1896.

The number of labels issued in the half year from December 1, 1896, to May 31, 1897, was said to have been over 3,000,000. The number distributed from June 1 to November 30, 1899, was reported as 1,565,600 and the whole number distributed up to November 30, 1899, as 115,537,691. Early in 1901 the organization reported that it was using about 1,000,000 a month, and that the demand was rapidly increasing. Nearly 150 names appear in the directory of union fur hat manufacturers of the United States, issued by the United Hatters for 1900. In the issue made early in 1901 there are 158 names. The secretary of the union wrote in August, 1900, "over 25 nonunion factories have been unionized since 1896, and all through the influence of the union label."

The expenses connected with the label are paid out of the treasury of the organization. The manufacturers are not required or permitted to make any contribution toward the cost. In 1899 the union put an agent on the road in the New England States to advertise the label. One of the results of his activity was to detect and stop the counterfeiting or imitation of the label by a firm of manufacturers, which admitted its guilt, turned over 5,000 imitation labels to the agent of the union, unionized its factory, and consented to the entry of a judgment against it for \$200 damages and to an injunction restraining it from further counterfeiting of the label.

The convention of the United Hatters in 1900 unanimously adopted the following resolution: "Resolved that delegates to the next convention be debarred from a seat in the convention unless their shoes, clothes, and hats shall contain a union label."

## THE UNITED GARMENT WORKERS OF AMERICA.

**History.**—The United Garment Workers of America was organized in April, 1891. It may be regarded as the successor of District Assembly 231, of the Knights of Labor, whose members were gradually absorbed by it, though the District Assembly was not dissolved till 1895. The organization includes tailors, cutters, trimmers, and lining cutters. Where the number of workers is considerable the several branches are organized in separate locals.

The clothing trade gives abundant opportunity for rival unions and disputed jurisdiction. The domain of the Garment Workers is perhaps sufficiently distinct from that of the Journeymen Tailors, working on made-to-order clothing, to make it possible for them to live in peace together, though they have not always done so. But there has recently arisen an organization called the Custom Clothing Makers Union to occupy an intermediate territory, which it alleges to be neutral and unoccupied, but which the Garment Workers claim to cover. The position of this organization is referred to below (page 68).

The whole number of locals on the books of the United Garment Workers, as reported by the secretary in October, 1900, was 113. The number of locals in good standing and the number of members on the books at the end of each fiscal year (July 31) is reported by the secretary as follows:

Year	Number of locals	Number of members	Year	Number of locals	Number of members
1891	18	6,000	1896	78	17,000
1892	23	8,500	1897	61	18,500
1893	38	9,400	1898	65	20,000
1894	41	11,000	1899	68	21,000
1895	52	11,000	1900	101	23,000

The secretary referred in his report for 1899 to a change in the policy of the organization, in that it had ceased to organize the workers in the great centers by a single impulse of enthusiasm or of despair. Experience had shown that organizations suddenly formed in this way went down as rapidly as they came up. The wretched tailors would organize and immediately strike. If the strike failed, the organization was broken up. If it succeeded, the organization was at once abandoned. The national officers now hope to bring the workers into the union by slow and steady accretions, unionizing shop after shop, and so assimilating and training the workers as they are gradually introduced. The cutters tend to organize in a more permanent way than the tailors, and constitute the strongest element in the union.

**General aims.**—The convention of 1899 adopted the following resolution:

*Resolved*, That we reaffirm the policy of the U. G. W. of A. as declared at previous conventions, namely:

"That our sphere of action be confined strictly to trade matters, believing that by that means alone can unity and directness of purpose be secured, and while other methods may promise much, costly experience has plainly shown that the hope of the wage-earners lies in more compact organization on trade-union lines, by securing concessions from the employers gradually, by improving the standard of living by obtaining more independence in the shop and a higher standing in society."

**Conventions.**—The convention of the Garment Workers meets annually on the second Monday in August. Locals are entitled to 1 delegate for the first 100 members, and 1 additional delegate for each additional 300 members or major part thereof. No local can have more than 4 delegates. Representation is based on the average membership on which per capita tax has been paid for the 12 months ending June 30. Each delegate has 1 vote, and no proxies are allowed. To be eligible as a delegate one must have been a member in good standing for at least 6 months, provided the local has existed so long. Delegates are elected at a special meeting not later than June 30, and a plurality vote is sufficient. Alternates are elected at the same time with delegates, and if a delegate is unable to serve the alternate who had the highest vote takes his place. The expenses of the delegates are paid by the locals, the expenses of the general president and secretary, if they are not elected as delegates, by the general fund.

Two-thirds of the members in attendance constitute a quorum. Absence from roll call, unless on account of sickness or convention business, entails a fine of \$1.

A special convention may be called by a two-thirds majority on a popular vote,

on motion of 5 locals, no 2 of which are in the same State or province. A special convention is composed of the delegates who attended the last regular convention.

No person who is not a member of the union can be admitted during the session of the convention, except upon suspension of business.

**Constitutional amendments.**—The constitution may be amended either by majority vote of the convention, confirmed by a majority vote of the general membership, or by a two-thirds vote of the general membership on a proposition offered by any local and seconded by 5 other locals. Every question which the executive board considers of general importance must be submitted to popular vote, and a two-thirds majority is required. The vote of a local must be received at the general office within 30 days after it is called for, or it will not be counted.

The constitution provides that the affiliation of the United Garment Workers with the American Federation of Labor may be revoked by a two-thirds vote of the whole membership. The same vote is required to remove the headquarters of the union from New York. It is provided that the United Garment Workers shall not be dissolved while there are 3 dissenting local unions.

**Officers.**—The officers are a president, a secretary, a treasurer, an auditor, 3 trustees, and 3 other members, who, with these 7, constitute the executive board. At least 5 of the 10 members of the board must be chosen from New York, Brooklyn, Jersey City, Hoboken, Newark, and Newburg. No member is eligible to election as a general officer unless he has been a year in good standing. Officers are elected by the convention, and a majority vote is required. If a majority is not obtained, the candidate who has the lowest number of votes is dropped and a new ballot is taken.

The president is the chief organizer, and is expected to adjust differences between employers and employees and between local unions. He is subject to the direction of the executive board. Whenever the funds permit, he is to give his whole time to the union, and is then to be paid \$25 a week.

The secretary is to collect all money and to turn it over to the treasurer at the end of each month, after paying all claims approved by the executive board. He is to issue an itemized quarterly financial report, and to send monthly report blanks to the locals, with instructions for filling them out and returning them. He is to keep separate and itemized accounts of postage, telegrams, printing and office expenses. He gives a bond for \$3,000 in some first-class surety company, the cost of which is paid by the union. His salary is \$25 a week.

The treasurer is to deposit all money in excess of \$200 within 24 hours after receiving it. He furnishes a bond for \$3,000 in a surety company, at the expense of the union. If the amount in the bank exceeds \$3,000, his bond is to be increased accordingly. His salary is \$12 a year.

The auditor is to examine the books of the secretary and the treasurer, and also, under the direction of the executive board, the books of the locals. He may appoint a subordinate examiner, under the title of financier, to examine the books of the locals in any place. He is to receive the monthly reports of the locals and to issue due stamps and union labels to the general secretary.

The executive board has general supervision of the affairs of the union, power to decide claims, grievances, and appeals, subject to appeal to the next convention, and power to fill all vacancies.

The officers of locals are elected semiannually by ballot, and only a plurality is necessary to a choice. No member is eligible to office who has not been at least 6 months a member in good standing. Among the officers are a recording secretary, a financial secretary, and a treasurer. The financial secretary collects all funds and turns them over to the treasurer.

**Local unions.**—The constitution says: "Each L. U. should maintain labor bureaus, found libraries, hold lectures, join central labor unions, maintain friendly relations with other labor organizations, and do all in their power to strengthen and promote the labor movement."

The constitution provides that a local union shall not dissolve or withdraw from the general union so long as seven members, at a special meeting called for that purpose, object and are willing to retain the charter. A 3 month notice of withdrawal is required. Of course, in practice, failure to pay the per capita tax would result in the suspension of a local and in its separation from the general body.

**District councils.**—In large cities, where tailoring is divided into branches the constitution makes it the duty of the locals to establish a joint executive board to transact business pertaining to the welfare of the whole. It is also provided that when there are three or more locals in any city they shall form a district council, for the transaction of business of common interest, such as organizing, labeled agitation, and preventing any union from entering on an independent strike.

**Membership.**—In order to be admitted to membership a person must be employed in the manufacture of garments for men, boys, and children, and must be working at the trade. A foreman or a person who has authority to hire and discharge employees can not be a member. One can not be a member of two unions at the same time, nor a member of the Garment Workers and also of any other organization of the trade.

The secretary called attention in his report of 1899, and again in his report of 1900, to the policy of some local unions of restricting their membership by an exorbitant initiation fee, in the hope of securing more work in union shops for those who were already members. The secretary pointed out the shortsightedness of such an exclusive policy, told how it intensified the competition of those who were not members and lowered the general conditions, showed how it intensified the opposition of employers, and recommended that locals be prohibited from charging more than \$5 for initiation. The recommendation was adopted by the convention of 1900.

**Clearance cards.**—Clearance or transfer cards are issued by the local president and financial secretary, without vote of the union, to members who are not in debt to the union nor under charges, upon payment of the per capita tax for the time for which the card is granted not exceeding 3 months, together with a fee of 5 cents. Such a card must be renewed or deposited with another local within the period for which it is issued, otherwise the member forfeits his rights. The card must be deposited within 2 weeks after the arrival of the holder in a town where a local exists.

**Discipline.** Any member who is concerned in illegally supplying or issuing the union label is to be prosecuted at law and debarred from membership in the union. Local officers who fail to fill out the report blanks furnished by the general secretary, for 2 consecutive weeks, are liable to a fine of \$5. Any member who undermines another in wages or otherwise, or reveals the business of the union to employers without authority, may be punished by fine or expulsion.

A member who willfully slanders or libels another may be fined or expelled at the option of the local. But if a member is accused of slandering or libeling a general officer, the officer is to choose 3 members, the accused member may choose 3, and these 6, together with a seventh chosen by them, have power to try the case and inflict punishment.

It is forbidden to the locals to make appeals to other locals for help except through the general office, and all money contributed by locals must go through the general office.

A person who has been expelled, suspended, or rejected by one local, can not be received into another without the consent of the first.

Charges against a general officer can be brought only by a local union. They must be made by officers of the local and sworn to or affirmed before a notary public or a justice of the peace. The executive board tries the accused. It may summon witnesses and guarantee the payment of their expenses. The accused may present evidence, and question witnesses, in person or by attorney, but the attorney must be a member of the union in good standing. The executive board must send each local a circular containing the testimony in brief, and the findings and recommendations of the board. The locals vote upon the question of approving the findings. Each local has the same number of votes that it would be entitled to in a convention. The decision of the board stands if it is approved by a majority of such votes.

Charges against a private member must be brought in writing, and tried before the executive board of his local. The findings of the board must be approved by a vote of the local.

Charges against officers of a district council or joint executive board are tried by the executive boards of the locals interested, meeting jointly. The findings must be ratified by a majority of the members of the locals in interest.

An appeal lies from the decision of a local to the executive board. Decisions of the executive board, except those which are confirmed by popular vote, are subject to appeal to the next convention.

**Finances.**—The charter fee paid by new locals is \$5. The general office receives 25 cents of the initiation fee of each new member. This money goes to the organization and label fund. Organizations which join in a body are exempt from this fee. The per capita tax is 12 cents a month on members in good standing. It is received for by means of adhesive stamps affixed to the member's due book. Ten per cent of the per capita tax goes to the strike fund. The executive board has power to levy assessments of 5 cents a week on each member, when necessary, to sustain strikes.

## 60 THE INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

on motion of 5 locals, no 2 of which are in the same State or province. A special convention is composed of the delegates who attended the last regular convention.

No person who is not a member of the union can be admitted during the session of the convention, except upon suspension of business.

**Constitutional amendments.**—The constitution may be amended either by majority vote of the convention, confirmed by a majority vote of the general membership, or by a two-thirds vote of the general membership on a proposition offered by any local and seconded by 5 other locals. Every question which the executive board considers of general importance must be submitted to popular vote, and a two-thirds majority is required. The vote of a local must be received at the general office within 30 days after it is called for, or it will not be counted.

The constitution provides that the affiliation of the United Garment Workers with the American Federation of Labor may be revoked by a two-thirds vote of the whole membership. The same vote is required to remove the headquarters of the union from New York. It is provided that the United Garment Workers shall not be dissolved while there are 3 dissenting local unions.

**Officers.**—The officers are a president, a secretary, a treasurer, an auditor, 3 trustees, and 3 other members, who, with these 7, constitute the executive board. At least 5 of the 10 members of the board must be chosen from New York, Brooklyn, Jersey City, Hoboken, Newark, and Newburg. No member is eligible to election as a general officer unless he has been a year in good standing. Officers are elected by the convention, and a majority vote is required. If a majority is not obtained, the candidate who has the lowest number of votes is dropped and a new ballot is taken.

The president is the chief organizer, and is expected to adjust differences between employers and employees and between local unions. He is subject to the direction of the executive board. Whenever the funds permit, he is to give his whole time to the union, and is then to be paid \$25 a week.

The secretary is to collect all money and to turn it over to the treasurer at the end of each month, after paying all claims approved by the executive board. He is to issue an itemized quarterly financial report, and to send monthly report blanks to the locals, with instructions for filling them out and returning them. He is to keep separate and itemized accounts of postage, telegrams, printing and office expenses. He gives a bond for \$3,000 in some first-class surety company, the cost of which is paid by the union. His salary is \$25 a week.

The treasurer is to deposit all money in excess of \$200 within 24 hours after receiving it. He furnishes a bond for \$3,000 in a surety company, at the expense of the union. If the amount in the bank exceeds \$3,000, his bond is to be increased accordingly. His salary is \$12 a year.

The auditor is to examine the books of the secretary and the treasurer, and also, under the direction of the executive board, the books of the locals. He may appoint a subordinate examiner, under the title of financier, to examine the books of the locals in any place. He is to receive the monthly reports of the locals and to issue due stamps and union labels to the general secretary.

The executive board has general supervision of the affairs of the union, power to decide claims, grievances, and appeals, subject to appeal to the next convention, and power to fill all vacancies.

The officers of locals are elected semiannually by ballot, and only a plurality is necessary to a choice. No member is eligible to office who has not been at least 6 months a member in good standing. Among the officers are a recording secretary, a financial secretary, and a treasurer. The financial secretary collects all funds and turns them over to the treasurer.

**Local unions.**—The constitution says: "Each L. U. should maintain labor bureaus, found libraries, hold lectures, join central labor unions, maintain friendly relations with other labor organizations, and do all in their power to strengthen and promote the labor movement."

The constitution provides that a local union shall not dissolve or withdraw from the general union so long as seven members, at a special meeting called for that purpose, object and are willing to retain the charter. A 3 month notice of withdrawal is required. Of course, in practice, failure to pay the per capita tax would result in the suspension of a local and in its separation from the general body.

**District councils.**—In large cities, where tailoring is divided into branches the constitution makes it the duty of the locals to establish a joint executive board to transact business pertaining to the welfare of the whole. It is also provided that when there are three or more locals in any city they shall form a district council, for the transaction of business of common interest, such as organizing, labeled agitation, and preventing any union from entering on an independent strike.

The secretary, in his report to the convention of 1899, congratulated the convention upon the great change which had been effected in the conditions of the over-all manufacture. There, he said, all work is done in large shops controlled directly by the firms, and the work day is limited to 8 or 9 hours. The secretary attributed the success of the organization in this branch to the effective use of the union label.

**Union label.**—The union label appeared in the ready-made clothing trade in 1886, when the Knights of Labor were in control. The present label was adopted by the national union in 1891.

The label may be attached to garments that are cut, trimmed, and made in union shops, under the direction of the union. Overalls and shirts, in order to be entitled to the label, must be made upon the premises of the firm, without the intervention of a contractor, and all such garments must be labeled if the label is used at all.

Of late years the garment workers have been one of the most active unions in union-label agitation. Lithographed cards, showing the label in position on the garment, have been freely distributed. Advertisements have been run in the labor press. The officers in their reports call attention to the work which has been done in the way of advertising the label in print and by agents. They hold that the effectiveness of the label depends upon the possibility of convincing employers that the union is creating a demand for labeled goods. At the convention of 1900 a delegate from Brattleboro, Vt., presented a report in the following terms: "A little less than a year ago the firm, having a demand for union-made garments, presented to the employees the importance of becoming organized. As the result, a meeting was called October 7, 1899, for the purpose of instituting a local union.

It must be confessed that the garment workers' label has not always furnished that guarantee of reasonable wages and hours and sanitary conditions of production which the professions of the union would lead one to hope for. The factory inspectors have found the label in New York sweat shops. The exigencies of union policy, the desire to gain members, and to extend the union control of the trade, have tempted the officers to departures from the path which they had marked out, and which they would doubtless have been glad to follow. It was admitted in 1899 that it was very hard to control the label in New York, Chicago, and Philadelphia, because of the petty contract system and the consequent difficulty of supervising the shops, and because of the failure of the workers themselves to understand the purpose of the label, and their opposition to the regulations designed for their benefit.

It may be hoped, however, that conditions are improving and that the label is coming to mean more of what it professes to mean. The convention of 1899 enacted that no firm should be permitted to use the union label which had any work done outside in nonunion shops. It also provided that no shop should be considered a union shop where the hours of labor were more than 10 a day. Both in 1899 and in 1900 the secretary said in his reports that the general officers had found it necessary to restrict the label to firms which make the better class of goods, as unscrupulous dealers are apt to take advantage of patrons by palming off a cheaply made garment, with the help of the label, for the better kind. In May, 1901, the general executive board, with the sanction of the local unions, decided to withdraw the label within six months from all New York manufacturers who employ the contract system, and to confine it exclusively to firms which conduct their own tailor shops. The same rule is to be extended to other cities as fast as possible. The reason given for it is that it has been found impossible to govern conditions in the shops conducted by the petty bosses or contractors, on account of the lack of responsibility, the shifting and uncertain employment, and the practice of utilizing the labor of helpless immigrants to replace those who become dissatisfied. "This," says the secretary, "the contractors are driven to do by the wholesale firms, who pit one against the other, and thus inaugurate a merciless cutthroat competition which keeps conditions down to the life line. If brought together in larger groups, and employed directly by the firms upon the premises, it is contended that organization and factory inspection would be facilitated. A number of large firms in different cities, some of whom have not been using the label, have already agreed to the proposition. All the resources of the national body will be devoted to combating the contract system, and no compromises will be made with the contractors. The policy agreed upon is to force one firm at a time to abandon the contract method until the movement makes sufficient headway to warrant a general fight against the rest."

The Garment Workers presented a resolution in the convention of the American Federation of Labor in 1900 to give the executive council of the Federation power

<sup>1</sup> Garment Worker, Aug. 1, 1899, p. 8.

<sup>2</sup> American Federationist, Vol. 6, p. 179.

to exercise a supervision over the methods pursued by unions in issuing their union labels, in order to give additional assurance that the labels might not be "misused by being placed upon articles made under unclean and unfair conditions, or upon inferior products." This seems to indicate a genuine desire on the part of the Garment Workers to make their label stand for the wholesome conditions which it pretends to stand for.<sup>1</sup>

About 2,000,000 labels were reported to have been issued during the fiscal year ending July 31, 1898. In August, 1899, the secretary reported that 54 firms were using the label, and that about 1,500,000 labels had been used during the preceding year. A year later he reported that the label was used by about 80 firms, employing about 5,000 men, and that 7,714,000 labels had been used during the year. He congratulated the convention upon the success of the label as applied to work men's garments, such as overalls, jackets, working pants and shirts. "All the leading manufacturers in that large branch of the trade are using it and making their goods under the most approved conditions." Of a list of 90 firms which use the union label, published about November 1, 1900, 12 are under the heading "pants, overalls, etc." In October, 1900, the secretary expressed the opinion that 50 per cent of the output of overalls was issued under the label. The label appears on only a small part of the output of other clothing.

### THE JOURNEYMEN TAILORS' UNION OF AMERICA.

**History.**—The Journeymen Tailors' Union of America was organized in 1883. There had been an earlier attempt at a general organization of tailors, called the Tailors' National Union. It was formed in 1871, and went to pieces in 1876.

In July, 1900, the secretary reported the number of locals as 290 and the number of members as 9,000, of whom 1,500 were female. The number of members entitled to benefit was reported as 6,217 on July 1, 1899, and 9,727 on July 1, 1901. The number of locals existing in successive years is said by the secretary to have been about as follows:

Year	Number	Year	Number	Year	Number
1883 .....	14	1890 .....	100	1897 .....	200
1884 .....	14	1891 .....	120	1898 .....	220
1885 .....	16	1892 .....	120	1899 .....	250
1886 .....	16	1893 .....	200	1900 .....	290
1887 .....	20	1894 .....	160	1901 .....	318
1888 .....	30	1895 .....	200		
1889 .....	50	1896 .....	200		

In its earlier years the union had disputes with the Garment Workers over questions of jurisdiction. The convention of the Federation of Labor in 1897, at the request of the delegate of the Journeymen Tailors' Union instructed the United Garment Workers to withdraw the charters of all local unions affiliated with it whose members were engaged on custom made clothing, and ordered that neither the Garment Workers nor the Journeyman Tailors should retain any member who should properly belong under the jurisdiction of the other. It added that the designation merchant tailor should be "construed to mean establishments where custom clothing is exclusively made to the measurement and order of each individual customer," and should "not include any ready-made clothing manufacturer, nor any special-order work made for such manufacturers."

**Objects.**—The objects of the tailors' union are declared in the constitution to be: "To rescue our trade from the condition to which it has fallen, and by mutual effort place ourselves on a foundation sufficiently strong to prevent further encroachments; to encourage a higher standard of skill, to cultivate feelings of friendship between members of the craft, to assist each other to secure employment, to secure free workshops; to reduce and limit the hours of labor, and use our influence with the lawmakers of each State and province to secure the passage of laws that will prohibit sweating and working in our homes; to secure adequate pay for our labor; to assist each other in case of need and distress, and by all honest and just means to elevate the moral, social, and intellectual condition of our members."

**Convention.**—The constitution provides that the regular convention shall be held on the first Monday in August, 1901, and every fourth year thereafter. But on the 1st of November preceding the time fixed for the convention the general secretary is to submit the following question to a general vote: "Shall the convention be held this year and a 50-cent levy be declared upon each member to pay

mileage of all delegates? " If the majority is adverse, no convention is to be held. This was the result in 1901. Local unions with less than 100 members are entitled to 1 delegate in the convention, from 100 to 500 members, 2 delegates, from 500 to 1,000 members 3 delegates, over 1,000 members, 4 delegates. During the week of the sitting of the convention not more than one session is to be dispensed with or curtailed for entertainment purposes. The convention is to sit from 8.30 to 12 and from 1.30 to 5.30. Delegates absent from roll call are to be fined \$1, unless they are sick or on business of the convention.

**Committee on Laws and Audit.**—Separating its conventions by the long interval of 4 years, the Tailors' Union provides a substitute in its committee on laws and audit, which is to meet halfway between conventions. When it is voted not to hold a convention at the regular time as in 1901, the committee meets then also. The executive board is to designate 5 local unions—one in Canada and one in each of four different States, in the North, East, South, and West—each of which locals shall elect 1 member, and these 5 members are to compose the committee on laws and audit. This committee is to examine the books of the secretary and the treasurer, to consider amendments to the constitution which may be submitted to it, and to formulate or propose such amendments as it may think wise. Such propositions as it approves are to be submitted to a general vote of the members. It, like the convention, hears appeals from the decisions of the executive board. The powers of the committee are substantially the same throughout as those of the convention. Its members receive \$3 per day and railroad fare, but no other allowance for expenses.

**Constitutional amendments.**—The constitution may be amended by the action of the convention or of the committee on laws and audit, approved by a majority of the members voting in a plebiscite. Any local union may at any time propose amendments. They are then to be inserted in the official journal. If one-fourth of the local unions second the proposals they are to be submitted to a general vote, and they become law if approved by a majority of the members voting.

**Officers.**—The officers are a secretary, a treasurer, an executive board, and organizers. The organizers are appointed by the general executive board for 6 months. The secretary, the treasurer, and the executive board are elected for terms of 4 years: the secretary and the treasurer by vote of the whole membership, and the executive board by the local union of the city where the headquarters are and the two other local unions nearest the headquarters. The largest of these three locals elects 2 members, the next largest, 2 members, and the smallest, 1.

Three months before the time for nominations for secretary and treasurer, the secretary is to submit this question to the locals: "Shall an election of general secretary and general treasurer be held this year? If the majority vote 'no,' the existing officers hold their places for another term of 4 years. If the majority vote 'yes,' the local unions are to be called upon for nominations. When the time for nominations has expired, the secretary is to notify each nominee, and each nominee who desires to be a candidate must write a letter for publication in *The Tailor*, defining the policy he will follow if elected. The secretary is to prepare ballots according to the Australian ballot system, containing the names of all candidates in alphabetical order, and to furnish them in sufficient numbers to the local unions. A majority of all votes cast is necessary to elect. If there is no election a second ballot is taken in which only the 3 candidates who have received the highest votes are eligible. If there is still no election, a third ballot is taken, in which the lowest candidate on the second ballot is dropped. Any member who fails to vote, unless excused on the ground of sickness, is to be fined 50 cents. Any member who is elected to a general office and fails to qualify according to the laws of the union is to be fined \$100.

The secretary receives all money due the national union and pays ordinary expenses. He is instructed to pay over to the treasurer "all surplus funds exceeding \$1,000, in his hands at the end of each month after paying all claims approved by the general executive board." He issues a membership book to each member of the union. He is editor of the official journal. He keeps a list of all members of the union, showing the standing of each. His salary is \$24 per week, and he is to give bonds for \$5,000, signed by owners of real estate or by some reliable surety company.

The treasurer is to receive and take charge of all surplus funds. He is not to hold more than \$500 in his possession, and is to deposit all further sums in some bank approved by the executive board, and is not to draw any amount from the bank except by check signed by himself, the secretary, and 1 member of the executive board, with the seal of the union attached. His salary is \$60 per year, and his bond is \$10,000. For attendance at the meetings of the executive board he receives the same pay as members of the board.

The executive board has general authority over the union, subject only to appeal once in 2 years to the convention or the committee on laws and audit. It is to look after the funds and investments of the union and the bonds of the secretary and the treasurer. It hears claims, grievances, and appeals, and has power to authorize strikes and to support lockouts. It may propose amendments to the constitution and submit them to general vote. One of its duties is to prosecute violators of the laws of the United States and Canada against the importation of labor under contract. It is directed to do all in its power to discourage strikes, and to adopt such means as will tend to bring about an amicable understanding between members of the union and their employers.

**Local unions.** A local may be organized by any number of tailors not less than 5, by applying to the general secretary for a charter, and sending \$10 for the charter and \$1 initiation fee for each new member. A second local union may not be chartered in any city of less than 200,000 inhabitants, except by the consent of the existing local.

The constitution says that a public meeting of each local union should be held at least once each month for the discussion of the labor movement, and that each local union should have social gatherings at stated times for the entertainment of the members, their families, and their friends. Each local union should maintain a labor bureau, found libraries, hold lectures, join central labor unions, and do all in their power to strengthen and promote the labor movement. The first day of May and the first Monday in September are recommended to be adopted as labor's holidays, and every local union and every member is urged to observe them.

**Membership.** A candidate for admission to membership "must be a journeyman tailor, apprentice, helper, or worker, engaged in the production of custom-made clothing.

**Apprentices.** The constitution provides that apprentices shall be bound for not less than 3 years, and that a clear book shall not be issued to apprentices after their time has expired unless their work is satisfactory to a committee of the local union.

**Traveling books.** Any member who wishes to travel or transfer his membership may pay up his dues and assessments for not more than 3 months in advance and take the usual receipts in his membership book. This regular book constitutes his traveling credentials. It must be presented to some local union and renewed within 3 months after the expiration of the term for which dues are paid. Any local union can renew it. If the member goes to work in any place where a local union exists, he must deposit his book within 2 weeks on penalty of forfeiting all his rights as a member.

**Discipline.** A member who injures the interests of another by undermining him in wages or in any other willful manner, or who reveals business of the union to employers without a vote of the union, may be punished by fine or expulsion. Other offenses specified in the constitution are mentioned under "Strikes."

No member can be fined or expelled without an impartial hearing on written charges, which have been duly delivered or sent to him, with a notice of the time and place of trial. Any member who feels aggrieved by a decision of the local union may appeal to the executive board, and any member or local union may appeal from the executive board to the convention or to the committee on laws and audit.

**Finances.**—The union is supported by a charter fee of \$10 from each new local, \$1 from the initiation fee of each new member, and a per capita tax of 35 cents a month. In addition two levies of 25 cents a member are to be declared in each year, on May 1 and November 1, so long as the general fund of the national union is less than \$30,000. The executive board may levy assessments of 10 cents a member not oftener than twice in 3 months if the general fund is depleted by an increased death rate or a long-continued strike. Further assessments may be levied by a general vote.

The local initiation fee is \$2. When the name of a member has been stricken from the rolls for nonpayment of dues or for any other cause, he must pay an initiation fee of \$1 to be reinstated, of which \$2 goes to the national union.

During the 2 years ending July 1, 1899, the total income of the national union was \$15,711 and the total disbursements were \$33,577; \$9,298 was paid for funeral benefits and \$1,371 for strike benefits. During the 2 years ending July 1, 1901, receipts, \$73,229; disbursements, \$62,301; funeral benefits, \$10,716; strike benefits, \$28,463. The balance in the treasury on July 1, 1901, was \$25,007.

**Death benefits.**—The union pays death benefits, graded according to length of membership, from \$25 after 6 months to \$100 after 5 years. There was formerly a provision by which the widow of a deceased member might acquire a claim for a funeral benefit on her own account by paying dues of 15 cents a month after her

husband's death. This is now abolished, except as to widows who took advantage of it before January 1, 1898. On the death of such a widow the benefit paid to her heirs ranges from \$25 after 6 months' payments to \$50 after 3 years' payments.

**Strikes**—If any members have a difficulty with their employers they must lay the case before the local union, and the union if it approves must appoint a committee of three good members to wait on the employers and try to effect a settlement. If the committee reports that it is unsuccessful, the question of sustaining the members is submitted to a secret ballot of the local. Only those who have been members for at least 4 months are permitted to vote and a two-thirds majority is necessary to sustain the complaining members. If such a majority appears, a full statement of the circumstances is to be sent to the general secretary. He is at once to call a meeting of the executive board. A strike may only be authorized either by a vote of the executive board or, if its decision is adverse, by a two-thirds majority of the members of all the local unions on a general vote.

Members who participate in an authorized strike are entitled to \$1 per day. During the months of January, February, July, and August the allowance is only 75 cents per day. If the funds do not warrant the payment of the full strike benefit the executive board have power to pay a part and issue to each member, weekly a due bill for the balance. The executive board has power to levy assessments of 10 cents per member in case of a deficiency due to a long-continued strike but not more than 2 such assessments can be levied within 3 consecutive months. In extreme cases the executive board may submit to general vote a proposition for a special levy, not exceeding 50 cents per member.

No person is entitled to strike benefits unless he was a member of the union before the day on which the strike was declared. The members of a local union are not entitled to strike benefits unless the local has belonged to the national union for at least 6 months.

Members victimized on account of their activity in the interest of the union are entitled to the same benefits as strikers.

Any member or other person who goes to work for any employer during a duly authorized strike against such employer is to be fined not less than \$5 nor more than \$25, and the fine must be paid in full before the person can be reinstated or become a new member, unless it is remitted or reduced by the local union which imposed it. While an authorized strike or lockout is in progress no member involved is permitted to leave the place without the consent of a two-thirds majority of the members present at a regular or special meeting.

The union reported to the Federation of Labor in the fall of 1900 that it had won 21 strikes during the preceding year, compromised 2, and lost 3. Three thousand six hundred persons were involved, of whom 3,100 were benefited. The cost was \$20,419, of which more than half was paid as benefits on lost strikes. The total gain in wages was estimated at \$100,000.

**Free workshops.**—It has not been the custom of the trade that the employer furnish the workshop. The journeymen have worked at home or have clubbed together and rented a room for themselves. This custom is economical for the employer, and many journeymen cling to it because it seems to give them greater freedom than they could have in the employer's shop. They can work when they please and quit when they please. The union, however, is devoting its strongest efforts to the breaking up of the practice.

The secretary declares that the union has "but one great goal set for attainment, and that is the establishment of free workshops throughout the entire organization. All other matters are of positive insignificance when compared with this. To secure free workshops in any city is many times more valuable than to secure a 10 per cent advance in wages." He admits that many of the journeymen are opposed to the change, but he declares that such opposition is due to ignorance and thoughtlessness. The people who work at home make less wages, on the whole, than those who work in employers' shops, and the social and moral effects of turning the home into a factory are disastrous. The children of the home worker are almost sure to be used in helping on the work. The children of the man who works in the factory or shop get some decent opportunities for education and for play.<sup>1</sup>

The executive board is directed to designate one or more local unions, on February 1 and on July 1, to demand free shops from their employers. No local is to be selected to make this demand until it has shown by majority vote that it is prepared to make it.

The Tailor, of March, 1900, reported 113 local unions having free shops furnished by employers, and 7 as having free shops furnished to a part of their members.

<sup>1</sup> American Federationist, July, 1900, p. 224.

The executive board has general authority over the union, subject only to appeal once in 2 years to the convention or the committee on laws and audit. It is to look after the funds and investments of the union and the bonds of the secretary and the treasurer. It hears claims, grievances, and appeals, and has power to authorize strikes and to support lockouts. It may propose amendments to the constitution and submit them to general vote. One of its duties is to prosecute violators of the laws of the United States and Canada against the importation of labor under contract. It is directed to do all in its power to discourage strikes, and to adopt such means as will tend to bring about an amicable understanding between members of the union and their employers.

**Local unions.** A local may be organized by any number of tailors not less than 5, by applying to the general secretary for a charter, and sending \$10 for the charter and \$1 initiation fee for each new member. A second local union may not be chartered in any city of less than 200,000 inhabitants, except by the consent of the existing local.

The constitution says that a public meeting of each local union should be held at least once each month for the discussion of the labor movement, and that each local union should have social gatherings at stated times for the entertainment of the members, their families, and their friends. Each local union should maintain a labor bureau, found libraries, hold lectures, join central labor unions, and do all in their power to strengthen and promote the labor movement. The first day of May and the first Monday in September are recommended to be adopted as labor's holidays, and every local union and every member is urged to observe them.

**Membership.** A candidate for admission to membership "must be a journeyman tailor, apprentice, helper, or worker, engaged in the production of custom-made clothing.

**Apprentices.** The constitution provides that apprentices shall be bound for not less than 3 years, and that a clear book shall not be issued to apprentices after their time has expired unless their work is satisfactory to a committee of the local union.

**Traveling books.** Any member who wishes to travel or transfer his membership may pay up his dues and assessments for not more than 3 months in advance and take the usual receipts in his membership book. This regular book constitutes his traveling credentials. It must be presented to some local union and renewed within 3 months after the expiration of the term for which dues are paid. Any local union can renew it. If the member goes to work in any place where a local union exists, he must deposit his book within 2 weeks on penalty of forfeiting all his rights as a member.

**Discipline.** A member who injures the interests of another by undermining him in wages or in any other willful manner, or who reveals business of the union to employers without a vote of the union, may be punished by fine or expulsion. Other offenses specified in the constitution are mentioned under "Strikes."

No member can be fined or expelled without an impartial hearing on written charges, which have been duly delivered or sent to him, with a notice of the time and place of trial. Any member who feels aggrieved by a decision of the local union may appeal to the executive board, and any member or local union may appeal from the executive board to the convention or to the committee on laws and audit.

**Finances.**—The union is supported by a charter fee of \$10 from each new local, \$1 from the initiation fee of each new member, and a per capita tax of 35 cents a month. In addition two levies of 25 cents a member are to be declared in each year, on May 1 and November 1, so long as the general fund of the national union is less than \$30,000. The executive board may levy assessments of 10 cents a member not oftener than twice in 3 months if the general fund is depleted by an increased death rate or a long-continued strike. Further assessments may be levied by a general vote.

The local initiation fee is \$2. When the name of a member has been stricken from the rolls for nonpayment of dues or for any other cause, he must pay an initiation fee of \$1 to be reinstated, of which \$2 goes to the national union.

During the 2 years ending July 1, 1899, the total income of the national union was \$15,711 and the total disbursements were \$13,577; \$9,298 was paid for funeral benefits and \$4,371 for strike benefits. During the 2 years ending July 1, 1901, receipts, \$73,229; disbursements, \$62,301; funeral benefits, \$10,716; strike benefits, \$28,463. The balance in the treasury on July 1, 1901, was \$25,007.

**Death benefits.**—The union pays death benefits, graded according to length of membership, from \$25 after 6 months to \$100 after 5 years. There was formerly a provision by which the widow of a deceased member might acquire a claim for a funeral benefit on her own account by paying dues of 15 cents a month after her

**Conventions.**—The convention is to meet on the first Monday in August in 1902 and every fourth year thereafter. Locals which have paid per capita tax for 12 months before the convention on from 50 to 200 members, are entitled to 1 delegate, on from 200 to 500 members, 2 delegates, on 500 members and over, 5 delegates. Locals with less than 50 members may combine with other locals in electing a delegate. Each delegate has 1 vote.

**Constitutional amendments and referendum.**—The constitution can be amended only by a referendum vote. Measures passed by the convention become effective if a majority of the members voting in the referendum favor them. A committee on by-laws is to be elected by the convention, and any measure approved by it must be submitted to the general vote even though not passed by the convention, but in that case it will become valid only if it secures a two-thirds majority in the referendum. Any proposition may also be submitted by the executive board, or by any local with the approval of 5 other locals. In each case a two-thirds majority in the referendum is required.

**Officers.**—The officers are a president, a vice-president, a secretary, a treasurer, an organizer, and 3 trustees. The trustees must be members of the executive board. The executive board is composed of 12 members, representing cutters, trimmers, operators, and pressers in the 3 branches—coat, vest and pants making. The members are elected from locals nearest the headquarters in Chicago. The president, the vice-president, the organizer, and the trustees are elected by the executive board. The secretary and the treasurer are to be elected by general vote on the Australian system, unless a convention is held at the proper time for electing them. Requests for nominations are to be sent out to the locals on January 1, 1902 and every 1 year thereafter. Ballots containing the names of candidates are to be furnished by the general secretary, and the election is to take place on the second Monday in June. A two-thirds majority is required to elect. The term of each officer, except the organizer, is 1 year. The secretary receives \$100 a month and expenses, and gives the bond of a surety company for \$2,000 at the expense of the union. The treasurer gives a bond in like manner for \$1,000. The secretary is permitted to retain \$500 for current expenses, but all other money is to be deposited so that it can only be drawn on an order signed by the treasurer and the 3 trustees. The organizer is elected for a term of 6 months, and his salary is \$100 a month and expenses.

**Local conference committees.**—The constitution provides for local conference committees "to be composed of all the local unions in a given place. It is their duty to act together in the fixing of scales of wages, and also to consider and settle any disputes between locals of the different branches of the trade, subject to appeal to the executive board and ultimately, if necessary, to the convention.

**Walking delegates.** The constitution directs that each local have a walking delegate to visit shops, inspect membership cards, and perform such duties as the locals may impose upon him or her.

**Membership.**—The Custom Clothing Makers provide in their constitution for the inclusion of all makers of special-order-made clothing, or workers on clothing made to order and measure of each individual customer, also workers on clothing made for tailors to the trade—that is, all custom-clothing makers who do not stand under the jurisdiction of the Journeymen Tailors of America. Members are forbidden to work on ready-made clothing. The constitution contemplates the organization of the members of the several branches of the trade—cutters, trimmers, operators, pressers, and finishers—in separate locals.

**Finances.**—The charter fee of each new local is \$5. Twenty-five cents of each initiation fee is paid to the national union, and \$1 on each transfer card. The per capita tax is 10 cents a month. The executive board has power to levy a special tax of 10 cents a member, or a special assessment of 10 cents, whenever a deficiency occurs through a strike or through organizing expenses. Not more than 3 such taxes or assessments may be laid in any 1 year. A local must be notified when 2 months in arrears, and if its taxes are not paid by the 15th day of the fourth month it is to be expelled.

The local initiation fee may not be less than \$2 nor the monthly dues less than 25 cents.

**Strikes.**—A shop strike may be declared by a two-thirds vote of the local, after investigation by a conference committee and efforts by it to settle the differences with the employers. A general strike of the members of a local may be declared by local action but without any right to the support of the general union, unless it receives the sanction of the executive board. An appeal may be taken, however, from the adverse decision of the executive board to a general vote of the locals, and the executive board is under obligation to support any strike caused

## 70 THE INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

by a reduction of wages without previous notice to the local, provided the local has lived up to the constitution.

Members injured on account of their activity in the interest of the union are entitled to such assistance from the general fund as the general executive board may direct.

**Labor Day.**—The constitution urges every local and every member carefully to observe Labor Day, and especially empowers the locals to fine their members in such sums as they see fit for not observing it.

**Union label.**—The Custom Clothing Makers adopted a union label in November, 1899. In March, 1901, the secretary reported that 30 manufacturers were using the label, that 5,000,000 labels had been issued, and that the label was placed on 70 per cent of the output of the trade in Chicago.

The label is printed on white linen, and bears the words, "Custom Clothing Makers' Union of America, organized 1899." It is not given in any case to the merchant tailor or to the proprietor of any shop. It is to be attached to the clothing by machine stitching, by members of the union only. The local union is to investigate the right of each shop to use the label, and is to furnish the labels to the shop when satisfied that the shop is entitled to them.

### INTERNATIONAL LADIES' GARMENT WORKERS' UNION.

**History.**—The International Ladies' Garment Workers' Union was organized in June, 1900. It is meant to include, according to the statement of the secretary, "workers on all branches of Ladies' wear except shoes." In September, 1900, the secretary reported 7 branches and 2,310 members, of whom 100 were female. On June 1, 1901, 9 branches and 3,976 members were reported.

**Finances.**—The receipts of the general office for the year ending May 31, 1901, were \$307, and the expenditures were \$383.

**Strikes.**—From July to November, 1900, the unions won two strikes and lost four. One thousand members were involved and 300 were benefited. The cost of the strikes was about \$800.

**Hours of labor.**—The Ladies' Garment Workers hold as an aspiration to the 8-hour day. In practice they have to work from 10 to 16 hours a day during those parts of the year in which there is work for them. Many of them work in their own homes, and then hours are, of course beyond control. Even in the factories they generally work at least 10 hours when they work at all. The secretary says, "The only remedy for the existing conditions is an 8-hour law which will not exist on the statute books only, and the introduction of a trade label, and thorough organization and control of the trade by the workers." Early in 1901, however, 100 cloak makers in Baltimore, not all members, struck for a 9-hour day, along with other demands and obtained it after a week's idleness. The 9-hour day has also been obtained in San Francisco.

**Division of employment.**—The shop delegate in union shops is expected to see that the available work is equitably distributed when there is not enough for all. In the contracts between locals and manufacturers there is sometimes a clause providing for a division of available work among all the members.

### THE SHIRT, WAIST, AND LAUNDRY WORKERS' INTERNATIONAL UNION.

**History.**—An organization called the United Shirt and Waist Workers was formed in September, 1898. It was meant to be of national scope, but it did not spread beyond New York, Philadelphia, and Baltimore. The Shirt, Waist, and Laundry Workers' International Union was formed in 1900, and obtained a charter from the American Federation of Labor. The earlier organization disintegrated, and the most of its locals joined the other. In June, 1901, a membership of about 7,000 was claimed, in 78 locals. The headquarters is fixed at Troy, N. Y., and can be removed only by a two-thirds vote of the general membership. The constitution provides that the union may withdraw from the American Federation of Labor by a two-thirds vote.

**General aims.**—The objects of the organization are stated as follows in the preamble of the constitution: "First, To organize and cooperate with all shirt, waist, and laundry workers. Second, To abolish competition in each respective branch of the trade by securing a universally equal and just rate of prices without resort-

ing to strikes. Third. To discourage Chinese, sweat-shop, and convict labor. Fourth. To maintain by assessment a death benefit for all members.

**Convention.**—The convention is to meet annually in September. The representation of locals is based on the average membership on which they have paid per capita tax for the preceding 12 months. Each local is entitled to 2 delegates for the first 100 members, and to 1 additional delegate for each additional 200 members or major part thereof; but no local can have more than 4 delegates. In order to be eligible as a delegate, a member must have been in good standing in the local which he represents for at least 6 months, if the local has existed so long. Each delegate has one vote, and there are no proxies. A delegate absent at roll call is to be fined \$1, unless he is sick or absent on convention business. A local must have its per capita tax and assessments paid up to the month preceding the convention in order to be represented. The expenses of delegates are paid by their locals.

**Constitutional amendments and referendum.**—The constitution may be amended by a two-thirds vote of the members. Amendments may be proposed by the convention or by a local, with the sanction of 5 other locals. The general executive board may also submit any question to a referendum vote. When a referendum is ordered, each local must consider the subject-matter at a special meeting.

**Officers.**—The officers are a president, four vice-presidents, a secretary-treasurer, an auditor, and 3 trustees. The officers constitute the executive board, and at least 5 of them must be chosen from the vicinity of the general office. Any point within 8 hours by rail is considered in the vicinity. All officers are elected at the convention by majority vote. All must be 'competent mechanics, fully conversant with all technicalities of the craft' and must constantly maintain themselves in good standing.

The secretary-treasurer is required to keep a register of all members initiated, suspended, and expelled. He decides points of law, subject to appeal to the executive board. The auditor is required to examine the books of the secretary-treasurer and also, under the direction of the executive board, the books of the locals.

**Local unions.**—A local may be organized by 7 shirt, waist, or laundry workers. The constitution forbids a local to withdraw from the national organization so long as 7 members, at a special meeting called for the purpose, object and are willing to retain the charter. Where there are 2 or more locals in any city or locality they may form a district executive board to deal with matters of common interest such as organizing, label agitation and strikes.

**Membership.**—Male and female workers in the manufacture, laundering, receiving, or delivering of shirts, collars, cuffs, shirtwaists, and similar articles are eligible to membership. Foremen, fore-women, and persons who have authority to hire or discharge are not eligible.

**Clearance cards.**—Membership is transferred from one local to another by means of a clearance card, which is issued on payment of all dues and assessments to the time of issue and payment of the per capita tax in advance for the period for which the card is to run, not exceeding 3 months, together with a fee of 10 cents for the card. If the member goes to any place where there is a local union, the card must be deposited within 2 weeks, on pain of forfeiture. It must, in any case, be deposited somewhere or renewed before it expires.

**Discipline.**—Charges against a general officer must be made by officers of a local and sworn to or affirmed before a notary public or a justice of the peace. They are tried before the executive board. The findings of the board and an abstract of the testimony are to be furnished to each local, and a majority vote, each local having the same vote which it would be entitled to in a convention, is required to approve the findings of the board.

Charges against a private member must be made in writing and tried before the local executive board, after proper notice to the defendant. The findings of the board, with a brief statement of the evidence, must be submitted to the local for approval. In all cases an appeal lies to the general executive board, and from it to the next convention.

**Finances.**—The charter fee for new locals is \$10. The per capita tax is 10 cents a month. The general treasury also receives 25 cents from each initiation fee, this goes to the organization and label fund. Ten per cent of the per capita tax goes to the strike fund. Payment of per capita tax is evidenced by a monthly due stamp, and members who have not such stamps in their due books are not entitled to benefits. It is required that due stamps be paid for by locals in advance; yet there is a provision that any local 3½ months in arrears shall be suspended.

The local initiation fee can not be less than \$1. Members are to be suspended when 3 months in arrears, and after 6 months their names are to be dropped from the rolls.

**Death benefit.** The union has adopted an optional plan for the payment of a death benefit of \$100, by assessments upon those members who enter the scheme. Any local union, as a whole, may enter it, and individual members may enter it when their locals do not.

**Strikes.**—When a dispute with an employer arises, the local executive committee must first try to settle it. If the committee does not succeed, the case is to be submitted to a secret vote of the local. A two-thirds majority is required to support a strike. If such a majority appears, a full statement of the case must be sent to the general executive board. If the board refuse to sanction the strike, the local may appeal to the general membership. A two-thirds majority of the members voting is necessary to overrule the decision of the board. A strike commenced by a local without the consent of the national authorities is at the local's risk and expense. Locals are forbidden to send appeals for financial assistance directly to other locals. All such appeals must be sent to the general secretary-treasurer.

The amount of the strike benefit is at the discretion of the executive board, but may not exceed \$5 a week. None is paid for the first week of a strike. No local can draw strike benefit until it has been 3 months connected with the national organization and has paid 3 months' dues, and no person can draw strike pay who was not a member before the beginning of the strike. The executive board has power to levy an assessment of 5 cents a week for strike purposes. Whenever the board is satisfied that a strike is lost, it can declare it at an end, so far as the financial help of the national organization is concerned.

Any member or other person who goes to work where a strike exists is to be fined not more than \$25, and the fine must be paid in full before the person can be reinstated or become a new member.

Members victimized for activity in the cause of the union are entitled to such assistance as the executive board may direct, not exceeding \$10 at one time.

**Distribution of work.**—The constitution requires members to have work equally divided where it is possible.

**Labor Day.**—Each local may adopt its own rules requiring its members to observe Labor Day.

## THE CHARTERED SOCIETY OF THE AMALGAMATED LACE CURTAIN OPERATIVES OF AMERICA.

**History.**—The Chartered Society of Amalgamated Lace Curtain Operatives of America is a small union whose membership is confined to the State of Pennsylvania, excepting the employees of one firm at Tariffville, Conn. It was organized in March, 1892. It has only 5 locals and about 360 members. The general secretary reports that this number includes three-quarters of the workers at the trade in the United States. The members are subject, however, in strikes, to the competition of lace makers in other lines. During 1900 the charter of a local union of lace makers in Brooklyn was revoked by the American Federation of Labor because its members took the places of lace-curtain operatives who were on strike at Wilkesbarre, Pa. A movement is understood to be on foot for the amalgamation of all lace workers with the Lace Curtain Operatives.

**General aims.**—The lace-curtain operatives mention the following among the objects of their union: "To endeavor to avoid all labor conflicts and their attendant bitterness and pecuniary loss by resorting to conciliation in the settlement of all disputes concerning wages and conditions of employment."

**Convention and constitutional amendments.**—The convention meets annually. "Each branch shall be entitled to at least 1 delegate, and 1 additional delegate for each 50 members or fraction thereof." Special meetings must be called on the petition of 2 or more branches; but the executive council may impose a fine, together with all the expenses of the meeting, upon the branches that call a special meeting which the council does not consider justified by the importance of the business.

The constitution may be amended by a majority vote of the convention.

**Officers.**—The officers are a president, a secretary, a treasurer, and an executive board composed of these officers and 5 other members. All must live in Philadelphia during their term of office. The officers are elected by popular vote.

The executive board has full control of the society, entire power over its funds, power to make all needed rules, and power to decide disputes and maintain discipline.

The secretary collects money due the international union. The treasurer receives all money from the secretary, and is required to deposit it within 48 hours, unless otherwise ordered by the executive board or the convention, and to show the receipt to the president within 48 hours after leaving the bank. He receives 5 cents per member per annum for his services. The books are to be audited once a year by a certified public accountant.

The members of the executive board are required to furnish bonds for \$2 000 each, and the president, secretary, and treasurer for \$10 000 each. The bonds are to be given by some responsible security company and the cost is paid by the society.

**Membership.**—The society is declared to be composed of lace-curtain operatives, and persons from any other branch of the lace trade who shall be admitted according to the rules. But persons from other branches of the lace trade are regarded as apprentices for 2 years after election to the union. A competent workman is defined as one who has worked 3 years at a lace-curtain machine.

A member who has been dishonorably dismissed from the society may be readmitted by the executive board on payment of such readmission fee as the board may fix, not less than \$100.

**Apprentices.**—One apprentice is allowed to every 9 competent workmen. An apprentice can not take up the occupation when he is younger than 18 or older than 25. Apprentices are required to serve 3 years, and then pay is fixed at 60 per cent of full rates the first year, 75 per cent the second year, and 90 per cent the third year, on one-half the racks made on the machine.<sup>1</sup> The deduction is equally divided between teacher and employer.

Workmen from other branches of the lace trade are expected to serve 2 years as apprentices, receiving 75 per cent of full pay the first year and 90 per cent the second year, the deduction being divided equally between teacher and employer.

**Finances.**—The initiation fee is uniformly \$10 for operatives and \$6 for apprentices. The per capita tax is 25 cents a week. The local dues are from 50 to 75 cents a week. Additional assessments are levied for death benefits as well as for strike benefits. A member who is more than 4 weeks in arrears has no claim for benefits.

**Funeral benefits.**—A funeral benefit is paid of \$100 after 1 year's membership, \$125 after 1 year and 6 months, \$150 after 2 years, \$175 after 2 years and 6 months, \$200 after 3 years. On the death of a beneficial member's wife, he receives \$50, "but no member shall be entitled to receive this more than once."

The funeral fund is kept separate from the general fund, and is maintained by separate assessments. Whenever it is reduced to \$500 a levy of \$1 a member is made by the executive board.

If a deceased member has no relatives in this country his funeral expenses, not exceeding \$100, are paid by the society, but no expense is to be incurred for wreaths or flowers. Heirs in any foreign country may claim any unexpended balance of the funeral benefit, provided they prove their claim within 6 months.

A member may retain his membership and his right to death benefits, after leaving the trade, by paying the death levies.

**Hours of labor.**—Members are forbidden to work more than 55 hours in a week.

**Piecework.**—The majority of lace curtain work is done by the piece.

## NATIONAL SPINNERS' ASSOCIATION OF AMERICA.

**History.**—The National Spinners' Association of America dates its organization, according to information given by the secretary, from 1858. It has not, however, maintained an uninterrupted existence. After a dissolution, of which the date is unknown, it was reorganized in 1873. It fell to pieces again in 1875. After another reorganization there was another dissolution in 1885. It has now existed continuously since 1889.

The association is composed of mule spinners, and it formerly bore the name of National Cotton Mule Spinners' Association. The number of members was reported in July, 1900, as about 3,000. The organization is almost confined to New England. The secretary believes that not more than 10 per cent of the New England mule spinners are outside of it.

**Convention.**—Up to 1899 the conventions were held twice a year, in April and in October. In October, 1899, the constitution was changed so that conventions

<sup>1</sup> Two operatives work at different times on the same machine. The product is evenly divided, in order that one may not take advantage of the other by neglecting to care for the machine and leaving it in bad condition. One-half the racks made on the machine represents the full product of one person.

The local initiation fee can not be less than \$1. Members are to be suspended when 3 months in arrears, and after 6 months their names are to be dropped from the rolls.

**Death benefit.** The union has adopted an optional plan for the payment of a death benefit of \$100, by assessments upon those members who enter the scheme. Any local union, as a whole, may enter it, and individual members may enter it when their locals do not.

**Strikes.**—When a dispute with an employer arises, the local executive committee must first try to settle it. If the committee does not succeed, the case is to be submitted to a secret vote of the local. A two-thirds majority is required to support a strike. If such a majority appears, a full statement of the case must be sent to the general executive board. If the board refuse to sanction the strike, the local may appeal to the general membership. A two-thirds majority of the members voting is necessary to overrule the decision of the board. A strike commenced by a local without the consent of the national authorities is at the local's risk and expense. Locals are forbidden to send appeals for financial assistance directly to other locals. All such appeals must be sent to the general secretary-treasurer.

The amount of the strike benefit is at the discretion of the executive board, but may not exceed \$5 a week. None is paid for the first week of a strike. No local can draw strike benefit until it has been 3 months connected with the national organization and has paid 3 months' dues, and no person can draw strike pay who was not a member before the beginning of the strike. The executive board has power to levy an assessment of 5 cents a week for strike purposes. Whenever the board is satisfied that a strike is lost, it can declare it at an end, so far as the financial help of the national organization is concerned.

Any member or other person who goes to work where a strike exists is to be fined not more than \$25, and the fine must be paid in full before the person can be reinstated or become a new member.

Members victimized for activity in the cause of the union are entitled to such assistance as the executive board may direct, not exceeding \$10 at one time.

**Distribution of work.**—The constitution requires members to have work equally divided where it is possible.

**Labor Day.**—Each local may adopt its own rules requiring its members to observe Labor Day.

## THE CHARTERED SOCIETY OF THE AMALGAMATED LACE CURTAIN OPERATIVES OF AMERICA.

**History.**—The Chartered Society of Amalgamated Lace Curtain Operatives of America is a small union whose membership is confined to the State of Pennsylvania, excepting the employees of one firm at Tariffville, Conn. It was organized in March, 1892. It has only 5 locals and about 360 members. The general secretary reports that this number includes three-quarters of the workers at the trade in the United States. The members are subject, however, in strikes, to the competition of lace makers in other lines. During 1900 the charter of a local union of lace makers in Brooklyn was revoked by the American Federation of Labor because its members took the places of lace-curtain operatives who were on strike at Wilkesbarre, Pa. A movement is understood to be on foot for the amalgamation of all lace workers with the Lace Curtain Operatives.

**General aims.**—The lace-curtain operatives mention the following among the objects of their union: "To endeavor to avoid all labor conflicts and their attendant bitterness and pecuniary loss by resorting to conciliation in the settlement of all disputes concerning wages and conditions of employment."

**Convention and constitutional amendments.**—The convention meets annually. "Each branch shall be entitled to at least 1 delegate, and 1 additional delegate for each 50 members or fraction thereof." Special meetings must be called on the petition of 2 or more branches; but the executive council may impose a fine, together with all the expenses of the meeting, upon the branches that call a special meeting which the council does not consider justified by the importance of the business.

The constitution may be amended by a majority vote of the convention.

**Officers.**—The officers are a president, a secretary, a treasurer, and an executive board composed of these officers and 5 other members. All must live in Philadelphia during their term of office. The officers are elected by popular vote.

The executive board has full control of the society, entire power over its funds, power to make all needed rules, and power to decide disputes and maintain discipline.

## THE ELASTIC GORING WEAVERS' AMALGAMATED ASSOCIATION OF THE UNITED STATES OF AMERICA.

**History.**—The Elastic Goring Weavers' Amalgamated Association was organized in 1885. It has 7 locals in Massachusetts, 2 in Connecticut, and 1 in Camden, N. J. It is one of the smallest national bodies affiliated with the Federation of Labor. Its members are makers of the elastic web which is inserted in the sides of congress gaiters. The demand for these shoes has been very light of late years, and the makers of the elastic goring have not had more than 3 days' work a week, yet their union is still one of the strongest in the United States, if strength is measured by control of a given field of labor. The general secretary reported in the summer of 1900 that only about 8 workmen of the trade were outside the union. The membership of the union was then 271. In 1895, when it was largest, it was 355. In June, 1901, it was reduced to about 230, with not more than six or seven workers of the trade outside. All of the goring weavers are men.

**Objects.**—The elastic goring weavers mention the following among the purposes of their union: "To cultivate, by all honorable means, a friendly feeling between employers and employed, to prevent strikes through the medium of arbitration; to endeavor by every means in our power to produce the best article possible with the material given to us, and thus demonstrate to our employers that while serving our own interests we are at the same time serving theirs."

**Officers.**—Each branch elects 1 delegate, and the delegates constitute an executive committee. The committee meets annually in September. Sometimes a special meeting is called during the year, and once or twice there have been two. Each delegate is entitled to 1 vote for every 10 members or major part thereof in his branch. The executive committee elects a president from among its own members, and a secretary who need not be one of themselves. It has general control over the business of the association. It is, indeed, both an executive committee and a general convention. Its members receive \$1 a day while engaged on union business. The executive committee has power to call for and examine all the books of any branch when it thinks it necessary. The constitution may be amended by a majority vote of the executive committee at an annual meeting. Any proposition for this purpose must be sent to the general secretary at least 4 weeks before the meeting.

**Nonmember men.**—Every person who runs a loom must be a member of the union, must receive the full list price for his work, and must pay his contributions according to the constitution. Members of firms and their sons are exempt from this rule.

**Apprentices.**—No member of the union is permitted to teach the trade to anyone without the consent of his branch.

**Finances.**—The expenses of the general body are raised by assessment. The initiation fee is uniformly \$15. The current dues are uniform throughout the association. The amount is fixed by the executive committee. It varies, from time to time, from 25 cents to 50 cents a week. A member is exempt from dues for any week in which he works less than 25 hours. For any week in which he works 25 hours and less than 35 hours he pay half dues. When he works 35 hours or more, his dues are to be paid in full. No branch may appropriate any part of its funds for any other purpose than necessary running expenses without the permission of the executive committee.

**Benefits.**—A death benefit of \$100 is paid. If a member owes 8 weekly payments, he is not entitled to benefit, and he does not come into benefit until 13 weeks after paying up his arrears.

In July, 1900, the secretary said that \$500 had been paid in death benefits during the preceding fiscal year, and \$410 in strike benefits. That about \$2,100 had been paid in death claims since 1892, and that since 1886 more than \$20,000 had probably been paid in strike benefits.

**Strikes.**—During the fiscal year 1899-1900 there were two strikes, involving 10 persons and costing \$250.

**Hours of labor.**—The constitution provides that 55 hours shall constitute a week's work, and that Saturday afternoon shall be a holiday the year round. As is noted above, the actual hours of labor have been much shorter of late on account of the depressed condition of the trade.

**Piecework.**—All the weaving of elastic goring is done by the piece. For preparatory work, such as altering the loom to make a different style of goods, the union fixes a rate of 20 cents an hour for skilled help and not less than 15 cents for unskilled.

**Union label.**--The Elastic Goring Weavers adopted a union label in 1898, but they have not succeeded in inducing any manufacturer to use it. The secretary explains that the only way in which it can be used effectively is by stamping it on the back of the goods. All manufacturers have their own printed stamps, and they are not willing to give up the stamps which they have spent money to advertise in order to use the union stamps. The union still hopes to induce the manufacturers to use its stamp in connection with their own. The use of the union label could not, apparently, greatly strengthen the position of the union, since it is asserted that 98 per cent of the goring made in the United States is already union made.

**Efforts to increase employment.**--The constitution of the Elastic Goring Weavers requires every member to wear congress shoes, the making of whose elastic web is the business of the members of the organization. In 1899 the union undertook an additional measure to help the depression in its trade, by sending out two members on the road to induce trade-unionists to buy congress shoes.<sup>1</sup>

### INTERNATIONAL UNION OF TEXTILE WORKERS.

**History.**--This union was formed on March 30, 1891. It was meant to include all workers in textile mills except cotton mule spinners. This exception was made because the Mule Spinners had a charter from the American Federation of Labor before the International Union of Textile Workers was formed. The intention of general inclusiveness has not, however, been carried out. The strength of the organization has been largely among the cotton-mill workers of the South. The New England cotton operatives have unions of their own, which have not been willing to join the existing international union. Some of the New England unions have been prevented from joining the American Federation of Labor only by their unwillingness to go into the International Union of Textile Workers and by the impossibility of getting a separate charter from the Federation under its rules. The Textile Workers, however, have branches in all parts of the United States where textile manufactures are carried on, and also in Canada. They are giving increasing attention to other branches than the cotton manufacture.

The officers of the Textile Workers were for some years on bad terms with the American Federation of Labor. The officers of the Federation attributed the difficulty to unfaithfulness of the officers of the Textile Workers to the trade-union movement, which was alleged to be caused by their pronounced socialistic opinions. The American Federation of Labor convention of 1895 directed that special efforts be made to organize the textile workers in the Southern States, and the Federation sent special organizers into the region for this purpose. The president of the Federation, in his report to the convention of 1896, declared that the unions of textile workers formed by the organizers of the Federation in Columbus, Ga., had "for a time been diverted from their purpose and turned into machines for theoretical political propaganda, rather than devoting their efforts for immediate economic and legislative relief. \* \* \* It behooves this convention, though, to say whether the efforts we put forth for the purpose of organizing the unorganized of this industry, and the money expended by us for these purposes, shall be perverted or further applied to a political machine, to the injury of the interests not only of the textile workers, but of the general labor movement."

In his report to the American Federation of Labor convention of 1897, President Gompers referred to the differences between the American Federation of Labor and the former managers of the Textile Workers National Union. He said that a representative of the executive council of the American Federation of Labor had attended a convention of the Textile Workers' Union, and had told the members that unless that organization "proposed to organize the textile workers as a trade union, the Federation would undertake that function." Mr. Gompers added that the Textile Workers' Union was now "offered by those who are devoted to its growth and interests," and deserving of all the sympathy and aid that the Federation could give.

About the beginning of 1898 the textile workers of New Bedford, Mass., struck without success against a reduction of wages. Those of Fall River accepted the reduction without a protest. President Gompers attributed the failure of the strike partly to this defection, partly to the comparatively unorganized state of the New Bedford operatives, except the Mule Spinners, and partly to the actions of certain representatives of the Socialist Labor party, who, he declared, held daily meetings for the avowed purpose of spreading dissatisfaction and discouragement

<sup>1</sup>American Federationist, vol. 6, p. 182

among the workers, exultingly predicted defeat, and did all they could to bring it about.

**Union of textile workers.**—The convention of the International Union of Textile Workers, in 1899, appointed a committee to confer with the other unions of workers in textile mills with a view to amalgamation. In September, 1899, this committee met with the representatives of the National Carders' Union, the National Federation of Textile Operatives, the National Loom Fixers' Association, the National Association of Mule Spinners, and the National Slashers' Association. It was unanimously resolved that all these unions should amalgamate into one national body, preserving the autonomy and the individuality of each trade union under the federation. The following resolution was also passed:

"Resolved, That in the event of any difficulty arising between any union represented in this conference and the management of any mill corporation, each organization shall make common cause against such employer, and all unions hereby pledge their support to any such aggrieved organization."<sup>1</sup>

On May 11, 1901, a conference was held in Boston between five representatives of the International Union of Textile Workers and five representatives of the American Federation of Textile Operatives, with Mr. James Duncan, first vice-president of the American Federation of Labor, as chairman. The representatives of the Federation of Textile Operatives were from the Fall River Carders' Association, the Weavers' Association, the Slasher Tenders' Union, and the Mule Spinners' Union. It was resolved that the organizations represented be amalgamated under the name of the United Textile Workers of America, that this new organization apply for a charter from the American Federation of Labor, and that the present charter of the International Union of Textile Workers be given up. A convention is to be held not later than November 19, 1901, to complete the new organization. This will give time for the various bodies which are to be absorbed to hold their conventions, either before the date fixed for the amalgamating meeting or at the same time, and complete their arrangements for ending their separate existence. On the other hand, it will be possible to report the complete union to the convention of the American Federation of Labor in December. It is expected that the new organization will immediately absorb all the unions in the textile trades except the Mule Spinners. The Mule Spinners have an old and strong organization, with prior rights of recognition by the American Federation of Labor, because they were the first textile union to affiliate with it. It is admitted that the technical situation of their trade is such that they may very properly maintain their separate organization until the development of the new amalgamation shall provide proper means of supervising the Mule Spinners' affairs. It is expected, however, that they will ultimately unite in the one organization with the other textile workers.

**Declaration of principles, and general aims.** The following declaration of principles is prefixed to the constitution:

"Society at present is composed of classes whose interests are highly antagonistic to each other. On the one side we have the proprietary class, possessing almost all the soil, all houses, factories, means of transportation, machines, raw material, and all necessities of life. In comparison to the entire people this class represents a small minority. On the other side we have the workmen, possessing nothing but their intellectual and physical power with which to labor, and which they must sell to the possessors of the means of production in order to live. The workers represent the millions.

"The interest of the possessing class consists in buying the productive power of the laborer as cheaply as possible, in order to produce as much as possible and to amass wealth. The few hundred thousand proprietors arrogate to themselves the larger part of the wealth produced by the workers.

"The laboring millions receive from the product of their labor only so much as is necessary to live a life of misery and starvation.

"Every improvement in machinery, every new discovery of hitherto unknown forces in nature, the proprietary class arrogates to itself for the exclusive purpose of increasing its possessions. Through this process human labor is more and more displaced by machinery.

"The workers having become superfluous are compelled to sell their labor at any price in order to save themselves from starvation. The value of labor gradually decreases; the laboring people are being impoverished more and more; their consuming power is more and more lessened, and the consequence is that the commodities produced remain upon the market without being bought by anyone. Commercial stagnation sets in, production is decreased and even partially suspended. The crisis has arrived.

<sup>1</sup> Convention Proceedings, 1900, pp. 13-16.

"The proprietary class presses into its service the power of the State, the police, militia, press, and pulpit to protect the possessions produced by others and to declare for the 'sacredness' of property.

"While the millions of the working people are left without the means of existence, without rights and unprotected, betrayed and sold out to their enemies by the State, by the press, and by the pulpit, the arms of the police and of the militia are directed against them.

"In consideration of these facts we declare:

"1. That the laboring class must emancipate itself from all influences of its enemy, the proprietary class, that it must organize locally, nationally, and internationally for the purpose of setting the power of the organized masses against the power of capitalism, and that it must see that its interests be represented in the mills, workshops, etc., and in different branches of the local, State, and national administrations and governments.

"2. National and international trade unions are apt to exert a powerful influence upon production, prices, the hours of labor, the regulation of apprenticeship, and to support their members in all the different phases of life.

"3. The combat through which they have naturally to go with the organized power of capitalism leads them to recognize that all trade unions must form one great, powerful body, the solidarity of the interests of all is proclaimed, the workers mutually assist each other. Soon the fact will be recognized that the entire system of production rests upon the very shoulders of the laboring class and that if the workers only display their firm determination and exert their power a new system based upon justice might be easily introduced. Arrayed against the power of capitalism and its minions stands the power of the laboring masses self-reliant and conscious that they possess the power with which to overwhelm their antagonists.

"4. There is no power on earth large enough to resist the will of such a majority if it be enlightened in regard to its rights, it will accomplish its aims and objects irresistibly. The right of nature is upon its side. The earth, together with all its wealth, belongs to mankind. The results and triumphs of civilization have been achieved through the course of thousands of years and with the assistance of all nations. The organized workers will come to carry into reality these principles, and they will establish a state of affairs under which everyone will enjoy the fruits of his labor."

The declarations of principles of the Amalgamated Glass Workers and the Wood Workers are the same, word for word, with two or three exceptions. Those of the Brewery Workers and the Bakers are the same in substance, phrase for phrase, though with a different choice of words. The differences seem to be differences of translation from the German.

The Union of Textile Workers has especial reason to desire action upon the subject of child labor, because its members are largely in the South, where organization is weak, factory legislation is backward, and the exploitation of child labor is universal. At the convention of 1900 it passed resolutions in favor of the prohibition of the labor of children under 11 years old in any manufacturing establishment, mine, workshop, or the like, and in favor of compulsory education according to the laws of Massachusetts.

The union urges its members to "strive to secure legislation in favor of the wealth producers of the country," and provides that all discussions and resolutions in that direction shall be in order at any regular meeting, though party politics must be excluded.

**Convention.**—The convention meets annually in May. Each local is entitled to 1 delegate for each 100 members or fraction thereof. The mileage and expenses of delegates are paid by their locals. The president and the secretary-treasurer are required to attend the convention, and their expenses are paid out of the general treasury.

**Constitutional amendments.**—The constitution may be amended in the convention by a two-thirds vote. It is recommended that proposed amendments be submitted to the general secretary-treasurer at least 20 days before the convention, so that he may lay them before the locals.

**Officers.**—The officers are a president, five vice presidents, a secretary-treasurer, and two general organizers. By action of the convention of 1901, one vice-president must be elected from the woolen industry, one from the carpet and jute industry, one from the silk industry, and one from the Northern and one from the Southern cotton mills. One of the organizers must come from the North and one from the South. All the officers are elected by the general convention by ballot, and a majority of all votes cast is necessary to an election. The general executive council has full power to direct the affairs of the union in the interval between

conventions, including the power to indorse strikes and to levy an assessment, when it is necessary, to carry on the work of the international union or to aid a union on strike. It also has power to hear all appeals and grievances.

**District councils.**—The Textile Workers' Union permits the establishment of a district council in any manufacturing center where 2 or more local unions exist. Elsewhere in the constitution it is said that 3 unions in one vicinity may form a district council.

**Membership.**—The only qualification prescribed by the constitution of the International Union of Textile Workers is that the candidate "must have been a textile worker."

**Finances.**—The per capita tax is 5 cents a month. The initiation fee is usually \$1. The local dues are usually 50 cents a month. The president recommended in his report to the convention of 1900 that the national organization be strengthened by an increase of the per capita tax. On a proposition to raise the tax from 5 cents to 6 cents a month the vote was—yeas, 37, nays, 28. So the motion was lost, as a two-thirds vote is required to amend the constitution. The convention, however, authorized the national president to levy an assessment of 5 cents a member a week to support a strike or lockout, and also authorized the executive committee to levy an extra assessment in case of a lockout where a new union was being established. The convention of 1901 limited assessments to 2 cents a week and to 4 months in a year.

The constitution forbids the use of funds of the union for loans or for political purposes.

**Strikes.**—The Textile Workers' Union provides that when any difficulty arises the members aggrieved shall lay the case before their local union or district council, and this body shall try to adjust the dispute through a conference committee. No strike requiring assistance from the international union can be declared except by a two-thirds vote, by a secret ballot, of the members present at a meeting held to consider the grievance, after due notice to all members. When such a vote has been passed, the general secretary of the international union must be notified and if the general executive committee deem it necessary, he is to deputize a member to visit the scene of the difficulty and try to settle the dispute by arbitration. If this fails, final report is made to the general executive committee, and they have power to sustain the action of the local union or district council provided the body affected has been for 6 months connected with the international union. It may then pay such benefits as the funds of the organization permit.

**Hours of labor.**—The convention of 1900 instructed the secretary-treasurer to make a request of all manufacturers of textile fabrics to concede a workday of not more than 10 hours, to take effect not later than May 1, 1901. This action had no important visible result, but the results of the agitation are likely to appear hereafter.

## TRUNK AND BAG WORKERS' INTERNATIONAL UNION OF AMERICA.

**History.**—The Trunk and Bag Workers' International Union of America was organized in 1895. In July, 1900, the secretary reported 7 locals and 343 members. The number of locals and members in previous years is given as follows.

December 31	Locals	Members
1896	3	45
1898	3	49
1899	6	249
1900	6	290
1901 (June 1)	6	290

**Convention.**—The convention meets biennially between December 25 and January 1. Each local is entitled to one delegate. No member of the executive board is eligible. Every delegate must have been a member for 1 year unless his local has been formed within that time. Members not in good standing and members whose names have been on the black list are ineligible. Each local bears half the expense of its delegate, the other half is paid from the general treasury.

**Constitutional amendments.**—The constitution may be amended only by a two-thirds vote of all the members. The constitution provides that the union shall not be dissolved while there are three dissenting unions, "nor shall this section be subject to any alteration whatever."

**Officers.**—The officers are a president, a vice-president, and a secretary-treasurer. These officers also constitute the executive board. The president and the secretary must live at different places. The secretary is paid \$5 a month. All the members of the board receive \$2 a day for actual time lost in attending meetings of the board. The executive board has power to decide all questions and disputes, subject to appeal to popular vote of the members. The officers are elected by the convention and a clear majority is necessary to elect.

The executive board has power to appoint organizers at a salary not less than \$1 a day, with an allowance for expenses of \$1 a day and railroad fare.

**Membership.**—Any person who has served the term of 3 years in the trunk and bag industry is eligible to membership. This includes members of cooperative factories, and manufacturers who employ no journeymen.

**Apprentices.**—Each shop is entitled to 1 apprentice for every 4 journeymen. Boys can not enter as apprentices under 14 years of age.

**Discipline.**—Fines may be levied by local unions up to the amount of \$25. Larger fines must be submitted to the executive board for approval.

**Finances.**—The charter fee is \$9. This includes the cost of seal and certain stationery. The per capita tax is 15 cents a month. The initiation fee may not be more than \$3 nor less than \$1, and the dues are uniformly 10 cents a week. Dues and assessments are paid by the stamp system. Any member who fails to pay dues or assessments for 12 weeks is to be suspended, unless he is out of employment and when so suspended he is subject to a reinstatement fee of \$2. Locals are liable to suspension when 30 days delinquent in payment of per capita tax.

**Strikes.**—All applications for permission to strike are to be submitted to the executive board, and strike pay can not begin before the day on which the executive board approves the application. Strike pay is \$5 a week for the first 8 weeks, and thereafter \$3 a week during the continuance of the strike. A union whose application to strike has not been approved may not make a second application for the same cause during the next 3 months.

If a committeeman is discharged while performing his duty he is entitled to strike benefit from the time of his discharge.

**Union label.**—The union label was adopted in July, 1898. The first issue of it is said to have been made in January, 1900. In June, 1901, the secretary-treasurer reported that 4 manufacturers were using the label, and that about 1,000 labels had been issued.

## CHAPTER V.

### LABOR ORGANIZATIONS IN THE PRINTING TRADES.

#### INTERNATIONAL TYPOGRAPHICAL UNION OF NORTH AMERICA.

**History.**—The International Typographical Union has had a longer continuous history as a national organization than any other in the country. It was organized in 1850, took the name of the National Typographical Union in 1852, and became the International Typographical Union in 1869. Its growth has been steady and constant, and it has long been recognized as a type of a strong labor organization.

The average number of paying members for each year, ending June 30, since 1890, is as follows: 1890, 24,194; 1891, 25,165; 1892, 28,187; 1893, 30,454; 1894, 31,379; 1895, 29,295; 1896, 28,838; 1897, 28,096; 1898, 28,614; 1899, 30,646; 1900, 32,105; 1901, 11 months, to May 31, 34,918. The union received per capita tax on 38,646 members during the month of January, 1901.

It will be seen that the union grew rapidly from 1890 to 1894. In the next fiscal year it gained the 1,100 or 1,200 members of the German-American Typographia, whose amalgamation with the International Typographical Union took effect July 1, 1894. In spite of this its average membership fell more than 2,000. This was partly through the hard times and partly through the departure of the pressmen and the bookbinders. Since 1898 there has been again a rapid increase, and the

organization is now larger than ever before. The following table shows the proportion of unions and members belonging to the different branches of the craft organized in the International Typographical Union:

*Local unions and members of International Typographical Union; years ending June 30 up to 1900; in 1901, May 31.*

Branches.	Number of unions at end of year			Average membership for whole year		
	1899	1900	1901	1899	1900	1901
Typographical unions	311	380	412	27,673	28,864	31,000
German-American Typographia	22	24	21	843	861	635
Stereotypers and electrotypers	42	42	50	1,431	1,459	1,578
Photoengravers	19	19	19	843	861	635
Mailers	11	12	15	562	555	629
Typesetters	3	6	6	110	282	411
Newspaper writers	4	8	6	57	84	68
Total	442	490	529	30,616	32,105	34,948

The typographical unions are made up of compositors working in English, with a few of the other languages, not including German. The German compositors are in the German-American Typographia. It will be seen that nearly four-fifths of the unions are those of the English compositors while the number of members of the compositors' unions including the German-American Typographia, is nearly nine tenths of the total number. The organizations of Stereotypers and Photoengravers are relatively strong, these branches employing comparatively few men. The mailers are less effectively organized, while the attempt to organize reporters and newspaper writers in connection with the Typographical Union has so far met with comparatively little success.

The German-American Typographia has so high an organization, under its own laws, that it is treated separately below (pp. 100, 101).

The members of the minor crafts within the organization still display the same uneasiness which led to the secession of the Pressmen and the Bookbinders. In the convention of 1900 the Stereotypers' and Electrotypers' District Union asked to be allowed to withdraw from the International Typographical Union and establish a separate international union. The request was denied.

**Triple alliance—Pressmen and Bookbinders.**—There have been considerable discussions from time to time between different branches of the printing trades. In former years all the employees of printing and binding establishments, so far as they were organized, were usually members of the International Typographical Union. The great preponderance of the compositors necessarily gave them control of the common organization. The less numerous crafts believed that their interests were often neglected for the interests of the ruling trade. The pressmen were the first to start a formidable movement for secession. They established the International Printing Pressmen's Union in 1889. In 1892 the International Brotherhood of Bookbinders was formed. The early 90's were a period of constant conflict between these new organizations and the Typographical Union, which still claimed jurisdiction over bookbinders and pressmen. It was not until 1895 that peace was brought about. A truce and a treaty of alliance were made, to take effect January 1, 1896. This "tripartite" agreement, with amendments adopted in 1897, and in March, 1901, is still in force.

Each party agreed to abandon all pretense of right to organize persons engaged in any branch of the business controlled by either of the other parties. This was, of course, a restriction upon the Typographical Union, which had claimed jurisdiction over the whole force of printing offices. The Typographical Union desired to establish joint defense funds and to form a strong alliance, but this was defeated by the action of the other organizations. If a dispute arises between the allied unions it is agreed to refer it to a board of arbitration of three members, one chosen by each union.

Grievances which require joint strikes must be decided by the executive boards or councils of the several international unions. A united request for action of the central authorities must first be made by local unions representing each international union. The international presidents must then be notified, and must visit the place in person or by proxy and try to effect a peaceable settlement. If they fail they must report to their respective executive councils. For the purpose of action in such cases the executive councils of the several international unions

must have an equal number of members. If a majority of the executive councils taken together believe that a strike is absolutely necessary, the presidents must again try to effect a settlement, and if still unsuccessful they are to order a strike of all members of the three unions in the offices affected. When a joint strike has been inaugurated the whole burden of strike pay for the first 8 weeks is placed upon the union from whose dispute the strike arose. The rate is \$7 a week to married men or heads of families, and \$5 a week to single men or women. After 8 weeks beneficiaries must apply to their own unions for further relief. Strikes may be declared off by a majority vote of the executive councils. Any local union may strike without the consent of the united local unions in the place, but in that case the allies are under no obligation to assist, except by refraining from filling the places of the strikers.

The relations between the three organizations under this agreement have not always been harmonious. The use of the label of the allied printing trades councils has caused frequent difficulty. This subject is referred to below, under the head "Union label." The officers of the Typographical Union complain that the equal representation of their body with the much smaller organizations of the pressmen and bookbinders in the formation of local and international strike committees and allied councils is an injustice to the compositors, and that they, as the oldest and strongest organization, are often compelled to take up the fights which the weaker organizations are unable to carry on themselves. It is also declared that, while the tripartite agreement requires the Typographical Union to induce nonunion pressmen and bookbinders to join the unions of their crafts, the agreement does not require the pressmen and the bookbinders to return the compliment, and it is in fact not returned. The smaller organizations, on the other hand, declare that they do insist that compositors join the Typographical Union; and they attribute the continual friction to the domineering attitude of the Typographical Union.

The trouble appears to be at bottom the same which made it hard to unite the large States and the small under the Constitution of the United States. The small States—the Pressmen and the Bookbinders—want common affairs to be controlled by a board in which each organization shall be treated as a unit and shall have equal powers. The large State—the Typographical Union—wants power to be proportioned to membership. The latter principle, strictly carried out, would give the compositors absolute control of the whole force of the printing offices. The former would subject the majority of the workmen, as members of the Typographical Union, to the control of a comparatively small minority.

The amendments of 1901 establish a joint board of appeals, consisting of the presidents of the three international unions. This board has power to charter the allied printing trades councils and to enact rules for the government of them. It also has power to hear appeals from the action of the councils. The new amendments also provide more definitely for the regulation of the allied trades label. These provisions are given in greater detail below (pp. 98, 99).

**Allied Printing Trades Councils.**—Allied printing trades councils had been established in many places before the Tripartite Alliance of 1895 was formed. They customarily consisted of three representatives from each local union in the place, connected either with the International Typographical Union, the Pressmen, or the Brotherhood of Bookbinders. The Tripartite agreement assumed the existence of these bodies, but did not undertake to regulate them and did not mention them except in connection with the union label of the allied printing trades. The amendments of March, 1901, provided a constitution for them. They are to be composed of members of the three international unions "and such other organizations affiliated with the American Federation of Labor as may obtain the unanimous consent of the joint board of appeals to their admission." Each council is to be composed of three delegates from each local union entitled to representation. The joint committee which framed the amendments agreed that where there are two or more locals connected with the international unions they shall be compelled to form an allied printing trades council, and that where such a council exists all eligible locals shall be compelled to join it. The enforcement of these rules is necessarily left to the international unions severally. It was enacted by the joint committee that when an allied printing trades council is formed it must, within 60 days, apply to the joint board for a charter.

**Linotype machinists.**—One of the most troublesome and persistent of jurisdiction disputes has existed for some years between the Typographical Union and the Machinists' Union over the control of the machinists who are employed in printing offices to keep the linotypes in order. At the American Federation of Labor convention of 1895 a petition was presented from some linotype machinists in Brooklyn, who desired a local charter direct from the American Federation of

Labor, and said that they desired to join the Typographical Union, "but were opposed and prevented to a certain extent by the International Association of Machinists." The officers of the Federation had declined to grant the local charter advising the men to join either the Typographical Union or the Machinists. The convention declined to interfere at that time.<sup>1</sup>

The Machinists afterwards adopted a resolution authorizing the organization of hnotype machinists into separate lodges wherever 10 or more were employed in one city. Several such lodges were formed. Some hnotype machinists joined the grand lodge, under the individual-membership law, in places where the machinists had no lodge.<sup>2</sup> The International Typographical Union, however, in 1898 adopted a rule that after July 1, 1899, all machine tenders in printing offices should be members of the Typographical Union. This attempt to shut out members of the Machinists Union from the care of hnotypes unless they would join the Typographical Union also brought the long-standing dispute to a head.

In the American Federation of Labor convention of 1898 the representatives of the Machinists introduced a resolution declaring it to be the sense of the convention that all machinists, in printing offices or wherever employed, should be under the jurisdiction of the International Association of Machinists. Though this resolution seems to agree with the principle of organization by trades which the Federation has always maintained, the convention did not venture to take such action, but resolved: "While the policy of the American Federation of Labor has always been to uphold an affiliated organization in the rightful exercise of its trade jurisdiction, we strongly recommend the International Typographical Union and the International Association of Machinists to make still another effort to settle the question, either by agreeing to arbitration by an impartial tribunal of trades-unionists, or such other means as may present themselves."<sup>3</sup>

The convention of the Federation in 1899 recommended that a committee of arbitration be formed, consisting of three members of the Typographical Union, three members of the Machinists, and three disinterested trades-unionists, appointed by the executive council of the Federation, to investigate the dispute. It was not proposed that this committee render any authoritative decision.<sup>4</sup> The executive council accordingly appointed a committee, and the Machinists appointed one. The Typographical Union declined to do so, but insisted on maintaining the position which it had taken.<sup>5</sup> It had possession of the field, and proposed to keep it.

The American Federation of Labor convention of 1900 expressed deep regret that the Typographical Union did not accept the desire of the Federation that the dispute be submitted to a fair tribunal for adjustment, but admitted that the Typographical Union was within its constitutional powers, and pledged the services of the Federation for further mediation between the two unions. The committee which reported on the matter expressed the opinion that the broad principles on which the controversy between the Brewery Workmen and other unions had been decided would have to govern this case also.<sup>6</sup> There seems to be no logical escape from this position. The decision in the brewers' case substitutes the principle of organization by industries for that of organization by trades. If this is adhered to, the claim of the Typographical Union to control the printing-office machinists must apparently be conceded.

**District organizations.**—The compositors' unions are divided into 16 districts, each of which has an organizer, who does not, however, give his entire time to the work. The stereotypers and the electrotypers throughout the country form a district by themselves, and this district organization has the exclusive right to issue charters to new unions of members of those crafts, and to decide matters relating exclusively to them. The president of this district organization is the second vice-president of the international union. More recently the photo-engravers have formed a similar trade district. The president of it is the sixth vice-president of the general organization. Other allied trades belonging to the international union may form such trade districts, but apparently they have not done so as yet, although one of the vice-presidents must be chosen from members of each of these branches.

**Relation to other labor organizations.**—The printers have always taken a lively interest in trades-union alliances. The convention of 1864 recommended the creation of local federations everywhere, embracing all possible trades. The convention of 1882 renewed the recommendation. That of 1885 proposed to fine anyone who

willfully violated a boycott ordered by any federation of trades with which a typographical union was affiliated.

In 1869 the typographers at Washington took the initiative in a protest against the reduction of wages in the navy-yards, which the administrative officers enforced in connection with the introduction of the 8-hour day by act of Congress.

It was the International Typographical Union which officially called the Pittsburgh congress of workmen, in November, 1881, from which sprang the Federation of Trades, and in 1886 the American Federation of Labor.<sup>1</sup>

**Political attitude.**—The general laws of the organization forbid any member to use the name of his union for any political purpose to further his or her personal interests without the consent of the union, but a subordinate union may take political action where the interests of the craft as a whole may be benefited thereby. As a qualification of this latter regulation, however, must be considered the following resolution, adopted in 1892. "The International Typographical Union is non-political in character and condemns all action by subordinate unions for the advancement of party ends."

The International Union, however, has adopted a resolution urging the subordinate bodies to provide for the discussion of the various phases of the labor question and of other matters of public concern. The union has also from time to time passed resolutions favoring particular governmental action, such as the initiative and referendum on constitutional questions, the establishment of postal savings banks, Government control of telephones, telegraphs, and railways, abolition of the contract system on all public works, etc.

"This international body requests the abolition of the contract system in connection with Federal, State, and municipal public works, and the institution of a system whereby such public works will be carried on under the direct supervision of the Federal, State, and municipal governments thus saving to the people a large revenue which is now absorbed by middlemen."

"Union printers of the United States and Canada, in convention assembled, favor in every manner governmental control of the telegraph, railway, and telephone, and call upon all subordinate unions to endeavor by all possible means to have their Senators and Congressmen work to that end."

"That the International Typographical Union petitions the Fifty-sixth Congress of the United States to enact suitable laws for the establishment and control of the postal savings bank system. That each and every subordinate union in the United States of the International Typographical Union be requested and urged to petition their Senators and Representatives in Congress to urge and vote for legislation establishing said postal savings banks."

The union has been particularly active in advocating Government ownership of the telegraph. It believes that this change is especially important to its members, because the conduct of the telegraph companies, and particularly their relations with the news-gathering agencies, are such, in its judgment, as to restrict the establishment of newspapers, and so to restrict the employment of printers.

In the convention of 1899 a resolution was presented reciting that private property in the natural sources of production and the instruments of labor is the cause of economic servitude and political dependence, and calling upon the members of the union to ally themselves with the Socialist Labor Party. It was proposed that the resolution be submitted to the referendum, and when approved be made a part of the constitution. In the brief discussion which followed one of the members said that he was a socialist, but was not a member of the Socialist Labor Party, and objected to seeing the International Typographical Union made a tail to the party kite. The resolution was tabled by a vote of 61 to 12.

In the convention of 1900 the following resolution was at first adopted by a vote of 87 to 73, but was reconsidered the next day by a vote of 91 to 61, and defeated:

*Resolved*, That the International Typographical Union emphasizes that it is distinctly a class organization, embracing in its membership all workers following the kindred crafts in the printing industry, who upon the industrial field are antagonized by their employers on every occasion, which fact should impress the members of this organization that to subserve their interests as wage workers it is essential that they act as a unit upon the political field, from whence capitalism derives its power to oppress, and we declare it consistent with the ethics of unionism and the sacred duty of every honorable member of this union to sever his or her affiliation with all political parties of the exploiting class, which are constantly encroaching upon the liberties of the working people."

<sup>4</sup> Proceedings, 1899, p. 44.

**Conventions and constitutional amendments**—The conventions of the Typographical Union are held annually in August. Subordinate unions are entitled to representation according to the following apportionment: Unions with 100 members or less, 1 delegate, more than 100 and less than 500 members, 2 delegates, more than 500 and less than 1,000 members, 3 delegates, and 1,000 or any greater number of members, 4 delegates. Two or more subordinate unions, having a membership of less than 100 members each, have the power of combining and electing 1 delegate if they so desire.

All constitutional amendments are adopted, on the principle of the referendum, by popular vote of the members. Such amendments as are approved by the annual convention are submitted to the general membership. If a majority of the votes cast favor an amendment, it goes into effect. General laws, however, which include some very important features of the work of the organization, may be adopted by the convention itself. The principle of the initiative is also recognized. Whenever 50 subordinate unions petition for the submission of any proposition or constitutional amendment it is the duty of the executive council to submit it to a vote of the membership.

From 1891 to 1898 the conventions were held biennially, and in 1898, for the first time, the officers were elected by popular vote instead of by the convention. There was a strong agitation in 1898 for a return to annual conventions, and also for an increase of the power of conventions at the expense of the powers of the members at large. In particular for a return to the system of electing officers by the convention. This agitation was attributed, at least by some of the opponents of it, to dissatisfaction with the results of the recent popular election. It was said that the smaller unions lost the chance of getting officers in losing the advantage which their relatively large representation in the convention gives them, and that many delegates from the larger cities were displeased because their favorites were not elected, and felt sure that a different result could have been secured if the choice had been left to the delegates. Mr. Prescott, who had been president for 7 years, but who was not the recipient of the election by referendum, which had just occurred, came out strongly in favor of the maintenance of the referendum principle. He declared that representative government as practiced by the union was farcical, that the system of representation was inequitable, and that delegates in many instances did not pretend to know, to say nothing of representing, the views of their unions; that the mandates of the convention were habitually disregarded by local unions, and that "it was not until the members spoke through the referendum that the international's utterances were deemed worthy of attention or acquiescence."

The convention voted in favor of the complete abolition of the referendum system. It was necessary, however, to submit the measure to popular vote, and on the popular vote it was defeated. The convention was made annual, but no change was made in the system of representation which the president had complained of. The larger unions still have much less representation in proportion to their membership than the smaller.

**Officers**—The elective officers of the International Typographical Union, whose terms are 2 years, are a president, a first vice-president, a second vice-president, who must be a practical electrotypist or stereotyper, and who is elected by the stereotypers and electrotypers' trade district union, a third vice-president, who must be a member of the German-American Typographical Union, elected by the members of that organization; a fourth vice-president, who must be a practical mailer; a fifth vice-president, who must be a member of the Newspaper Writers' Union, a sixth vice-president, who must be a practical photoengraver, elected by the photoengravers' trade district union; a seventh vice-president, who must be a practical type-founder, and a secretary-treasurer.

The union also nominates the trustees of the Childs-Drexel Home for Union Printers and an agent whose duties are connected with that institution. The board of trustees is legally a self-perpetuating body, but the candidates chosen by the union are elected by the board, as a matter of course.

The officers are elected in May by the votes of the individual members of the subordinate unions. Any subordinate union may, by a majority vote, nominate one candidate for each of the offices, except that those vice-presidents who must belong to particular allied crafts can be nominated only by unions of their own trades. The secretary-treasurer prepares a ballot containing the names of all candidates for each office, arranged alphabetically, together with the names and numbers of the unions of which they are members. Each member of the union votes by designating his choice with a cross.

With the exception of the president and the secretary-treasurer, those nominees having the highest number of votes on the first ballot are declared elected to the

positions for which they are candidates. If on the first ballot no candidate for president or secretary-treasurer has received a majority of all votes cast, the secretary-treasurer issues ballots containing the names of the two candidates who have received the greatest number of votes, and the subordinate unions hold a second election.

The president and the secretary-treasurer are required to give their full time to the work of the union and to reside at its headquarters at Indianapolis. The president has a casting vote when there is an equal division in the convention. He oversees the operations of the organizers. He may suspend any officer for neglect of duty, and such officer is then tried before a committee of three members of the executive council appointed by the first vice-president. The president is also required to see that the accounts of the secretary-treasurer are properly balanced.

The second, third, and sixth vice-presidents have special powers relating to the branches of the organization by which they are elected. The secretary-treasurer must give bond for \$20,000. He must deposit all funds under the direction of the president in responsible banks, and can withdraw them only by check signed by the president and himself. All bills require the approval of the president. The treasurer must balance his books monthly and publish in the *Typographical Journal* a full statement of receipts and disbursements. An auditing committee inspects his accounts twice a year.

The executive council consists of the president, the first second, and third vice-presidents and the secretary-treasurer. The council has general supervision of the business of the union. It decides all questions arising between subordinate unions or between districts, questions relating to strikes, etc. Appeals from its decisions only to the convention. The executive council may impeach any officer, and on proper trial he may be disqualified.

The salaries of the officers are as follows: For the president, \$1,100 per annum and traveling expenses, confined to actual railroad fare by the shortest possible route and hotel expenses not to exceed \$3 per day, first vice-president, \$150 and traveling expenses to and from the conventions of the International Typographical Union; second vice-president, \$300 per annum and traveling expenses as above, third vice-president, \$500 per annum, sixth vice president, \$50 per annum and \$1 per diem and legal expenses while engaged in the performance of any work under the direction of the president or the executive council, secretary-treasurer \$1,100 per annum. The compensation of an unsalaried officer is an amount for time lost equal to his earning capacity, or, if unemployed, the regular scale of his union, with hotel expenses not in excess of \$3 per day, and first-class railroad fare by the shortest possible route.

**Membership**—No subordinate union may admit a person who has not served an apprenticeship of at least 4 years and passed a rigid examination. This provision does not apply to newspaper writers and mailers. The international organization recommends that no one be admitted under the age of 20 years. "A subordinate union has not the right to reject a candidate for membership solely on the ground of having served his apprenticeship in an 'unfair' office, but such union may impose such restrictions, in its discretion, as seem best for the general welfare, upon apprentices entering 'unfair' offices within its jurisdiction, and such apprentices may not be permitted to enter the union until such restrictions are removed or special laws complied with."

The general laws also declare that, "While it is the sense of the International Union that subordinate unions, and they only, have at all times the right of judging of the qualifications of the applicants for admission to membership, it is deemed the true policy of subordinate unions to go to the utmost limits consistent with safety and honor in receiving into membership all 'unfair' printers who make application to that effect, and who evince a desire to again become 'fair' men." A rejected applicant may appeal to the international president, and the action of the local may be set aside if it appears that the applicant has been unfairly treated. Either party may take a further appeal to the executive council.

The obligation which every person must subscribe on being admitted to membership is given here in full, in the belief that it is typical of the obligations usually imposed by trade unions:

"I (give name) hereby solemnly and sincerely swear, or affirm, that I will not reveal any business or proceedings of any meeting of this or any subordinate union to which I may hereafter be attached, unless by order of the union, except to those whom I know to be members in good standing thereof; that I will, without equivocation or evasion, and to the best of my ability, abide by the constitution, by-laws, and the adopted scale of prices of any union to which I may belong; that I will at all times support the laws, regulations, and decisions of

the International Typographical Union, and will carefully avoid giving aid or succor to its enemies, and use all honorable means within my power to procure employment for members of the International Typographical Union in preference to others, that my fidelity to the union and my duty to the members thereof shall in no sense be interfered with by any allegiance that I may now or hereafter owe to any other organization, social, political or religious, secret or otherwise, that I will belong to no society or combination composed wholly or partly of printers, with the intent or purpose to interfere with the trade regulations or influence or control the legislation of this union, that I will not wrong a member, or see him or her wronged, if in my power to prevent. To all of which I pledge my most sacred honor.

"Provisional members" may be received in places where there are not enough printers to organize a local. Printers in such places may make application to the secretary-treasurer of the International Typographical Union, and he is to publish their names in the Typographical Journal. If no valid objection is received within 30 days, he is to issue certificates of membership. Such provisional members pay an initiation fee of \$2 and pay the regular per capita tax.

**Withdrawal cards.**—Members who cease to work at the trade, or who remove from the jurisdiction of a subordinate union, may receive withdrawal cards, which exempt them from dues, and deprive them of office and benefits.

**Discipline, nonunion men, etc.**—The policy of the International Typographical Union is to unionize individual printing offices thoroughly, by reaching agreements with the employers to abide by the rules of the union and to employ exclusively union men. The union insists that in such offices the foreman shall be a union man and shall have entire control of the office management. Printers seeking work are permitted to apply only to the foreman. The following provisions will show more in detail the practice of the International Union as to the unionizing of offices.

All persons performing the work of a foreman or journeyman at any branch of the printing trade under the jurisdiction of the International Typographical Union must be active members of the local union of their craft, and entitled to all the privileges and benefits of membership. *Provided*, Local unions can prohibit employers from becoming active members of their organizations if they so desire.

It shall be a misdemeanor, punishable by expulsion, for one union man to make application for the position of another union man in any office. Foremen of printing offices have the right to employ help, and may discharge: (1) for incompetency, (2) for neglect of duty, (3) for violation of office rules (which shall be conspicuously posted) or of laws of the employer union; and (4) to decrease the force, such decrease in newspaper offices to be accomplished by discharging first the person or persons last employed, either as regular employees or as extra employees, as the exigencies of the matter may require. Should there be an increase in the force within 60 days after a decrease, the person or persons displaced through such cause, shall be reinstated in the order in which they were discharged before other help may be employed. Upon demand, the foreman shall give the reason of discharge in writing. Persons considered capable as substitutes by foremen shall be deemed competent to fill regular situations, and shall be given preference in the filling of vacancies in the regular force. This section shall apply to incoming as well as outgoing foremen.

Foremen shall not designate any particular day, nor how many days a man shall work in any one week.

No foreman shall have the right to discharge or discipline a regular for putting on an incompetent "sub." *Provided*, The foreman has not notified the regular of the "sub's" incompetency.

Where the scale of prices of a subordinate union does not provide an established rate of wages for foremen and assistant foremen, a printer applying for or accepting the situation of any foreman or assistant foreman within its jurisdiction at a less rate of wages than the then foreman or assistant foreman is receiving shall be deemed a rat, and if a union member, shall be expelled from the union of which he is a member.

Where, through dullness of business or other causes the position of foreman and assistant foreman (or editor and foreman, both being members of the union) become consolidated, the party retained can not be charged with violating the preceding section of these general laws. *Provided*, He does not accept a lower rate of wages than previously paid to either of the incumbents.

Where it is in the power of a foreman to employ help of the allied trades, and he shall employ a nonunion man in preference to a union man, he shall be fined not less than \$5 nor more than \$25, and, on the second offense, he shall be subject to suspension or expulsion.

In offices under the jurisdiction of the International Typographical Union the foreman is the only person to whom to apply for work, and any person securing work or attempting to secure work in any department under the jurisdiction of the foreman, in any other manner than by application to said foreman of the office, shall be deemed guilty of conduct unbecoming a union man, and, upon conviction, shall be suspended for a period of 6 months. The trial for such offense shall be conducted according to the rules and regulations of the local union in which such offense occurred.

The word "rat," which is peculiar to the printers' craft, is practically the same in meaning as the word "scab," used by many unions to designate disloyal members. The general laws of the Typographical Union provide:

"A member of a union engaging to take a situation in the jurisdiction of another union at a lower rate of wages than the scale of prices of the latter union calls for, and failing from any cause to obtain the same, is guilty of 'ratting.' " "When a member has deliberately ratted, it is not necessary that he should be cited to appear for trial, but he may be summarily expelled."

The convention of 1900 adopted a resolution subjecting members to suspension or expulsion for publishing or causing to be published malicious and untrue articles reflecting upon the character, private or public, of any member of the International Typographical Union.

Charges against a member must be made in writing by a member of the union and must be investigated by a committee of five. At the demand of either party witnesses must be sworn before a notary public. The evidence of nonunion men can not be received. No evidence can be considered by the committee except such as is offered at a regular hearing at which all parties interested have been notified to be present. If the committee finds the charges sustained, wholly or in part, the accused has the privilege of defending himself before the union. The secretary then reads the judgment of the committee and the president submits it to vote. A two thirds vote of the members present is necessary to convict. If the accused feels that injustice has been done him by his local, he may appeal to the International Union. Pending a decision by the international president or executive council, no penalty is to be inflicted, unless the trial was for defalcation or for deliberate ratting. In such cases the decision of the local is to be immediately enforced.

**Female members.** The International Typographical Union seeks to bring into the organization all women engaged in branches of the printing trades. The complaint is made repeatedly that various offices take advantage of the supply of female labor to cut wages, to the injury both of the women and of the men of the craft. A provision of the constitution accordingly directs all subordinate unions at the earliest possible moment to organize all female help within their jurisdiction. It is also declared that any office refusing to comply with this regulation is considered an unfair office and placed under the ban of the union.

"Equal wages shall be paid for the same work to both sexes employed in any union office in the jurisdiction of any subordinate union within the jurisdiction of this international body."

**Apprenticeship.**—The period of apprenticeship is fixed at 4 years, except for newspaper writers, mailers and type founders.

The constitution says, "Apprentices, upon entering offices under the jurisdiction of the International Typographical Union, shall be registered by local unions. A record shall be kept of such apprentices and a certificate issued to each, which certificate shall be presented to the union where application is made for membership as a journeyman."

"It is enjoined upon each subordinate union to make regulations limiting the number of apprentices to be employed in each office to one for such number of journeymen as to the union may seem just, and all unions are recommended to admit to membership apprentices in the last year of their apprenticeship, without the privilege of voting, and exempt from the payment of dues for that year, to the end that upon the expiration of their terms of apprenticeship they may become acquainted with the workings of the union and be better fitted to appreciate its privileges and obligations upon assuming full membership: *Provided*, They shall be required to take an obligation pledging themselves to maintain the secrecy of the organization in which they desire membership."

**Finances.**—The revenue of the International Typographical Union is mainly derived from a per capita tax of 30 cents a month. Of this amount one-sixth goes to the general fund, to defray the expenses of the union, one-fourth is placed as a defense fund to the credit of the executive council; one-fourth is placed to the credit of the burial fund and one-third to the credit of the endowment fund of the Childs-Drexel Home for Union Printers and Allied Crafts. A proposition to increase the per capita tax to 40 cents a month, provide a reserve fund, and increase the burial benefit, carried in the convention of 1900, was defeated in the referendum by a vote of 8,517 to 4,822.

There is no provision in the constitution for the levying of assessments for the defense fund or for other purposes. Nevertheless, by special vote of the members, assessments are levied from time to time. Thus the money for the erection of the Union Printers' Home was largely obtained by special assessments, while a large assessment was also levied in 1892 and 1893 for the support of a great strike at Pittsburgh, and another in 1899-1900. The chief source of revenue, however, is the per capita tax. There are some incidental receipts from the sale of the Typographical Journal and of supplies, and from other minor sources, but out of a total of \$871,272 received during the 9 years from 1890 to 1898, inclusive, \$643,135 came from the per capita tax, and about \$134,000 from assessments.

A new system of collecting dues took effect on January 1, 1901. Adhesive stamps of a face value equal to the monthly per capita tax, and also working cards with stamps of equal value printed on them, are issued by the International Typo-

graphical Union. Locals may choose to use either the adhesive stamps or the working cards, but every member must have either an international working card for the current month or a card to which international due stamps showing all dues paid up to and including the current month have been attached. Otherwise he is to be regarded as delinquent to the International Union and not entitled to any benefits. Any member who counterfeits or imitates the due stamp or working card, or knowingly uses counterfeits or imitations, is to be fined not less than \$5.00 or expelled as the circumstances may warrant.

The following table shows the expenditure from 1889-90 to 1899-1900. The items do not include all of the expenditures a few minor sums being omitted. The figures, however, give a fair comparison of the various objects of expenditure and of the total expenditures for the different years. The end of the fiscal year was changed in 1901 from June 30 to May 31. In consequence the year 1900-1901 contains only 11 months.

*Expenditures, International Typographical Union.*

Under strike and lockout benefits are included the expenses of officers and organizers in settling difficulties.

The membership given is the average paying membership for each fiscal year as shown by the aggregate per capita tax.

The expenditures for administration include officers' salaries, organizing expenses, printing proceedings and constitutions, and sundry office expenses.

It will be seen that there was a great increase in the outlay of the organization, beginning in the years 1890 to 1892. It was at this time that the system of burial benefits was established. The Printers' Home fund first became a regular item of outlay about the same time. The expenditure in support of strikes has been materially greater since 1891 than before. These new sources of expenditures necessitated an increase in the monthly per capita tax about 1892. The per capita

expenditure for the year 1889-90 was only \$1.01. For 1891-92 it was \$3.98, on an increased membership. Since the latter year it has varied from \$1.06 in 1894-95 to \$5.76 in 1899-1900.

Much the greater part of the expenditures of the Typographical Union are in the nature of benefits to its members. Thus, for the 10 years from 1889 to 1898, out of a total expenditure of \$991,714, the amount paid for strike and lockout benefits was \$297,811, or nearly 30 per cent., the amount paid for burial benefits was \$177,255, or nearly 18 per cent., while the Printers' Home fund called for an expenditure of \$245,908, or nearly 25 per cent. These three items together amount to \$721,000, or over 72 per cent of the total outlay. A considerable portion of the remaining expenditure is for the printing of the Journal. The actual expenses of administration have been moderate, ranging from 31 to 67 cents per capita, and, for recent years, from 10 to 15 per cent of the total expenditure.

**Benefits.**—The Typographical Union provides a strike benefit of \$7 per week for married men and \$5 per week for unmarried men. The local unions frequently have sick benefits, but none are paid by the International Union. On the death of a member in good standing the International Union pays a burial benefit of \$65. Before 1900 the amount was \$50. This payment is supported by the appropriation of one-fourth of the international per capita tax, amounting to 7½ cents monthly. Local unions often have additional death benefits.

The annual payments from the burial fund since its establishment in 1891-92 have varied from \$21,950 to \$25,800. (See table of expenditures.)

**Local benefits.**—The local unions often have benefit systems much more comprehensive than that of the national union. Typographical Union No. 6, of New York, may be mentioned as a type. This union, widely known as "Big Six," has a membership of about 5,000. Its great size results from the rule of the International Union that only one union of compositors speaking English and engaged on English work can be formed in one city. The following is a condensed statement of the receipts and expenditures of Typographical Union No. 6, for the fiscal year 1899-1900:<sup>1</sup>

#### RECEIPTS.

Dues and assessments	\$76,401.51
Special strike assessments	98,059.39
Initiation and reinstatement fees and fines	1,668.20
From International Typographical Union on account funeral benefits	4,380.00
Donations from sister unions	4,616.62
Total from above and all other sources	185,806.25

#### EXPENDITURES.

General expenses—salaries, rent, printing, etc.	\$12,789.42
Out-of-work benefits	38,001.70
Per capita tax	20,469.35
Funeral benefits	9,817.82
Strike benefits and expenses	102,705.94
Total for above and all other purposes	186,828.22

In Denver an Allied Printing Trades Benefit Association has been organized, to which members of any of the allied printing trades in Denver are eligible. The members are divided into 3 classes, paying, respectively, 10, 50, and 60 cents a month, and receiving, respectively, in case of sickness, \$6, \$8, and \$10 a week for 12 weeks after the first. For the first week of sickness members in all classes receive only \$1. The association has paid \$1,026 in benefits in 3 years, and at the close of the third year had \$1,363 in the treasury. This, however, is a voluntary association, distinct from the union organization.

**Union Printers' Home.**—A peculiar feature of the work of the International Typographical Union is the home for union printers at Colorado Springs. The establishment of such a home was discussed many years ago. In 1882 a committee was appointed by the organization to investigate the subject. Nothing was done, however, until 1886, when Mr. George W. Childs and Mr. A. J. Drexel, of Philadelphia, gave \$10,000 to the International Typographical Union, to be used at its discretion. The union decided to employ this money in erecting a home for printers. The

<sup>1</sup> Typographical Journal, September 1, 1900, p. 195.

<sup>2</sup> Typographical Journal, February 15, 1901, p. 147.

money was allowed to accumulate at interest for several years, and was increased largely by assessments on the members of the organization and by minor contributions. In 1889 the Board of Trade of Colorado Springs offered to deed the union 80 acres of land near that city for the home, and the offer was accepted. The building was begun in 1891 and was open for use on May 12, 1892. The cost at the date of completion was \$70,114. The main building is all white lava stone, 144 feet long by 44 feet wide, with a wing 20 by 40 feet.

Such a large proportion of the inmates of the home were found to be afflicted with consumption that it was deemed wise to house them in a separate building. A hospital building was accordingly built, the cost, \$13,829, being defrayed by a general assessment.

This home is open to all union printers who are recommended for its benefits by local unions and deemed eligible by the board of trustees. Inmates are required to make no payments and to perform no work or other recompense. The illustrations in the booklet describing the home show that the life must be one of no little comfort.

The running expenses of the home are borne entirely by the members of the International Typographical Union, one-third of the per capita tax being set aside for that purpose. The annual outlay has varied from \$18,000 to \$39,000.

There has been some complaint by a number of members of the organization that the Printer's Home is unduly expensive and that it is not the most satisfactory method of relieving the sick and needy members of the organization. This opinion was strongly expressed by the president of the union in his annual report to the convention of 1898. The superintendent of the home, however, in his report for 1899 defended the economy of the management. He pointed out that the average cost of maintaining the 72 inmates for the year ending June 30, 1898, was \$29.53 each per month, while in 1899 the average cost for the 99 inmates was \$27.38 each per month. Commenting on this, he says:

"The argument is frequently made that the Home is more expensive than other institutions of its kind. Assertions of this character are made without due consideration. The total expenditures of the Home the past year were \$29,578.65, the average number of inmates being 99, making the cost per inmate per week \$6.38. The lack of knowledge displayed by many of our members concerning the affairs of the Home is somewhat surprising. It must be understood that when a member is admitted to the Home he is guaranteed everything that a man requires - clothing, medical attendance, nursing and medicines, shaving and hair cutting, dentistry, first-class table service, first-class transportation, if he wishes to vacate, to the point he came from and as above stated, a cash consideration of \$26 per year. I would like to know where a man can secure such accommodations for \$6.38 per week. Inmates of the Consumptives' Home in Denver pay \$9 per week for board, medical attendance and nursing alone, and I have it from Superintendent Oakes that he came out some \$29,000 on the wrong side of the ledger the past year, which was made up by wealthy and charitably inclined people throughout the country."

An idea of the character of the diseases with which inmates are affected, and of the general character and conduct of the inmates, is gained from the report of 1898-99:

"From August 1, 1898, to July 1, 1899, there have been 54 admitted. Of this number 18 suffered from phthisis, 5 from rheumatism, 5 from general debility, 6 from paralysis, 2 from locomotor ataxia, 6 from old age, and 12 from sundry causes, such as hydrocele, blindness, scrofula, loss of limb, etc.

"The general health of the institution has been good. The mortality has been low when we consider the physical condition of the men in the institution. The men all come here well advanced in years or broken down in health, hence we may expect a high mortality rate.

"Of the 14 deaths, 6 were from phthisis, 3 from pneumoma, 2 from cerebral hemorrhage, 1 from accident, and 1 from rupture of aortic aneurism. Outside of the 3 cases of pneumonia, we might say that the deaths were from unavoidable causes. We have felt the need of more hospital room. It will be impracticable to admit many suffering from phthisis during the coming year unless more spaces be provided for hospital use.

"The conduct of the inmates during the past year has been uniformly good all seeming to realize that the rules adopted by the board governing the institution are intended for the protection of the majority, and with a few exceptions they have been obeyed to the letter. During the year 71 have been admitted, 14 died, and 11 expelled. Of the latter number 8 were expelled for intoxication, 2 for obnoxious conduct, and 1 for assault and abusive language."

<sup>1</sup> Report of Superintendent of Home, 1899.

## 92 THE INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

The following are the statistics since the opening of the Home in 1892.

Total number admitted	424
Total number expelled	67
Total number died	97
Total number vacated	176
Number at Home July 1, 1901	84

**Strikes, authorization.**—In case any difficulty arises between a subordinate union and an employer which may result in a strike, the union must notify the international president. He must visit the place in person or by proxy, investigate the cause and endeavor to adjust the dispute. If this is in vain a majority of the executive council may authorize a strike, if it deems it necessary. No money may be spent from the defense fund without such authorization. After this action by the executive council a ballot of the members of the subordinate union must be taken on the question of inaugurating a strike. Only members in good standing for at least 6 months are allowed to vote, and three fourths of the members present must vote in the affirmative to authorize the strike.

The constitution places even more stringent regulations upon the authorization of strikes involving 2 or more branches of the trades represented in the international union. In a jurisdiction where more than one trade hold charters from the International Typographical Union, they must create a joint standing committee to consist of 3 members from each body. Its duty is to meet at least once every 3 months and report to the executive council of the International Typographical Union the condition of trade in the city; and to this committee the several trades shall refer the adjustment of difficulties with employers. Failing to adjust any difficulty they shall immediately call upon the president, who shall repair, in person or by proxy, to the city involved, and failing to effect a settlement of the question at issue, he shall proceed as above provided. "and a strike or lockout of any branch or craft of this international union, authorized by the executive council thereof, shall apply alike to each and every union, craft, and individual working under said jurisdiction in the office or concern involved. *Provide*, Should a majority of said unions fail to support a proposition to strike, the aggrieved union may take an appeal to the executive council, and if, after being furnished with statements from all parties concerned, four fifths of the members of that body think the inauguration of a strike absolutely necessary, the president shall, in person or by proxy again attempt to effect a settlement with employers, and if unsuccessful, shall, through the officers of the various unions, order a general strike of all members of the International Typographical Union employed by the firm or firms interested, and those disregarding this order shall be forthwith expelled. In case of strike or lockout where more than 1 craft is involved, settlement shall be made by a majority vote of all crafts involved."

No strike may be inaugurated by a subordinate union until at least 1 year after issuance of its charter.

The regulations which govern joint action with the pressmen and the bookbinders are given above (pp. 81, 82).

**Benefits**—During an authorized strike those thrown out of work by it are entitled to \$7 weekly from the international treasury in the case of married men and \$5 weekly in the case of unmarried men. The benefit expires at the close of 8 weeks, unless its continuance be deemed necessary by both the local union and the international executive council. The members receiving benefits are required to report daily and may not refuse to do work at scale rates. The executive board of the subordinate union must make weekly reports of strike disbursements to the international secretary-treasurer.

There is no special constitutional provision for strike assessments. The only instances of the levy of such assessments in support of strikes have been two to aid strikes at Pittsburg; one in 1891-1893, when \$64,790 was collected in this way, and one in 1900, when about \$32,000 was collected.

The amount paid for strike benefits from year to year since 1889 is given in the table on page 89 above.

**Working of strike system.**—Although it appears to be the general policy of the Typographical Union to maintain friendly relations with employers so far as practicable, the demand for the exclusive employment of union members and for entire compliance with union regulations frequently leads to conflict. The annual reports of the officers of the union show from 20 to 40 strikes each year, and by no means all of them are successful. In many instances, however, the efforts of the international officers to settle disputes result in the prevention of strikes. The

following extracts from the report of the president for 1899 give statistics as to the strikes and disputes of that year:

Since November 1, 1898, 19 strikes have been ordered by local unions and the International Union. Of these strikes, 4 were shorter-workday strikes on which the local unions drew no benefit. Of the number, 7 were won, 9 are pending, and 3 were lost. Through the efforts of the organizers and the International officers 5 threatened general strikes were averted and 44 disputes which were reported to headquarters as likely to involve strikes were amicably adjusted."

During the year ending October 1, 1900, 18 strikes were reported to have occurred under the jurisdiction of the International Typographical Union of which 7 were said to have been won and 11 lost. Four hundred and twenty-three persons were involved, of whom 40 were benefited and 383 were displaced. The cost of the strikes was \$83,893.

The officers of the union complain that the local organizations do not bear a sufficient part of the burden of strikes, and that their lack of financial preparation is largely responsible for the failure of strikes in so many instances. Thus the international president, commenting upon the strikes in the year 1897-98, says:

"It will be noted that while the international aided subordinate unions to the amount of nearly \$32,000 (a loan of \$3,000 to San Francisco union being omitted), the latter expended only \$7,500 in combating the same firms. The only possible inference from this showing is that our members have come to regard the defense fund as their main financial support when trouble threatens. This is a delusion to be guarded against, as it may in time prove fatal to some unions. It is a feeling akin to conviction which prompts the opinion that many of those conflicts given as 'lost' would be marked 'won' had the local unions but fought energetically, persistently, and sensibly, aided by a reasonable expenditure of money—that god of industrial battles. Though firmly believing in the international conducting these struggles in all their phases, it would be worse than useless for it to attempt to do so with a defense fund based on a monthly contribution of 7½ cents per member."

The secretary-treasurer makes a similar comment regarding the strikes in the year 1898-99. In that year the amount paid out by the international organization in support of strikes was \$19,080, while the amount expended by the locals was only \$7,598.

The following extract from the report of the president for 1898 shows his opinion as to the effectiveness of strikes by unions of the compositors:

"The strike as a weapon of organized labor has been greatly abused. Its too frequent use has tended to lessen its effectiveness. Under no circumstances should local unions be permitted to engage in aggressive strikes without complying with all the laws of the international union, and not then unless the union shall have sufficient funds on hand to pay strike benefits and expenses for a period of at least 8 weeks. With a thorough organization, sufficient finances and the sympathy of the public, strikes are successful. The officers and members of subordinate unions should make great preparation before engaging in a strike. The most important work is to secure hearty cooperation and a prompt response to the call of the union on the part of the men directly affected, and in future local unions requesting the endorsement of strikes will be compelled to first assure the executive council that they have such cooperation, and will be able to call out every man and boy employed in the shop or shops affected. The preliminary work incident to a strike is the most important, and neglect of this work has been, in a majority of cases, the direct cause of the loss of the contest."

**Boycotts.**—"Subordinate unions are directed to pass by-laws enforcing with fines, suspension, or expulsion the willful violation of boycotts adopted either by them or the International Typographical Union. *Provided, however,* That it be not considered mandatory to enforce boycotts ordered by affiliated trades."

Newspapers have often been subjected to boycotts. The attacks have frequently developed into the secondary form of boycotts upon all advertisers in the prohibited paper, or perhaps more frequently upon particular advertisers who are selected for their prominence or for other reasons. This method of selection is preferred to the method of general attack on the ground that a boycott is weakened by spreading over too much surface.

The New York Sun was boycotted in 1853. The New York Tribune was boycotted by the Federation of Labor in 1884, and the boycott was reaffirmed by the conventions of 1885, 1886, and 1887. In 1887 the Knights of Labor undertook a boycott of the New York Sun to compel it to replace typographical union compositors with Knights of Labor. The Federation of Labor passed a resolution severely condemning this action of the Knights. In 1891 the Federation placed a general boycott on all journals which employed nonunion men. From the middle

of 1899 to February, 1901, the typographical union of New York prosecuted a boycott against the New York Sun with great vigor; and after peace was supposed to have been made, the struggle broke out again in April, 1901.

A struggle of peculiar complication has recently taken place in Chicago. It began with a strike of the Stereotypers in July, 1898. The Chicago Allied Printing Trades Council, the Chicago Federation of Labor, and the International Printing Pressmen's Union levied a boycott against the Daily News and the Chicago Record. The action of the Allied Printing Trades Council was determined by the votes of the local unions of Web Pressmen, Web Pressmen's Assistants, Mailers, Stereotypers, Photoengravers, and Linotype Machinists. All of these locals, except the Pressmen and Assistants, belonged to the International Typographical Union. The press rooms of the boycotted newspapers had been nonunion for years, though those of the other Chicago dailies were controlled by the Pressmen's Union. The Chicago Typographical Union No. 16, embracing the Compositors, had entered into a contract with the Chicago Daily Newspaper Association, which took effect on March 20, 1897, and will not expire until March 20, 1902. The Stereotypers were also under a contract with the papers at the time of their strike. The Compositors did not sympathize with the Stereotypers, holding that they had violated their contract and were therefore in the wrong, and the International Typographical Union, though the Stereotypers are members of it, refused to endorse the boycott. When the Pressmen's Union became actively interested in the struggle, it tried to get the boycott endorsed by the American Federation of Labor. The convention of the Federation in 1899 referred the question to the executive council. The executive council, after three months of consideration, declined to sanction the boycott. This action was put on the ground that the greater part of the employees of the News and the Record were members of organized labor—that is, members of Typographical Union No. 16, attached to the International Typographical Union—and that the International Typographical Union had lodged a protest against the boycott. The International Typographical Union ordered all its locals in Chicago to cease hostilities against members of the Daily Newspaper Association. The president of the International Typographical Union requested the various unions to instruct their delegates to the Allied Printing Trades Council to vote to lift the boycott. Up to May, 1901, some of the locals attached to the International Typographical Union had not yet complied with this request, and the boycott had not been lifted. On April 11, the committee of the executive council of the American Federation of Labor selected to arbitrate between the Pressmen and the boycotted papers rendered a decision that the Pressmen officially declare off the boycott. Until the Pressmen shall have taken this action, the decision states, the council is not warranted in attempting to settle any other issue. This decision was not complied with. On the contrary, on April 21, 1901, the Chicago Federation of Labor declared a boycott, in sympathy with the Pressmen, on all newspapers controlled by the Chicago Newspaper Publishers' Association, and on May 5 the Chicago Federation of Labor expelled the delegates of Typographical Union No. 16.

Book publishers are less open to attack by boycott than publishers of newspapers, because they are usually less dependent upon the patronage of trade unionists, and because they are not subject to indirect attack through advertisers. Yet Rand, McNally & Co. and the Werner Publishing Company, who were for some time under the ban, appear to have been brought to terms. The Donohue & Henneberry Company were boycotted by the Federation of Labor in 1896 at the request of the Typographical Union, and this boycott is still in force.

**Hours of labor.**—The general laws of the Union prohibit members from working more than 54 hours a week where it is practicable for them to obtain a substitute to complete the required number of hours. In practice this rule is, of course, enforced only in such offices as make the regular working week 54 hours, where it applies to overtime. A strenuous effort has been made during the past few years to reduce the hours of labor to a maximum of 54 hours in all offices. The agreement of 1898 with the United Typothetic of America, provides for a general 9-hour day. This agreement has been carried out with a fair degree of success. The employers still complain that the Typographical Union is not sufficiently strong in some places, especially in the smaller towns, to maintain the standard rates of wages, so that the larger employers in the cities are subject to an unfair competition. Nevertheless most of them have reduced the hours of labor in accordance with the Syracuse agreement. The following extracts from the reports of the officers of the Typographical Union show the progress in this direction. It was said in August, 1899:

"Through the efforts of the various organizers the shorter workday has been secured for a number of towns, and, considering the past 8 months as a criterion by which to judge the future, it is safe to predict that the 9-hour workday will

be an established rule in all branches of the printing trade in every city and hamlet in the country within 1 year from the present date.

"The reports of local unions relative to the enforcement of the Syracuse agreement show that, with few exceptions, the 9-hour day has been inaugurated. The only city of any size in which the enforcement of the shorter workday met with decided opposition was the city of Pittsburg.

"We have determined that 9 hours shall be the maximum number which any member of our organization shall work per day. We believe that work beyond this number of hours is detrimental to the mental and physical health of the worker. The representative employers of the country and those employers who are not actuated by greed alone have conceded to us the 9-hour day. It is our duty to ourselves, our fellow-workers, and our employers to exert every effort for the purpose of forcing into line the printing establishments throughout the country which are operating more than 9 hours per day, and particularly those that do not pay living wages. It is a fact that every town complained of by employers as having an advantage in the matter of wage scale is poorly organized, and the Typographical Union in these places has met with determined opposition on the part of the employers. A portion of the preliminary work of organization has been performed, and if the International Typographical Union is guaranteed immunity from attack by locals of the United Typothetae, we will succeed in the next 6 months in making a great step forward in the interests of what is termed by our employers 'wage equalization.'

"The membership of typographical unions on November 21, 1898, was 27,635, and the number of unions chartered was 317. Of these, 21,937 members and 234 unions were in the enjoyment of the 9-hour day, or working under the Syracuse agreement, being 91 per cent of the membership and 76 per cent of the unions. The 83 unions not having secured the shorter workday include but 2,468 members, an average of but 30 each. As a matter of fact but 6 of these unions have 50 members or over, 17 range between 25 and 50 members, while 60 unions have less than 25 members each. These unions are widely scattered and owe their delinquency to various causes."

In 1900 the president said

"As reported to you last year, the Typothetae offices in Pittsburg and San Francisco repudiated the agreement made between the printing trades unions and the United Typothetae of America. The Kansas City Typothetae opposed the efforts of the union to establish an overtime rate for time worked in excess of 9 hours per day, and not only opposed our efforts to equalize wages, but opposed the adoption of a wage scale.

"In a small number of isolated towns our locals did not take prompt action for the purpose of establishing the 9-hour day. In these cases, however, agreements have been signed with employers which provide for the inauguration of the 9-hour day during the present year."

As long ago as 1896 it was announced that 17 unions, out of 257 reporting, had fixed 18 hours as the maximum for a week's work on book and job composition, 1, 51 hours; 19, 53 hours; 1, 53½ hours; 31, 54 hours. On machine composition for morning papers 2 unions had attained a maximum of 36 hours a week, 1, 39 hours, 6, 40 hours, 10, 42 hours, 11, 45 hours, 92, 48 hours. One union had attained a 36-hour week on weekly papers, and 41 others had fixed maxima of 48 hours or less.<sup>1</sup>

A report of June 1, 1901, says: "In newspaper offices the hours of labor range from 36 to 54 per week, the average being 48 hours for machine operators and all composing room employees. The 9-hour day is in vogue in practically all book and job rooms, the exceptions being towns where existing contracts prevent the enforcement of the law or the unions have been recently organized. So general is the observance of the shorter workday that these exceptions are of but passing importance."

In 1899 an expression of the opinion of the members, by referendum vote, upon the establishment at a future time of a "5-day law" was called for by the convention. The vote for such a law was 4,800; against it, 9,261. In a communication in favor of the proposition, which appeared in the *Typographical Journal*, it was said that the intention of the agitators for a 5-day law was that it should affect only men who were working under a machine scale. The argument for it was based largely upon the displacement of men by typesetting machines and upon the need of making places again for some of them. The writer referred to said: "A great many members voted against this proposition because they could

<sup>3</sup> Report of president, 1900.

<sup>4</sup> *American Federationist*, vol. 3, pp. 30, 31.

do so secretly; but if it came to a rising vote in a meeting they wouldn't vote against these propositions because they wouldn't care to show their selfishness."<sup>1</sup>

**Piecework.**—The international union recommends time work; but the matter is left to the locals, and in practice the work is largely done on piecework scales.

**Speed contests.**—The convention of 1900 enacted that no member may engage in speed contests, either by hand composition or on machines, under penalty of a fine of not less than \$25 or suspension.<sup>2</sup>

**Wages.**—The wages are regulated by the local unions, and some locals permit old men to work at less than the union scale.

**Typesetting machines.**—As late as 1887 the chief organizer of the International Typographical Union was able to congratulate his fellow-members that a machine capable of thinking and reasoning, and so of setting type successfully, had not been invented and did not seem likely to be. Yet the convention of the next year began to take measures in view of the encroachments of machines. By 1894 the president's report said that 282 machines were in use, worked by 550 men, that 153 union men had been displaced by them, and that the places of some of these men had been taken by 11 rats. In that year the convention voted that union typographers must be employed to work the machines, at rates fixed by the local unions. The question of the introduction of machinists also came up in this year.

In 1891 the president said that in spite of the increased use of machines the international union had made a growth of 1,000 members. He declared that 1,450 machines had displaced 3,500 union men, and had changed the position of the rest for the worse. He congratulated the union on its wise policy of accepting the necessity of the introduction of machines, and said that by this means they had been able to maintain themselves under conditions which would have broken up the union if they had attempted an unyielding policy. Twenty-one allied printing trades councils had been formed, despite the vigorous opposition of the master printers, who had wished to deny the right to organize to mailers and others on the ground that their work required no particular technical skill. The typographers needed, said President Prescott, to beware lest the machine put the typographers in the same position.

Mr. Ferguson, secretary treasurer of Typographical Union No. 6 of New York, found by an investigation at the end of 1893 that machines had displaced 662 typographers in 19 establishments in New York, or more than 38 per cent. President Prescott estimated about the same time that the machines had displaced about 2 men in every 5, allowing for the increase which had taken place in the production of printed matter on account of the lowering of the price. In the 19 establishments investigated by Mr. Ferguson the linotype with 1 man set up 22,000 to 35,000 ems in 8 hours, generally 24,000 to 28,000. Other machines, run by 2 men, set from 10,000 to 43,000 ems in 8 hours. In a competition in 1871, the first prize went to a compositor who set 1,800 ems in an hour, and the second to one who set about 1,700, the third did not set 1,650. According to George Chance, president of Typographical Union No. 2, of Philadelphia, a good compositor can hardly set 1,200 ems an hour regularly.<sup>3</sup> If this estimate is correct, 1 man with a machine would do more than 2 men, perhaps as much as 3 men, by hand.

The following are the chief provisions of the laws of the Typographical Union as to typesetting machines.

"The International Typographical Union demands that in all offices within its jurisdiction, where typesetting machines are used, practical union printers shall be employed to run them; and also that subordinate unions regulate the scale of wages and the time on such machines.

"In machine offices under the jurisdiction of the International Typographical Union no person shall be eligible as a 'learner' on machines who is not a member of the International Typographical Union. The time and compensation of 'learners' shall be regulated by local unions. Regularly employed apprentices in machine offices shall be privileged to practice on machines during all of the last three months of their apprenticeship. All laws conflicting with the provisions of this section are hereby repealed.

"No member of a subordinate union shall be allowed to accept work in any newspaper or job printing office where a task, stint, or dead line is imposed by the employer on operators of typesetting devices. Any infraction of this provision shall be punished by expulsion.

"All machine tenders shall be members of the International Typographical Union, and the local unions shall provide and maintain a scale covering such posi-

<sup>2</sup> Typographical Journal, September 1, 1900, p. 186.

<sup>3</sup> Vigoureux, *La Concentration des Forces Ouvrières*, pp. 37-40.

tions, and they shall at all times be under the control and amenable to all laws and regulations of said local unions: *Provided*, That assistants or helpers employed by foremen to assist machine tenders shall be journeymen members of the local typographical union, and the local union shall provide and maintain a scale covering such positions. *Provided further*, That such apprentices shall not be considered as in conflict with the number already allotted by local laws. *Provided further*, That this shall not be construed as applying to those now working as machine tenders, helpers or apprentices.

It has happened in many trades that the introduction of machinery has allowed the employment of a less skilled class of workers, and that the operators of machines have occupied a weaker economic position than their hand-working predecessors. The Typographical Union is able to say, however, in its report of June 1, 1901, that machine operators receive higher wages and work shorter hours than hand compositors. Perhaps the extreme example of the shortening of working hours is that of the Hebrew machine operators of New York City, who have reduced their working week to 24 hours—11 hours a day. The union remarks that in the exceptional cases where the wages of machine operators are low and their hours comparatively long the machines in use are other than linotypes. The implication seems to be that the shortening of hours and the raising of wages which it has been possible to effect bear some relation to the efficiency of the machines. A comparison of the course of events in the printing trade with that in other trades where machinery has been introduced seems to compel the conclusion, however, that much of the economic success of the printers is due to the exceptional wisdom with which the problem of machinery has been met.

The following tables and remarks are from the report of the union published June 1, 1901. The data are admittedly incomplete, because of the failure of a few local secretaries to fill out their reports properly.

*Machines in union and nonunion offices.*

Make of machines	Union offices		Nonunion and open		Total in union offices	Total in nonunion offices
	News paper	Book	News paper	Book		
Meigs, Thaler . . . . .	1,289	526	798	175	3,815	753
Thorn . . . . .	10	16	17	23	56	43
Empire . . . . .	4	27	1	12	31	13
Rogers . . . . .	65	10	5	75	75	5
McWilliam . . . . .		2	1	2	2	1
Simplex . . . . .	26	6	7	2	32	9
Lauston . . . . .		44	40	10	44	50
Monoline . . . . .	38		6		44	6
Unitype . . . . .	1				1	
Total . . . . .	3,463	635	675	202	4,008	877

Percentage in union offices, 824.

Even a better showing is made in the ensuing schedule of machine operators and machine tenders. A greater number of machine operators are members of the union than there are machines in union offices, for the reason that some union operators are employed in open offices. The table demonstrates the correctness of the claim of the International Union that it controls practically all machine tenders and operator machinists.

	Union	Non union	Total	Per cent union
Male machine operators . . . . .	6,406	557	6,963	92
Female machine operators . . . . .	106	90	205	63
Machine tenders . . . . .	475	73	548	86
Operator machinists . . . . .	730		730	100
Total . . . . .	7,717	720	8,436	91

The most casual reader will observe that the number of machine operators and operator machinists is largely in excess of the number of machines in use under the jurisdiction of the reporting unions. This fact should not be construed as meaning that there is an oversupply of operators, for such is not the case, good operators being in demand. It is due to the custom of working machines both day and night which prevails in numberless instances, especially in the larger cities. Thus a plant of three machines, working two shifts, employs six operators, etc.

Printers complain that one effect of the use of typesetting machines, along with other influences arising from modern methods, is the undue specialization of skill. The president of the typographical union said in 1899.

"Since the introduction of the typesetting machine there has been a tendency manifested toward the creation of specialists in the printing trade. The tendency should be opposed by the typographical union, and general laws should be adopted for the governing of apprentices, not only as a protection to the competent printer, but as a protection to the employer. The 'all-round' printer has not been displaced by the typesetting machine, but the specialist has. The man whose knowledge of the printing trade was limited to his ability as a typesetter on straight composition forms 95 per cent of the unemployed printers of to-day. The technical school for the apprentice should be the composing room, and his guardian should be the typographical union. Apprentices should be guaranteed an opportunity to learn the printing trade, and boys who, after a few months' experience, show no adaptability in the printing office should be discharged and their places taken by apprentices more competent. I would recommend that a committee be appointed for the purpose of preparing an address to the United Typothetæ on the subject of apprentice regulations."<sup>1</sup>

Upon the general question of machinery the Typographical Journal of July 1, 1899, speaks as follows:

"What trades unionists contend is that without organization on the workers' part machinery reduces wages, and that a labor-saving device must necessarily displace men, else it could not lessen the cost of production. We never heard of a labor organization of one year's standing advocating the suppression of machinery. That is usually the remedy proposed by a so-called independent worker, who would not listen to the much-contemned agitator or study the labor question."

**Union label.**—While local union labels had been used for some years by local branches of the typographical union, it was not until 1893 that the international body adopted a label to be used by all its branches.<sup>2</sup> The label is not put on job work unless it is asked for by the patron.

Two kinds of labels are provided—that of the International Typographical Union and that of the allied printing trades councils. Both are the property of the International Typographical Union. The German American Typographia has also a union label of its own, over which the International Typographical Union exercises no control. The labels are registered for legal protection in the States whose laws provide for union label registration. The labels are supplied in the form of electrotype cuts.

By the tripartite agreement of 1895 the allied printing trades council label was placed under the control of the local council in each place. This label, however, is furnished by the officers of the International Typographical Union in the same manner as the label of that union itself. The label of the International Typographical Union is sold by the officers to the local unions, that of the allied printing trades to the allied printing trades councils. In each case it is agreed that the price charged shall be approximately 10 per cent above the cost. The cuts are lent by the local unions or the councils, as the case may be, to employers who apply for them and abide by union conditions.

There has been no little difficulty between the allied trades as to the use of the union labels. The compositors are, of course, much the most numerous element in the printing trades. In the allied printing trades councils they do not have a weight proportional to their strength, because a small local has the same representation as a large one, and the rules of the International Typographical Union do not permit the organization of more than one local of English compositors in one place. The compositors complain that small organizations of the other crafts sometimes demand exorbitant terms from employers, and the compositors are forced to support them or go without the use of the allied printing trades label. These complaints are directed largely against the pressmen and bookbinders, who are not in the International Typographical Union; but it is said that the smaller crafts within the International Typographical Union are often disposed to act with the pressmen and the bookbinders and against the compositors. On the other hand, the allied trades sometimes complain that the label is put on work which is done, so far as their share is concerned, by nonunion men. Thus the International Bookbinder of June, 1900, said: "It is a well known fact that a great deal of work is printed in label offices and then sent to nonunion binderies to be bound." It is asserted that at the convention of the International Typographical Union in 1900 one delegate declared that he did not want the label of the allied printing trades to be used in his city. The label of his own union was recognized, and that was all he wanted.<sup>3</sup>

<sup>1</sup> Report of president, 1899.

<sup>2</sup> Vigouroux, *La Concentration des Forces Ouvrières*, p. 37.

<sup>3</sup> *American Pressman*, September, 1900, p. 272.

One particular bone of contention has been the so-called one-man shop. This phrase designates properly a small office in which all the work is done by the proprietor with perhaps the assistance of a boy. In such shops there is, of course, no employment for pressmen or bookbinders. There has been some agitation among the pressmen for the withdrawal of the union label of the allied printing trades from these shops. It was alleged on behalf of those printers who favored continuing to give them the label that it was the small shops rather than the large ones which had pushed the label to the front, and that the only result of withdrawing it would be to remove the label from a great deal of work on which it appears. The printers themselves, however, were not unanimous on this question. At the convention of the International Typographical Union in 1900 the fact was developed that 26 job printer delegates were opposed to giving the union label to one-man shops, while 5 favored it, but the overwhelming majority of the convention took the other view.

It is largely the differences of opinion about the use of the union label which have caused the constant friction between the members of the triple alliance. It was largely these questions that led to the long series of negotiations which have ended, for the present, in the amendments of March, 1901, to the tripartite agreement.

By these amendments the union label of the allied printing trades is placed in the charge of the allied printing trades council in each place. It can be loaned or leased only with the unanimous consent of the local unions represented, but a valid reason for objection must be given, and the council is to be the judge of the validity of the reason, subject to appeal to the joint board of appeals. The label can be loaned or leased only to employers who conduct strictly union offices, and can be used only on products which are wholly produced by union labor.

Whenever an allied council is in existence the local unions are to withdraw the labels of their respective unions. This means, in practice, only the label of the International Typographical Union. The Pressmen and the Bookbinders have no separate labels.

The question of the use of labels in one-man shops was settled by providing that an active member in any branch represented in an allied printing trades council, who runs an office of not more than two platen presses and complies with the 9 hour law and the laws of his union, may use the label, provided he does the whole work of his office, or, when he employs any additional help, employs members of affiliated unions. This provision for one-man shops does not apply to cities of 500,000 inhabitants or over.

The printers have for some years carried on an agitation for the requirement of the union label on printing done for State and local governments. The legislature of Montana passed a law in 1897 requiring the label to be used on all printing for which the State is chargeable, and such a law exists also in Nevada. Many local governments have taken similar action. The city of Boston is one of the latest. A resolution of the city council of Paterson, N. J., requiring the union label on all official printing, was declared unconstitutional early in 1901.

The organizations in the printing trades have recently turned their attention to the securing of the union label on schoolbooks. The president of the Typographical Union declared in 1900 that 75 per cent of the schoolbooks of the country are produced by nonunion labor in composing rooms and binderies, and that probably 50 per cent of the presswork is done in press rooms that are not thoroughly organized. The leaders are undertaking to bring pressure to bear on public-school authorities everywhere to turn out from the schools all books which have not the union label. It was announced in the American Pressman for September, 1900, that the allied printing trades of East St. Louis, Ill., backed by the central labor union, had succeeded in getting provision made for a grammar and an arithmetic in the schools of that town which should bear the union label.<sup>1</sup>

There have been many attempts to use the labels of the printers' organizations without authority. The president stated in 1899:

"Owing to the ever increasing power of the union label, as a factor in organization work and a protection to scales of prices, its use has met with continued and bitter opposition by employers who conduct unfair establishments.

"A number of local unions are at the present time endeavoring to secure the enactment of label ordinances, and the label is being constantly used by unprincipled persons without permission. Numerous requests for assistance in label cases have been made to the executive council during the past year, the local unions maintaining that they were not in a financial position to prosecute the persons who infringed upon their label rights or to conduct law suits in which they had become involved. The executive council has found it impossible to comply with these requests."

<sup>1</sup> American Pressman, September, 1900, pp. 273, 30.

The secretary reports, in June, 1901, that the International Union now gives help to local bodies which are unable to conduct such prosecutions, and that the decisions of the courts have been uniformly favorable.

**Journal.** The Typographical Journal, the official journal of the International Typographical Union, is a semi-monthly magazine of not less than 48 pages, nearly 7 by 10 inches in size. It is devoted, for the most part, to news of the union and discussion of matters of direct interest to the craft. It prints also a small amount of miscellaneous matter. The subscription price is 50 cents a year. The journal is not sent free to members, but the income from subscriptions and advertising does not cover the cost of publication. The deficit is made up from the general funds of the union. The highest point which this deficit has reached is \$8,216 for the fiscal year 1896-97. For the year 1899-1900 the amount was a little over \$4,572, and for the 11 months ending May 31, 1901, \$2,705.

The convention of 1900 passed a resolution urging each local union to subscribe for as many copies of the journal as it has members, and to pay the subscription price out of the funds of the local.

### GERMAN-AMERICAN TYPOGRAPHIA (DEUTSCH-AMERIKANISCHE TYPOGRAPHIA).

**History.** This organization was formed in 1873. It was amalgamated with the International Typographical Union on July 1, 1894, retaining a certain degree of autonomy in various regards. It is entitled to elect the third vice president of the Typographical Union, who is one of the five members of the executive board of that organization. He is also secretary-treasurer of the German branch. The subordinate organization retains its own system of sick and death benefits. These it has developed quite highly, while the Typographical Union leaves such benefits to the local unions.

On other subjects the German branch is subject to the general laws of the Typographical Union, especially with regard to strikes and strike benefits. Members may be transferred from the German unions to English unions, and vice versa, without payment of initiation fee, but also without transference of benefit features.

The German-American Typographia has been able to secure nearly complete control of the German press in the principal cities. The secretary, in his report to the convention of the International Typographical Union in 1900, and that the Cincinnati Freie Presse had recently been unionized after a struggle of seven years, and that this left the Chicago Freie Presse the only nonunion German daily newspaper of any account in the United States. The Chicago Freie Presse has for years maintained a bitter conflict with the Typographia, and has done a large business in the supplying of platematter to other papers. The secretary congratulated the organization in his report of 1900 that this source of income to the Freie Presse had been much diminished, several papers had been induced to get their platematter from other sources. The Central Newspaper Union of Philadelphia is another establishment of which the union complains that its work is largely done by apprentices and youths at low wages, and which supplies platematter in Philadelphia itself, in Camden, Reading, Pittsburg, Baltimore, and Boston. Some German publishers in New York are also nonunion.

From year to year the reports of the secretary mention the inroads of the linotype. Machines were introduced during the fiscal year ending July 30, 1899, in Louisville, Evansville, and Columbus, and during the following year in Baltimore and Belleville. The report of 1899 also called attention to the inroads of typesetting machines in the German-speaking countries of Europe, and to the consequent tendency of German printers, in spite, as the secretary said, of all warnings of those already in America, to try their fortunes on this side of the sea.

The secretary's reports indicate also a tendency to consolidation and perhaps a tendency to decay among the German papers of the United States. In his report to the convention of the International Typographical Union in 1899 he said that several German papers had gone out of existence during the preceding year and others had consolidated, thereby throwing a number of members out of work and greatly burdening the out of work fund. These events were largely due to the decrease of German immigration. The German press was having a hard struggle for existence.

These circumstances together cause an increasing difficulty in getting work for German printers. The secretary's report of 1899 urged everyone who could to get work in English printing offices, and everyone who could to get into other lines of

<sup>1</sup>Conv. Proceedings, International Typographical Union, 1899, p. 76.

work. During the fiscal year 1898-99, out of 1,000 men on the average entitled to benefit, 117 on the average were drawing benefit for unemployment. In the following year the number was reduced to 90, out of an average of 983 entitled to benefit. But out of an aggregate membership of 1,044 at the end of June, 1900, including both those entitled to benefit and those not entitled to it, 70 had left the business, and were simply maintaining their connection with the organization for the sake of the sick and death benefits. The active membership, therefore, was reduced to 974.

**Conventions.**—No convention has been held since 1884. The proposition to hold one was defeated during the fiscal year 1899-1900 on a referendum vote, by a majority of 2 to 1. It was determined, however, to make a thorough revision of the constitution.

While the Typographia has held no convention of its own for many years its laws provide that the delegates of its locals to the convention of the International Typographical Union shall meet before, during, or after that convention, to consider measures in the interest of the Typographia. If their conclusions involve changes in the laws they must be submitted to the general vote.

**Constitutional amendments and referendum.**—Changes in the laws of the German-American Typographia, not in conflict with the laws of the International Typographical Union, may be made by popular vote upon the motion of one local supported by two other locals. In dealing with the constitution of the International Typographical Union, the German locals and members have the same rights as others.

Any local typographia which feels its rights to have been infringed upon may demand a general vote if its demand is supported by one other local.

**Officers.** The officers are a secretary, an executive council of three, and three trustees. The secretary is at the same time third vice-president of the International Typographical Union, and his office is at its headquarters. He is elected for 2 years. His salary is \$1,000, half of which is paid by the International Typographical Union and half by the Typographia. He is elected by general vote of the members, and an absolute majority is necessary to a choice.

Of the members of the executive council 1 must come from New York, 1 from Chicago, and 1 from St. Louis. Each is elected by the members in his own city at the time of the election of the general secretary. The executive council has general control of the official journal and of the funds of the general office, and hears appeals from decisions of the secretary.

The trustees are elected by the local in the place where the headquarters of the International Typographical Union are. Their term is 3 years. They are required to examine quarterly the books and accounts of the secretary, and to deposit all funds of the general office above \$100 in a bank designated by the executive council.

**Local unions.**—The amalgamation agreement with the International Typographical Union provides that in any city or town which affords employment to 7 or more printers on German work those so employed shall organize a German branch. The constitution of the Typographia provides that no local can be dissolved as long as 7 members remain in good standing. A local which holds no regular meetings for 3 months loses its charter. One which fails for 3 months to make its payments to the general treasurer is to be suspended after warning.

**Membership.**—Every person, male or female, who is competent to set German matter, and who is working for wages in the printing business, is eligible to membership, provided he has done nothing against the principles of the organization. The candidate must be examined by a committee and must write correctly a paragraph of 15 or 20 lines and must set correctly an ill-written paragraph. The examining committee must ascertain whether the candidate has served 4 years as an apprentice. Every candidate must be examined by a physician named by the local union. He is not entitled to sick benefits until 6 months after the physician's certificate is furnished.

The name and place of working of every candidate proposed must be published in the official journal, and the candidate can not be admitted until 2 weeks after such publication. Any member may protest against the reception of any candidate. The protest must be submitted to the member's own local, and is of no force unless indorsed by it. If the protest is so indorsed the candidate can not be received until his case has been investigated by the executive committee. A rejected candidate can not again apply for admission to any local until 6 months have passed.

**Apprentices.**—Apprentices must be 14 years of age, must be able to read fair handwriting, and must have been examined by the foreman or by a committee of the

compositors. Each office is entitled to 1 apprentice; daily newspapers to 1 further apprentice for every 10 regularly employed journeymen, exclusive of sub-, book and job offices, with or without weekly newspapers, to 1 additional apprentice for each 6 regularly employed journeymen. Apprentices on newspapers must be regularly articulated. When an apprentice has worked 3 years in a union office he may be permitted to attend the meetings of the union.

While these are the laws of the general organization, they have little practical effect, at least as far as newspaper offices are concerned. The trade can hardly be learned in a modern newspaper office, and in most of the larger cities there are local rules which allow no apprentices on newspapers.

**Cards.** Members in good standing of another branch of the International Typographical Union may join the Typographia by card without initiation fee, but they are treated as new members with regard to the time which must pass before they can draw benefits. Members of foreign unions of printers which exchange cards with the International Typographical Union are received on the same terms. The Typographia transfers its members by card to other branches of the International Typographical Union, but no such card is granted as long as the member is engaged on German work.

**Discipline.** All questions which do not relate to the particular laws of the German-American Typographia are decided according to the laws of the International Typographical Union, with appeal to its president, from him to its executive council, and from the council to the convention. Any member who behaves himself to be injured in a matter outside the jurisdiction of the International Typographical Union can appeal to the general secretary of the Typographia, from him to its executive council, and from it to the convention of the International Typographical Union, but by the articles of union the convention is bound to decide such questions not by a vote of all its members, but by a vote of the delegates of the German unions, sitting as a committee.

**Finances.** The initiation fee is \$3. The dues are 15 cents a week, besides death assessments and any local assessments which may be levied. Members who are not entitled to the full sick benefit (see below, under benefits) pay 5 cents less a week. Members who have gone over to another branch of the International Typographical Union or have left the business may retain their rights to sick and death benefits by paying 25 cents a week. Such members are exempt from local assessments. Traveling members are free from local and extra assessments. Members who work 20 miles from the nearest Typographia are not subject to local assessments.

The initiation fees and dues form a common fund which is managed in a way somewhat similar to that of the Cigar Makers. Two cents a member a week is allowed for local expenses. If more is needed it must be made up by a local assessment. Forty-five cents a member a month is sent to general headquarters. Out of this, 30 cents a member a month is paid to the International Typographical Union as its per capita tax. The remaining 15 cents is used for the expenses of the general office of the German branch, including its official journal. Out of this fund are also furnished membership books, monthly reports, cuts of the union label, and other similar supplies for the local unions. At the end of the year the common fund in the hands of the several branches is equalized in proportion to membership. In case the common fund sinks below \$5 a member the executive committee has authority to increase the dues 5 cents a week until a fund of \$5 a member has accumulated. The fund has in recent years actually amounted to about \$10 a member, but a permanent increase of the dues was made on January 1, 1890, from 10 cents to 45 cents a week.

On the death of a member an assessment of 15 cents is levied. The constitution provides for raising the death assessment to 25 cents if the common fund should fall below \$5 a member. During the fiscal year ending June 30, 1901, the tax paid by each member to the general fund was \$26.10; 52 weeks' dues at 45 cents a week, and 18 death assessments.

The executive council has authority to levy extra assessments if they are needed on account of strikes, introduction of type setting machines, business depression, or other extraordinary circumstances. Such extra assessments must be levied as a percentage of wages and the sick, strikers, and the unemployed are exempt.

Members who at the end of the month have not paid all sums due are to be suspended from work until they have paid up, and they are not entitled to benefit until 4 weeks after payment is made. Members who have been dropped for failure to pay their dues and wish to join again must pay an initiation fee of \$5, together with the back dues standing against them, and if the occurrence is repeated they must pay \$10, together with back dues.

**Benefits.**—While the members of the German-American Typographia pay the same contributions to the International Typographical Union as other members

of it, and are entitled to the same death benefits and the same support in case of strikes, the Typographia has an independent benefit system, which is one of the most highly developed in America, and the integrity of which was preserved when the Typographia joined the International Typographical Union.

*Death benefit.*—On the death of a member his heirs are entitled to a funeral benefit of \$65 out of the treasury of the International Typographical Union, but if he has been 1 year continuously a member of the Typographia he receives an additional \$5 from its treasury, and after 2 years membership \$135. The death benefit is payable only to beneficiaries within the jurisdiction of the International Typographical Union, and will not be sent to a foreign country. If the member leaves no heirs and has not disposed of his benefit by will, his local union conducts his funeral at a cost not greater than the benefit due him, reporting the expenses to the general secretary.

On the death of a member's wife the Typographia pays a funeral benefit of \$50. *Sick benefit.*—Full members of the Typographia, who have been members uninterruptedly for at least 6 months, are entitled to a weekly benefit of \$5 in case of sickness, beginning with the day of notification. No benefit is paid unless the sickness lasts a full week after notification, but for each additional day 70 cents is paid. When a member has drawn \$250 sick benefit, the weekly payment is reduced to \$4, and when he has drawn \$150 more, making \$400 in all, he can draw no further sick benefit for 2 years.

Members who are 50 years old when they join or whose medical examination is unsatisfactory pay 5 cents less a week in dues than regular members, and can draw no sick benefit until they have been members 2 years. They receive in sick benefit only \$4 for a full week and 45 cents for each additional day. When they have drawn \$150, the payment is reduced to \$1.50 a week, and when they have drawn \$75 more, making \$225 altogether, they can receive no further sick benefit for 2 years.

Written notice of sickness, with a medical certificate, must be given to the local secretary. If the sick member is at a distance from the local, a medical certificate must be furnished every 2 weeks. Otherwise at least one member of the local must visit him weekly and report. The local may send a physician at its own cost if it suspects that the sickness is not genuine. One who refuses to serve on a sick committee may be fined not more than \$1.

If a member is taken sick in traveling he is to notify the nearest local, sending his membership book and a physician's certificate. Even if he is not legally entitled to benefit the local may help him out of the common fund.

*Out-of-work benefit.*—Every member in good standing who has maintained his membership uninterruptedly for 2 years is entitled to a weekly benefit of \$5 when out of work, beginning when he has been 18 days on the unemployed list. This does not apply to office subs (that is, to members who have the first right to permanent work in a given office), but only to members who are on the unemployed list and report daily at the office of the local and wait for work in their turn. When a member has drawn \$20 out-of-work benefit he can draw no more until he has again been 18 days on the unemployed list. No member can draw more than \$80 in one fiscal year. For every day that a man works \$1 is deducted from his benefit, and no benefit can be drawn for a week in which one works 1 day. If a member loses his position by his own fault he can draw out-of-work benefit only after he has been 36 days on the list. If he gives up his job voluntarily he can draw no benefit for 4 weeks unless the local executive approves his action. If he refuses a position he can draw no benefit for 6 weeks. When a member is shown to be incapable of doing satisfactory work the local may decide, with the sanction of the general executive council, whether he shall be altogether excluded from further out-of-work benefits.

Every member out of work must report daily to the local executive at a designated time. Whoever omits this will be understood to have worked on the day in question.

*Strike benefit.*—So long as members on strike are receiving benefit from the International Typographical Union none is paid by the Typographia, but if the International Typographical Union ceases to give support the members of the Typographia who are out of work in consequence of the strike are at once entitled to the regular out-of-work benefit. This is the case even if they would not yet be entitled to out-of-work benefit under ordinary conditions.

*Traveling benefit.*—A traveling benefit is paid to members of 6 months' standing going to look for work or to fill a position. The amount is 2 cents a mile for the first 200 miles, and 1 cent for each additional mile, not exceeding \$10 in all. When one has drawn \$25, no further traveling benefit can be drawn for 12 months. A member who loses his position through his own fault can draw no traveling benefit for 2 months. One who gives up his place voluntarily can draw none except with the approval of the local executive. A traveling member reaching a place

where there is a local Typographia must report to it within 2 days or forfeit all benefits for 4 weeks from the time when he does report.

The following table gives the membership and expenditures for each year since 1885. The increase of about \$2,500 in the out-of-work benefit for the year ending June 30, 1899, is partly due to the increase in the maximum amount payable to one member in one year from \$60 to \$80; though the aggregate fell in the next year to its former level. The increase of \$500 in the sick benefit was also affected by a change in the laws, providing that no account should be taken of sick benefit previously drawn, provided 2 years had elapsed. Under the former rule when one had drawn \$100 in all, even though some of it had been drawn 10 years before, he could have no more till after a full interval of 2 years.

*Membership and expenditures of the German-American Typographia, 1885 to 1900.*

Year ending June 30	Mem-ber-ship at end of fiscal year	Sick bene-fit	Death bene-fit	Out of work bene-fit	Trav-eling bene-fit	Total bene-fits except strikes	Strike bene-fit	Ex-pen-ses of man-age-ment, local and general	Total ex-pen-ditures	Total ex-pen-ditures per mem-ber

**Hours of labor.**—The Typographia forbids its members to exceed 8 hours of work a day or 48 a week. Having for some years enforced the 8 hour system, it has adopted the policy of introducing a 5-day week. The secretary, in his report of July, 1899, said that the 5-day system was working satisfactorily in Philadelphia, and suggested the advisability of introducing it wherever it had not been introduced in order to make room for the members out of employment.

**Official journal.**—The official journal is a semi-monthly paper called the Deutsch-Amerikanische Buchdrucker-Zeitung. The general secretary is the editor, under the general control of the executive council. Every member receives a copy without charge. A considerable part of the paper is filled with reports of the condition of the local branches. There is also discussion of the general problems which directly concern the organization, and a certain proportion of general news of the labor movement and the labor world. The paper supports the Social-Democratic party.

## INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION OF NORTH AMERICA.

**History.**—The International Printing Pressmen and Assistants' Union of North America was organized in 1889. The International Typographical Union had undertaken to control all branches of the printing trade up to that time, and it did not welcome an independent organization of pressmen. The Typographical Union was gradually deserted by local unions of pressmen which belonged to it, and the Pressmen's International Union was able in the end to conquer recognition from the older and larger organization. In 1895 an agreement was made by which all the individual pressmen who were still members of the Typographical Union were to leave it within 6 months for the Pressmen's Union. The Typographical Union officers declare that they did all they could to carry out this agreement, but that they have had great difficulty in carrying it out. Within the 6 months the transfers could have been made without a new initiation fee. That

privilege then expired, and the Typographical Union has since been obliged even to order a strike in order to force men who had been in good standing in the Typographical Union to join the pressmen's union and pay the pressmen's initiation fee.<sup>1</sup> It is admitted that many individual pressmen still belong to locals of the Typographical Union.

**Convention.**—The convention meets annually. The subordinate unions are entitled to 1 delegate for the first 50 members or less, 2 delegates for more than 50 members and less than 100, and 1 additional delegate for each additional 100 members. Small unions may combine in sending delegates. No proxies are allowed.

To be eligible as a delegate one must have been an active member of his local for at least a year if the local has been organized so long. Any delegate who absents himself from any regular meeting of the convention unless on convention business is to be fined not less than 50 cents nor more than \$1 for each absence.

**Constitutional amendments.**—Amendments which involve increased taxation, after passing the convention, must be sanctioned by a majority vote of all the members of the local unions. Other amendments may be made by vote of the convention.

**Officers.** The officers are a president, 3 vice-presidents, and a secretary-treasurer. The second vice-president is taken from the assistants' unions, and the third third vice-president from the web pressmen's unions. The officers are elected by the convention. Nominations are made on the third day of the sitting. The secretary-treasurer has the names of all nominees printed on an official ballot, and the election takes place on the next day. A majority is necessary to elect. No one but a delegate in attendance is eligible to any office, except that any officer may be re-elected if he has the endorsement of his local union.

The president is required to countersign all drafts against the treasury, and is directed to appoint a competent expert to audit the accounts of the secretary-treasurer at least once in 3 months. His salary is \$300 a year.

The secretary-treasurer has the custody of all the funds. He is directed to deposit all money in some bank or trust company in the name of the union, and to forward a duplicate of each deposit slip, signed by the receiving teller, to the president. He is to publish quarterly a full statement of receipts and disbursements, and a sworn statement of the balance in his hands. His bond is \$10,000, the cost of it is paid by the union. His salary is \$900.

The president, the vice-presidents, and the secretary-treasurer constitute a board of directors, which has general supervision over the affairs of the union. It has power to decide all disputed questions, subject to appeal to the convention. It may fill vacancies in offices. It determines the rendering of assistance in strikes and may order a subordinate union to strike. It is directed to appoint an organizer for each State.

Delegates and alternate delegates to the Federation of Labor are chosen by the president from the local unions nearest the place of meeting, one of each from a pressmen's union, and one of each from an assistants' union, on the recommendation of the local unions of which they are members.

**Local unions.**—A local charter may be granted to not less than 5 qualified flat-bed or web pressmen, and one to not less than 10 assistants in each town. In places where not enough men are employed at each branch of the trade to hold a separate charter, charters may be issued to 10 or more men, pressmen and assistants together. Such charters may be held only while the numbers do not justify separate charters for journeymen and assistants. If, however, an existing local disapproves of the issue of a separate charter to a particular branch of the trade, when the number of workmen has come to justify it, it may protest to the board of directors, and the board of directors must make an inquiry into the circumstances before passing judgment. If either party feels aggrieved by the decision of the directors, an appeal may be made to the convention.

**Chapels.**—Members of a local, even though a majority of it, have no right in chapel meeting (a meeting of the men employed in one printing office) to take any action affecting the laws of the local. Such action is permissible only in open meeting of the union.

An appeal from the decision of the chairman of chapels to a foreman is not to be permitted under any circumstances, and is to be punished by fine or expulsion.

**Joint committees.**—In places where more than 1 local union exists, conference committees are to be established, consisting of 3 men from each local. Any subject on which a conference committee fails to agree is to be referred to the president of the International Union.

<sup>1</sup>American Pressman, September, 1900, p. 38.

**Membership** The constitution leaves all qualifications for membership to the local unions, except that it requires that an apprenticeship of 4 years shall have been served in a press room. It recommends that no one under the age of 20 years be admitted.

**Apprentices** Subordinate unions are left to make regulations as to the number of apprentices to be allowed, but it is recommended that only 1 apprentice be allowed for every 4 journeymen in places where there are unions of feeders and assistants under the International Union. An apprentice shall not be admitted as a member of the pressmen's union unless holding a certificate of membership in good standing in said press assistants' and feeders' union." An apprenticeship of 4 years is nominally required, and also a rigid examination as to the competency of applicants. But if an assistant is able to get the pressman's scale he is in practice given a permit to work as a pressman until the period of his nominal apprenticeship has expired.<sup>1</sup>

When a member of an assistants' union joins a pressmen's union he can not be charged an initiation fee greater than the difference between the initiation fees of the two unions.

**Transfer and withdrawal cards.**—Certificates of membership and withdrawal cards are furnished by the International Union to local unions at a cost of 10 cents each. A member traveling from one jurisdiction to another must carry a certificate of membership, and he is entitled to it if he has paid all dues, fines, and assessments, and if there are no charges against him. The holder of a certificate must deposit it within a week after arriving within the jurisdiction of another union. If he goes to work at the business where there is no local union, he must deposit his certificate with the nearest local within 15 days. No member is allowed to pay dues to one union while he is working in the jurisdiction of another. Dues are declared to belong to the union in whose jurisdiction work is done.

A local must accept a certificate of membership unless it is on strike or the member is shown to be incompetent or to have obtained his certificate by misrepresentation. A member who joins on a certificate of membership can not be charged initiation fee. A man who comes without a certificate from a place where a pressmen's union exists can not be admitted without the consent of that union. The secretary of a local which receives a certificate of membership must notify the union which issued it. A member who leaves the trade or removes from the jurisdiction of a local is entitled to a withdrawal card which exempts him from dues and deprives him of benefits and of the privilege of holding office.

**Foremen**—It is made the duty of the executive committee of each local to see that no one other than a member of the union in good standing is recognized as foreman in a press room within its jurisdiction. If any member seeks employment in person or by letter from a proprietor who has a union foreman in his press room, he is to be fined \$10 for the first offense and expelled for the second. If a foreman has power to employ pressmen or assistants and employs a non-union man in preference to a union man, he is to be fined not less than \$5 nor more than \$25 for the first offense, and for the second is subject to suspension or expulsion. Aside from this it is declared that foremen may hire or discharge help at will, so long as they comply with the regulations of the local union and do not discharge men for maintaining union principles.

**Nonunion men and "rats."**—The constitution recommends to local unions "to go to the utmost limit consistent with safety and honor in receiving into membership all 'unfair' men who may make application to that effect, and who evince a true desire to become 'fair' men."

The word "scab," common to most labor organizations, is replaced in printing offices by the word "rat." The Pressmen's Union says that any member of a subordinate union who shall accept a position made vacant by a member of any other subordinate union under its jurisdiction, who is on strike for a just cause, shall be declared a "rat," provided that such strikers are not antagonistic to this body. When a local union has no established scale of wages for a given position, any person who applies for a situation at a lower rate of wages than has been paid for it, is declared a rat, and if a member of the union, is to be expelled. "When a member has deliberately 'ratted' it is not necessary that he should be cited to appear for trial; but he shall be summarily expelled. It is forbidden to receive the evidence of rats in impeachment of union men," as they are under the ban of the union and not recognized by it as honorable men."

<sup>1</sup> American Pressman, September, 1900, p. 25.

<sup>2</sup> This provision is copied from the laws of the International Typographical Union, but is strengthened by substituting "shall" for "may."

**Discipline.**—Charges against a member must be presented in writing and tried after due notice, if the union thinks them worthy of trial, by a special committee of five. The committee reports to the union, giving a synopsis of the testimony and the committee's verdict. The union votes first on sustaining the verdict, and then, if the accused has been found guilty, on the penalty. The vote is by ballot. Expulsion is first voted on, then, if expulsion has not been carried, suspension, then a fine, then a reprimand. An affirmative vote of two-thirds is necessary to inflict any penalty.

Appeals lie from decisions of local unions to the president, thence to the board of directors, and thence to the convention. The decision must be complied with pending appeal, except that an appeal acts as a stay of a judgment of reprimand or censure. The parties to an appeal, in cases where documents are to be submitted, must make affidavit to the truth of their statements before a proper public officer.

Many local unions enforce attendance at meetings by pecuniary penalties. The Duluth local assesses each man \$1.50 a month and gives him a rebate of 75 cents if he attends the meeting. At St. Louis the dues are 75 cents, and a member who fails to attend the meeting is fined 25 cents.<sup>1</sup>

**Finances.**—The International Union derives its revenue from a charter fee of \$5, from the sale of certificates of membership, from a per capita tax of 25 cents per month on each member of a pressmen's union, and 20 cents on each member of an assistants' union, and from the official journal. Five cents a month of the per capita tax, together with all money derived from other sources, goes to the general fund. Ten cents of the per capita tax of the pressmen and 5 cents of that of the assistants goes to the burial fund. The remaining 10 cents goes to the defense fund.

Any local which does not pay its per capita tax within 3 months may be suspended or its charter may be revoked, and certificates of membership are not to be issued to it while 3 months in arrears. A local which fails to pay money due the International Union for 6 months forfeits its charter. The president has power to fine a local union not less than \$5 nor more than \$20 for disregarding the laws of the International Union respecting its duties to the International or to other locals.

**Tax dodging.**—The present secretary-treasurer complained in the convention of 1900 that the membership record which he should have received from his predecessor was never turned over to him. He immediately notified the unions to send a complete list of their members with their first per capita tax. He refused to give a receipt to any union which did not send its list of names. He said: "From the records you will find that the month previous to my coming in a great many unions had a membership of possibly 15 or 20, and when they sent me a list they had 35 or 40. There was no law compelling them to send a list of names, which is a proper thing to do, with each statement, but if they sent 40 names and the next month sent me a per capita tax of 39 members, and didn't state that one was withdrawn or expelled, I refused to give them a receipt unless they told me what became of that member, and who that member was."

**Benefits.**—On the death of a member his family is entitled to a funeral benefit of \$100, if he belonged to a pressmen's union, and \$75 if he belonged to an assistants' union. If no family or relatives appear the union pays the burial expenses, and the balance reverts to the International Union. Locals in arrears for per capita taxes for more than two months have no claim on the burial fund in case of the death of any of their members. The constitution provides that in no event shall the money of the burial fund be used for any other purpose.

The death benefit provision does not apply in the Dominion of Canada, except in the Province of Quebec, and Canadian locals, outside of Quebec, are exempt from that part of the per capita tax which goes to the burial or death benefit fund. This is because the provincial laws forbid the doing of an insurance business by any society which is not an incorporated body with a permanent legal domicile.

**Strikes.**—The defense fund, provided by a payment of 10 cents a month by each member, is set aside to be drawn on only for the sustaining of legal strikes, "for resisting the encroachments of unfair and disreputable men when too strong for the local union to contend with," and for "advancing and defending the principles of unionism as applied to our own trade."

When any subordinate union desires to strike it must first confer with any other unions belonging to the International Pressmen's Union in the same town. It must then send a full report of the case to each member of the board of directors. Each member of the board is immediately to forward to the president his

<sup>1</sup> American Pressman, September, 1900, proceedings of convention.

<sup>2</sup> American Pressman, September, 1900, pp. 17, 18.

vote on the sanctioning of the strike. If it is sanctioned by a majority, the local union is to call a meeting, notifying all the members, and a three-fourths vote is necessary to inaugurate a strike. No member is allowed to vote unless he is in good standing and has belonged to the subordinate union 6 months. No local union is permitted to strike within 6 months after the issue of its charter. Those who take part in an authorized strike receive \$7 a week for each married man and \$5 a week for each unmarried man, for 12 weeks. Strike pay stops at that time, unless the board of directors votes to continue it. If the defense fund is insufficient, the board has power to levy an assessment, of not more than 25 cents a month, on all working members.

Those who receive strike pay are required to give a receipt in triplicate, one copy of which is to be retained by the local union, one to be sent to the president of the international body, and one to the secretary-treasurer. The local president and secretary are required to furnish the international president and secretary-treasurer, every thirty days during the strike, with complete lists of the persons affected, and the weekly benefit which each is entitled to. The local strike committee must keep a roll, signed daily in triplicate by every striker, of which one copy is to be retained, one sent to the national president, and one sent to the national secretary-treasurer every day, and if for two consecutive days in any week this list is not forwarded the secretary-treasurer may withhold benefits for that week.

No member is entitled to benefit unless he reports daily to the proper officer. No member who receives three days' work in any week can receive benefit for that week. Any member who refuses work while on strike is debarred from all benefits. To check the tendency of local unions to appeal to other locals for aid when the board of directors consider it unwise to prosecute a strike the convention of 1900 forbade such appeals, except with the approval of the board.

No organizer or other officer of the national body is permitted to adjust or start any printing machine in any town to which he may have been called to settle a difference between employers and employees, under penalty of a fine of \$500, or expulsion, or both. The secretary explains that this provision is intended to make it certain that presses that have been stopped by a strike will be started only by those who have before had charge of them.

The president, in his report to the convention of 1900, stated that about 80 applications for the sanction of strikes had been made to the executive board during the preceding year, and that at least half had been refused.

The regulations of the triple alliance, regarding strikes which require common action of the Pressmen, the Bookbinders, and the Typographical Union, are summarized above, on pages 81 and 82.

**Differences of wages.** In the convention of 1900 a representative of the New York City pressmen moved a resolution that the scale of wages within 250 miles of New York be the same as that paid in New York. It was explained that the purpose of the resolution was to bring the matter before the convention in such a way as to stir up the delegates from the territory mentioned to take measures for raising the union scales. It was declared that in many subordinate unions near New York pressmen were working for \$12, \$13, \$14, and \$15 a week, and that the New York employers contended that this was very unjust while the New York union exacted \$20 or more for each pressman. At Albany, it was stated, the scale was \$15, and at Poughkeepsie \$12 to \$14. The discussion brought out a similar state of things in other regions. In Cincinnati the scale was said to be \$18, while 15 miles away there was a \$13 scale. The rate was \$3 lower in Milwaukee than in Chicago. In partial justification of these differences it was pointed out that the employers in the large cities have some compensating advantages, and it was declared that when the Chicago employers brought up the Milwaukee scale as an argument for reducing the wages of their men, the Chicago pressmen had thought it a sufficient answer to say, "Move your printing plants to Milwaukee."

**Hours of labor.**—In 1893 the triple alliance of typographers, bookbinders, and pressmen made an agreement with the association of employers by which the day's work was reduced from 10 hours to 9½, beginning November 21, 1898, and to 9 hours from November 21, 1899.

The pressmen's convention of 1899 levied an assessment of \$1 per member on pressmen's unions and 50 cents on feeders' unions to carry on the work of the shorter workday committee. The committee, in its report to the convention of 1900, recommended that no more charters be granted to unions which should be working more than 9 hours per day. The convention declined to adopt this regulation.

<sup>1</sup> American Pressman, September, 1900, pp. 41, 48.

<sup>2</sup> American Pressman, September, 1900, pp. 18-20.

on the ground that the 9-hour rule can not well be put in effect except through the power of a well-organized union. The report of the committee showed that the 9-hour day had been put in force by nearly all the local unions of the pressmen.<sup>1</sup>

**Limitation of work.** The Pressmen forbid any member to run more than two single cylinder presses or more than one flat-bed rotary or one perfecting press. Pressmen are forbidden to feed their own cylinder presses in towns where assistants' unions exist.

**Labor day.**—At the convention of 1900 an appeal came up, made by a member of the St. Paul union, against the action of his local in levying a nominal assessment of \$5 per member for the expenses of the Labor-Day celebration in 1899, and paying \$5 to every member who took part in the Labor-Day parade. It appeared that the same practice of assessment had been maintained for 10 years. The executive council, without denying that the local union might compel its members to parade on Labor Day and might fine them for absence, decided that, since the constitution of the St. Paul local made no provision for such compulsion, the local had attempted to do by induction and subterfuge something which should be done by formal amendment of its constitution, if it were to be done at all. The executive committee therefore upheld the appeal.

**Official journal.**—The official journal of the Pressmen's Union, the *American Pressman*, is published by an individual member of the union under contract with the body. The existing contract gives the editor and publisher 60 per cent of the net income and the international union 40 per cent. The subscription price is \$1 a year. During the year which ended May 30, 1900, more than half the total income came from advertising. Subscriptions brought in only \$617. The international union paid the publisher \$1,627 for printing the convention proceedings and for job printing. Advertisements paid \$3,317. The editor made a little over \$1,200 and the international union received over \$800, or considerably more than the total income from subscriptions.

**Union label.**—The joint allied printing trades councils have control of the allied printing trades label. It is issued from the headquarters of the typographical union (whose property it is), and is furnished to the allied printing trades councils at a price approximately 10 per cent above cost. It is only to be lent to such offices as comply with the rules and regulations of unions affiliated with the issuing allied printing trades council. (See pages 98 and 99.)

## INTERNATIONAL BROTHERHOOD OF BOOKBINDERS.

**History.** The International Brotherhood of Bookbinders was founded May 5, 1892. Some account of its relations to the International Typographical Union is given in the sketch of that organization.

The brotherhood includes binders of printed and blank books, paper rulers, paper cutters, edge gilders and marblers, and workers in all other branches of the bookbinding industry. In March, 1901, the secretary reported 3,900 male members and 1,100 female members. In June, 1901, the aggregate membership was stated as 7,000. The average membership on which per capita tax was paid to the Federation of Labor, from December, 1900, to December, 1901, was 3,730.

**Conventions.** The convention meets biennially in June. Each local is entitled to 1 delegate for the first 50 members or less and to 1 additional delegate for each additional 50 members or major part thereof. The whole number of votes to which a local is entitled may be cast by a single delegate. A local may also give its vote to a member of any other local as its proxy. A local can not be represented unless its indebtedness to the national body is paid. The brotherhood pays the mileage of delegates at 2 cents a mile. The remainder of their expenses is paid by their locals.

The constitution is amended by a majority vote of all the members on the proposal of the convention.

**Allied printing trades councils.**—The constitution of the Bookbinders allows, but does not require, local unions to send representatives to allied printing trades councils.

**Officers.**—The officers are a president, 3 vice-presidents, a recording secretary, a financial secretary-treasurer, a statistician, 1 district organizer, and an executive

<sup>1</sup> Vigouroux, *La Concentration des Forces Ouvrières*, p. 42, note, *American Pressman*, September 1900, p. 1.

<sup>2</sup> *American Pressman*, September, 1900, pp. 12, 13.

council of 8 members, of whom 4 must be binders of printed books and 4 of blank books. Not more than 1 member of the executive council can be elected from any one city. Officers are elected by the convention. No one is eligible who has not served an apprenticeship according to the law of the local union to which he belongs. No one is eligible who is not a delegate except that the holder of any office may be reelected. The salaries of all officers are determined by the convention before the officers are chosen.

The duty of the statistician is to collect all possible information as to the condition of the industry throughout the country, to prepare and furnish to each local union, yearly, a statement of the average wages earned by each local in the different branches, and to furnish the executive council a similar report semi-annually. There are also local statisticians, whose duty it is to keep a record of the number of journeymen and apprentices employed in all shops and the average wages earned at each branch of the trade, and to report these facts semi-annually to the national statistician. Any local union which fails to make a statistical report to the national statistician at least once a year is liable to a fine of \$5. A local which fails to furnish the secretary-treasurer with a true list of its members once a year is liable to a fine of \$10.

**Local unions.** A local may be organized by 7 persons working at the trade, and can not be dissolved so long as 7 members in good standing are willing to return the charter. In a city where a local already exists a second local can not be established without the consent of the first.

**Certificates of membership.** Certificates of membership are granted to members who wish to leave the jurisdiction of their locals, and members holding them must be admitted to other locals without fee of any character, provided they have served such an apprenticeship as the laws of the local which they wish to join require, but locals which pay sick or funeral benefits may charge fees to members who join on cards and wish to become beneficiary members.

**Apprenticeship.**—The brotherhood urges local unions to try to introduce a system of indenturing apprentices, and also to limit the number of apprentices to some definite proportion to the number of journeymen. It is forbidden to let any person enter the trade as an apprentice under the age of 15 or over the age of 18. The term of apprenticeship is 4 years. Apprentices are required to fulfill their terms with the employers with whom they have contracted. Locals are recommended to admit apprentices in their last year to members up, without payment of dues and without the privilege of voting, in order that they may become acquainted with the workings of the brotherhood.

The secretary says that the system of indentured apprentices is found practicable in many places, and that where it is in vogue it works to the advantage of the employer, because it compels the apprentice to remain with him during his term of service. At the same time the steady and continuous employment in one place is to the real advantage of the apprentice. It is usual for the locals to insist upon a service of four years as an apprentice before a man is admitted to full membership. "This is done for the benefit of our trade in general, on account of the great inroads made by machinery. There is a tendency to make specialists at a particular branch, who learn to operate one of these machines. This overcrows our trade with incompetent mechanics, who, in many cases, when out of employment, will accept a position at a reduced rate of wages just to obtain work. Such a man not only drags himself down financially, but others as well."

**Finances.** The charter fee is \$10, but charters are issued free to locals composed of women. The brotherhood levies two separate per capita taxes—one of 15 cents a quarter on male members and 10 cents on female members for the organization fund, and one of 10 cents a month on male members and 5 cents a month on female members for the defense fund. The defense fund can not be drawn on, according to the constitution, except for the purpose of sustaining legal strikes. If the defense fund is inadequate to support a strike, the executive council may levy an assessment of 25 cents a member, not oftener than once a week. Any local which fails to pay its per capita tax within 3 months after it is due is to be suspended. A member seems to incur no penalty by nonpayment of dues until he is 2 years in arrears and has had 2 months' notice of his indebtedness from the local financial secretary. Then he is to "be deemed guilty of a flagrant violation of union principles and may be dealt with as may be deemed advisable by the local union."

The initiation fee may not exceed \$25. In the case of locals composed of men it may not be less than \$10.

The latest financial statement is as follows

ORGANIZATION FUND	
On hand May 1, 1898	\$1,724.78
Received as per capita tax and charter fees	4,024.04
Received from sale of Journal	750.00
Received from sale of supplies	170.24
	6,669.06
Expenses	5,556.45
	1,112.61
DEFENSE FUND	
On hand May 1, 1898	\$2,004.54
Received for defense fund	7,396.06
Total on hand and received to May 15, 1900	9,400.60
Total amount received as assessment	717.25
Cash from local union No. 28, to pay amount due from local union No. 31	19.00
Cash from local union No. 8, being balance on hand from strike fund	33.00
Total amount received from all sources to the defense fund	10,169.85
Amount expended	5,565.10
Balance in bank to the credit of the defense fund	4,604.75

**Strikes.**—The Brotherhood, recognizing strikes as detrimental to the best interests of the craft, recommends local unions not to order a strike until every possible effort has been made to settle the difficulty. But as resistance to unreasonable demands of employers will be at all times necessary, it enacts "laws to govern resistance." When a disagreement with employers occurs, it is the duty of the local union if its efforts at adjustment fail, to notify the executive council. If a majority of the council think a strike necessary, the local may be authorized to declare so. The local president must then call a meeting within 24 hours and give notice to all members. A three-fourths majority of the local members voting is necessary to declare a strike.

In a city where there are two or more locals of the Brotherhood they must create a joint standing committee consisting of two members from each. This committee must meet at least once a month and report to the international executive council on the condition of trade. To this committee the local unions must refer difficulties with employers. If it does not succeed in adjusting a difficulty it must appeal to the executive council. A proposal to strike must be voted on by the local members as if only one local union were concerned. If a majority of the locals decide in favor of a strike, by a three-fourths vote, all are governed by the decision. If the strike is not approved by a majority of the locals, the executive council has still power in such cases by a four-fifths vote to order a general strike of all members employed by the firm or firms interested.

Members who participate in an authorized strike are entitled to \$7 a week for each married man, \$5 a week for each single man, and \$4 a week for each woman. The money is paid by the general office to the order of the president and secretary of the local union. The executive board of the local union must make weekly reports to the national headquarters, showing the amount of money distributed for benefits, the number of beneficiaries—heads of families and single persons, union and nonunion—and all other facts that may be required. No member is entitled to benefit unless he reports daily to the proper officer. No member is entitled to benefit for any week in which he has 1 day's employment. If a member refuses to work he can draw no more benefit, and if he works for 1 week continuously his name can not again be put on the strike roll.

A local which inaugurates a strike without the approval of the executive council can receive no benefit, unless the strike or a lockout or a reduction of wages, is forced upon it without opportunity to consult the council.

If a strike exists in a town where there is no union the members of the union are forbidden to take work there without the consent of the strikers.

The union reported to the American Federation of Labor, in the fall of 1900, that it had won three strikes and lost two during the preceding year, at a cost of \$2,769. Five hundred and ninety-two persons were involved, of whom 555 were benefited.

**Piecowork.**—Piecowork is allowed by the Bookbinders' Brotherhood, but, according to a statement of the secretary, it is not approved.

**Convict labor.**—Any person who has learned the art of bookbinding in a penal institution, or who teaches others the art in a penal institution, is debarred from membership.

**Journal.**—On January 1, 1900, the International Bookbinder was started as the organ of the brotherhood, but at the personal expense of a prominent member. At the convention in June, 1900, the paper was adopted by the brotherhood.

## LITHOGRAPHERS' INTERNATIONAL PROTECTIVE AND BENEFICIAL ASSOCIATION OF THE UNITED STATES AND CANADA.

**History.**—The Lithographers' International Protective and Beneficial Association is composed of transferers, steam-press printers, provers, and hand-press printers; artists and engravers are eligible, and occasionally join. The question of its relations with the press feeders has caused some trouble, and the proposition to grant charters to unions of feeders has been made; but it has been held that the feeders are excluded by the terms of the existing constitution, and no arrangements for taking them in have been concluded.

The union was formed in 1883 by local organizations which had been connected with the Knights of Labor. At the convention of 1895, 1,165 members in good standing were reported, in 1897, 1,190. In August, 1900, the secretary gave the membership as 1,750; on April 1, 1901, as 2,056, of whom 62 were apprentices. The number of local unions was 16 in 1897, 17 in 1898, 18 in 1899, and 20 in 1900 and 1901. The secretary estimates that about nine tenths of the workers at the trade are members of the union.

The New York City local union has nearly half the total membership. It has full control of the city trade. Every shop in the city, except 1 in Brooklyn, is reported to be thoroughly organized. About January 1, 1901, the local reported 856 members. The dues are \$1.50 a month. The local pays an out-of-work benefit of \$3 a week, a sick benefit of \$5 a week for 8 weeks, and a funeral benefit of \$500.<sup>1</sup>

**Objects.**—The constitution of the Lithographers' Association mentions, among other objects more commonly recited, the following: "To impart to its members the most advanced and improved methods of work in all its branches, such knowledge to be the secret property of the members of the association." The final clause, however, is not lived up to.

**Conventions.**—The convention meets once in 1 years. Each local union is entitled to one delegate for the first 50 members or less, and one additional delegate for every additional 25 members or majority fraction thereof. A delegate must have been in good standing for a year before his nomination, and must have paid up all indebtedness to the union to the day of the convention. Local associations can not be represented unless they are clear on the books of the national union. A delegate must be actively engaged in lithographic work. Expenses of delegates are paid from the general fund, and also the expenses of such general officers as are entitled to attend the sessions. The delegates receive \$3.50 a day and actual traveling expenses.

**Constitutional amendments.**—The constitution may be amended, either by a two-thirds vote in the convention, or by a two-thirds majority of a popular vote upon amendments proposed with the consent of five local unions.

**Officers.**—The officers are a president, a vice-president, a secretary-treasurer, a secretary-treasurer of the mortuary fund, and alternates for the two secretary-treasurers. All are elected by ballot at the quadrennial convention.

The secretary-treasurer is required to keep a roll of all members of the union, showing the local which they are attached to, the branches or work in which they are employed, their ages, and locations. He must also keep a roll of all expelled members and rejected candidates, with their ages, occupations, and locations, and the causes of their expulsion or rejection. The constitution requires him to keep a roll of all workers at the trade who are not members, and their locations; but this is not lived up to. He must keep a list of all shops, the number of hands employed in each of the several branches, the average wages paid in each branch, and the hours of work. Every 3 months he must ascertain the condition of the trade in each city and send a report to each local. He collects all money due the organization, except money due to the mortuary fund.

<sup>1</sup> Typographical Journal, January 15, 1901, p. 63.

The secretary-treasurer of the mortuary fund collects all money due to that fund, and pays death claims and expenses pertaining to the fund.

The president's salary is \$500 a year; that of the secretary-treasurer, \$300 a year; that of the secretary-treasurer of the mortuary fund, \$200 a year. The two secretary-treasurers give bonds for \$1,500 each, the cost of which is paid out of the funds which they respectively manage.

The general president appoints five members, who, together with himself and the secretary-treasurer, constitute the general executive board. This board audits the books and accounts of the general officers twice a year. It also decides all differences that may arise between the general officers and the local unions, and all appeals from the decisions of the general president. Its decisions stand as law until the next convention. At the convention the board presents a written report of all decisions rendered, and those approved by the convention are published as an appendix to the constitution and accepted as an authority for future decisions. Though the laws so established are primarily judge made, they do not stand as permanently valid till they have been approved by the legislative body.

**Shop and local committees.** In every city which contains two or more lithographic establishments, the constitution requires that a trade committee be established, composed of one member from each shop which contains two or more members of the association. In each such shop a shop committee is to be elected, and the chairman of this committee is to be the delegate to the trade committee. The secretary of the trade committee is directed to present a full report of the committee's proceedings at each regular meeting of the local union. It is the duty of the chairman of the shop committee to keep a general oversight of the shop, watch the employment of new men, try to see that all men employed in the trade are members of the union, and collect all dues and assessments from members in the shop, and turn them over to the secretary of the local union.

**Membership.** A candidate for membership must be at least 21 years old, and must have resided at least 1 year at the branch specified in his application. The proposition must be referred to a committee, who are to investigate the character and eligibility of the candidate and report at the next meeting. A secret ballot is then taken, and unless 5 black balls appear the candidate is elected. Several other national unions provide that if less than a specified number of black balls are cast the candidate shall be voted on again at the next meeting, and in the meantime the objecting members shall furnish their reasons for objection in writing, to be read to the union, though generally without exposure of their names. The lithographers provide for a similar procedure only in case as many as 5 black balls are voted. If the reasons offered by the 5 objecting members seem to the local executive board to be sufficient the candidate is rejected. If the board thinks the reasons insufficient, the president reads them at the next regular meeting, and a new vote is taken. A two-thirds majority seems then to be sufficient to elect the candidate. The names of those who present objections to a candidate are not to be revealed by the president to anyone without their consent.

The initiation fee may be any sum not less than \$3, of which \$2 goes to the general mortuary fund, and 25 cents to the same fund for a benefit certificate.

Stockholders in lithographic plants are not eligible to membership. If any member becomes a stockholder he is to receive an honorable withdrawal card. If he afterwards desires to become a member as an employee he is to deposit the withdrawal card and may be admitted by a two-thirds vote of the members present. If a member, after becoming a stockholder, causes such trouble as to bring on a strike or lockout in any local association he must pay that local \$250 before being admitted again to that local or any other.

**Apprentices.** One apprentice is allowed for the first 10 journeymen or less in any branch of the business; 1 additional apprentice for the next 10 journeymen, another for the next 15, and another for the next 25. The union recommends to its locals that the system of indenturing apprentices be introduced as far as possible. Apprentices are required to serve 4 years and to pass a "rigid examination" before being admitted to membership. Locals are recommended to admit apprentices to provisional membership in the last year of their apprenticeship without the payment of current dues and without the privilege of speaking or voting.

**Discipline.** Charges against any member must be presented to the local president in writing, and must be tried by a committee of five. If the committee reports to the union that the charges are sustained, and the accused takes no appeal within 4 weeks, the decision is final. In that case, or if, on appeal, the local sustains the committee, a penalty of expulsion, fine, or reprimand is ordered by a two-thirds vote of the members of the local. An appeal may be taken to the general executive board. A member expelled from any local can not be readmitted to any other

without the consent of the local which expelled him, to be given by a two-thirds vote.

No member can go to work in the jurisdiction of another local than his own without first obtaining the permission of its president and learning whether he is taking the place of a sacrificed member or a member on strike. No union man is allowed to take or apply for any position in any nonunion shop without first obtaining the consent of the local union, to be given by a two-thirds vote of the members present. When such consent has been given, the member must do his best to unionize the shop, and must report progress to the local at each regular meeting. If it appears that no progress is being made, the member may be ordered, by a two-thirds vote, to withdraw from the shop.

**Finances.**—In addition to payments to the mortuary fund, a per capita tax of 75 cents a quarter is levied on every member. Thirty-five cents of this amount is to be kept in a separate fund, known as the emergency fund, and to be used only in support of strikes and lockouts or in aid of "sacrificed" or victimized members.

Any member who fails to pay his dues and assessments, other than mortuary dues, for 3 months is to be expelled. If he makes application for reinstatement within 30 days, it may be granted by a majority vote of the members present at a regular meeting. Within 60 days it may be granted by a two-thirds vote. After 60 days it must be referred to the local executive board. The board must report to the next regular meeting on what terms it recommends readmission, and a two-thirds vote of the members is necessary.

**Benefits.**—*Death benefits.*—Every new member is required to pay an initiation fee of \$2 for the mortuary fund, and 25 cents for a benefit certificate. The mortuary fund is maintained by assessments of 50 cents each, levied whenever the general president and the secretary-treasurer of the mortuary fund consider it necessary, but not more than 2 assessments can be levied in 1 month. In practice it is stated that about 10 assessments a year are called for. The members are divided into 7 classes. Class A comprises members who have been in good standing for 6 consecutive months immediately before death, and the beneficiary designated by a member of this class is entitled to a death benefit of \$500. Class B comprises members who have been in good standing for 5 consecutive months immediately before death, and the benefit is \$300. In Class C, 4 months, the benefit is \$250, in Class D, 3 months, \$200, in Class E, 2 months, \$150; in Class F, 30 days, \$100; in Class G, less than 30 days, \$50. Any member who fails to pay an assessment within 40 days from date of call is reduced 3 classes, and if he is a member of Class E, F, or G he is dropped from the roll and can regain membership only by reinstatement. If a member fails to pay an assessment within 60 days, he is reduced 4 classes, and is dropped if he has been a member of Class D. Members of Classes A, B, and C are dropped if their assessments are unpaid for 90 days. Any member dropped from the roll of the mortuary fund is by that fact expelled from the association, and any member expelled from the association for any cause forfeits all claim for any benefit.

*Traveling loans.*—Any member who wishes to change his location may be granted a loan of the necessary money by a majority vote of the local executive board. He must give his note at 60 days, and must pay the amount within that time unless he secures an extension. In default of payment he is liable to expulsion, if the amount is equivalent to 3 months' dues.

*Sick and out-of-work benefits.*—The president, in his report to the convention of 1897, advocated the introduction of an out-of-work benefit, particularly on the ground that improved presses were throwing many members out of employment. The change was not introduced. The local executive board has power to remit dues and assessments to members who are in arrears through sickness or lack of work.

Sick benefits are paid by the local unions in New York, Boston, Chicago, and a few other cities. Unemployed benefits are paid by the locals in New York and Boston.

**Strikes and lockouts.**—Any grievance against an employer is first to be presented by the aggrieved member to the chairman of the shop committee, and he is to report it to the president of the local. If the local executive board thinks that the grievance deserves consideration, it is to call a special shop meeting. At this meeting an individual statement regarding the grievance is to be received from each member employed in the establishment. If the board is now convinced that the grievance should be pressed, a special meeting of the local is to be called. The local votes by secret ballot, and a two-thirds majority is necessary to sanction a demand or resistance. When such a vote has been given, the local president is to appoint a committee of the employees of the establishment involved to act with the local executive board in presenting the grievance to the employers. If an amicable

adjustment is not obtained the local secretary is to lay the whole matter before the general president, with a statement of the number of members involved, the number of married men, the number of single men, the amount in the local treasury, how many are engaged in the trade in the town, and the condition of the trade. If the general executive committee approve the demand, the local president is to be directed to order the men out. Members taking part in an authorized strike are entitled to \$10 a week strike pay if they are married or have others dependent upon them for support. Single members, who have only themselves to support, receive \$8. Larger amounts may be allowed by a two thirds vote of the general executive board. The benefits are not to be paid for more than 6 months. Assessments may be levied by the general executive board if necessary.

The local executive board is to take full charge of the strike. The local union is to select two competent members to handle all strike money. One is to act as paymaster, the other as clerk. The clerk must prepare a weekly pay roll, in triplicate, one copy for the general secretary-treasurer, one for the paymaster, and one for himself. The paymaster is to pay to each man on the roll, at a specified time and place, the amount opposite his name.

The local union is to report all particulars of the strike to the general president every fourth week, and a copy of the report is to be sent to each local. If the general executive board considers that the members are unable to continue the resistance, it is to issue a statement of the reasons to all the locals, and to invite a vote on the following questions: First, Shall resistance be continued? Second, Shall financial aid be continued?

A "sacrificed" member is defined in the constitution as one who has lost his position by reason of his activity in advancing the interests of the union. He is to be paid his full salary until a permanent position has been secured for him. A permanent position is defined as being a position for at least 4 weeks.

Thirty-five cents a member a quarter, from the per capita tax, is put into a separate fund, known as the emergency fund, which is to be used only for the support of strikes or lockouts or in aid to sacrificed members.

**Hours of labor.** The present constitution provides for a week of 54 hours, and says that all work done outside of the hours of the agreed schedule is to be considered overtime and to be paid time and a half. It is reported that the 54-hour week has been established by all locals except three, and that they have partly established it. There has been a strong agitation among the lithographers for the 8-hour day, but they have not yet thought it wise to insist upon it. A committee which considered the question some years ago reported that "its enforcement is impracticable at this time, owing to the depressed condition of trade."

The president said, in his report to the convention of 1897, in discussing the efforts which the association had made to reduce the working week from 59 or 60 hours to 73. A fact that is oftentimes lost sight of in the consideration of this question is the anomaly that in almost every instance where the lesser hours are in vogue the product is greater than in the locality where the longer hours prevail. There are perhaps many reasons which might be given to explain this anomaly, yet they are in no way called for simply because the fact is conceded by all those who have given the subject careful thought. Employer and employee when the question has been investigated, agree upon the fact, and it is possibly owing to this very circumstance more than to anything else that the employers who have granted the lesser hours are comparatively satisfied to wait to see what we as an organization may be able to effect in the near future.

It is an interesting query whether this belief has any connection with the refusal of the association to try for the 8 hour day during hard times. Other organizations, like the German printers, which unhesitatingly look upon the shorter work-day as a means of diminishing the product of the individual, and so giving employment to more men regard the time of depression as the very time for shortening hours. The lithographers act on the same principle when they shorten the week in order to divide the work. In New York plants shut down on Saturday when work is slack, thus dividing employment equally. Union officers keep in touch with the shops and furnish the most of the men that are called for.

**Limitation of work.**—Any member who runs more than 1 press unless for a single day in an emergency, is to be expelled, and can not be reinstated without paying a fine of \$25.00.

**Holidays and overtime.**—There is no constitutional provision forbidding work on holidays, but it is directed that members who are obliged to work on such days shall be paid time and a half. Overtime is paid at the same rate.

<sup>1</sup> Constitution, 1897, p. 61.

**Wages.** Local organizations usually fix minimum wages. In New York the minimum wages are \$6 a week. But such rules do not prevent members from getting larger wages. Twenty-five dollars a week is said to be frequently paid in New York. By a two-thirds vote of the local union a member of advanced age or inferior ability may be permitted to work for less than the established rate. Such permission, however, is very seldom asked for.

**Piece, team, and task work.** **Bonuses.** Any member working team or task work, or accepting percentage or bonus, is to be reported at once to the local union officers, and they are to "take action as to the best interest" of the association. Team work is defined as "the employing of boys or girls not regularly apprenticed at any branch of the business to do one part of the work only; the employing of a man to do a part of his branch of the business continuously."

The secretary reports that the task-work system has been done away with, and that neither task work nor piecework in any form is allowed.

**Un or label.** The Lithographers adopted a union label in 1897, but the nature of their work is not such as to make their label of great value to them. The secretary-treasurer says: "Most manufacturers employ only union men and might use the label, but on many classes of work the label can not be used without spoiling the appearance of the work or dissatisfying customers. Labels are more used in the West than in the East. Forty or 50 per cent of the manufacturers use it where possible."

### INTERNATIONAL STEEL AND COPPER PLATE PRINTERS' UNION OF NORTH AMERICA.

**History.** This union was organized September 2, 1893. The local unions which composed it had been affiliated with the Knights of Labor. It embraces printers of bank notes and pictures as well as of cards and commercial work. It has only 5 local unions and about 800 members, but these are said to comprise 95 per cent of all the plate printers in the country. The membership in successive years is given by the secretary-treasurer as follows: 1893, 350; 1894, 400; 1895, 500; 1896, 550; 1897, 600; 1898, 675; 1899, 725; 1900, 800.

**Convention.** The convention meets annually in June. Each local is entitled to 2 delegates, and the expenses of the delegates are paid by the locals. The delegate holds office for a year, and represents his local in case of a special convention during his term. A local must have paid its per capita tax and all indebtedness to the national union in order to be represented. Each delegate must have been a resident member of the union he represents for at least 6 months, if the union has been organized so long.

The constitution is amended by vote of the convention.

**Officers.** The officers are a president, a vice-president, a secretary-treasurer, and an organizer. They are elected by the convention by ballot. A majority is necessary to a choice. No one except a delegate is eligible for any national office but that of secretary-treasurer.

The president has power to suspend any officer whom he believes to be derelict in his duty or guilty of any dishonest act. He must, however, furnish the officer with a detailed statement of his reasons, and also send the vice-president a similar statement. The vice-president is then to appoint a committee of 3 from the executive council to try the suspended officer.

The secretary-treasurer is directed to deposit all money, except \$150 for current expenses, in the name of the trustees. The current-expense account is to be drawn upon only by the secretary-treasurer in conjunction with the president. The salary of the secretary-treasurer is \$750 a year.

The organizer is directed to correspond with each town or place in his territory where there are plate printers at work, to encourage them to embrace unionism. He is entitled to the regular rate of wages of his union for any time lost in attending to union business, together with necessary traveling expenses. The amount paid him may not exceed \$100 a year, except on the indorsement of the executive council.

The executive council consists of one delegate from each local union. It has power to impeach any officer. If an officer is found guilty and removed from office, the remaining delegate from the same local union is to be appointed by the president as his successor. Each local secretary is required to furnish the secretary-treasurer quarterly with a statement of all rejections, expulsions, suspensions, and reinstatements, and the reasons therefor, and also with a statement of

the condition of the trade. Local secretaries must also furnish annually statistics of the number of apprentices within the jurisdiction of their unions.

**Membership.** The constitution requires an apprenticeship of 4 years, beginning between the ages of 17 and 18, as a qualification for admission. The qualification of apprenticeship may be waived only by consent of the national union. An applicant for membership or reinstatement who has been rejected can not apply again to any union within 6 months. A member who secures a place as foreman may retain his membership if he wishes.

The name of every applicant for membership must be sent at once by the local secretary to the national secretary-treasurer, and by him to all the local unions. No person may be received into membership until 15 days after the publication of his name as an applicant, but this is not to be enforced during a strike.

**Apprenticeship.** The constitution enjoins upon each local union to limit the number of apprentices in some definite proportion to the number of journeymen employed in each office. An apprenticeship of 4 years is prescribed as the necessary qualification for a plate printer, and it must have been begun between the ages of 17 and 18. The local unions are recommended to admit apprentices to a conditional membership in the last year of their apprenticeship, without payment of dues and without the privilege of voting, in order that they may become acquainted with the workings of the union.

**Transfer cards.** Cards in the form of certificates of membership, prepared by the national office, are issued to members, good for 30 days from date, and transfers from one union to another are made by the use of these certificates. A person who comes from a place where a union exists without such certificate can not be admitted unless by special permission of that union, under penalty of a fine of \$25 upon the union which makes the irregular admission.

**Appeals.** Appeals from the decisions of a local union lie to the executive council and from it to the convention. All parties to an appeal, in which documents are to be submitted to the general offices of the union, must make affidavit to the truth of their statements before a notary public. The decision of the local union must be complied with pending the appeal.

**Finances.** The national union derives its revenue from a charter fee of \$1, from the sale of supplies to local unions, and from a per capita tax of 10 cents a quarter. The executive council has power to levy assessments when necessary. Locals are required by the constitution to pay the per capita tax on all members 1 year or less in arrears. Local dues are from 25 cents a month up.

**Strikes.** In case of a dispute with an employer the local union is required to notify the organizer. The organizer is to go to the place and try to adjust the difficulty. If he fails, he is to notify the president. The president submits the case to the executive council. If the executive council votes to authorize a strike, the question is then submitted to a special meeting of the local union. No member may vote on the question unless he is in good standing and has belonged to the local union at least 6 months. A three-fourths vote is necessary to authorize a strike. Strike pay is \$7 a week for married men and \$5 for single men. No member who receives work as much as 4 days in the week is entitled to benefit, and any member who refuses work is delinquent. Strike pay ceases after 8 weeks unless both the local union and the executive council think it necessary to continue it. Weekly reports are required from the executive board of the local union to the national secretary-treasurer showing the amounts of money paid in benefits, the number of beneficiaries, union or nonunion, and all other facts that may be required.

It is especially provided that in case of a general strike in a town where several offices are involved no union force of men shall refuse to work for a proprietor who agrees to pay the scale, provided they have the consent of the local union.

**Sharing of work.**—The secretary-treasurer reports that it is the general rule that all shall have an equal share of work in all union shops.

**Hours of labor.**—Forty-eight hours is the usual length of a week's work.

**Piece work.**—The piece-work system is approved by the plate printers for their own trade, and is the system under which they are usually paid.

**Machinery.**—The plate printers have always opposed the introduction of steam presses, and have maintained that the work done on a hand-roller press is far better. They have succeeded in excluding the steam press from the United States Bureau of Engraving and Printing, the largest plate-printing office in the country.

## CHAPTER VI.

## LABOR ORGANIZATIONS IN THE BUILDING TRADES.

## BRICKLAYERS AND MASONS' INTERNATIONAL UNION OF AMERICA.

**History.**—The Bricklayers and Masons' International Union of America was organized in 1865. It includes bricklayers, stone layers, and plasterers. The secretary asserts that the union has never countenanced or encouraged the admission of plasterers where the Plasterers' International Association has had a local. It refuses to grant charters to locals composed of plasterers exclusively, holding that such locals belong to the Plasterers' International Association. In small places which can not support separate locals of bricklayers and of plasterers, it takes the position that the plasterers should join with the bricklayers and masons. Nearly one third of the locals of the Bricklayers are mixed unions which contain plasterers, and some of them are over 30 years old. Plasterers have been members of the Bricklayers' Union since 1865. The convention of the bricklayers in 1898 passed a resolution directing the executive board to consult the Plasterers' International Association with a view to the amalgamation of the two bodies, and to report to the bricklayers' convention of 1900.<sup>1</sup> The Plasterers did not consider the proposition favorably.

Four hundred and twenty-two locals were reported in the summer of 1900 and 371 in 1899. On December 31, 1900, the number was 452. The secretary estimated the membership June 30, 1901, at 39,000. For December 31 of certain previous years the membership is given as follows:

1892	27,448
1894	19,674
1896	23,251
1898	26,707
1899	33,351
1900	37,789

President Gompers said in his report to the American Federation of Labor convention of 1899 that the Bricklayers and Masons' Union had decided by a referendum vote in favor of affiliating with the Federation of Labor, but that their general officers found themselves without authority to carry out the decision, and had concluded to refer the matter to the next convention, which was to be held in January, 1900.<sup>2</sup> The question was again submitted to the local unions in 1900, and was defeated by a vote of 299 unions against 123. The vote is counted by unions, and not by members.

The officers in their reports expressed regret at this outcome. The secretary said that the union constantly received great assistance from the organizers of the Federation. He called attention to the isolated condition of the Bricklayers, and said that the question would soon be, not whether they should affiliate with other organizations, but whether they should affiliate with the American Federation of Labor or with the National Building Trades Council.

**General attitude.**—The preamble of the Bricklayers' Union recites the phrases of the Declaration of Independence that God has endowed all men with certain inalienable rights, and that all men are created free and equal. It continues: "The trend of employers, assisted by combined capital, is to debase labor and deny it its lawful and just share of what it produces."

**Convention.**—The convention meets annually on the second Monday in January. Each local is entitled to 3 representatives for the first 250 members or less, and to 1 additional representative for each additional 150 members. Representation is based on the membership shown by the July report. When a vote by unions is taken in the convention each local is entitled to at least 3 votes, whether or not it has 3 delegates present. A local in arrears for dues is not entitled to representation. The expenses of delegates are paid by their locals. The general body pays

<sup>1</sup> Plasterers' International Association Convention Proceedings, 1900, pp. 26, 27.

<sup>2</sup> A. F. of L. Convention Proceedings, 1899, p. 8.

the expenses of its officers in attending the convention, and pays them the regular rate of wages in the locals to which they belong with \$1 a day additional. Salaried officers do not receive the per diem allowance.

The secretary, in his report of December 1, 1900, called attention to the small attendance at recent conventions and recommended that the expenses of delegates be paid from the general treasury instead of by their locals. He also suggested cutting down the representation of each union to 1 delegate and giving each delegate a number of votes proportional to the number of members he might represent.

**Officers.**—The union has an executive board composed of the president, first vice-president, and secretary, and a separate judiciary board composed of the president and the first and the second vice-president. The executive board has control of all executive business, including all disputes with employers, and complete control of all strikes. The judiciary board has control of all matters of appeal relating to the laws or usages of the international union, or of subordinate unions, and to charges or disputes of one member or one local union against another. The officers are elected by ballot in convention, and a majority of all votes polled is necessary to election.

The secretary devotes all his time to the organization. The president is an active officer and has to give the union a great deal of his time, but he is paid by the day, only for time lost at his accustomed rate of wages. During the 11 months ending November 30, 1900, his compensation was \$660, made up of wages for 130 days lost time, at \$1.10 a day, and 16 days of attendance at sessions of the executive board, at \$7.50 a day. The convention of January, 1901, voted testimonials of \$300, \$200, and \$100, respectively, to the retiring president, first vice-president, and second vice-president.

**Local unions.**—In April, 1900, Mr. O'Dea, who had for many years been secretary of the organization, resigned that position and was appointed general organizer, under an agreement that he was to be paid \$75 for every new local organized, and was to pay all the expenses of organization. In connection with his offer to take the position on these terms, he submitted a table of the work of the previous year, showing 24 unions obtained by the organizers at a cost of \$2,150, or about \$102 a union. In the period of 7 months from May 1 to December 1, 1900, under his contract, Mr. O'Dea organized 15 unions, which entitled him to a payment of \$3,375; out of which, however, all expenses of organizing, as well as cost of seals and some other supplies for the new locals, had to be paid. The new secretary, in his report of December 1, 1900, expressed the greatest gratification with the results of the contract. The convention of January, 1901, however, discontinued the arrangement. A testimonial of \$250 was voted to Mr. O'Dea, but was declined.

Each local union, when it is organized, may be installed as a bricklayers', bricklayers' and masons', bricklayers' and plasterers', bricklayers', masons', and plasterers', or stone masons' union, provided there is no objection from any other union in its city or neighborhood.

All communications from a local must bear the seal of the union and the signatures of the president and the recording secretary. Any union which fails to answer such official communication within a reasonable time, not more than 10 days, shall, on report of the union or person making the complaint, be fined the sum of \$5, which shall be paid into the treasury of the international union.

**Membership.**—Every candidate for membership "must be a practical bricklayer, mason, or plasterer, and competent to command the existing scale of prices for work, and shall (if complaint is made as to his ability) be compelled to pass a satisfactory examination by a committee of the union in whose jurisdiction he is working." The candidate must be vouched for as being a citizen of the country, or having declared his intention to become one.

After providing for the reception of plasterers by the local unions, the constitution adds, "This shall not apply to localities where there are exclusive plasterers' unions of a local or national character. But the admission of plasterers to a local union shall be left optional where no exclusive plasterers' union exists."

Every person initiated takes a pledge on his honor as a man that he will not reveal any private business or proceedings of the union or any individual action of its members; that he will abide by the constitution, by-laws, and scales of prices of work adopted by it; that he will acquiesce in the will of the majority, and that he will, by every honorable means within his power, procure employment for members of the union.

**Apprentices.**—The constitution gives the locals power to regulate their own apprentice laws, but it forbids any contract of indenture for less than three years. It provides for compelling indentured apprentices to complete their time, and for finding places for apprentices whose employers may have gone out of business.

It also presents a form of contract for indenture which it recommends to the locals. The secretary reports that indentures are much used. Where they are not in use apprentices are often registered by the union, and the same control over them is maintained.

**Traveling card.** Any member who is clear of indebtedness to his local, and against whom no charge is pending, is entitled to a traveling card, good for 30 days from date of issue. It may be once renewed for 30 days, but can not be renewed again. Before the renewal expires the holder must deposit it in some local, or forfeit his membership. On depositing it, and paying dues from date of issue of the card, he is entitled to all the privileges of a member. Contrary to the practice of many unions, the bricklayers do not collect dues in advance on issuing a traveling card. Indeed, collection in advance under such circumstances is forbidden, under penalty of a fine of \$3 on the offending local.

One who joins the union as a stone mason must draw his card as a stone mason, and one who joins as a bricklayer must draw his card as a bricklayer. Violation of this rule is punishable by forfeiture of membership, and a special initiation fee of \$25 if reinstatement is applied for.

No union may charge money for receiving a traveling card, under penalty of a payment of \$5 more than it charged.

The corresponding secretary of the union in which a card is deposited must immediately to ward a certificate of the receipt of it to the corresponding secretary of the union which issued it, under penalty of a fine of \$5. The constitution adds, "This law is imperative, so as to enforce discipline and to be enabled to keep track of all traveling members." Any bricklayer or mason who refuses to join the union where he is, but goes to another place, joins a union with a smaller initiation fee, and returns within 30 days, is to be required to pay the difference between the initiation fees.

**Discipline.** The Bricklayers and Masons' Union has a code of crimes and penalties, according to which treasury defaulters are to be fined not less than \$10 or more than \$50, besides the return of the amount embezzled; "union wreckers," \$25 to \$100, inveterate or notorious scabs, for third offense or over, \$50; common scabs, for first or second offense, not less than \$5 or more than \$25. A union wrecker is defined substantially as one who goes into the jurisdiction of a union on strike and accepts employment and persists in retaining it, or who leaves a union to defeat a legal strike. Scab is defined as "an employer or employee who has violated the laws of this or of subordinate unions, whom the members of the international union are debarred from working for or with until he or they have complied with the laws of said union."

Those who as nonunion men have worked against the interests of the Bricklayers' Union and refused to join it may be punished with a special initiation fee of not more than \$25, in addition to the regular initiation fee, when they apply for membership.

It is forbidden to place a fine on any employer who is not a union member, but this does not apply to special initiation fees.

Charges against any member must be brought in writing and tried in open meeting, after due notice to the accused. Guilt or innocence is determined by a majority vote, and the penalty is fixed in the same way. If an accused member fails to appear for trial he is deemed in contempt and fined such sum as the union may think proper, and suspended until the fine is paid. An appeal lies to the judiciary board, and, finally, to the convention. Before making an appeal the accused must pay any fine which may have been imposed upon him, in order to restore himself to good standing. If the appeal is sustained the fine is returned.

**Finances.**—The charter fee is \$20. Twenty-five cents is collected by the general body for each new member, including charter members, and credited to the strike fund. The per capita tax is fixed each year by the convention. In 1900 it was 7 cents a month. The local initiation fee may not be less than \$10 nor more than \$25. New locals may admit members at a lower rate for the first 30 days after they are established; and the executive board has power to grant any local permission to do so for a limited time.

A member 5 months in arrears for dues is to be suspended, and when 6 months in arrears is to be dropped from the roll and may not be reinstated "unless upon payment of an initiatory fee." A subordinate union 6 months in arrears for dues to the national union is to be dropped from the roll and is not to be restored until it pays double the amount of its per capita tax for the time it has been in arrears.

The names of delinquent members are sent by the secretary of the international union to each local, and each local secretary is required to post the list in a conspicuous place in the meeting rooms on pain of fine of \$5. No union may receive

into membership any person whose name appears on the delinquent list until he has settled the fines or claims with the union by whom he was termed delinquent.

On December 31, 1899, there were 22 different rates of initiation fee, as follows.

Number of unions	Rate charged	Number of unions	Rate charged	Number of unions	Rate charged	Number of unions	Rate charged
1	\$1.00	4	\$11.00	2	\$15.00	2	\$22.00
1	.50	2	12.50	1	18.00	1	22.25
1	.20	11	15.00	3	20.00	1	25.00
112	10.00	6	15.25	1	20.25	1	26.00
1	10.25	1	15.75	1	21.25	1	30.00
1	10.75	2	16.00				

The unions in and near New York City and Chicago charged \$25, so did those of many smaller places, but only \$15 was charged in Philadelphia, St. Louis, and Boston, and only \$10 in San Francisco, New Orleans, and Baltimore. The one union which charged \$26 was in Denver, and the one which charged \$30 was at Missoula, Mont.

In 1899 the bricklayers' union introduced a yearly working card to which monthly stamps indicating the payment of per capita tax were to be affixed. The secretary, in his report of December 1, 1900, expressed thorough approval of the system, but said that some local unions had failed to put it into operation. He believed that it could be brought into successful working in the course of another year.

**Benefits.** The constitution specifies among the powers of the local unions that of establishing beneficial or mortuary funds. It forbids locals to take traveling cards for such funds.

**Strikes.** 1. *Earlier provisions as to authorization of general strikes.*—The rules of the union have for a long period provided that in order to receive aid from the general organization, any union desiring to strike must obtain the consent of two-thirds of the entire number of the local unions in the organization. Formerly the general officers had no discretion in submitting the petition or "bill of grievances" of a union desiring strike assistance to the subordinate unions, provided the petition was in proper form. The constitution of 1893 (art. 12, sec. 2) provided that the subordinate union desiring to make application for authority to strike must take a vote by written ballot, a two-thirds majority of all the members being required. In case there should be two or more unions in a city they must be regarded as one in taking such a vote. There was also a requirement in this constitution that subordinate unions should provide for joint boards of arbitration with their employers, and in practice the central executive board was wont to hold that in the absence of attempts to settle difficulties by arbitration the grievances of any union should not be submitted to the vote of the several unions.

2. *Attitude of general officers toward strikes.* It appears from the reports of the president of the International Union from year to year which contain a detailed statement of the action taken with regard to various bills of grievances from local unions, that it has been the policy of Mr. Hertz, the former president, of Mr. Klein, who has been president since 1894, and of Mr. O'Dea, general secretary, to interpret the limitations upon the authorization of strikes by the national organization, as strictly as possible. Thus there have been numerous instances in which the application of a local union to be permitted to appeal to the other unions for support was rejected on the ground of technical insufficiency, failure to take a written vote, insufficient majority, etc. In not a few other instances the application has been rejected on the ground that efforts to secure arbitration have not been properly made. In still other instances the application has been rejected on the ground that only one or more firms in the city were involved, so that the dispute was not a general one in which the principles of the organization were at stake. In a communication replying to such a petition, signed by Thomas O'Dea, secretary of the International Union, in 1894, it was stated that the customs and practices and laws of the International Union have always been opposed to granting aid in strikes against an individual or a firm. The right of the union to demand support is recognized only when its demands are refused in general by all the contracting parties or employers, necessitating a general lock-out or stoppage of all work.<sup>1</sup> A similar provision was later incorporated in the constitution.

As an illustration of the policy of the international executive officers regard-

<sup>1</sup> Twenty-ninth Annual Report of President and Secretary, p. 40.

ing strikes, their annual report for 1891 shows that petitions for the submission of grievances to the local unions were sent in by 7 unions. In 6 of these cases the executive board rejected the application, while in the seventh case the local union appears finally to have decided not to submit its grievances to the other unions.

In that year the 1 referendum vote actually taken on the question of authorizing a strike was regarding the strike of a union at Grand Rapids, which had been authorized by the annual convention to submit its grievances to the local unions. This fact is interesting because the strike of the Grand Rapids union was the last which has received financial assistance from the international organization.

3. *Strike benefits.*—The constitution of the Bricklayers and Masons' International Union provides that if once the organization votes to grant assistance to a local union on strike, the members of the union who are married men shall be paid \$7 per week during the continuance of the strike, and those who are unmarried shall be paid \$5 per week. Careful provision is made in the constitution regarding the method of distributing strike money in order to prevent fraud. The executive board has for many years been given a certain degree of control over the conduct of strikes receiving aid from the general organization. Thus the constitution of 1893 (art. 12, sec. 4) authorizes the board to investigate the progress of any such strike from time to time, and to declare it off if the prospects of success are found hopeless. The International Union does not provide for any payments except those to the members on strike. Any money expended for contingent or other purposes must be furnished by the local

The money necessary to pay these benefits is raised, if necessary, by assessment upon all the local unions, the amount of the assessment being determined by the weekly payments necessary to support the members on strike. The Bricklayers and Masons have also a law for maintaining a reserve fund in the general treasury, to be supported by a payment of 25 cents by each member on his initiation. Since there have been no general strikes supported by the union during the past 7 years, the reserve strike fund has been gradually accumulating, although no new assessments have been levied especially to augment it. The amount of the reserve fund at the close of 1892 was \$7,106, while at the close of 1899 it amounted to \$11,990, although \$3,081 had been paid during the year 1899 for buying the trade journal of the organization. At the close of 1900 the amount was \$14,117.

The annual reports of the secretary show how carefully this system of strike benefits and assessments has been conducted. As an illustration of the methods employed, the report concerning the last strike receiving aid from the general organization, that of 1891, may be interesting. The secretary's report states first the action of the annual convention endorsing the application of the Grand Rapids union for permission to apply to subordinate unions for support in its strike. Then follows a copy of the circular sent out to the unions, which contains in full the statement of grievances submitted by the Grand Rapids union, the action of the convention regarding it, and directions as to the manner of taking the vote on the question of supporting the strike, and of transmitting the result to the secretary. The required number of unions having voted in the affirmative, the secretary sent directions in detail to the Grand Rapids union as to the manner of conducting the strike, of distributing the strike pay, etc. At the same time a circular was sent out to all the unions, giving the result of the vote in detail, including the action of each special union, and fixing the rate of assessment for the support of the strike at 3 cents per member per week. The secretary of the Grand Rapids union was required to send a weekly pay roll to the secretary of the International Union, together with a report as to the progress of the strike, the negotiations with the contractors, etc. To these weekly reports the secretary responded with advice and suggestions. After the strike had been in progress several weeks, the president of the International Union authorized a deputy to visit the scene of the strike and report the conditions. On receiving his report, the executive board thought it advisable to continue the granting of aid only for 2 weeks longer. The local union was informed of the intention to declare the strike off, and, consequently, it made more strenuous efforts to arrive at an agreement with the employers. The circular declaring the strike off was held up 1 week longer than the time which had been set, but was finally sent out. The strike was apparently not settled until after the International Union had discontinued its aid, but it finally resulted in a compromise. The report of the secretary contains a full statement of the amount paid each week of the strike, and the number of men, married and unmarried, receiving aid. After the close of the strike a notice was sent out to all the unions, stating the amount of expenditures and of receipts, the result of the strike, and containing a table for equalizing the contributions of the unions. The amount actually levied at the rate of 3 cents per week had been greater than was necessary to cover the expense of the strike, so that some of the unions which had paid in full were entitled to a rebate, while

the sums due from the others were decreased by an amount sufficient to properly equalize the assessment.<sup>1</sup>

1. *Working of strike system prior to 1894.*—Notwithstanding the restrictions above outlined regarding the authorization of general strikes, the number of such strikes up to 1894 was considerable, and caused no little dissatisfaction on the part of the executive board. The following table shows the entire number of strikes receiving general sanction from 1883 to 1894, together with the amounts paid out by the International Union, and the results of the strike

Year	Location	Weeks on strike	Amount paid by International Union	Rates assessed per week	How terminated
					<i>Cents</i>
1883	Hamilton	2	\$1,676.23	10	Won
1884	Natick				Settled
1884	London				Settled
1884	New Haven				Settled
1884	Buffalo	15	21,662.00	15	Lost
1885	Cleveland	6	2,401.00	25	Won
1885	Denver	4	541.00	12	Won
1886	Providence	20	4,697.00	65	Lost
1887	Providence	21	3,602.00	65	Lost
1887	London				Settled
1888	Fort Wayne				Settled
1888	Hamilton	2	1,912.00	65	Won
1888	Fall River	9	1,114.00	65	Lost
1888	Ann Arbor	18	1,762.00	65	Lost
1889	Ann Arbor	21	1,600.00	65	Lost
1889	Cleveland	5	5,717.00	68	Settled
1890	Pittsburg				Settled
1890	Toronto	7	11,321.00	18	Won
1890	Cincinnati	1			
1890	Cincinnati	1	1,158.61	65	Won
1890	New Haven	56	26,148.00	65	Lost
1891	Williamsport	62	10,561.00	62	Lost
1891	Pittsburg	49	45,688.00	65	Won
1891	Vicksburg	4	1,100.00	62	Lost
1891	Utica	1	173.00	62	Won
1891	Lowell	21	7,399.00	63	Lost
1891	Grand Rapids	23	12,199.00	63	Compromised

"Settled" satisfactory to the union.      "No assessment collected"

It will be seen that the total number of strikes which received the approval of the International Union during these 14 years was 27. Assistance was granted in 21 cases, the other 6 strikes being settled before the payments became necessary. The most serious strike ever undertaken by the organization was that at Pittsburg in 1891 and 1892, which lasted 19 weeks and required the expenditure of \$45,688, the weekly assessments upon all of the members of the organization being 5 cents.

Mr. O Dea, secretary of the International Union, commented strongly in his report for 1893 on the undue number and expensiveness of strikes. He says that the general impression among members of the union is that victory is to be expected in the case of any strike which has such wide support and which, owing to the precautions regarding its authorization, is presumably so just. As a matter of fact, a considerable proportion of the strikes undertaken by the organization have been lost, and the fault is that of the organization and of its rules. The subordinate unions are under the impression that the executive board is thoroughly conversant with all matters pertaining to the proposed strike before it permits any union to submit its grievances to the subordinate unions. Such, however, is not the case. The board is as ignorant of the true state of affairs as the subordinate unions are. It can not go behind the bill of grievances as presented. The constitution requires that bills which are in regular form shall be submitted by the executive board to the subordinate unions for their vote. The vote is almost invariably in favor of supporting the strike. It is usually a sympathetic vote. The majority of the unions vote in the affirmative as a matter of pride, so that they may say that they have never voted against a strike. The secretary advises more careful attempts at arbitration and less disposition to enter upon strikes or to vote in favor of supporting them.<sup>2</sup> He recommends also the adoption of an amendment to the constitution

<sup>1</sup> Twenty-ninth Annual Report of Secretary, pp. 21-45

<sup>2</sup> Report of Secretary, 1893, pp. 26, 27.

increasing the authority of the general executive officers regarding strike petitions. In accordance with this recommendation the annual convention, which met in June, 1891, adopted constitutional amendments which, with some modifications, are the existing laws as to the authorization of strikes.

5. *Existing provisions as to authorization of strikes.*—The present rules of the Bricklayers' and Masons' International Union regarding the authorization of strikes are so stringent and so important as to deserve quotation in full.

“ARTICLE XVII. *Strikes and lockouts.*

“SECTION 1. The policy of the International Union is protection. It seeks to maintain it by means of reason and conciliation through the peaceful methods of arbitration rather than by means of force. When reason fails and force is resorted to, then strikes are the result as a last resort.

“*Causes for strike.*—A strike will not be considered unless it be for a demand to maintain the standard hour worktime or for a decrease in the hours of labor, a demand for an increase in wages, or to resist a reduction thereof, and all strikes must be of a general character, in which the union is arrayed against the employers as a whole, and vice versa. Any strike by a subordinate union against an individual, firm, or a minority of the employers of its locality, shall not be considered an International Union matter. And no application for strike will be acted upon until all efforts at arbitration have proved futile.

“2. Any subordinate union requiring the assistance of the International Union to vindicate its rights and privileges as guaranteed by this constitution, shall be required to conform to the laws and rules governing the same, and wait for an official answer.

“Where subordinate unions in distress are not allowed financial assistance, all International Union officers and subordinate unions are in duty bound in true union spirit to grant a general support possible.

“3. *Bill of grievance.*—It shall transmit to the executive board of this union a bill of grievance which shall plainly state all the circumstances of the alleged trouble or difference existing in the locality. It shall state how and when it originated, what methods were employed to effect a settlement; if by arbitration, what propositions were advanced, and by whom, the names of the arbitrators, the number of meetings and dates of the same, and the ultimatum offered by either side. It shall state whether the negotiations for settlement were conducted by the arbitration joint committee or by the union direct.

“4. If a settlement can not be reached, the union shall at a summoned meeting order a ballot to be taken, and it shall require a two thirds majority of all the members of the union to adopt a motion to strike. The vote taken must be by yes or no, printed or written on paper ballots, and they shall be cast and canvassed in the same manner as when officers are elected by the union. A record of the vote, and date of the meeting held, and the number of members present in attendance at the same, shall be entered on the minutes of the meeting, and a copy of the same shall be embodied in the bill of grievance. It shall also state its present numerical and financial standing, and be signed by the president and recording secretary, and attested by the deputy, with the seal of the union thereon.

“5. *Special deputy.*—On the receipt of such application to strike by the executive board, it shall at once send a special deputy to the scene of action to thoroughly investigate, and upon the report of such deputy (if all terms of the law have been complied with) the bill of grievance, together with the report of his investigation and the recommendation of the executive board, shall be submitted by the secretary of the International Union to the subordinate unions for their final action.

“6. *Vote on grievance.*—The corresponding secretary of each subordinate union, upon receipt of the bill of grievance from the secretary of the International Union, shall immediately notify the president of his union, who shall call a meeting of his union for the purpose of voting thereon, and he shall return the vote of the union, yes or no, within ten days from receipt of such bill. Any subordinate union failing to report their decision for or against a permission to strike within ten days, the secretary shall enter such union as voting in the affirmative upon the record of the International Union. Unions are requested to transmit answer, yes or no, by telegraph, to avoid delay. Any union failing to return an answer within twenty days shall be fined the sum of five dollars.

“7. Immediately upon ascertaining that a two-thirds majority of the several subordinate unions voting within the specified time are in favor of granting authority to strike, the president shall notify the union asking such permission, and action thereon shall be taken by said union within five days from the receipt of said notice.

18. *The assessment.*—Each union shall take into consideration all matters submitted to it by the president of this union and shall return the same to him immediately with its approbation or disapproval and if authority be granted and he deems it expedient, he shall levy a tax not exceeding \$1 during a strike on each member per week and all the money thus raised shall pass directly into the treasury of the International Union. When official notice of assessment is submitted to the subordinate unions, it shall contain a statement of the question or questions voted upon by them, in tabulated form, and a notice stating the date the payment for such strike goes into effect. Upon receipt of an order from the president of this union the treasurer shall transmit the necessary weekly amount to the receiver of said union on strike, by post office order or express.

It will be seen that these new provisions not merely define very closely the grievances which may be a legitimate cause for a general strike, but require the international executive board to investigate the local conditions by the appointment of a special deputy before submitting the bill of grievances to the subordinate unions for their final action. The executive board is authorized to accompany the bill of grievances when submitted to the unions with its recommendations as to their action. In practice this seems to mean that the executive board uses its discretion as to whether it shall submit unvarnished appeals to the local unions at all.

The effect of this increased power of the central executive board over the authorization of strikes has been very marked. During the next year after the report above cited, 1894, the conditions in the bricklaying trade, as in most others throughout the country, were exceedingly unfortunate. Many bricklayers belonging to the International Union were out of work, while reductions in wages took place in the case of many others. The report of the secretary for the year declares that early during the year a large number of unions sought sanction for strikes to resist reductions in wages or otherwise to improve their conditions. During the months from February to April no less than ten such applications for support were forwarded to the general office. In view of this condition the executive board took advantage of its new powers to refuse to countenance appeals for permission to strike. It also issued an appeal to all the unions to refrain from strikes and to vote against the support of strikes when petitioned by any union. This appeal pointed out the depressed state of business generally, the inability of the members of the union to pay strike assessments, and the likelihood of the failure of strikes if undertaken. As a result of this appeal, only a single strike was authorized, by the vote of the unions during 1894, while since that date no strike has actually received financial assistance from the International Union. In one instance, in 1894 a vote of the subordinate unions did authorize a strike, but the difficulty was settled before assessments were actually levied for the support of the strikers.

The working of this system of central control over strikes is well illustrated by the experience of the bricklayers' organization in 1899. There were during that year four petitions from local unions for permission to appeal to the subordinate unions for strike support. Two of these difficulties were amicably settled by the special deputy sent to the place in question. One of the applications was rejected by the executive board on technical grounds. The other grievance was found on investigation to be a legitimate one, and the subordinate unions voted to support the strike. Meantime, however, the efforts of the special deputy to bring about a settlement were successful, and the strike was declared off before any assistance had been granted to the union. Aside from these formal applications for permission to inaugurate a general strike, seven other strikes of a local nature were brought before the executive board for consideration. In one of these instances the board held that the local union was not within its rights in prohibiting its members from working with a certain contractor. When the union refused to abide by the decision of the board in this regard its charter was revoked. In four other cases strikes threatened or actually in force were settled by the intervention of special deputies or of the other officers of the organization. In one case an appeal for aid was made without petition for formal strike assessments on behalf of the union. This appeal was refused on the ground that the strike was a sympathetic one in which the interests of the bricklayers themselves were not particularly involved. In one other instance, after investigation, the executive board declared its moral approval of a proposed strike, although financial support from the general organization was not asked for.

The vigorous policy of the central board in its control over the subordinate unions in regard to strike matters is shown by the occasional suspension or revocation of the charter of a local union for refusing to obey the orders of the board. This was the case, for instance, in regard to one union in Massachusetts in 1897. The local had appealed to the annual convention for support in a boycott to be instituted

against certain employers. The executive board, on investigating the matter, found that some of the material facts had not been brought before the convention; especially that another union in the same city had not consented to the boycott; and that the matter really involved a dispute between these two unions, in which the one refusing to sanction the boycott was beyond question right. The executive officers, therefore, sent a special deputy to try to bring about a settlement of the difficulty, and, when his services were rejected by the union, refused to approve the boycott. The local union continued insubordinate, declaring that the action of the convention took the question of the boycott entirely out of the hands of the executive board. Finally the executive board revoked the charter of the union, sending out a general circular to that effect, with an account of the dispute, to all the unions. The case is described in full in the annual report, but the next annual convention took no steps to override the action of the executive board.<sup>1</sup>

6. *Settlement of disputes by intervention of national officers.*—One of the most important results of the increased control of the executive board over the authorization of strikes has been the frequent settlement of disputes by the intervention of the board in connection with its investigation of the local conditions. The authority given to the board to appoint special deputies to visit the scene of the difficulty and investigate has been increasingly used, and their conciliatory action has become increasingly important. The first comment on this practice is contained in the report of the president for the year 1896. He declared then that the results of the appointment of such special deputies had invariably exceeded the expectations of the executive board. They had in various cases been able to prevent or settle troubles.<sup>2</sup>

Each annual report since 1896 contains accounts of a considerable number of cases in which special deputies have visited cities where strikes were impending. In many instances they report that the subordinate union rather than the employers is at fault, and by their influence they have been able to bring the union into line with the general conciliatory policy of the organization. In some instances the local unions are dissatisfied with the advice of special deputies, but the recommendations of the deputies are usually upheld by the executive board. From time to time, also, appeals are taken from the decisions of the executive board to the general annual convention. Here, again, most of the decisions of the board are sustained, although they are occasionally overruled. In still other instances the special deputies find real grievances existing, but are able, by negotiation with the employers in accordance with the conciliatory methods provided for by the rules of the bricklayers' organization, to effect a satisfactory settlement. The president and the secretary of the international union themselves at times visit the local unions and take part in negotiations with employers, or settle internal disputes within the unions.

As a result of all these endeavors on the part of the central officers to maintain peace in the ranks of the subordinate unions, general strikes of sufficient importance to warrant the support of the entire organization have been practically done away with. Moreover the number of local strikes has been very greatly decreased, and the instances in which amicable settlements of disagreements are reached by means of joint boards, or through the intervention of national officers, have greatly increased.

The officers of the organization itself appear highly satisfied with the results of their control over strikes. It is very evident that their attitude toward employers is friendly, and that they desire to settle all difficulties in an amicable manner if possible. The president and the secretary in each of their annual reports congratulate the union upon its success in avoiding strikes. Thus the report of President Klein for 1898 expresses the opinion that the general strike is really a thing of the past. The regulations of the organization over the conduct of the subordinate unions are too strong to permit financial loss to the general body through strikes on the part of local unions. The rules of the organization mean investigation, conciliation, mediation, and arbitration. The most successful mediator in the cases which can not be settled by local arrangement is the special deputy.

Secretary O'Dea also in his report for 1898 declares that the special deputies who have been employed during the year have performed their missions with fidelity, and have been successful in settling the disputes in which they have intervened.<sup>3</sup>

The present secretary, Mr. Dobson, remarked in his report of December 1, 1900, that while 55 unions had secured the 8-hour day during the preceding year, with, in most cases, an increase of pay, these gains had been made with very little serious trouble. He advised the new local unions to observe and follow the policy of the older ones, and to note their success in winning peaceful victories in respect to hours, wages, and other conditions.

<sup>1</sup> Thirty-second Annual Report, pp. 21-34.

<sup>2</sup> Rep. of President, 1896, p. 2.

<sup>3</sup> Thirty-third Annual Report of President and Secretary, pp. 4, 81.

Some further account of the methods of the Bricklayers in dealing with employers, particularly in regard to formal agreements and arbitration, is given on pp. 374 ff.

**Hours of labor.**—The union provides in its constitution that none of its members shall work more than 9 hours in 24, except in cases of extreme emergency, which must be reported to the executive board and receive its sanction. Among the powers reserved to the subordinate unions, however, is the power "to designate what constitutes emergency as to working overtime." But it is further provided that no union shall "allow its members to work 10 hours per day consecutively on any work merely because extra pay will be given for the tenth hour."

The executive board has also power to grant to such unions as may apply for it "the privilege to work such hours as will tend to hold and control any mason work in rolling mills, smelting works, blast furnaces or corporation work held or controlled by scabs or nonunion men." The privilege is granted by the board reluctantly and sparingly. Members who go into a town where such a privilege has been granted must deposit their cards in the local union under penalty of a fine of \$35.

The executive board may grant financial assistance to any local union which applies for it "with proof that with said assistance they can secure the 8 hours without regard to wages."

The following table is prepared from official reports of the secretary

*Number of 8-hour unions.—Bricklayers and Masons' International Union of America, March 7, 1896, and December 31, 1899.*

	1899	1896		1899	1896
British Columbia	1	—	New Jersey	11	2
California	1	—	New York	31	16
Colorado	6	2	Ohio	9	5
Connecticut	2	—	Ontario	2	—
Illinois	13	2	Oregon	1	—
Indiana	2	1	Pennsylvania	4	—
Iowa	1	2	Rhode Island	1	1
Kansas	1	—	Tennessee	1	1
Kentucky	1	3	Texas	6	1
Massachusetts	6	1	Washington	5	4
Michigan	3	1	Wisconsin	2	1
Minnesota	2	—	District of Columbia	2	2
Missouri	2	3			
Montana	2	—	Total	121	72
Nebraska	1	1			

In 1896 no union reported a day of more than 9 hours. In 1899 a single union at Lancaster, Pa., reported that its members worked 10 hours. It reported 9 hours in 1896. December 1, 1900, 172 unions out of a total of 441 were reported to have the 8 hour day.<sup>1</sup>

**Wages.**—The following table gives the rates of wages per hour of the several local unions on March 1, 1896, and on December 31, 1899, as reported to the general secretary and tabulated by him:

*Rates of wages per hour, Bricklayers and Masons' International Union of America, March 1, 1896, and December 31, 1899.*

Number of unions			Number of unions			Number of unions		
Mar 1, 1896	Dec 31, 1899	Rate per hour	Mar 1, 1896	Dec 31, 1899	Rate per hour	Mar 1, 1896	Dec 31, 1899	Rate per hour
—	1	\$0.20	—	3	\$0.30	—	2	\$0.43

23	26	.35	—	2	.43	2	5	.62
1	—	.35	10	6	.42	3	3	.69
11	5	.36	—	2	.43	—	2	.75

<sup>1</sup>Annual Report, December 1, 1900, pp. 229, 230.

The following table gives average rates per hour by States and Provinces, each local union in a State having the same weight in determining the averages.

*Average rates of wages per hour by States and Provinces.*

	Rate per hour			Rate per hour	
	Dec 31, 1899	Mar 1, 1900		Dec 31, 1899	Mar 1, 1900
Alabama	\$0 37½	\$0 33½	Montana	\$0 66½	\$0 61½
Arkansas	50	50	Nebaska	50	45
British Columbia	50	50	New Brunswick	34	34½
California	52	50	New Hampshire	39	39
Colorado	39½	39	New Jersey	39½	38½
Connecticut	40	40	New York	42½	41
Delaware	39½	40	North Carolina	40	40
Florida	39½	40	Nova Scotia	30	40
Georgia	27½	—	Ohio	41	40½
Illinois	44	44½	Oklahoma	50	40
Indiana	42	43	Ontario	31½	33½
Iowa	42½	46	Oregon	55	62½
Kansas	47½	50	Pennsylvania	37	35½
Kentucky	42½	46½	Quebec	30	—
Louisiana	47½	45	Rhode Island	38	37½
Maine	32½	33½	Tennessee	40	40½
Manitoba	50	50	Texas	54	51
Maryland	41½	41	Virginia	39	40
Massachusetts	42	39½	West Virginia	43½	43
Michigan	40	36½	Washington	37½	55½
Minnesota	39	39	Wisconsin	48	40
Mississippi	40	—	District of Columbia	50	50
Missouri	50	52½			

**Scabs.** The constitution of the Bricklayers defines a scab as follows: "When- ever the word 'scab' appears in this constitution it shall signify an employer or employee who has violated the laws of this or subordinate unions, whom the mem- bers of the I. U. are debarred from working for or with until he or they have complied with the laws of said union."

**Official journal.** The Bricklayer and Mason, the official journal of the union, is under the control of the editor, both as to its contents and as to its business man- agement. The editor is directed to "advocate, through editorials in the journal, ideas consistent with true trade unionism." His salary is \$1,500 a year, and he gives a bond of \$2,000, on which the premium is paid by the organization.

## UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA.

**History.**—Two fruitless attempts were made by the carpenters, in 1854 and 1867, to establish a national union. The Brotherhood of Carpenters was established at Chicago in 1881 by 12 local unions, representing 2,042 carpenters. The first pres- ident of the brotherhood was Gabriel Edmondston, who organized a local federa- tion of trades at Washington, and who was for several years secretary and then vice-president of the National Federation of Trades, which was established in 1881. The brotherhood afterwards absorbed the United Order of Carpenters and took the name of the United Brotherhood of Carpenters of America.<sup>1</sup>

The following table shows the growth of the organization:

*Brotherhood of Carpenters and Joiners.*

Year ending June 30	Charters granted	Charters surren- dered	Net gain of unions	Number of unions in good standing	Members in good standing	Increase in member- ship
1881	—	—	—	12	2,042	—
1882	13	2	11	23	3,780	1,738
1883	11	8	3	26	3,203	2,487
1884	21	—	21	47	4,364	1,071
1885	50	17	33	80	5,789	1,425
1886	104	7	97	177	21,423	17,039
1887	129	—	129	306	25,406	4,073

Loss

Of the 679 unions on the rolls July 1, 1900, there were 40 working in the German language, 6 French, 2 Bohemian, 2 Jewish, 1 Scandinavian, and 1 "Latin." In distinctive trade branches there were 9 mill men's unions, 6 stair builders' unions, 1 of car builders and 1 of floor layers. In the Southern States there were 16 unions of colored carpenters.

Starting with a membership of 2,000 in 1881, the union grew steadily to nearly 6,000 in the middle of 1885. In the next year it made a great leap to a membership of about 21,500. In the fiscal year ending June 30, 1890, there was another leap from about 31,500 to nearly 51,000. The panic of 1893 carried down the membership from more than 51,000 on June 30, 1893, to less than 31,000 on June 30, 1894. On June 30, 1895, the number was barely more than 25,000. There was a gradual recovery to 31,500 in the middle of 1898, and a more rapid growth to almost 40,000 in the middle of 1899; and in next year a year of greater general prosperity—the number rose to 68,500. The Brotherhood is now one of the strongest trade unions in America.

The number of members not in good standing (owing 3 months dues) was not given in 1900. In 1899 the number was 9,817, making the total number of names on the books, June 30, 1899, 19,692. The aggregate membership on June 30, 1900, was probably not far from 80,000.

**Jurisdiction disputes.**—*Amalgamated Society.*—The Brotherhood has fought many contests local and general, over questions of jurisdiction. It has a direct and evident rival in the Amalgamated Society of Carpenters and Joiners. The Brotherhood was able to have the Amalgamated Carpenters excluded from the Federation of Labor, on grounds of unity of trade control when they first applied for admission in 1888. It was not till 1891 that they were admitted; then the Brotherhood consented to let them in.

In spite of constant jealousy, and occasional open contests, the two organizations generally maintain a state of outward peace. In Chicago there is a carpenters' executive council, in which representatives of the Brotherhood and of the Amalgamated Association meet together. In New York there is no such formal unity, but the Amalgamated Association has acted with the Brotherhood in its recent contest with employers.

The convention of the Brotherhood in 1900 received a petition from the Buffalo delegate asking for moral and financial assistance in the conflict between the members of the Brotherhood in Buffalo and the Amalgamated Society. The convention acted favorably. It also resolved to instruct the delegates to the next convention of the Federation of Labor to move in that body that no body of carpenters be recognized except the United Brotherhood.

In February, 1901, the executive council of the Federation of Labor requested the two organizations of carpenters to make such changes in their laws that only one organization should have jurisdiction in any one city.

**Wood Workers.**—The interference between the Brotherhood and the Wood Workers is hardly less direct than that between the two unions of carpenters. As is noted below, under Membership, the Brotherhood claims jurisdiction over all men who run wood-working machinery. This is the particular province of the Wood Workers; and they in turn undertake to cover some hand work, which seems to be within the natural province of the Carpenters.

The convention of the Federation of Trade and Labor Unions, in 1885, instructed

the legislative committee to use its best efforts to organize the wood-working machine hands. A protest was made on behalf of the Furniture Workers' International Union against any interference with the machine hands under its jurisdiction, and it was agreed that the resolution should be taken as referring only to machine workers on "sash, doors, blinds, wagons, etc." No protest was made on behalf of the Carpenters' Brotherhood, though it was represented at the convention. As a result of the activity of organizers connected with the Federation, the Machine Wood Workers' International Union was organized in 1890.

An appeal was made to the convention of the American Federation of Labor in 1889, to settle a dispute between the carpenters and the furniture workers of Pittsburg. The convention declined to interfere. It recommended "that organizations affiliated with the American Federation of Labor, whose trades are so closely allied as are the furniture workers and the carpenters and joiners, should, in each district adopt a code of working rules suitable to that particular district," so that such disputes may be avoided.

On September 21, 1891, an agreement was made between the Brotherhood and the Machine Wood Workers' International Union defining their respective jurisdictions. The next year, when the Wood Workers consolidated with the Furniture Workers and adopted the name of Amalgamated Wood Workers, it was considered that the change abrogated the agreement.

In October, 1897, after long negotiations, a new agreement was made, by which the Wood Workers were given full jurisdiction over all mill hands, except carpenters who might be at times engaged on mill work, and except millwrights and stave builders. The Brotherhood was to have sole jurisdiction over outside carpentry work and the fitting up of offices and stores.

The Brotherhood convention of 1898 abrogated all agreements made by the executive board with other wood working organizations, and ordered that no such agreements be made in future and that no such organizations be recognized by the Brotherhood. Locals and district councils were still permitted to make local agreements with such other organizations by vote of their members.

The executive board continued to be of a less strenuous temper than the delegates to the convention. In October, 1899, it considered favorably the idea of sending a representative to the next convention of the Wood Workers, "to the end that a permanent understanding may be arrived at and all existing troubles settled at the next convention of the United Brotherhood." Representatives of the Amalgamated Wood Workers presented themselves at the Brotherhood convention of 1900, and tried to come to an agreement on the basis of a division and mutual limitation of the field of work. The Wood Workers claimed, besides all work in mills, the right to put up saloon, bank, and drug store fixtures manufactured in shops under their control. The convention refused, asserting its jurisdiction over all carpenter work as specified in our constitution, believing that the division of control by two organizations of one trade can not be tolerated, particularly where the standard of wages of one is lower than that maintained by the other," and resolved that no agreement should be entered into with the Amalgamated Wood Workers. The executive board was instructed to "carry out the objects of the recommendation in each locality in such a manner as their best judgment suggests."

**General principles.**—The declaration of principles prefixed to the constitution declares that trades-union men above all others should set a good example as good and faithful workmen; urges organized labor everywhere to "try to secure more stringent immigration laws, particularly against the importation of destitute laborers; condemn prison contract labor," because it puts the criminal in competition with honorable labor for the purpose of cutting down wages and also because it helps to overstock the labor market. It declares that the shortening of the working day "increases the intelligence and happiness of the laborer, and also increases the demand for labor and the price of a day's work," says that discussions and resolutions looking toward the securing of legislation "in favor of those who produce the wealth of the country" shall be in order at any regular meeting of the Brotherhood, but that party politics must be excluded.

A resolution was introduced in the convention of 1900 directing the delegates of the Brotherhood to the convention of the American Federation of Labor to demand that the officers of the Federation refrain from further appeals to the United States Congress, because experience had shown that such appeals were useless, and to

<sup>5</sup> Convention Proceedings, 1900, pp. 70, 71.

impress upon the convention and the wage workers at large "the necessity of keeping aloof from all capitalistic political parties and to enter into independent political action on their own behalf." The independent action referred to was apparently to be taken by joining the socialist parties. The majority of the committee on resolutions reported in favor of the resolution. The minority reported unfavorably, and the minority report was adopted by the convention.<sup>1</sup>

**Convention.**—The convention meets biennially. A local which has 100 members or less in good standing is entitled to 1 delegate, one which has more than 100 members and less than 500, to 2 delegates; more than 500 and less than 1,000, 3 delegates; 1,000 or more, 4 delegates. Each delegate has 1 vote, and there are no proxies. The mileage and expenses of delegates are paid by their locals. The president, the secretary-treasurer, and the recording secretary of the executive board must attend the convention, and their expenses are paid out of the general treasury.

A local which owes two months' taxes is not entitled to representation. At the convention of 1900 the representatives of 4 locals, though given seat and voice in the convention, were excluded from voting because the per capita tax of the locals had not been paid. During the progress of the convention word came from the central office that the taxes had been received, and the delegates were then given the right to vote.

**Constitutional amendments and referendum.**—No amendment to the constitution can be adopted except by referendum. Amendments may be passed upon the proposal of the convention or of the executive board, or upon the proposal of any local endorsed by 5 other locals in as many States.

A two thirds majority of the members voting is necessary to carry any measure on which a general vote is taken, whether or not it is a proposal to change the constitution.

**Officers.** The general officers are a president, 2 vice-presidents, a secretary-treasurer, and an executive board of 5 members. The members of the executive board are required to come from different districts of the United States and Canada, defined in the constitution. All the officers are elected at the convention by a majority vote. If no candidate receives a majority, the lowest candidates drop and another vote is taken. The term of office is 2 years. Any general officer may be removed by a general vote on charges sustained by two thirds of the members voting. In order to be eligible as a general officer one must be a journeyman carpenter, working at the trade or employed by the organization, and must have been a member in good standing for 12 months before the election. Similar qualifications are required for delegates to the general convention except that membership for 6 months suffices, and that this qualification may be waived if the local represented has not been 6 months in existence.

The president has power to examine the books and accounts of all locals and district councils, either personally or by deputy. He has power to suspend any local for violation of the constitution or laws, and to suspend any general officer under charges, pending an investigation by the executive board. He signs all charters.

The secretary-treasurer receives all applications for charters and "shall sign and grant the same in proper order." He decides points of law, subject to appeal to the executive board. He publishes the official journal and gives in it a monthly report of receipts and expenditures. His bond is \$5,000.

The executive board elects a chairman and a recording secretary from its own members. It is required to meet quarterly. The president and the secretary-treasurer have a voice in its meetings, but no vote. It is required to audit the accounts of the secretary-treasurer every quarter and to inspect his books. It decides all points of law and all grievances and appeals which are submitted to it in legal form, and its decision is binding until reversed by the convention.

The president is not expected to devote his full time to the organization and is paid by the day instead of receiving a regular salary by the year. The president's report to the convention of 1900 declared that the organization had reached such a size that the president could no longer perform his duties without giving his whole time to them and that he ought to be steadily employed by the Brotherhood at a fair salary. The convention voted to amend the constitution in this respect and to fix the president's salary at \$1,500. The convention also voted to separate the office of treasurer from that of secretary. On the referendum both proposals were defeated.

<sup>1</sup> Convention Proceedings 1900, p. 86.

**Local unions and district councils.**—A local union may be organized by 10 or more carpenters. It is declared that a local can not withdraw from the United Brotherhood, or dissolve, so long as 10 members in good standing object, but it may consolidate with another local by a two-thirds vote. When there are two or more locals in one city or borough of a city they must be represented in a carpenters' district council, composed exclusively of delegates from unions of the United Brotherhood. If there are several borough district councils in a city they must be represented in a central executive council. The laws of such executive council must be agreed to by a general vote of the members in the several boroughs. District councils have power to frame and enforce working and trade rules for their districts, and to adopt by-laws and rules governing strike benefits and other benefits to be paid by locals under their jurisdiction. Violations of trade rules within their territory are to be tried exclusively by them and not by the locals. By-laws and trade rules of district councils must be submitted to the locals concerned, and must be adopted by a majority of all members voting at a special meeting called for the purpose. They must also be submitted to the general president for his approval.<sup>1</sup>

Besides the district councils, composed exclusively of members of the Brotherhood, there are often, in the larger cities, committees or councils in which the local organizations of the Brotherhood act with other organizations of carpenters. In Chicago, in 1890, the local unions belonging to the Brotherhood, those of the Amalgamated Society of Carpenters, and the assemblies of carpenters belonging to the Knights of Labor, formed a common committee to deal with their employers. They made a contract with the master carpenters for an 8-hour day, at 35 cents an hour, from April 13, 1891, to April 13, 1893. By 1896 the Knights of Labor were no longer recognized in the agreement.<sup>1</sup> The executive council still exists, representing the Brotherhood and the Amalgamated Society.

**Local officers.** In each local union there is a financial secretary, who receives all money and pays it over to the treasurer at the close of each meeting. The financial secretary keeps the accounts of the members and reports monthly to the general secretary-treasurer, and quarterly to the local, on the numerical and financial standing of the local. There is a board of three auditors whose duty is to make a monthly audit of the books and accounts of the financial secretary and the treasurer. There is also a board of three trustees who have general supervision of the funds and property of the local. It is their duty to notify all members to be present at the first meeting night of each quarter, in order that the members' due cards may be compared with the books of the financial secretary. Each member who fails to attend this quarterly meeting is subject to a fine of not less than 25 cents.

**Membership.**—In order to be admitted to beneficial membership a candidate must be not less than 21 nor over 50 years of age, and must be a journeyman carpenter or joiner, stair builder, ship joiner, millwright, planing mill bench hand, cabinet maker, or running wood-working machinery. He must be of good moral character and competent to command standard wages. The jurisdiction of the Brotherhood is declared to extend over all engaged in the occupations mentioned, "whether on the building in its erection or repairs, or employed in the preparation or manufacture of material for same." It is noted above that this claim of jurisdiction gives rise to disputes with the Wood Workers, whose field is embraced within that claimed by the Carpenters.

A candidate must furnish proof of citizenship of the country where he resides (the United States or Canada), or of intention to become a citizen. He must fill out and sign a regular application blank and have it indorsed by two members in good standing as vouchers of his fitness to become a member. A two-thirds vote is necessary to elect to membership. A person who has been expelled, suspended, or rejected by any local can not be received by any other local except with the consent of that which expelled, suspended, or rejected him.

An apprentice over 18 years of age, or any candidate who is over 50 years of age, or who is disqualified for beneficial membership by reason of bad health, may be received as a semi-beneficial member. (See below, under *Benefits*.) An apprentice so received becomes a beneficial member when he reaches the age of 21, if he has been 6 months in good standing, and if he is otherwise qualified. A semi-beneficial member may vote and hold office, and is entitled to all trade privileges and to strike benefits.

No member can join or remain in more than one local, or join or remain in any other organization of carpenters and joiners, upon pain of expulsion.

<sup>1</sup> Vigouroux, *La Concentration des Forces Ouvrières*, pp. 99, 100.

No person who engages in the sale of intoxicating liquors can be admitted or retained as a member.

**Apprentices.**—A code of rules which was adopted by the convention of 1888, and which all locals are still urged to try to enforce, recommends the indenturing of apprentices wherever possible, requires an apprenticeship of 1 year, not to be completed before the age of 21, forbids an apprentice who has left his employer before the end of his term from working in any union place, enjoins on every local to limit the number of apprentices in some fixed ratio to the number of journeymen.<sup>1</sup>

**Clearance cards.**—A member who wishes to transfer his membership, or who leaves the jurisdiction of his local to work in that of another, must take out a clearance card and deposit it on the first meeting night after having secured work with the local which he wishes to join. His old local must issue the card on his paying all arrearages together with dues for the current month and the next month, and 10 cents for the card. A member is not entitled to a clearance card until he has been 3 months a member since his last initiation.

Clearance cards have 2 coupons attached, numbered 1 and 2. When the card is deposited the financial secretary who receives it must sign coupon No. 1 and affix the seal of his union to it, and mail both coupons to the financial secretary of the local which issued the card as evidence that it has been deposited. The latter secretary must sign coupon No. 2 and affix the seal of his union and return it to the former as evidence that the card was legally obtained.

In June, 1900, the president suspended five New York locals because, having raised their initiation fee to \$20, they attempted to compel any member who came with a clearance card from an outside district, where the initiation fee was \$5, to pay the \$15 difference. The action of the president was sustained by the next convention.

**Discipline.** Any member who violates the trade rules of the locality or who undermines a fellow member in prices or wages, or who reveals business of the local union without authority granted by a vote, is punishable by a fine of not less than \$5, or by expulsion. Any member who becomes an habitual drunkard, or wrongs or demands a fellow member, or advocates or encourages the dissolution of any local union or division of its funds, or the separation of any local from the Brotherhood, or who is guilty of any improper conduct, is to be fined or expelled.

All charges must be made in writing and must specify the offense and the section of the constitution or by-laws which is violated. They must be referred to a trial committee of 5, selected by lot from 11 members named by the local union. The accused and the accuser have each 3 peremptory challenges. The committee must give the accused a fair and impartial trial after due notice and must submit a full report of the case, with its verdict and the evidence, in writing, to the local. A two-thirds vote of the local is necessary to convict. A member must be charged and tried within the jurisdiction of the local or district council where the offense is committed. If he is a traveling member a copy of the verdict must be sent to his own local.

An appeal lies to the general president and from him to the general executive board. All parties to an appeal must make affidavit to the truth of their statements before a notary public. If any sum of money is involved the appellant must first pay it over to his local or to the district council to hold until the appeal is decided, but if the sum is greater than \$5, such smaller sum as the general president may decide is to be received in place of the full amount. Under a decision of the general executive board made in 1896 a member forfeits his rights to appeal within the Brotherhood by taking his case to the civil courts.

Profane or unbecoming language during a meeting, or appearance at a meeting in a state of intoxication is punishable by a fine of 50 cents for the first offense, \$1 for the second, and by suspension for 3 months for the third. These fines are imposed by the president without vote.

**Finances.**—The charter fee for new unions is \$10, including the cost of a seal and an outfit of books and stationery. The per capita tax is 20 cents a month. The convention of 1900 adopted a proposition to increase the tax to 25 cents a month, and to devote 5 cents a member a month to the establishment of a strike and defense fund; but it was defeated on the referendum vote by almost 10,000 votes against 4,000.

If a deficiency is likely to arise by reason of an increased death rate, the executive board has authority to draw such money as may be needed to cover it from the funds of the locals.

The initiation fee may not be less than \$5, and the monthly dues payable to the

<sup>1</sup> The Carpenter, August, 1900, and repeatedly.

<sup>2</sup> Convention Proceedings, 1900, p. 15.

locals may not be less than 50 cents a month for beneficial members and 30 cents a month for semibeneficial members and apprentices.

The locals are required to buy all their cards and supplies from the secretary-treasurer, sending cash with their orders. A local is to be suspended when 3 months in arrears for per capita tax.

A member who owes a sum equal to 3 months' dues, whether the obligation consists of dues or fines and assessments, is not in good standing and is suspended from all benefits, and is not again in benefit until 3 months after all arrearages are paid in full. One who owes a sum equal to 6 months' dues is suspended without vote of the union and can be readmitted only as a new member, subject to such reinstatement fee as may be determined by the local or by the district council. No claim can be allowed for general benefit arising out of any sickness or accident which occurs while a member is in arrears. If any local owes 3 months' dues or taxes to the general treasury, its members are not entitled to benefit and do not receive the right until 3 months after all arrearages are paid.

The following table gives a classified statement of the receipts and payments of the Brotherhood for certain biennial periods:

*Finances of United Brotherhood of Carpenters, biennial periods, ending July 1.*

Total disbursements	67,484 46	169,120 96	221,461 06	203,455 89

**Benefits.**—A beneficial member must be not less than 21 years old, and must not have been over 50 years old when he joined, and must have been then in sound health. There is not, however, any provision for a medical examination. If a beneficial member dies after being 6 months in good standing, his wife or his legal heirs named in his application are entitled to a funeral benefit of \$100; after 1 year, \$200. After 1 year's membership, if total and permanent disability, which will make it impossible ever again to follow the trade for a livelihood, is incurred while working at any of the occupations over which the organization claims jurisdiction, a disability benefit of \$100 is paid; after 2 years' membership, \$200; after 3 years' membership, \$300; after 5 years' membership, \$400. A semibeneficial member is entitled only to a funeral allowance of \$50 after 1 year's membership in good standing.

On the death of a wife, provided she was in good health at the time of the member's admission, a benefit of \$25 is paid on 6 months' membership and \$50 on 1 year's membership. This benefit is paid "for 1 wife only."

If disability occurs "through actual negligence or through the use of alcoholic drinks on the part of the disabled brother" no disability benefit is paid. Neither death nor disability benefit is paid "in the case of any member whose disability or death is caused by intemperance, or his own improper conduct, or by any accident or disease incurred previous to joining the United Brotherhood, or while on

duty as a volunteer or militiaman, or by exposing himself to risks to which men in the occupations embraced in the Brotherhood are not usually liable.

The following table gives the amounts paid for death and disability benefits from year to year and the amount in the treasury at the end of each year.

*Amount paid for funeral and disability benefits, and balances on hand, United Brotherhood of Carpenters and Joiners, 1881 to 1900.*

Year ending June 30	Amount paid for funeral and disability benefits	Balance on hand at end of year	Year ending June 30	Amount paid for funeral and disability benefits	Balance on hand at end of year
1881	\$1,400.00		1892	12,643.45	50,293
1884	2,750.00	828.34	1894	61,684.45	9,409.03
1885	5,000.00	228.02	1891	79,912.50	5,513.54
1886	9,500.00	9,080.12	1895	51,311.75	12.46
1887	16,275.46	4,443.55	1896	91,690.00	261.92
1888	18,750.00	7,980.51	1897	40,224.45	14,674.92
1889	25,550.00	6,535.65	1898	18,953.99	18,738.21
1890	32,265.49	5,986.22	1899	51,229.58	30,787.55
1891	41,732.65	8,232.51	1900	83,120.45	30,268.69

Of the \$51,229.58 paid during the year ending June 30, 1899, \$40,479.58 was paid on account of deaths of members, \$7,050 on account of deaths of wives, and \$3,800 on account of disability.

In 1900 the constitution was amended by a general vote of 9,341 to 4,321 to provide for a superannuation benefit. A payment is to be made to every member over 60 years of age who has been continuously in good standing for 25 years. The amount of the pension is to be fixed by the convention. Twenty-five cents a year per capita is to be set aside to cover it, and it is forbidden to use this fund for any other purpose. By its terms, this provision is to take effect January 1, 1902, but as the union was organized in 1881 no one can have been a member for 25 years before 1906.

The convention of 1900 directed the executive board to formulate "a plan of reorganization of the Brotherhood, said plan to be of a more liberal policy as relates to benefits, and to include an out-of-work benefit, and the present benefits as now prescribed by the constitution, with increased dues sufficient to meet the new reorganization. The dues and benefits are to be universal throughout the Brotherhood, and the plan is to be presented at the next convention in 1902."

In addition to the regular benefits prescribed by the constitution, considerable amounts are voted from time to time in special donations. The convention of 1900 voted to place \$2,000 in the hands of the executive board, to be used at its discretion for the benefit of the members of the Brotherhood and their families who suffered by the Galveston flood. The executive board was also instructed to issue a circular to the locals asking them to subscribe for the relief of the members in Galveston.

The funds of locals can not be used for loans or donations to members or for political purposes. No donation for any purpose can be given nor tax or special assessment levied, by any local union except by a two-thirds vote of all the members present after the proposition has been laid over from one meeting to another and all members have been notified that it is pending. No appropriation of money can be voted after 10 p. m.

Sick benefits are, however, a part of the regular expenditures of most locals, and the amounts so paid are considerable. For instance in 1898 Local 375, of New York, paid \$3,015 in sick benefits to 137 members out of about 725. At that time no benefit was paid for the first week of sickness. The New York district council amended its by-laws so as to require payments to begin from the first day when the sickness lasted two weeks. In 1899 \$1,352 was paid to 131 members.<sup>1</sup>

The general secretary said, in his report for 1898, that the total amount of sick benefits paid by the locals since 1883 has been \$683,644.

The carpenters, like other organized workers, often give sums which are large in proportion to their means, in aid of the struggles of workers of other crafts. For

<sup>5</sup> American Federationist, October, 1898, p. 162.

instance, the Brotherhood contributed about \$3,500 to help the miners in their strike of 1897, \$500 from the general treasury, \$1,626 in contributions of locals sent through the general office, and about \$1,400 in contributions of locals sent direct to the miners' headquarters or given to visiting committees of miners.<sup>1</sup>

**Strikes.** When any trade difficulty arises the president of the local or of the district council is first to appoint a conference committee of three capable members to try to adjust the dispute with the employer or employers. If the attempt is not successful, the question of sustaining the members involved is to be voted on at a meeting, of which one week's notice has been given to all members. The vote is by secret ballot. A two-thirds majority of the members present is necessary to insist up in the grievance. When such a vote has been taken a detailed account of the difficulty must be sent to the general secretary-treasurer. If, if the executive board think it necessary, is to deputize some suitable member to proceed to the scene of difficulty and try to adjust the trouble. If he fails, the question of sustaining the local action is submitted to the executive board.

Where a district council exists it must adopt rules for the government of strikes and lockouts in its district. Any local or district council which engages in a general strike without the consent of the executive board is liable to expulsion. Any member who goes to a city seeking work or goes to work where a strike or loc out is pending is subject to a fine of \$25, or expulsion, or both.

When strikes or lockouts involving more than 6,000 members are in existence no other strike or lockout can be aided at the same time from the general treasury. No general strike can be sanctioned from November 1 to April 1. The president and the executive board have power to declare a strike at an end, so far as aid from the general body is concerned, whenever they deem it advisable.

Relief to members engaged in strikes or lockouts is to be given only to such extent and at such rate as the general funds may warrant. Previous to 1900 the constitution provided for a regular strike benefit of \$6 a week. The president said in his report to the convention of that year: "Our per capita tax should be increased to such a sum as to be able to meet all the money demands made upon the funds of the general office."

"You should either devise means of meeting the promises which the constitution gives or do away with the promise of a definite sum per week in case of strike. I believe there should be no stated sum per week unless we are willing to put the money there to keep that promise. Much dissatisfaction has been created by this lack of funds at headquarters. The convention offered two propositions for the vote of the members. First, to increase the per capita tax by 5 cents a month, and to devote this amount to the establishment of a strike fund; second, to remove from the constitution the promise of a definite strike benefit. The former proposition was rejected by a vote of 3,958 to 9,818, the latter was adopted by a vote of 8,636 to 9,975.

In the years 1888, 1890, and 1891 the Brotherhood was beaten, according to its reports in only 1 out of 15 of its strikes. In 1889 and 1892 it was beaten only once in 10 times. But in 1893 it was beaten in one fifth of its strikes, and in 1894 in one half. This lack of success was associated no doubt partly as cause and partly as effect with a marked falling off in its membership. From 1896 to 1900 the Brotherhood admitted defeat in only 1 strike out of 35 or 40, while about 1 in 12 were compromised, and victories were claimed in the rest.

From 1887 to 1894 only 132 strikes, looking to an increase of wages, were approved, 91 strikes for the 8-hour day, 175 for the 9-hour day, and 51 for a shorter day on Saturday. Out of 873 strikes approved the Brotherhood claimed 761 victories and 58 compromises, and admitted 51 defeats.<sup>2</sup>

Secretary McGuire said in his report of 1898 that since 1883 the union had expended \$351,294 in support of trade disputes. He continued: "In that period we have had 1,026 strikes and lockouts, of which 998 were successful, 61 were lost, and 67 compromised. The past 2 years we had 83 strikes, lost 2, compromised 7, and won 64 of them, expending \$8,397 for these 83 trade movements. The figures given below show the amounts we have expended for strikes and lockouts since November 1, 1886, previous to that date we had no provision for general strike funds. This appended statement proves that as our organization grows older and more disciplined, trade movements succeed with less expense. 1886-1888, \$10,311; 1888-1890, \$75,197; 1890-1892, \$1,436; 1892-1894, \$53,147; 1894-1896, \$15,015; 1896-1898, \$8,697; total, \$234,293. Added to this we find \$120,000 expended by the locals for local strikes in that same period, making a sum total of \$354,293.

"In 70 per cent of the cities in the our jurisdiction wages now average 50 cents a day more than they were before the union was started. Estimating on 8 months

<sup>1</sup> The Carpenter, October, 1897, p. 4.

<sup>2</sup> Vigouroux, *La Concentration des Forces Ouvrières*, pp. 81-82.

<sup>3</sup> The total and the items do not agree, they are, however, as given in the original report.

work in the year in these cities 12 years back we have a gain of \$4,500,000 annually, or \$51,000,000 more wages the past 12 years, for an expenditure of \$51,200 in strikes."<sup>1</sup>

In September, 1900, the secretary reported that there had never been in the history of the organization a greater number of "trade movements" than in the spring and summer of that year. Two hundred and fourteen cities and more than 35,000 members had been on strike at various times. One hundred and thirteen of the contests were for the 8-hour day, 85 for the 9-hour day, and the rest for the enforcement of trade rules. Of the 214 movements the secretary reported 14 as successful, only 6 as defeated, and 17 as compromised.

The expenditures from the general treasury for strikes and lockouts in successive biennial periods ending July 1, have been as follows:

1886-1888	\$10,311
1888-1890	75,467
1890-1892	71,336
1892-1894	73,437
1894-1896	15,015
1896-1898	8,697
1898-1900	38,645
Total	272,903

The expenditures during the last biennial period include \$12,820 for Chicago, \$5,000 for Scranton and 1,023 for New York. The largest single contributions to other places were \$2,000 to Galveston, \$2,000 to St. Louis, \$1,000 to Newark, N. J., and \$1,000 to Albany, N. Y. The fact that the most of the payments are in round numbers would of itself indicate sufficiently that the Brotherhood did not habitually make a regular weekly payment from the national funds to every participant in an authorized strike, according to the provisions which its constitution then contained. The custom is to pay lump sums to locals which are in difficulty, as the condition of the treasury and the weight of other demands may warrant. The convention at which this report was received proceeded afterwards to make an appropriation of \$2,000 for the current needs of the Chicago unions, "in the interim between the close of the convention and the meeting of the board." In one case presented to this convention a local seems to have demanded more than the provisions of the constitution entitled it to. The district council of Boston asked for \$1,000 as expenses incurred in their 8-hour movement of the previous spring. The convention ultimately appropriated \$100.50, "as being the amount (shown by the papers in the application) they would be entitled to from the general office on regular strike pay."

**Hours of Labor.**—During 1890 there was a strong concerted movement of the carpenters for shorter hours, at the instance and with the support of the Federation of Labor. The secretary reported that it had been successful in 13 cities and had benefited 16,197 workmen in that trade, and that countless others in every branch of the building trades were also gainers.

The Secretary's report to the convention of 1898 said: "When the United Brotherhood was formed in 1881 the 10-hour day was universal among the carpenters. At this date there are only 23 cities under our jurisdiction working the 10-hour day. 105 have the 8-hour rule and 121 work 9 hours a day. This is a gain of 53 cities on our 8-hour list since our last convention, 2 years ago." The secretary added that the reduction of the hours of labor had given employment to 15,130 more carpenters, union and nonunion men, than would have been working if the 10-hour day had still obtained.

At the convention of 1900 the secretary reported that the members in 184 cities and towns were working under the 8-hour rule, a gain of 81 in 2 years.

**Labor Day.**—A local union is permitted to fine its members for not parading on Labor Day.

**Wages.**—A decision of the general executive board, made in 1887 and still in force, declares that grading wages is demoralizing to union principles and to the welfare of the trade, and that no local union should adopt the system. A member incapacitated by age or accident may be permitted, however, by consent of his local or district council, to work for less than the regular scale of wages.

<sup>1</sup> American Federationist, vol. 5, pp. 162, 163.

<sup>2</sup> Convention Proceedings, 1900, pp. 48, 50, 75, 76.

<sup>3</sup> American Federation of Labor Convention Proceedings, 1890, p. 13.

<sup>4</sup> American Federationist, vol. 5, pp. 162, 163.

**Piecework**—Members are forbidden to lump, subcontract, or work at piecework for any builder or contractor on pain of a fine of not less than \$10 nor more than \$50, or expulsion. This does not forbid taking a contract from an owner who is not an employing contractor, even though the owner furnish the material.

**Union label.**—The convention of 1900 adopted a resolution that a brotherhood label should be adopted, and should be issued only to shops which should pay the wages and comply with the conditions and trade rules of their localities, and that it should on no account be issued unless a minimum wage of at least 25 cents an hour was paid.<sup>1</sup>

The New York district council has adopted a local union label, which is stated to be the only label recognized by the locals of the city as marking union-made woodwork. Such a rule necessarily prevents the establishment of the Wood Workers' label as a power in New York, since it is only by the demand of the carpenters for union-label material that a considerable demand for such material can be created.

**Journal.**—The *Carpenter*, the official journal of the Brotherhood, is a creditable monthly paper of 16 large pages of about twice the size of the ordinary magazine page. About two pages are printed in German. Besides official matter of the Brotherhood and labor news of general interest it presents a considerable amount of instructive technical matter relating to the trade. In its general tone and attitude toward social questions it is perhaps not an unfair representative of the opinions of trade-union leaders in general. It is not distinctly radical, like the publications of the Carriage Workers and the Brewery Workmen. It does, however, represent the class feeling of the working people. It is in a true sense class-conscious.

The journal is sent free to members. The convention of 1900 proposed to send it only to locals which should subscribe for it at 25 cents a member a year, but the general vote rejected the proposal.

### AMALGAMATED SOCIETY OF CARPENTERS AND JOINERS.

**History**—This is an English organization in its origin, and still has its chief strength in Great Britain. It was established in 1860. The number of members has increased steadily and the growth during the past decade has been more rapid than ever before. The organization is now one of the largest and strongest trade unions in the world. It has local branches in almost every country where large numbers of English-speaking people are found. It appears probable, however, that in the United States the organization has been recruited mainly from carpenters who have emigrated to this country from Great Britain and Ireland. The secretary states, however, that 80 per cent of the considerable increase in 1899, 1900, and 1901 is composed of native carpenters and men of long years of citizenship in this country who realize that high dues are necessary to preserve the fundamental principles of any labor organization, and to prepare it to meet its obligations to its members at the proper time. This was instanced in the great labor struggle in Chicago in 1900, when the Amalgamated Society was credited with being an exception, in that it was prepared to meet weekly all obligations to its members.<sup>2</sup> The total number of members in the organization at the close of 1899 was 61,781, and the number of members in the American branch (the United States and Canada) was 2,784. At the close of 1900 the total membership was 65,012, and that of the American branch was 3,011. On June 1, 1901, the American branch had grown to 3,307 members. The local organizations in the United States are chiefly confined to a few large cities. The total number of branches in the United States is 14, and there are 9 branches in Canada.

**Objects.**—The preface to the constitution of the Amalgamated Carpenters lays stress upon the desirability of establishing benefit systems for the members of the trade. It points out that the fluctuating condition of employment makes protection against unemployment, sickness, superannuation, and death particularly necessary. The statement of the objects of the society in the constitution also enumerates as the most important objects the establishment of various forms of benefits. It is also stated, however, that the society aims at the general advancement, protection, and organization of the trade. It seeks to render legal assistance to members for the recovery of their wages, and to take legal proceedings under the Employers' Liability Act and the Workmen's Compensation Act of Great Britain on behalf of injured members. The preface also points out the desirability of bringing together carpenters and joiners throughout the world. By such a

strong organization the interests of the trade can be more effectually defended than by any partial union.

Another paragraph in the preface expresses the hope that the children of the present generation may see the universal establishment of productive and distributive coöperative societies, and declares that this condition can only come about by the universal spread of the principles of economy and sobriety. This improvement in character will be furthered by the educational means which the union may establish.

**Conventions**—The chief legislative body of the Amalgamated Carpenters is much smaller than those of most American organizations. It consists of 15 members, elected from as many districts, established for that purpose. It is called the General Council. It meets triennially, and must also meet when summoned by the executive council, or when at least 20 branches of the society, by resolution, require it. A recent report of the general council complained that such a meeting had just been summoned without sufficient cause, and advocated a change in the rule. The general council may reverse any action of the executive council, may suspend its members, subject to appeal to direct vote of the membership, and has general control of the society's affairs.

Amendments to the constitution must be proposed by the branches, approved by the general council, and adopted by vote of a majority of the members present at special meetings of all branches of the society.

**Officers**—The chief executive body is known as the executive council, and consists of 6 members, exclusive of the chairman. The provision regarding the election of this council is somewhat peculiar. Its members must be nominated by and from branches of the organization situated within 12 miles of the general office of the society in England. The vote on these nominations is by members of all the branches within 50 miles of the general office. The members of the council hold office for 12 months, and half of them are replaced every 6 months. The chairman of the council is elected annually in the same way as the members of the council itself. The general secretary is elected triennially by vote of all the members of the society. The treasurer is elected annually by the executive council.

Special provision is made in the constitution for the election of the officers of the American District. There is a district committee composed of 6 members, including the president. These, in the same way as with the general executive council, are nominated by branches within a radius of 12 miles from the district office at New York City. The vote, however, is by the members of all the branches in America. The members of the district council hold office for 12 months. The American district secretary is nominated and elected in the same manner as the district council.

The compensation of these various officers is fixed by the constitution, usually at so much per week. The salary of the district secretary varies according to the number of members. The members of the executive council and of the American district council are paid 62 cents for each meeting which they attend. The officers of the local branches are all specifically established by the constitution, and their duties and compensation are fixed.

**Membership**—Candidates for membership in the Amalgamated Society of Carpenters must be not less than 19 nor more than 40 years of age, and in good health; they must have worked at the trade five years and must be good workmen, of steady habits and good moral character. Apprentices may be admitted in the last year of their apprenticeship. Candidates proposed for membership must pay a small fee, which is, however, returned to them if they are refused admittance. Election is by a majority of the members of the branch present.

**Trade and junior sections**—The Amalgamated Carpenters have recently established a "trade section" for persons who, on account of poor health or of old age, are not entitled to admission to the ordinary section and to the enjoyment of all the benefits. Candidates who have worked at the trade for 15 years and are not less than 40 nor more than 60 years of age, may be admitted to this section on paying a fee of \$1.75. The regular contribution is 12 cents weekly (as compared with 35 cents for the ordinary section), 9 cents per quarter to the contingent fund, and 18 cents per year for the special fund for trade purposes. Members of this section are entitled to the same strike benefit as regular members. The total benefit is limited to \$35, the accident benefit for total incapacity to \$50, and for partial incapacity to \$25, and the funeral benefit to \$15. The trade section had 1,003 members in the American branch, against 2,281 ordinary or full members, on June 1, 1901.

A section has also been established for persons too young to be regular members. Any one who has worked at the trade 12 months and is not less than 16 nor more than 18 years of age, if of good health and character, is admitted on paying an

entrance fee of 85 cents, a weekly contribution of 9 cents, and a quarterly contribution of 10 cents to the contingent fund. After 1 year's membership such a person is entitled to \$2.10 per week sick benefit for 12 weeks, and \$1.05 thereafter; also to the benefit of the contingent fund and to \$21 funeral benefit. No person may remain a member of this section after the age of 21. The junior section had 18 members in the American branch on June 1, 1901.

**Finances.**—The financial system of the Amalgamated Carpenters is almost completely unified, there being usually no separate contributions, accounts, etc., for local unions, as distinguished from the general body. Each local holds the money received from its members subject to the order of the central treasury. The claims upon the local are paid by it in the first instance, but any deficiency in its funds is supplied by drafts on other locals having a surplus. The central treasury constitutes a clearing house merely. Unfortunately the accounts kept by the general treasury do not show the total of the receipts and expenditures of the locals, although accurate statistics of the total expenditures for the various benefits are kept. Ordinarily all expenditures of locals are thus guaranteed by the general treasury, but locals are also empowered to raise special funds for particular purposes by vote of the members, approved by the executive council, or, in America, by the district committee.

The scale of entrance fees varies according to age, a practice arising from the difference in risks connected with the benefit system. In the United States persons from 19 to 25 years old pay \$2.00, from 25 to 30, \$3.50, from 30 to 40, \$5.25. Regular members in the United States pay a contribution of 35 cents per week. In addition members pay 9 cents per quarter to the contingent fund and 18 cents per year to the special fund for carrying on trade movements. See the paragraph above on trade and junior sections for the special provisions regarding membership of those sections.

If, at any time, the cash balance of the society, as shown by the reports of the locals, becomes less than \$10 apiece for the members of the ordinary section, \$5 for the members of the trade section, and \$2.00 for members of the junior section, the executive council must make a levy on each member in proportion to his rate of contribution. The executive council is also directed, in case of any great struggle between capital and labor in Great Britain, to take a vote of all the members there on the question of an assessment of not more than 6 cents per week per member.

The cash balance of the society at the end of 1900, the largest ever held, was \$1,051,500,<sup>1</sup> or about \$16 per member. There is no separate reserve fund for any particular object.

**Benefits.**—The society has a very considerable number of different benefits, of which accounts for the high dues of 35 cents per week.

**Strike.**—The "trade privilege benefit" which is practically a strike and lockout benefit, is \$5.25 a week for members who have been 6 months in the society, \$2.63 for those who have been members from 3 to 6 months. Members sent from the locality of a strike to another place to obtain work are allowed strike pay meantime and railroad fare. No payment may be made to persons not members of the organization.

**Unemployment.**—Any member who is out of employment, for satisfactory reasons, for 4 working days or more is entitled to \$3.50 per week for the first 12 weeks, whether successive or not, and \$2.10 per week for another 12 weeks. This makes a total of \$16.20 which may be drawn in 12 months. Officers and delegates who are discharged because of holding office or doing the society's business are allowed their usual wages until they find employment.

**Sick.**—In case of sickness, not caused by improper conduct, a member of 12 months' standing is entitled to \$1.20 per week for 26 weeks, and \$2.10 per week as long as he continues ill.

**Accident.**—A full member who is totally incapacitated for life by accident, blindness, or paralysis, not caused through immoral or reckless conduct, is entitled to \$700. A member partially incapacitated so that he can not earn full wages throughout his life receives \$350. A member who is injured and temporarily incapacitated, but who is likely to recover, is entitled to \$175.

**Superannuation.**—The superannuation benefit was established quite recently. Any member who is 50 years of age, and who is incapable of earning the usual wages, may, if he has been 25 years successively in the society, receive \$2.80 per week for life; if he has been 18 years in the society, he is to be allowed \$2.15 per week.

<sup>1</sup> At \$5 to £1.

*Funeral.*—On the death of any member in good standing for 12 months, a funeral benefit of \$81 is paid. If the wife of such a member dies he receives \$35, \$19 remaining to be paid at his own death. In the case of persons who have been only 6 months in the society, \$24.50 is paid at death.

*Tool.* A tool benefit is paid in case of loss of tools by a member through fire, water, or theft. The benefit varies according to the value of the tools, but can not exceed \$110. Similarly there is a benefit for the loss of tool chest, not exceeding \$7.

In addition to all these benefits there is a contingent fund supported by quarterly payments of all members, which is used in relieving cases of special distress recommended by branches and approved by the executive or district council. This fund is also used for aiding members of the carpenters' and other trades not belonging to the organization.

The following table shows the entire expenditures of the Amalgamated Society of Carpenters for the various benefits up to 1899, together with the yearly expenditure, per member, for each. It will be seen that there has been a steady increase in the outlay for all the benefits except those for unemployment and for strikes or trade privileges. The per capita expenditure per year for superannuation benefit has naturally increased from year to year, and no average taken for past years would be significant.

*Total amount of benefits paid during the years from 1860 to 1899.*<sup>1</sup>

	Total	Average cost per member per year
Unemployment benefit.....	\$2,871,864	\$1.38
Tool benefit.....	255,775	.28
Sick benefit.....	2,181,595	2.92
Funeral benefit.....	446,065	.52
Accident benefit.....	239,825	.28
Superannuation benefit.....	639,915	
Trade privileges (strikes).....	967,450	1.14
Benevolent grants.....	154,735	.15
Grants to other trades.....	128,065	.15
Total.....	\$176,625	

The following table shows similar facts for certain specified years. It is natural that the expenditure for certain classes of benefits should be much more uniform from year to year than that for others.

	1880		1885		1890		1895		1899	
	Amount	Per capita	Amount	Per capita	Amount	Per capita	Amount	Per capita	Amount	Per capita

<sup>1</sup> At \$5 to \$1.

## 142 THE INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

The following summary of the accounts of the first Chicago branch, one of the largest in the American district, with 123 members, for the year 1899, will show the working of the benefit system in the locals.

INCOME.	
Contributions, fines, and levies	\$1,858
Membership and proposition fees	47
From American District Council	500
Miscellaneous	13
	2,418
EXPENDITURES.	
Unemployed benefit	\$766
Tool benefit	61
Sick benefit	213
Superannuation	275
Trade privileges (strikes, etc.)	110
Accident benefit	350
Contingent fund grants	40
Funeral benefit	60
Officers' salaries	67
Delegate to American Federation of Labor	77
Miscellaneous expenses	127
Remitted to San Francisco branch	100
	2,249

It is usually the case that American branches spend more than local contributions and receive money from the general office through the American District Council, as in the above account. The practice of transferring surpluses to other branches is also illustrated by the accounts of this union.

**Strikes.** The system of strike management of the Amalgamated Carpenters is somewhat complicated. In the first place, it is provided that whenever the members of a branch society in any locality decide that a change in the code of working rules and customs of the district is desirable, or that it is necessary to take some action to secure a better carrying out of the local rules, they may vote to establish a managing committee which shall remain in office for 12 months. Where there are two or more branches in any place, they must act jointly in selecting such a committee. In towns or districts where other organizations of carpenters not affiliated with the Amalgamated Society, as is usually the case in the United States, a "united trade committee" may be formed composed of representatives of the various organizations. Where such a committee exists its members may also constitute the managing committee above provided for, although this is not essential. Each district is allowed to form its own regulations for the guidance of the managing committees or united trade committees, subject to the approval of the executive council, or of the district committee in the case of the American and Australasian districts. These united trade committees and managing committees, however, have no power themselves to declare strikes, except that at their discretion they may authorize a refusal to work with nonunion men. Otherwise, before making any demand upon employers the members of such committees must send a memorial regarding the proposed demands to the executive council (or, in America, the district committee). On receiving the sanction of the council to these demands, the committee may communicate with the employers and undertake the general management of the movement. If, however, it is deemed necessary to strike in order to enforce the demands, the sanction of the executive council or of the district committee must be again sought. In case the strike is duly authorized, a strike committee is to be elected by the members of the society on strike. When the same members are not elected on both the managing committee and the strike committee, the former is to meet only when its services are required. The strike committee acts in conjunction with and under direction of the managing committee. It has the detailed control of the distribution of moneys received from the society. The executive council or the district committee has power to put an end to a strike at any time.

In America the district committee largely fills the role regarding strikes which is filled by the executive council in England. The district committee is required to send notice of applications for support in demands or in strikes to the executive

council in England, but it is not necessary to await the approval of the executive council if the district committee considers that circumstances warrant immediate action. Indeed no resolution or act of the district committee can be set aside by the executive council unless it is in direct violation of the rules and objects of the society. A large degree of autonomy is thus given to the American district, although it is still entitled to call upon the parent society for financial support in strikes thus authorized.

The society reported to the Federation of Labor in the fall of 1900 that it had won 10 strikes in America during the preceding year, compromised 1, and lost 1. The cost of the strikes had been about \$15,000, of which the Chicago strike cost \$11,500.

**Provisos for obtaining employment.** The rules provide that each branch shall be provided with a "vacant book" and that members receiving strike or unemployed benefit must sign this book daily. This book is intended to facilitate the finding of situations for unemployed members.

### INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS

**History.** The International Brotherhood of Electrical Workers was organized in 1891. It includes line men, inside wire men, dynamo tenders, lamp trimmers, and electrical workers in general. In the summer of 1900 the secretary reported 136 locals, and estimated the membership at 7,000. In June, 1901, the membership was estimated at 10,000.

**General aims.** The preamble to the constitution declares that in spite of the material splendor of the age, wage workers are poorer to-day than ever before, and that this is especially true of the electrical workers, who get lower wages in proportion to the risk and the high skill required than any other trade. The want of a strict apprentice system it is declared, has burdened the trade with swarms of incompetent men. The formation of the brotherhood is intended to elevate the social and moral standing of the trade and of the community at large in the belief that the interests of employers will also be served.

In the constitution the objects are more definitely stated as follows: "To rescue our trade from the low level to which it has fallen and by mutual effort to place ourselves on a foundation sufficiently strong to prevent further encroachment. We propose to establish an apprentice system to maintain a higher standard of skill to encourage the formation of schools of instruction in line men unions for teaching the practical application of electricity and for trade education generally, to cultivate feelings of friendship among the men of our craft, to settle all disputes between employers and employees by arbitration, to assist each other in sickness or distress, to secure employment, to reduce the hours of daily labor, to secure adequate pay for our work, and by legal and proper means to elevate the moral, intellectual, and social condition of all our members."

The Electrical Workers have also adopted certain recommendations on platform planks. They declare themselves in favor of weekly payment of wages, they discountenance the use of articles made in penal institutions, they favor uniform lien laws making a mechanic's lien the first mortgage. It is also recommended that local unions do all in their power to make the 8 hour system universal and that they strive to form a league of delegates from the various unions in the building trades in their respective cities.

**Conventions and constitutional amendments.** The convention of the Brotherhood is held biennially in October. Each local union is entitled to one delegate for 50 members or less, two delegates for 100 members, and one delegate for each additional 100 members. The local is entitled to its full number of votes in the convention, though only a single delegate is sent. The expenses of delegates are defrayed by the local unions.

The constitution may be amended by a two-thirds vote of the delegates present at the general convention but subject to the vote of the local unions. A two-thirds vote of all the members is necessary to sustain amendments.

**Officers.** The officers of the Brotherhood are the grand president, grand secretary, grand treasurer, and six grand vice-presidents. They constitute the executive board. They each hold office for two years and are elected by the international convention. The election requires a majority vote, and at each unsuccessful ballot the candidate receiving the lowest number of votes is dropped.

The president has power to call a general meeting of the executive board whenever he deems it necessary, to decide all questions and controversies, subject to appeal to the executive board, and to perform the other customary duties of president.

The secretary is the chief financial officer, although he does not have actual custody of the funds. He must remit monthly to the grand treasurer moneys collected from the local unions or other sources. He must keep a correct financial account between the local unions and the Brotherhood, and must issue quarterly reports of receipts and expenditures. He must keep a general roll of the members of the Brotherhood. His salary is \$1,500 a year.

The general treasurer must pay all legal bills on the recommendation of the executive board and on warrant signed by the grand secretary. He receives a salary of \$5.00 per year.

The vice-presidents act as organizers in their respective districts. The executive board as a body is the final court of appeal in case of disputes of any sort, subject only to reversal by popular vote of all the members of the Brotherhood. The executive board also issues charters to local unions and holds the bonds of the grand secretary and the grand treasurer. The members of the board when on duty receive \$3 per day and expenses.

The officers of each local union are a president, vice-president, and recording secretary, financial secretary, press secretary, treasurer, 2 inspectors, a foreman, and 3 trustees. Each officer serves for 6 months, except the treasurer, whose term is 1 year, and the trustees, who hold for 18 months. The local unions may fix salaries for such officers as they see fit. The duties of the officers are the customary ones. The press secretary has charge of the preparation of an official letter monthly for the journal published by the general office and also acts as agent for the official journal in the union. The trustees have general charge of the funds and property of the local.

**Membership.** On account of the existence of a benefit system the constitution of the Electrical Workers provides that only those of not over 50 years of age and of sound health are eligible to full membership. Candidates disqualified on these grounds, however, may be admitted without being entitled to the funeral benefits or sick benefits. Candidates must also have served a regular apprenticeship of three years and be competent to command the general average wages. Members who become contractors or employers may remain members if they pay the scale of wages hire only union men, comply with the rules of the brotherhood, and are not members of contractors' or employers' organizations.

Each candidate, on applying for membership, must be examined as to his fitness by a special committee of three members of the local unions. If the committee reports favorably and no objections are stated by any member of the union a secret ballot is taken. If one third as many black balls are cast as there are members present, the candidate is rejected.

The admission fee may not be less than \$5.

**Discipline and rights of members.** No member of the brotherhood is allowed to injure the interests of another by undermining him in prices or wages or by any other willful act by which the situation of any member may be placed in jeopardy.

Any member who leaves work in such a condition as to endanger his fellow-craftsmen or the public generally must be expelled.

In case a member is defrauded of his wages and reports to his local union within 4 weeks, the local union must advance sufficient funds to sue the employer for such wages. The amount advanced must be paid back immediately if the wages are collected, and at the rate of 10 per cent weekly if not collected.

Any officer or member who becomes a habitual drunkard or commits any offense that will bring the brotherhood into discredit, or who endeavors to create dissension among the members, or who works against the interests and harmony of the brotherhood in any way, must be expelled.

Any member who willfully slanders another member or violates the recognized trade rules of the locality, or who is guilty of any fraud in connection with the funds of the union, must be fined, suspended, or expelled, as the local union shall direct.

Any member entering a meeting in a state of intoxication, or disturbing it in any way, or using profane or unbecoming language, must be admonished by the chair, and if he again offends must be fined 50 cents; for the second offense, \$1; for the third offense he must be suspended for three months.

**Finances.** The local initiation fee may not be less than \$5, \$2 of which goes to the general office. The local unions must charge at least 60 cents a month dues; 20 cents of this goes to the general office as a fund for the management of the brotherhood, publication of the official journal, and the payment of benefits. If at any time the funds in the hands of the general treasurer fall below \$500, an assessment of 5 cents on each member must be levied. It is also provided that local unions shall set aside 5 cents per capita each month for a protective fund subject to the order of the national union. This law is not practically effective.

**Benefits.** Every member 9 months in good standing is, in case of death entitled to a funeral benefit of \$100, unless his death was caused by his own improper conduct or by accident or disease incurred before joining the brotherhood. Sick and accident benefits according to the constitution of the national union are to be regulated by the rules of the locals.

A strike benefit is paid of \$5 a week to married men and \$1 a week to single men.

**Strikes.** The rules of the Electrical Workers provide specially for the establishment of committees of arbitration or conciliation to settle difficulties. Whenever any dispute arises the members involved must lay the matter before their local union. In order to sustain the grievance the vote of the local union must be taken by a secret ballot, and a two-thirds majority is required. If the demand is approved the union must immediately notify the general secretary of the exact nature of the difficulty and he sends a statement of the case to all the local unions. Pending the action of the general office the president of the local union must appoint an arbitration committee to wait upon the employers. The general secretary immediately after receiving notice of the difficulty directs the member of the national executive board nearest to the point of disturbance to go there at once. Another arbitration committee must then be appointed by the local union, which shall, together with the member of the executive board, endeavor to adjust the difficulty. If this effort fails the member of the executive board forwards to the general president a full statement of the grievance, with his advice as to the best course to pursue. The president submits the case to the executive board, and if a majority of its members favor the strike the local union may order it immediately.

Should the terms of settlement arrived at by the arbitration committee in any case be rejected by the local union, the general president must submit the decision to a vote of all the local unions, and if they approve it the action of the arbitrators is binding.

In case the executive board does not approve the application for permission to strike the local union may appeal to a general vote of the membership, and if two-thirds of all the members voting favor the appeal it is declared sustained.

Any member working for any employer against whom a legal strike has been declared is to be fined such sum as the local union may decide, but not less than \$5 for each day employed.

The general president and executive board have power, when satisfied that any dispute cannot be adjusted or refuse further financial aid to the local union.

An especially noteworthy point in the rules of the Electrical Workers is a provision that the regulations as to the authorization of strikes do not apply in cases where a local union is affiliated with the central labor body of any city, in which case the local has the option of obeying the order of the central body in preference to that of the executive board of the brotherhood. Nevertheless, the brotherhood reserves the right to decide the justice of any claim for strike benefits under such circumstances.

Members of the organization engaged in a duly authorized strike are entitled to \$5 a week, in the case of married men and \$1 a week in the case of single men, to commence the second week after the difficulty has been authorized. Each local union is directed to set aside 5 cents per capita monthly for the protective fund, which it holds subject to the order of the central executive board. In case the protective fund becomes exhausted in supporting a strike, the executive board has power to levy special assessments to maintain it.

## GRANITE CUTTERS' NATIONAL UNION OF THE UNITED STATES OF AMERICA

**History.** The Granite Cutters' National Union was organized in 1877, though local unions of the trade are said to have existed since 1830. The members are said by the secretary to be about equally divided in their employment between building work and monumental work. Everything in the way of granite cutting, from rough street and bridge work to statuary, is included in the trade. A considerable number of members work about the granite quarries. The number of locals reported by the secretary in August, 1900, was 415. Less than 5 per cent of the granite cutters are believed by the secretary to be nonunion, though about 300 are supposed to be members of other unions.

The trades of the Granite Cutters and the Stone Cutters are so similar that the two organizations could scarcely exist side by side without conflict. It is possible that the antagonism is increased by the fact that many of the granite cutters work

about the quarries and cut material, which is shipped to the cities in the finished state. The city stonemasons like most workmen whose occupation makes it practicable, have a strong tendency to local protectionism. The wage scale of the quarry granite cutters is rather lower than that of city workers in many kind of stone, and this aggravates the trouble. In Chicago the Stone Cutters were strong enough for a time to keep the Granite Cutters out of the building trades council. In the days of the council's power, under the rule that building workmen must carry building trades council cards, the Stone Cutters had strikes called to prevent members of the Granite Cutters' Union from working at their trade on buildings. Complaint was made of this in the convention of the Federation of Labor in 1899. The Stone Cutters are not affiliated with the Federation and no direct pressure could be applied to them—but the Federation requested all of its local and national unions which were represented in the building trades council in Chicago to instruct their delegates to cast their votes and use their influence so that the members of the local union of Granite Cutters should not be interfered with in following their craft in the city.

**Objects.** The objects of the Granite Cutters' Union are stated in the constitution to be: "To encourage a regular apprenticeship system and a higher standard of skill; to cultivate feelings of friendship among the craft, to assist each other to secure employment, to reduce the hours of daily labor, to discourage piece work as tending to degrade the trade, to secure adequate pay for our work, to furnish aid in case of death, and assist, to the best of our ability, disabled members, to endeavor by legal and proper means to elevate the moral, intellectual, and social condition of all our members, and to improve our trade."

**Conventions.** A convention may be called by a majority vote of the members in good standing. The convention consists of 1 delegate for a State having 500 members or less and 2 delegates for a State having over 500 members. No convention has been held since 1880.

**Constitutional amendments.** The constitution provides for a revising committee of 7, to be elected "when it becomes necessary to amend or alter this constitution." The members are to be chosen by a plurality vote of the members in good standing. No branch is to nominate more than 1 candidate and no State is to have more than 1 representative. Four revising committees have been formed since 1880, the last in 1897.

Amendments may be proposed by any branch at any time, and are to be received by the national committee, published, and placed on file, and "voted on at the first meeting of the revising committee or convention." It is also possible to amend the constitution, however, by a general vote of the members. Any proposition requiring the vote of the union is to be laid before the union a month before it is voted on, so that amendments can be offered. The original proposition and each amendment is to be voted on separately, and the proposition which receives the highest plurality vote is the decision of the union.

**Officers.** The officers are a president, a secretary-treasurer and 5 members of the national committee. The president and the committee members are elected by the branch where the seat of government is fixed. The president serves for 1 year. The committee members are elected for 6 months, 3 going out at the end of one quarter and 2 at the end of the next. The seat of government is chosen by vote of the whole membership once in 2 years. If there is no choice on the first ballot, a second ballot is taken in which only the 2 branches which have received the highest votes are eligible.

The secretary-treasurer is elected for 2 years, by a majority vote of all the members of the union. If there is no choice on the first ballot, the 2 highest candidates are voted for on the second ballot. The union pays the cost of his removal to the seat of government. In addition to the ordinary duties of his double office the secretary-treasurer edits and publishes the official journal. He may be removed from office on charges preferred by any branch or by the national committee. Such charges are to be investigated by a committee of 3 members in good standing, 1 chosen by the body which brings the charges, 1 by the secretary-treasurer, and the third by these 2. If the committee finds the charges sustained, it is to report to the union and the secretary-treasurer may be removed only by a two-thirds vote of the whole membership. The salary of the secretary-treasurer is to be fixed by vote of the union for the term for which he is elected. If he is called away from the seat of government on union business, he receives the expense of conveyance and \$2 a day over and above his wages.

Any branch may appoint a business agent, with the consent of the national union, paying half his salary by extra local assessments and half from the general fund. The agent's pay is not to exceed the established day wages of his branch.

**Membership** Regular granite cutters, stonecutting-machine workers, and tool sharpeners are eligible to membership. Machine workers are not allowed to cut granite in the usual way by hand unless they have served a regular apprenticeship. Granite cutters and tool sharpeners must keep to their respective trades, but a member who can cut granite and sharpen tools may pursue both callings in gangs where less than 8 cutters are employed. It is left to each branch to decide whether foremen shall belong to the branch or not.

**Discipline** Any member who uses threats or intimidation to compel nonmembers to join the union, contrary to the laws of the different States, shall be fined a sum at the discretion of the branch where the offense is committed.

Branch officers are subject to a fine of 25 cents for failure to attend meetings without satisfactory excuse. Any member who refuses to serve in any office or on any committee, without satisfactory excuse, is subject to a fine of 25 cents, but officers may decline a reelection or reappointment, and any officer may be excused from serving on any committee. Unnecessary talking or abusive language during a meeting involves a fine of 25 cents.

Any member who reports the doings of the union to outsiders without authority may be fined as the branch deems proper. Any member who reveals the transactions of the branch or undermines a brother member or otherwise puts the situation of any member willfully in jeopardy, is liable to a fine of no less than \$5 or more than \$25.

A member tried by his branch for any offense is entitled to appeal to the national committee, and thence to a popular vote.

If a member is in doubt of having a fair trial by the branch where he is accused, he may submit his case to a board of 6 members in good standing, 3 to be chosen by him, 3 by the branch, and the seventh by these 6. Such a board, if it convicts, may fix the fine to be imposed, not exceeding \$50. There is no appeal from its decision. No other national union seems to have provisions of this sort. For trial by a jury which the accused has had a voice in choosing—except the Garment Workers, in the particular case of an accusation of slandering a general officer.

**Fees.** The initiation fee for apprentices who present themselves at the first regular meeting of the branch after the 3 apprenticeship years is \$1. For all others the initiation fee may be any sum not less than \$1 nor more than \$30, at the discretion of the branch. The dues are 50 cents a month. All the receipts of all branches are treated as a common fund. Each local branch is required to transmit the whole of its receipts, after paying hall rent, a small sum for the salaries of local secretaries and committees, and the cost of books, papers, etc., to the national office. Remittances are to be made monthly.

Whenever the funds of the national union reach \$1,000, \$1,000 is to be invested in United States registered bonds. No money can be drawn from bank except upon an order approved by the national committee and signed by the president and secretary-treasurer.

If any dispute necessitates expenditures which reduce the funds of the union to less than \$1,000, the national committee may levy an assessment upon all employed members. After such a dispute is settled no money may be paid out of the general fund for any purpose except the settlement of debts contracted in the dispute, and the expenses of the general management and funeral claims, until \$12,000 has accumulated in the treasury.

When a convention or a revising committee meets, it is to audit the books of the national office. At other times an auditing committee of three members is to be chosen once a year, by a plurality vote, from the six branches nearest the seat of government, no more than one auditor coming from any one branch.

Any member over 3 months in arrears for dues, journal charge, or special assessments is in bad standing and not entitled to any benefits. When 12 months or more in arrears a member is to be suspended, and must pay 75 cents a month on applying for reinstatement. All over 2 years in arrears are to pay \$20 for reinstatement. Reinstated members are not entitled to funeral benefits until 6 months after the readmittance fee is paid in full. Twenty-five per cent of their earnings is to be paid toward the readmittance fee until it is settled.

**Benefits**—A death benefit of \$125 is paid on the death of one who has been a member for 6 months and is in good standing at the time of his death. If a member dies by accident before he has been a member for 6 months his heirs are entitled to full benefit.

The strike and lockout benefit is \$1 a day. Members victimized, or thrown out of employment in consequence of their support of the union, seem to be entitled to no benefit. The constitution only says that they shall be assisted in securing employment and given such help as is possible. Any member who has

reached the age of 55, and has been in good standing for 5 consecutive years, is entitled to full benefits by paying the journal charge of 30 cents a year and all extra assessments and 10 cents per month in place of the regular dues of 70 cents. Any member who is sick or out of employment for 2 months or longer is exempt from half dues if he has kept in good standing.

**Strikes.** Branches may make bills of prices to govern their localities, but must submit them to the national committee for approval. When an advance is demanded, the employers must have not less than 3 months' notice. On the other hand, employers are required to give at least 3 months' notice of a proposed reduction. If they fail to do so, branches are directed to resist the reduction, and they are entitled to support from the general fund.

If in any dispute a local branch decides by a two-thirds vote that a strike is necessary, the secretary of the branch must lay a full statement of the case before the national committee, showing the number of members both those in good standing and those in bad, belonging to the branch, the number of nonmembers in the locality, the state of the trade, the number voting for and against the strike, and all other matters pertaining to the case. The national committee may then authorize a deputation of not more than 2 members from the nearest point or points to investigate the case and report. After obtaining all possible evidence it is to lay the matter before the union as a whole. Permission to inaugurate a strike is constitutionally given by popular vote.

Members taking part in an authorized strike are entitled to a strike benefit of \$1 a day. To draw the benefit they must report daily at an appointed place and hour.

The secretary declared in 1900 that the fear of strikes seemed to be the strongest influence tending to make employers fair. The 8-hour day was gained in some places without strikes, but this was only because the members were on strike elsewhere and were determined to cut no more granite except on the 8-hour system. The granite cutters' general strike for the 8-hour day in 1900 lasted from 6 to 12 weeks in various places, and cost in strike pay alone \$115,000. The secretary says, "But we moved up a peg and do not begrudge the expense."

The attitude of the granite cutters toward arbitration is referred to on page 399.

**Hours and wages.** The constitution adopted in 1877 provided that, beginning with the year 1900, hours of labor should not exceed 8 per day and wages should not be less than \$3. In the spring of 1900 the union undertook an extensive strike to enforce this provision. It was successful as to the hours, and it is now understood that its members universally work an 8-hour day. It was only partially successful as to wages. The secretary-treasurer reported in August, 1900, that the minimum wages were \$2.80. In the spring of 1901, according to the statement of the secretary, advertisements for men were posted in granite-cutting sheds throughout the country. The secretary regards this increased and general demand for workmen as an exemplification of the trade-union argument for shorter hours, that the shortening of the day increases the opportunities for employment.

**Subcontracting.** If a branch has a bill of prices and a standard of wages, no member may subcontract where the bill of prices is in force, under penalty of a fine of not less than \$30. Each branch may define what constitutes subcontracting in that locality. The constitution says that a subcontractor is generally defined as a workman who contracts with his employers for a quantity of work to the injury of his fellow-workmen.

**Convict labor.** The union discommenances instructing convicts in granite cutting in prisons and reformatories, and urges the branches to do their utmost for the repeal of all laws which provide for the cutting of granite in such institutions. Convicts who have worked 3 years at granite cutting in prison may, however, be admitted to the union; the initiation fee is left to the branch where they make application.

**Official journal.** The Granite Cutters' Journal is published monthly and is sent to all members. It has been published since 1877. Some columns are printed in Italian. Each member is obliged to pay 30 cents a year to cover the cost of it. When a member ceases to be in good standing he ceases to receive the Journal. The subscription price to outsiders is \$1. The Journal is the medium of communication between the officers, the local branches, and members of the union. The constitution forbids the issue of any circular or document having reference to the affairs of the union otherwise than through the channels provided for in the constitution, under a penalty of not less than \$1 or more than \$10 for each individual implicated, and the publication of their names in the Journal. This does not apply to inquiries or information regarding the standing of members who present themselves at a branch which they do not belong to without the proper card or

regarding the character and standing of any candidate for election to an office in the union or regarding the facilities of any branch nominated for the seat of government.

### BROTHERHOOD OF PAINTERS, DECORATORS, AND PAPER HANGERS OF AMERICA.

**History.** The Brotherhood of Painters and Decorators was established on March 15, 1887. In 1891 a bitter factional strife arose which split the organization in two. Each faction claimed to be the Brotherhood of Painters and Decorators of America. One maintained its headquarters at Baltimore, the other at Lafayette, Ind. The Lafayette branch incorporated under the laws of Indiana on December 7, 1891.

The officers of the American Federation of Labor made repeated efforts to bring about a consolidation of the two organizations. They failed year after year, and in this view the reason of their failure was the refusal of the branch which had its headquarters at Lafayette, Ind., to meet the other branch in conference with a view to uniting the executive council of the Federation, therefore recognized the other branch which had its headquarters at Baltimore and afterwards at Syracuse, as the true Brotherhood of Painters, and treated the Lafayette branch as a seceding and traitorous organization. In spite of this, the Lafayette branch seems to have maintained a strength fully equal to that of the other.

In the American Federation of Labor convention of 1898 there was much discussion of the division of the Painters' Union and of the action of the executive council in recognizing the Baltimore branch as the genuine organization. One delegate asserted on the floor that the Lafayette faction had twice as many members as the other.

The American Federation of Labor convention of 1899 directed the executive council within 30 days to revoke the existing charter held by the Baltimore faction and within 6 months to call a convention of all painters, decorators, and paper hangers of the United States and Canada, for the purpose of consolidating all unions of these crafts into one international union. The convention elected a committee of three to attend this convention of paper hangers, organize it, and act as a committee of credentials, and finally decide all questions upon which the consolidated parties fail to agree.

In consequence of this action a conference was finally brought about, at which an agreement for consolidation was completed. The representative of each brotherhood nominated candidates for the several offices and named a city for headquarters. The choice of offices and the situation of headquarters was determined by a common vote of the members.

The number of members in the two organizations was not reported. The number of locals affiliated with the Syracuse Brotherhood was given as 147, and the number affiliated with the Lafayette Brotherhood as 145. The receipts of the Lafayette Brotherhood for 5 months from January 1 to June 1, 1900, were \$10,000 and its expenses \$11,283. The receipts of the Syracuse Brotherhood for a period substantially the same were \$3,218 and its expenses \$3,697. Lafayette was chosen as the headquarters of the united Brotherhood and the secretary of the Lafayette Brotherhood as the secretary of the united organization. These facts would seem to indicate that the body which had been treated by the Federation of Labor as the seceding body was in reality the stronger. The united Brotherhood acts under the charter of incorporation which was taken by the Lafayette organization in 1891. The name was changed to Brotherhood of Painters, Decorators, and Paper Hangers of America in the spring of 1900, just before the consolidation.

An organization called the National Paper Hangers' Protective and Beneficial Association has for some years maintained an independent existence and has made repeated applications to the American Federation of Labor for a charter. The matter has come up in the conventions of the Federation in 1898, 1899, and 1900. The Federation has uniformly decided that the paper hangers should be under the jurisdiction of the Brotherhood of Painters, though it has recommended that they be organized in separate unions and be granted autonomy within the painters' union. The promoters of the separate organization of the paper hangers have not acquiesced.

## 150 THE INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

The following table gives the number of local unions and the number of members reported at certain periods:

### *Brotherhood of Painters, Decorators, and Paper Hangers.*

Years	Unions in good standing	Members in good standing
Mar. 15, 1881	13	497
Dec., 1886	65	1,962
Dec., 1888	111	3,986
Dec., 1889	141	6,640
Dec., 1890	174	8,065
Dec., 1891	204	10,168
Dec., 1892	264	12,426
Dec., 1900	450	20,000

On February 1, 1901, 380 local unions, 13 district councils, and 31,280 members were reported.

**General aims.**—The articles of incorporation of the brotherhood gave its objects as follows:

For the purpose of aiding members to become more skillful and efficient workers.

The promotion of their general intelligence.

The elevation of their character.

The regulation of wages, and their hours and conditions of labor.

To cultivate feelings of friendship among the members of the association and to assist each other to secure employment.

The promotion of their individual rights in the prosecution of their trade or trades.

The raising of funds for the benefit of sick, disabled, or unemployed members, or the families of deceased members.

And for such other objects, for which working people may lawfully combine, having in view their mutual protection or benefit.

Among the objects stated in the constitution are the reestablishment of an apprentice system to encourage a higher standard of skill. The constitution also contains the following clause, which is used by several other organizations: "To rescue our trade from the low level to which it has fallen and by mutual effort to place ourselves on a foundation sufficiently strong to resist further encroachments."

**Convention.**—The convention is held biennially on the first Monday in December, unless otherwise ordered by popular vote. The question of holding a convention is to be submitted to the members during the preceding August.

Representation of locals is based on the number of members on which per capita tax has been paid. Unions which have 100 members or less are entitled to 1 delegate, more than 100 members and less than 500, 2 delegates; 500 and less than 1,000, 3 delegates; 1,000 or more, 4 delegates. Each delegate has 1 vote, and no proxies are allowed, but distant and small unions may join in sending a delegate. The general brotherhood pays in leage at the rate of 2½ cents a mile, and the rest of the expenses of the delegates are paid by the locals. Each delegate must have credentials signed by the president and recording secretary of his local and verified by its seal. A local must have been in existence 6 months in order to be represented, and a member must have been continuously in good standing for 6 months in order to be a delegate.

**Constitutional amendments.**—Amendments to the constitution may be proposed by the executive board, or by a two-thirds vote of the convention or by any local. In the last case the proposal must be seconded by 5 other locals, no two of which may be in the same State or Territory. In any case the amendment is valid only when accepted by a two-thirds majority on a popular vote.

**Officers.**—The officers are a president, 1 vice-presidents, no two of whom may be from the same State or Territory, and a secretary and treasurer. No general officer can be reelected. The term of office is 2 years. One must have been a member in good standing for 12 months to be eligible to a general office.

Officers are elected by the convention, and a majority of the total vote is necessary. If no one receives a majority, the candidate who has received the lowest vote is dropped. If the members vote not to hold a convention, nominations are made by the several locals, and officers are elected by popular vote.

The president has power to suspend any local or district assembly for any violation of the constitution or laws of the union, subject to appeal to the membership.

The secretary-treasurer is required to keep a roll of all members, with name, age, number of card and date of admission, and also a roll of all members expelled, suspended, and withdrawn. He publishes the official journal. His board is fixed at \$15,000, and is to be increased if the amount in his hands at any time is greater.

The president and vice-presidents constitute the executive board. The board elects a corresponding secretary from among its own members. The secretary-treasurer sits with the board and has a voice in its proceedings, but no vote. The board has general control of the brotherhood, subject to appeal to the convention. It may impeach and try any general officer on charges brought by any local and seconded by one fifth of all the locals. If it finds the accused guilty, it may remove him from office. Its action in such cases is subject to appeal to popular vote.

The members of the executive board receive \$2.75 a day for the time given to brotherhood business, and \$2 a day for expenses, besides railroad fare. By a vote taken in March, 1901, the president is placed at headquarters under salary. The secretary-treasurer had been the only salaried officer. The president and the secretary-treasurer now receive \$100 a month each.

**Local unions.**—A new local may be organized by any number of painters, decorators, or paper hangers not less than . . . The existence of one local in a city does not prevent the establishment of more, unless the existing local offers reasonable objections. Local unions are required to hold regular meetings at least once in each month on pain of forfeiture of charter. The constitution says that they should hold social gatherings at stated times for the enjoyment of the members and their families and for invited guests. The constitution also contains the following clause, which is found in substantially the same terms in the constitutions of several other organizations:

Each local union should maintain labor bureaus, found libraries, invite speakers from other trade unions to deliver lectures, join central labor unions or trade assemblies where such exist, maintain friendly relations with other trade and labor organizations, and do all in their power to strengthen and promote the labor movement.

The constitution provides that the Brotherhood shall not be dissolved while there are a dissenting locals, and that a local shall not dissolve or withdraw from the Brotherhood so long as 7 members in good standing object.

**District council.**—Where more locals than one exist in a city they are required to establish a district council. The by-laws of the district council must be adopted by popular vote of the locals. A district council can levy an assessment only by a two-thirds vote of the members of the locals. Any local may appeal from the district council to the executive board, or may protest to the board against any proceedings of the council. Where district councils exist they issue working cards to members.

**Memberships.**—A candidate for membership must be a painter, decorator, or paper hanger, working at the trade and competent to command the average wages, and of good moral character. For full beneficial membership he must be of sound health and not more than 30 years of age. No militiaman, special police officer, or deputy marshal in the employ of corporations or individuals during strikes, lockouts, or other labor difficulties, can either be admitted or remain a member.

Any applicant of good moral character, disqualified from membership because of his physical condition, may be admitted as an honorary member by the payment of the entrance fee and 10 cents a month as dues. No per capita tax is charged for honorary members, and they are not counted in fixing the representation of locals in the convention. A member who joins after he is 30 years old, but while he is in sound health, counts as a full member, but is entitled to only partial benefits.

Contractors or employers may be admitted at the option of locals. They must pay the union scale, must hire only union men, and must not belong to any employers' or contractors' association. No contractor is eligible to office or to vote on questions of trade rules, time, and wages.

Every applicant for membership must sign a regular application blank furnished by the general office, stating his age, health, and such other information as may be asked for. This blank must be countersigned by 2 members in good standing and forwarded to the general office. The qualifications of the candidate are examined by a special committee of three appointed by the local, and he is admitted by a two-thirds vote of the local. One who has been expelled, suspended, or rejected by one local can not be admitted to another except by consent of the first.

**Apprentices.**—The Painters declare that the indenturing of apprentices is the best means of giving the efficiency which a working man should possess, and also of giving the employer some return for the effort which ought to be made to produce competent workmen. Boys who wish to learn the trade should be required to

serve a regular apprenticeship of 3 consecutive years, and they should not be regarded as journeymen unless they have complied with this rule and are 15 years old at the completion of the apprenticeship. An apprentice who has contracted with an employer to serve a certain term of years must not be permitted to leave him and work elsewhere. Local unions are directed to make regulations limiting the number of apprentices. It is recommended that apprentices in their last year be admitted to the local unions, without vote and without paying dues and assessments, in order that they may be prepared at the expiration of their term to take their places as full members.

The secretary says that the apprenticeship system is enforced in the larger cities and the majority of the smaller ones, 1 apprentice being allowed on the average to 8 journeymen. The larger organizations require an apprentice to enter into an agreement with the master painter to remain with him for three consecutive years. The secretary-treasurer declares that local unions do not admit journeymen to membership who have not served a regular apprenticeship.

**Clearance cards and general membership cards.**—A member who has been 6 months in good standing is entitled to a clearance card on paying all arrearages and 1 month's dues in advance and 10 cents for the card. On such a card he may join any local. If he has not been 6 months a member in good standing when he applies for the card this fact must be noted on the card, and if, under these circumstances, he wishes to join a local which has a higher initiation fee than he has paid, he must pay the difference.

Members of suspended or dissolved locals and members who have gone into places where no local exists may obtain general membership cards and maintain their beneficial standing by paying 25 cents a month to the general office.

A member who carries a general card or a clearance card and who comes into a place where a local union exists must immediately report to it, on pain of forfeiting his card.

**Nonunion men.**—The constitution requires district councils, and local unions where no district council exists, to issue working cards to all members and to enforce the card system. This involves the exclusion of nonunion men from employment so far as the union can effect it.

**Discipline.**—The undermining of a fellow-member in prices or wages and the revealing of union business to persons outside without authority are punishable by fine or expulsion. If a local officer fails to discharge his duties for three consecutive meetings his office is to be declared vacant. If an officer or committee-man fails to perform any duty required of him without satisfactory excuse he is to be fined 25 cents for each offense. Habitual drunkenness and advocacy of the dissolution of a local or division of its funds or the separation of it from the Brotherhood are punishable by suspension. Slandering an officer or member violating the recognized trade rules of the locality, and fraudulent receiving or misapplying the funds of the union or money of any member or candidate received for payment to the union are punishable by fine, suspension, or expulsion. A member who enters a meeting drunk or disturbs its harmony or uses profane or unbecoming language during a meeting is to be admonished by the chair, and if he again offends is to be fined not less than \$1 nor more than \$5.

Charges must be made in writing and signed by the member who brings them. Ten members are nominated by the local, and 5 members chosen by lot from the 10 constitute the investigating committee. The accused has the right to challenge 3. The committee, after a hearing reports to the local and the guilt of the accused and the penalty are determined by vote of the local. If an accused member refuses to stand trial he is punished as for contempt. A member suspended or expelled for any misdemeanor can not be received again except by a two thirds vote of the local, approved by the executive board.

**Finances.** The charter fee is \$10, this includes the cost of seal, financial books, and cards and blanks. The national union receives 25 cents out of the initiation fee of each new member and a per capita tax of 10 cents a month, "for each member not regularly suspended on the books." An annual tax of 25 cents is laid to pay for the journal. Some revenue is also derived from the sale of constitutions, due books, and blanks, which the locals are required to buy from the general office. The executive board may levy an assessment not exceeding 10 cents for each member in good standing to cover a deficiency caused by an increased death rate.

A union 3 months in arrears is to be notified by the secretary-treasurer and if it does not then settle within 1 month it is to be suspended and forfeit its charter. A member indebted to his union for an amount equal to 3 months dues stands suspended without vote and can not be placed in benefit again until 1 year after paying all arrearages. If he fails to apply for reinstatement within 3 months after suspension, his name is to be dropped.

The initiation fee may not be less than \$2 nor the local dues less than 45 cents a month. When a local tax or assessment is proposed it must be laid over at least 3 weeks, and all members must be notified that it is pending. A two-thirds vote is required to pass it. No appropriation of money can be voted after 9 o'p.m.

During the 6 months from the union of the two organizations, September 1, 1900 to February 1, 1901, the receipts were \$30,408 and the expenses \$31,601. Six thousand seven hundred and seventy five dollars of this expenditure went for other benefits. The balance on hand September 1, 1900, was \$7,796; on February 1, 1901, \$13,600.

**Benefits.** Full benefit members are entitled to \$100 for permanent disability after 1 year's membership or \$150 after 2 years' membership. One hundred dollars is paid on the death of such a member after 1 year's membership and \$150 after 2 years' membership. On the death of the wife of a full benefit member, after 1 year's membership, he receives \$50. If a member was 50 years old when he joined, his death or disability benefit is only \$50 and his funeral benefit on the death of his wife only \$25. The wife funeral benefit is payable to a member only once. If a wife is in ill health when a member joins, no benefit is to be paid on her death. Disability giving title to benefit may be caused by accidental injuries or by paralysis or head poisoning. All claims for death or disability must be certified by a physician and approved by a two-thirds vote of the local, and the validity and the good standing of the member on the books at the time of his death or disability must be sworn to by the president and financial secretary of the local. Claims are not valid unless received by the secretary treasurer within 30 days after the date of the death or disability.

If the casualty or death of a member is caused by his own improper conduct or by an accident or disease incurred previous to joining the brotherhood or while on duty as a volunteer or fireman or by exposing himself to risks to which members are not usually liable, no benefit is payable.

If a local is 3 months in arrears for dues the general secretary is to notify it, and if it does not settle within 10 days, its members are not entitled to benefits until 3 months after all arrearages shall have been paid. (See also above under finances.)

**Strikes.** When a dispute arises the president of the local must appoint an arbitration committee to try to adjust it. If the effort fails, the action of the local is determined by secret ballot and a two-thirds vote is necessary to authorize a strike. When such a vote has been taken the case must be submitted to the general executive board. A local which strikes without the approval of the executive board is not entitled to any help and is liable to reprisals. More shop troubles must be dealt with by the local, but the local must at once report to the executive board. If the executive board refuses to sanction a strike, the local may appeal to a popular vote of the whole membership, and the board may be overruled by a two-thirds vote.

The amount of strike benefit is not fixed in the constitution. It is provided that benefits shall be paid to unions in accordance with their membership, and that the amounts received by locals from the general secretary treasurer shall be equally divided among all the members, except that married men shall receive 20 per cent more than single men. No strike benefit is paid to one who has not been a member in good standing at least 3 months before the strike. No benefit is paid for the first week of the strike. The executive board may declare the strike off, so far as financial aid from the brotherhood is concerned, at its discretion.

Any member who goes to work on a job which has been declared on strike or locout is to be fined by the local not less than \$5 for each day.

The union reported to the Federation of Labor in the fall of 1900 that it had won 14 strikes, compromised 2, and lost 2 during the preceding year. Two thousand eight hundred persons were involved, and 2,500 benefited. The cost of the strike was \$1,500.

**Hours of labor.**—The members work 8 hours in most cities.

**Wage.**—The Painters declare that they are opposed to any system of grading wages, and that they believe that such a system tends, when work is scarce, to lead first class men to offer their work at second and third class prices. "We hold that the plan of fixing a minimum price for a day's work is the safest and best, and that the employers should grade the wages above that minimum.

If a member is defrauded of his wages it is the duty of his local to advance funds for prosecuting a suit. But members who work for an employer who has once been sued do so at their own risk.

**Piecework.** Subcontracting is strictly prohibited except that putchangers are permitted to work by the piece.

## OPERATIVE PLASTERERS' INTERNATIONAL ASSOCIATION OF THE UNITED STATES AND CANADA.

**History.**—The Operative Plasterers' International Association of the United States and Canada was organized in 1882. The number of locals in existence at various dates is given by the secretary as follows:

July, 1883	12	January, 1893	80
July, 1884	14	January, 1894	72
July, 1885	16	January, 1895	75
July, 1886	18	September, 1896	63
July, 1887	23	September, 1897	62
January, 1889	32	September, 1898	38
January, 1890	52	September, 1899	56
January, 1891	90	September, 1900	106
January, 1892	70	June, 1901	131

The number of members was reported as 1,781 on November 30, 1898, and 6,260 on September 11, 1900.

The organization includes nearly all plasterers in the larger towns throughout the greater part of the country. In the New England States, in some parts of the South, and generally in small places, the Bricklayers and Masons' unions do plastering and admit plasterers.

**General aims.**—The objects of the Plasterers' Association are stated in the constitution in terms similar to those commonly used by other unions. The preamble says: "Recognizing the right of the employer or capitalist to control his capital, we also claim and will exercise the right to control our labor, and be consulted in determining the hours per day and the price to be paid for it."

The convention of 1900, in expressing sympathy with the anthracite miners in their strike, which was in progress at the time of the convention, added the following sentence: "And we also urge them to strive for the only permanent settlement of this question—that is, the operation and ownership of the mines by the State for the good of the whole people."

**Convention.**—The convention is held biennially in September. Locals are entitled to 1 delegate for the first 100 members or less, and to 1 additional delegate for each additional 100 members or fraction thereof. This provision is unusual in most unions a fraction of the quota must be more than half in order to give an additional delegate. There are no proxies.

**Officers.**—The officers are a president, 3 vice-presidents, a secretary-treasurer, and an executive board. The executive board consists of the 3 vice-presidents and 4 other members. All officers are elected by the convention, and all must be delegates to the convention. A majority is necessary to elect. No member can hold the same office more than two terms in succession, and when one has held an office for two terms, no other member of the same local can succeed him. The secretary-treasurer is forbidden to work at his trade or engage in any other business while holding the office, on pain of a fine of \$25 for the first offense, and removal from office for the second. He is required to issue a general quarterly report, based on reports furnished by local secretaries, showing the state of trade at the seat of each local union, all changes of membership, the initiation fee of each local, and all receipts and payments to the national organization. In addition to the ordinary duties of his office, he has power to appoint organizers and to fix their salaries, subject to the approval of the president and the executive board. His salary is \$1,300 a year, payable weekly. He is required to give a bond for \$6,000, secured on real estate or by a trust company. The cost of the bond is paid from the general treasury. The president's salary is \$100 a year.

The executive board decides appeals from the decisions of the president, and has power to authorize strikes. Its business is transacted by correspondence. Each member is required to make a decision within 10 days after any question is submitted to him, on pain of a fine of \$10. The records of the association show, however, that in spite of this threatened penalty the members of the board have frequently neglected their duty in this respect.

Since 1894 the constitution has provided for a register of all the members to be kept at the office of the general secretary-treasurer, and for a record of every admission, suspension, and transfer from one local to another to be made there. This system affords the only safeguard, on the one hand, against understatement of the membership of locals and consequent loss of per capita tax, and, on the other hand, the only secure way of determining the right of members to strike

benefits and to death benefits. The register was not actually made until the present secretary-treasurer assumed the office in 1898. Even with the best efforts on the part of the general office it is not found possible to escape the results of carelessness or mismanagement of local secretaries. When strike benefits were to be paid in consequence of the great Chicago strike in 1900 the registered members of the Chicago local increased from 238 on May 8 to 412 on July 28, and many of the members who were then registered for the first time claimed to have been members of the local from 3 months to 14 years.<sup>1</sup> So far as these claims were true, the officers of the local had either failed by carelessness to register their names or had refrained from doing so to diminish the per capita tax due to the International Association. Trouble arose when strike benefits were wanted, and the secretary-treasurer refused to pay them to any but those who were registered in his office.

In the convention of 1900 complaint was made that local secretaries report the state of trade dull in their localities when the truth is otherwise. The executive board was directed to lay fines upon local secretaries who do not report the state of trade correctly.

**Local unions.**—A local union may be organized by 7 plasterers, and 5 members are enough to retain an existing charter.

**Card.**—The traveling card of the Plasterers is a small book containing coupons, which are to be sent to the general secretary-treasurer to keep him advised of the movements of traveling members. One 10-in. of coupon is to be sent in by the secretary of the union which the member leaves and another by the secretary of that which he joins. The general secretary-treasurer keeps a record of every member and corrects it by means of these advices. A traveling card must be deposited with the local into whose jurisdiction the member has come at the first meeting. It must be deposited somewhere with in 30 days from its date. It can not be deposited with any local while the local is on strike or lockout. If one who has been a member less than 6 months goes to a local which has a larger initiation fee than that which he has joined he must pay the difference.

Every member is under the control and jurisdiction of the association under which he is working, and may be fined by it for violation of working rules, whether his card has been deposited with it or not.

One thousand three hundred and ninety-seven transfers were recorded between November 30, 1898, and September 1<sup>st</sup>, 1900.

**Nonunion rule.**—No member may be allowed to work for any employer who is employing nonunion men in another city where a subordinate association exists.

**Finances.**—The per capita tax is 5 cents a month, payable quarterly. The charter fee for new unions is \$10, including the cost of a seal.

The receipts, expenses, and balances on hand for successive years are given in the following table:

Period ending	Receipts	Expenses	Balance
Jan. 1, 1893 .....	9,986	9,415	\$840
Jan. 1, 1894 .....	6,169	2,668	3,522
Jan. 1, 1895 .....	6,431	2,422	3,969
Sept. 1, 1896 .....	6,925	2,556	4,368
Sept. 1, 1898 .....	2,652	3,788	3,232
Sept. 1, 1899 .....	2,211	2,515	2,891
Aug. 1, 1900 .....	4,433	6,812	513

**Benefits.**—A death benefit of \$50 is paid on the death of a member, provided both he and his local union have been in good standing in the Association for 6 months. A certificate of death must be obtained from the attending physician, and the heirs must make oath before a notary public that they are entitled to the benefit.

During the biennial period ending September 1, 1900, 63 members of the Association died, and 31 were entitled to benefits. Six benefits were refused because, although the members had paid their dues, the per capita tax of their local unions had not been paid to the national office.

**Strikes.**—Any local union which wishes to strike and to have support from the national organization must notify the general secretary-treasurer, giving its reasons, 30 days before the strike, and the case must be submitted to the executive board. A full statement of the circumstances, including the number of members and the number of unemployed men in the place, must be supplied. If the board refuses

<sup>1</sup> Convention proceedings, 1900, p. 15.

its consent, the local may still strike, but on its own responsibility. A local can not be allowed to strike until it has been in good standing in the International Association for 6 months. A local which is working 10 hours a day can not be permitted to strike for higher wages unless it is getting less than \$2.50, nor one which is working 9 hours unless it is getting less than \$3. Any demand for a reduction of hours may be sanctioned.

Not more than 2 locals may be authorized to strike at the same time. The first 2 which apply are to be supported (except in accordance with the rule above) if the executive thinks their claim is just. "No local shall receive benefits from the International Association when it goes on strike or lockout in sympathy with any central labor union."

Each participant in an authorized strike is entitled to a benefit of \$3 a week, beginning the third week. A member is not entitled to a benefit for any week in which he has 2 days' work and all members must report at headquarters promptly at 9 a. m. and at 3 p. m. daily when not working. Strike pay is disbursed on pay rolls made out in triplicate. 1 copy for the general secretary, 1 for the local, and 1 for the officers who make the payments.

The secretary-treasurer has power to levy such weekly assessments as may be needed to support a strike or lockout. The raising of a standing defense fund to care for the members during strikes is declared to be one of the main objects of the Association. For this purpose two assessments a year of not more than 50 cents are to be levied, according to the constitution, provided the executive board think that the prosperity of the trade will justify it. The constitution provides that the defense fund shall never be lower than \$1,000 but shall be kept above that sum by assessments. This rule has not heretofore been followed. The entire assets of the Association at the time of the last report, September 15, 1900, were \$1,442.48. Three thousand three hundred and fifty dollars was paid for strike benefits during the preceding year.

The general president is directed to appoint a member, subject to confirmation by the executive board, to proceed to a place where a strike or lockout exists, as the representative of the International Association, to attend all meetings of the committee in charge of the strike and to report weekly or oftener. He has power to examine all books and papers of the local union. He receives the rate of wages of the local of which he is a member, with all reasonable expenses.

The secretary said in his report of September, 1900, that 90 demands for more pay or less hours had been made by the local unions during the preceding 2 years, and that all had been victorious but two, excepting the demands published in the report for August 31, 1900, which had not yet been heard from. This statement does not include the great strike or lockout in Chicago. For the support of this trouble an assessment of 50 cents a member was levied by the international association. The largest number of members who received benefits in Chicago in any one week was 105. The whole number of individuals who registered for benefits during the 7 weeks of strike support was 204. The reported membership of the Chicago local at this time was 412, leaving 208 working or out of town or unaccounted for.

**Hours of labor.**—On August 31, 1900, one local was reported as working 7 hours a day; 65, 8 hours; 26, 9 hours; and 5, 10 hours. Six unions did not report.

**Wages.** On August 31, 1900, 92 unions reported their wage scales to the general secretary. One local was receiving as little as \$1.75 a day and 1 as much as \$7. Five unions received \$7; 2, \$4.50, 18, \$4; 30, between \$3 and \$4; 24, \$3; and 44, from \$2.25 to \$2.84.

**Piecework.**—Members are not allowed to subcontract work from any contracting plasterer.

**Inspectors of public buildings.**—The Plasterers' convention of 1900 demanded that on every public building a journeyman plasterer, a member of the union, be appointed plastering inspector.

## UNITED ASSOCIATION OF JOURNEYMEN PLUMBERS, GAS FITTERS, STEAM FITTERS, AND STEAM FITTERS' HELPERS OF THE UNITED STATES AND CANADA.

**History.**—The United Association of Journeymen Plumbers, Gas Fitters, Steam Fitters, and Steam Fitters' Helpers of the United States and Canada was organized in 1889. It is substantially a reorganization of the International Association of Plumbers, Steam and Gas Fitters, which was organized in 1880 and went to pieces in 1888; in consequence, it is said, of a great strike at Milwaukee

At the convention held in August, 1900, the secretary reported the membership as 10,791. It was 8,512 at the previous convention in 1897.<sup>1</sup>

**Convention.**—The convention is held annually in August. Each local is entitled to 1 delegate for the first 100 members or less and 1 additional delegate for each additional 100 members or majority fraction thereof. Small unions may unite with others near by in sending a delegate. Each State and inter-State association is also entitled to a delegate. The expenses of the delegates are paid by the bodies which send them.

**Officers.**—The officers are a president, 10 vice-presidents, a secretary-treasurer, an auxiliary secretary, and a general organizer. The officers are elected by the convention for terms of 1 year, by secret ballot. The United States and Canada are divided into 5 districts, from each of which 2 of the vice-presidents are chosen. The 10 vice-presidents constitute the executive board. At least 2 of them must be steam fitters.

The secretary-treasurer is required to deposit all money above \$250 in the name of the United Association. He may not expend more than \$5 at any one time without the approval of the executive board. He furnishes the bond of a surety company for \$5,000 and the association pays the cost of it. He is editor of the official journal. His salary is \$1,200 a year. He is authorized to hire such help as he needs.

The auxiliary secretary is to be furnished by the national secretary, at least once a month, with all information pertaining to his office so that in case of a vacancy in the office of secretary he may be acquainted with the business of the office. In such case he succeeds to the secretaryship with full powers. While he is an auxiliary secretary he receives no pay.

The vice-presidents have a right of succession in their order to the office of president if it becomes vacant. As an executive board they have general power over the business of the association between conventions.

The general organizer receives \$1,200 a year with necessary railroad fare and other actual expenses. He travels from place to place forming locals in unorganized towns, and helping and strengthening the locals which already exist.

**Local unions.**—Each application for a charter for a new local is to be considered by the executive board, and the board is directed to disapprove any application which has not been approved by the nearest existing local.

Any local existing where the members would be liable to be victimized if their connection with the United Association were known is directed to work secretly until it has strength enough to justify it in working openly. It is not to work openly until it has obtained the sanction of the general executive board, and even then every member is forbidden to reveal the name of any other member without his consent.

These clauses imply concealment of the existence of the organization under special circumstances. There is, however, a secret ceremonial which all the locals are required to make use of. The secretary, in his report to the convention of 1900, called attention to complaints that had arisen as to the complicated nature of this ritual. "A change is suggested that will tend to eliminate it, or, failing in that, to simplify it so that it will be readily understood." He declared that many locals did not work under the secrecy which was supposed to exist, and that the secret formalities had become a costly feature because of the necessity of sending an officer to install each new local. Affiliation with the Federation of Labor would make it possible but for this to use the Federation organizers without any cost. "It might not be amiss to consider the advisability of expunging the signs and secret work that is contained in the ritual." The convention resolved that the ritual be revised, but that the secrecy of it be strictly maintained.

**Apprentices.**—A rule has been in force since May 1, 1897, absolutely forbidding the employment of apprentices or helpers, helper and apprentice being interchangeable terms in the plumbing trade. This rule is defended on the ground that some employers were getting the most of their work done by boys, though they charged the public no less than if they had paid journeymen's wages. The national officers say that the rule was not intended to be permanent, and that it is not and never has been strictly enforced. It is said that no helpers are employed in Chicago, Cleveland, Omaha, or Denver. In many places only 1 helper is allowed to a shop, in others 1 helper is allowed to 3 or 4 journeymen.

The convention of 1900, upon the suggestion of the president, appointed a committee to meet a committee which had already been appointed by the Master Plumbers Association, to make an agreement on the subject of apprentices. The

<sup>1</sup> Plumbers' Journal, October, 1900, p. 17.

<sup>2</sup> Plumbers' Journal, October, 1900, p. 20.

president said that the Western locals with very few exceptions, had "taken up the apprentice question and made much progress in either restricting or abolishing them; but the Eastern locals have not as yet manifested a deep enough interest in the question."

**Cards.**—Members are transferred from one local to another by means of clearance cards, and they are under obligation to deposit such cards at the first meeting of a local in whose jurisdiction they have found work. One who has been a member less than 6 months, if he is transferred to a local whose initiation fee is higher than that of the local which he joined, must pay the difference. This is to prevent persons from getting into locals which have high initiation fees by joining neighboring locals which have lower fees. When a member comes, without a due book or a clearance card, to a place where there is a local union, he is required to deposit \$10 as a guaranty of good faith until his card has been procured.

Any member who starts in business for himself is required to withdraw from the association; a withdrawal card is granted to him.

**Finances.**—The United Association receives \$1 for each member initiated or reinstated, and a per capita tax of 2 cents a week from each member, besides an annual tax of 25 cents for the support of the journal. Payment of each of these taxes is indicated by an adhesive stamp affixed to a book with which each member is provided. A profit is also made on the sale of supplies to the locals.

The initiation fee of local unions may not be less than \$10 in the case of any union which has existed 6 months or more. Dues may not be less than 20 cents a week.

The minimum dues were raised to 20 cents in 1899. At the convention of 1900, when the law had been in force nearly a year, 28 locals, out of 53 represented, reported dues of 20 cents a week, 19 of 15 cents, 1 of 2 cents, and 1 of 30 cents. Four did not report. Those which had the smaller dues defended themselves partly on the ground that they had money enough to meet all demands, and partly on the ground that they could not afford to pay more.

Any member who owes over 3 months' dues stands suspended from all benefits and privileges of his local, and is not entitled to any benefits until 6 months after reinstatement. When 1 year in arrears he stands expelled, and must pay a year's dues to the expelling local and a new initiation fee to the local which he desires to join.

**Assessments.** The secretary congratulated the convention of 1900 that "for the first time in the history of the United Association a successful assessment has been levied on our general membership." The assessment was laid for the purpose of maintaining the official journal. The amount received was \$1,303.72, "almost two-thirds of the amount estimated to be paid at the last convention."<sup>1</sup>

**Strikes.**—Local unions are forbidden to declare a strike or make any demand upon their employers, with the expectation of receiving assistance from the United Association, without having received the approbation of the executive board. The constitution provides no fixed strike benefit, though it does provide for a defense fund in the general treasury and for a reserve fund, subject to the orders of the general executive board, to be held in the local treasury until it is needed. No local is entitled to assistance in a strike which lasts less than 3 weeks.

The officers spoke, in their reports to the convention of 1900, of the great number of strikes that had occurred during the previous year, and said that the largeness of the number had seriously impeded the progress of the organization. The executive board had given its consent to all the many applications for permission to strike, but had declined to promise financial assistance, on the ground that it would be impossible to help so many, and it was, therefore, best to help none. The president said that the most of the locals had been fortunate in securing victories, but there had been some disastrous failures. He recommended that the executive board be instructed to sanction no more strikes than can be safely assisted with the limited funds of the organization.

The president suggested also that in order to guard against further defeats each local union be required to furnish, before striking, a correct statement of the conditions, including the wages paid and those demanded, the hours worked and those proposed, and an outline of the general condition of the trade. He also recommended that an officer be dispatched to the place where the strike is proposed, to inquire into the conditions, the state of trade, and the probable success of the strike. These measures would diminish the number of strikes and moderate the demands of the locals. The convention approved the president's suggestions.<sup>2</sup>

<sup>2</sup> Plumbers' Journal, October, 1900, pp. 15, 17, 50.

<sup>3</sup> Plumbers' Journal, October, 1900, pp. 16, 51.

By the convention of 1900 the following provisions for strike benefits were made: Five cents a member a week is to be placed in the defense fund. A part of this fund, not more than \$1,000, is to be kept in the hands of the secretary-treasurer as a safeguard against delays. The remainder is to be held by the locals, and a quarterly report must be made upon it by each local, and published in the journal. In order to receive help from this fund, a local must have been a member of the association, in good standing, for 6 months before the strike. The strike must have been sanctioned by the general executive board. No benefit is to be paid until the strike has lasted 2 weeks, and none is to be paid unless half the members of the local are on strike or locked out. The executive board is forbidden to sanction so many strikes as to involve more than 500 members at one time except when one local exceeds that number.

Payments from the defense fund are to be made to locals at the rate of \$1 a week for each member on strike or locked out. The money is to be used at the discretion of the local but if any is left on hand when the strike is settled, it is to be returned into the defense fund. When it has been decided that the fund shall be drawn on, the secretary-treasurer is to notify the local on strike to draw the amount of the first payment, which he is to specify, from the defense fund in its keeping. Thereafter the secretary-treasurer is to have remittances made to the local on strike by other locals designated by him in sums equal to 1 week's benefit at a time. Locals are responsible for neglect of their secretaries in forwarding money, and are liable to a fine of \$5 for a delay of 5 days in remitting, excepting Sundays and holidays, and to a further one of \$5 for each additional 2 days' delay. Twice a year the secretary-treasurer is to equalize the defense funds among the several locals in proportion to membership, directing those which have more than their share to remit to those which have less.<sup>1</sup>

**Hours of labor.** The constitution provides that 8 hours shall constitute a day's work for all members, and that a half holiday shall be taken on Saturday. The half-holiday provision is specially based upon the ground that the plumbing business is insufficient to furnish employment for more than 90 or 75 per cent of the journeymen, and that a reduction of hours will tend to keep more men employed.

Both of these rules are conds of perfection. The president estimates the proportion of locals which have an 8-hour day at 10 per cent. The proportion of the members who have it may be somewhat larger, as it is chiefly the stronger unions which have obtained it. The president's report to the convention of 1900 drew attention to the fact that there are too great a number of our locals that have made no move to curtail the number of working hours. He argued that to decrease the number of hours a day means employment for more men, and that means a chance to increase wages. The convention instructed the executive board to enforce the provision that 8 hours shall constitute a working day "in such localities as they may, from reports and observation, deem in such a condition as to enforce this law."

**Uniform wages scale.** The president's report to the convention of 1900 discussed the idea of a uniform wage scale for the whole country, which, he said, had prevailed for some time in the minds of some members. He admitted strong reasons in favor of the plan in the extension of the business of some firms to all parts of the country, and in the consequent employment of plumbers under the jurisdiction of locals other than their own, which sometimes have higher wage scales than theirs. This gives rise, he said, to injustice toward the high-wage locals. He suggested the establishment of uniform scales to cover specified districts or particular States, but he considered the idea of a uniform scale for the whole country too radical to be considered at present.

**Limitation of work.**—The constitution includes this curious regulation for increasing the consumption of time: "The use of a bicycle or any other vehicle shall be discontinued by members of the United Association."

At the convention of 1900 an appeal was presented from a minority of the members of the local at Colorado Springs for countenance and aid in their effort to prevent members of the local "from furnishing stocks, ties, vises and other bench tools, and also from riding bicycles for doing job work." The convention voted to discountenance these practices.

**Piecework.**—Members are forbidden to do subcontracting or lumping from a master plumber, or to work for any person who has taken such a contract.

**Machinery, etc.**—The rules of the plumbers contain a long list of plumbing goods, such as drum traps with outlets and screws attached, lead pipe with ferrules and

<sup>1</sup> Plumbers' Journal, October, 1900, pp. 57, 68.

<sup>2</sup> Plumbers' Journal, October, 1900, p. 31.

nipples attached, etc., by which the work of their trade, they say, is gradually being taken from them, and the use of which should therefore be stopped. In the same connection they add a recommendation that all members advocate the exclusive use of iron sewer pipes in buildings, "believing it will benefit the health of the community and create a demand for more skilled labor." It is also provided that all brass and metal waste flush, and supply pipes shall be gotten out by the plumber who places it in position. "These rules to be enforced wherever practicable."

**Small shops.**—The president, in his report to the convention of 1900, declared that the small shop is rapidly becoming a most menacing evil. The small shops throw an immense number of apprentices on the trade. Their owners work long hours. In both ways the small shops tend to decrease the wages of the journeymen. Besides, the existence of the small shops and the help they give the large employers in a pinch is one of the great difficulties which the association meets in strikes.

**Separation of trades.** The association prohibits plumbers from working at steam or hot water fitting or gas fitting, and steam and gas fitters from working at plumbing, in any town where these crafts are organized separately within the United Association, or from allowing any mechanics aside from those named to infringe on these trades.

**Cooperation.**—The president, in his report to the convention of 1900, recalled the fact that the International Union, which preceded the present United Association of Plumbers, established a cooperative shop some years ago in Milwaukee while the Milwaukee local was on strike. The experiment was a failure. The president said that it was probably because of the glaring want of success in cooperation that the International Union disintegrated and the United Association was organized. He recommended that a committee be appointed to lay down a general plan which the locals might follow in establishing cooperative shops as a means of fighting the employers during strikes. He recommended, however, that no effort be made to maintain shops as business ventures when the strikes were over. He also advised that the clause of the constitution which forbade members to work on jobs where the material has been furnished directly to the owner or the general contractor be abolished. This clause, he declared, had prevented the establishment of a shop in Chicago by the union, which might have been expected to bring victory to the organization in the great strike of 1900.

**Official journal.**—The plumbers publish an official journal, in the form of a monthly magazine. It is sent to all members, and supported by a special tax of 25 cents a year.

## NATIONAL ASSOCIATION OF STEAM AND HOT-WATER FITTERS AND HELPERS OF AMERICA.

**History.**—The National Association of Steam and Hot Water Fitters and Helpers of America was established in 1888. It includes men employed in the fitting of engine and boiler connections, and piping for power or heating purposes, for refrigerating, for fire extinguishing, and for all kinds of pumping. Until the present union was formed the steam fitters, so far as they were organized, belonged to the unions of plumbers. Since that time there has been some friction between the Plumbers and the Steam Fitters, and some discussion of the advisability of amalgamation. When the Steam Fitters applied to the American Federation of Labor for a charter, in 1898, the Plumbers opposed the application on the ground that steam fitting was a branch of their trade. The charter was finally granted in November, 1899, with the provision that steam fitters who were members of the Plumbers' union might remain in it if they preferred, and that steam fitters might join the Plumbers' union in towns where they were too few to form a union of their own.

The ill feeling between the two organizations has never been dispelled. The Plumbers have always considered steam fitting a branch of their trade, and have not thought it right that it should be controlled by a separate national body. The executive council of the Federation had this dispute under discussion at its session in July, 1900, but declined to interfere, except by instructing a subcommittee previously appointed to continue the efforts it had already made, to get the two disputing unions to meet by committee and arrange for a settlement of difficulties and for a mutual recognition of cards.

The Plumbers' official journal of October, 1900, said that negotiations were

<sup>1</sup> Plumbers' Journal, October, 1900, p. 16.

<sup>2</sup> American Federationist, August, 1900, p. 256.

pending between the Plumbers and the Steam Fitters "with a view of arranging a more amicable relation in the family."

In the convention of the American Federation of Labor in 1899 a dispute came up from Chicago between the Steam Fitters' Union and the local union of Sprinkler Fitters. The convention recommended that the bodies concerned devise means by which sprinkler fitters might come under the jurisdiction of the Steam Fitters' Union.

In 1889, at the end of its first fiscal year, the Steam Fitters' Association had 5 locals. By 1893 the number had risen to 25. It fell to 19 in 1894. In 1895 and 1896 there were 24, 19 in 1897, and only 16 in 1898. In 1899 there were 27, and in 1900, 38. The number of members claimed in the summer of 1900 was 2,000. The secretary-treasurer estimated at that time that about 500 steam fitters belonged to the Plumbers' Union, and that about 30 per cent of the men working at the trade were nonunionists. In June 1901 the secretary-treasurer reported 44 locals in good standing but said that, by reason of the depression of business in the preceding summer, the number of members in good standing was reduced to 1,500.

**Conventions.**—The convention meets annually. Local branches are entitled to 1 delegate for the first 100 members, provided the number is not less than 10, and 1 additional delegate for each additional 100 members or fraction thereof.

**Constitutional amendments.**—The constitution can not be amended except on the proposition of a local branch, submitted in writing to the secretary-treasurer at least 3 months before the convention, and approved in the convention by a three-fourths vote. An amendment of the laws governing local branches, proposed by any local branch, may be passed by a two-thirds vote of the convention.

**Officers.**—The officers are a president, a vice president, a secretary-treasurer, three organizers and an executive board of seven or more members, of whom at least one-third are to be helpers, and not more than one member is to come from any one State. All officers are elected annually by the convention. The secretary-treasurer receives a salary of \$250. His bond is only \$500. The executive board has supervision of the union in the intervals between the conventions and has power to remove officers for neglect of duty and to appoint their successors. It may levy assessments in aid of strikes.

**Local unions.**—If an application for a charter comes from a town within the jurisdiction claimed by an existing local, the secretary-treasurer is required to notify the local. If it protests, the question of granting the new charter is referred to the executive board.

**Joint boards.**—Where there are a Steam Fitters' branch and a Helpers' branch in the same town, they are directed to have a joint executive board of 5 fitters and 5 helpers. Where two or more local branches exist within 100 miles of each other they are to maintain a conference board.

**Membership.**—It is prescribed that each local branch shall have an examining board (where circumstances will permit) to examine into the qualifications of candidates for membership. Any member who moves to another city must satisfy the requirements of the local examining board, if it is demanded, even though he has passed an examination in the city that he came from.

**Withdrawal and transfer cards.**—Any member is entitled to a withdrawal card on payment of all dues, assessments, and fines which stand against him. He may again affiliate with his branch at any time by presenting his card and paying 1 month's dues. If he presents the card within 12 months of the date of issue he must pay all dues and assessments for the interval.

A transfer card is issued, without vote, on payment of all dues and assessments to date of application. The acceptance of it is not obligatory on other locals. If it is accepted it is to be returned by the recording secretary to the local branch which issued it.

A traveling card is granted for any time not exceeding 1 year on the payment in advance of all dues for the period covered.

A local branch which admits a member from another branch is at liberty to charge him any difference which may exist between the admission fees of the two branches.

Any member who goes to work in a town where a local branch exists, even temporarily, must make his presence known and be subject to the local working rules, by-laws, examining board, and wage scale. If he is sent by an employer in the town he comes from, and if his wages are higher under the rules of his own town than under those of the place he comes to, he is not obliged to take lower wages. Men so sent out by employers from their homes must have all their expenses paid by their employers.

**Finances.**—The charter fee for new locals is \$15, which covers cost of necessary blanks. The per capita tax is 16 cents a quarter for steam fitters and 11 cents a quarter for helpers.

The initiation fee of local branches may be not more than \$50 nor less than \$2 for fitters, and not more than \$25 nor less than \$1 for helpers. When a helper passes into a fitters' branch, he may be charged a transfer fee not exceeding the difference between the two initiation fees.

**Strikes.**—The constitution contains the rather unusual provision that "all local branches are requested to notify the national secretary-treasurer before entering into any general strike," giving all necessary information about the cause of it. If the strike is indorsed by a majority of the executive board the secretary is to issue an appeal for assistance to all local branches. Elsewhere in the constitution it is provided that no general strike can be ordered by any local branch for a reduction of hours of labor or an increase in wages without the indorsement of a majority of the executive board, and if this law is not complied with the local branch has no claim on the national association. The executive board has power to levy an assessment in aid of a local branch "which may have been ordered on strike for a reduction of the hours of labor or an increase in the rate of wages or against non-union men, and through such strike should become financially embarrassed." The usual practice seems to be to appeal to the locals for voluntary aid.

The union reported to the Federation of Labor in the fall of 1900 that it had lost two strikes and compromised one during the preceding year. One thousand one hundred persons were involved. The cost of the strikes was about \$9,000.

**Hours of labor.**—About August 1, 1900, the secretary reported that 19 locals were working 18 hours a week, 18, 54 hours, and 1, 60 hours.

**Wages.**—Members of advanced age or inferior ability are sometimes permitted to work for less than the union scale.

**Nonunion men.** Where fitters and helpers are organized, fitters are forbidden to work with any but union helpers, and helpers to work with any but union fitters.

**Order in meetings.**—It is provided that no refreshment other than water shall be allowed in the meeting room while the local branch is in session, and no smoking shall be allowed during initiation.

## JOURNEYMEN STONE CUTTERS' ASSOCIATION OF NORTH AMERICA.

**History.**—The present general officers of the Stone Cutters' Association do not know when the local unions of the stonecutters first united in a national body. The secretary has a copy of a monthly journal issued by the Journeymen Stone Cutters' Association of the United States of America in February, 1857. Not only the association, but its official paper was by this time a going concern. The local unions attached, which are mentioned in this paper, are those of New York, Washington, Cincinnati, Chicago, Cleveland, Philadelphia, Baltimore, and Hamilton, Ontario. It is probable that the national association had existed for some years before this. It is certain that local unions had existed for many years. An old silk banner of the Newark union hangs in the office of the general secretary, which bears the inscription "Founded in 1834." The Washington union is also of many years' standing. There is a tradition of a conflict with President Jackson in 1829 about hours and wages on work at the White House. The Washington stonecutters are said to have marched in a body at the laying of the corner stone of the Capitol in 1792. The stone which was laid on July 4, 1828, to commemorate the commencement of the Baltimore and Ohio Railroad was presented by the stonecutters of Baltimore.

The Stone Cutters do not publish statistics of membership, but the secretary states the membership at approximately 10,000 men.

**Relations to other trade unions.**—Though local unions of the Stone Cutters usually join central labor unions or building-trades councils in their cities, the union, as a whole, shows no disposition to ally itself with others. It is proud of its long history, and is not ready to acknowledge either that others can help it or that it ought to exert its strength on behalf of others. The Stone Cutters' Journal of July, 1900, taking as its text the desertion of the Kansas City Building Trades Council by most of the strong unions except the Stonecutters and the Painters, advises stonecutters generally to maintain an independent attitude. They are drawn into sympathetic strikes and are "left to hold the bag." The stonecutters have the highest wages that are paid to any mechanics in the building line and the shortest day. They got these advantages by their own efforts, at the sacrifice of their own time and money. They should maintain them and let other people look out for

their own interests. "In these days of squabbling building-trades councils, American Federations, Knights of Labor, and antagonistic central bodies, stonecutters haven't anything in the world to gain by having anything to do with any of them, but everything to lose by the connection."

**Objects.**—The association mentions among its objects to establish an apprentice system and to encourage a higher standard of skill.

**Convention and constitutional amendments.**—The written constitution makes no provision for conventions. Conventions have, however, been held when it has seemed desirable to the local unions. There was one in 1892 and another in 1894. None has been held since. An extensive revision of the constitution was made by the executive board, and ratified by vote of the lodges, in 1900. Any local may at any time propose an amendment to the constitution. The proposition is sent to the general secretary-treasurer, and by him published in the Journal. If lodges which have one-fourth of the electoral votes second the proposal, it is submitted to a general vote. Each branch has 1 so-called electoral vote for each 25 members, or fraction thereof, on the roll at the time of the collection of the last per capita tax. A majority of such votes is enough to carry an amendment.

**Officers.**—The officers are a president, a vice-president, a secretary-treasurer, and an executive board of 7 members. The United States and Canada are divided into 7 districts, and 1 member of the executive board is chosen from each district. All officers are elected by popular vote, and a plurality of electoral votes is sufficient.

The secretary-treasurer, in addition to the other duties of his office, is editor of the *Monthly Stone Cutters' Journal*. His salary is \$1,500 a year. He has an allowance of \$600 for two assistants. It is his duty to attend conventions, and he is allowed his railroad fare and \$2.50 a day for expenses. He furnishes the bond of a guarantee company for \$1,000, the cost of it is paid by the organization.

The business of the executive board is almost all transacted by correspondence, and the decisions of the members, with explanations, are published in the Journal. A considerable space in each Journal is occupied by the letters from members of the board, conveying their judgments and the reasons for their judgments on questions that have been presented to them.

**Printing and headquarters.**—The constitution provides that bids for printing and supplies shall be invited annually, and that the general president, together with a committee of 2 from his local union, shall select 1 of the best and lowest bids from union printers, from which 1 shall be chosen by a general vote of the members. The headquarters are to be fixed for the year in the town where the printing is done. This plan of determining the place of the headquarters according to the bids for printing was formerly carried out according to its intent, though the secretary explains that it was not usual to accept the lowest bid. Since 1893 the headquarters have remained continuously at Washington, D. C., and the policy of the union seems to be to keep them there.

**Local unions.**—A branch may be organized by 7 practical stonecutters who have never disqualified themselves by working contrary to union principles. Wherever 7 members with general union cards are working together they are compelled to form a branch under penalty of forfeiting their membership. When a job starts where no branch is in existence the first member who goes to work on it must notify the general office and give the names and addresses of all stonecutters in the town.

Stonecutters are of necessity a shifting population. The construction of a great public work, a dam or a large building, will gather a considerable force and keep it together for months or years, when the particular work is completed not a stonecutter may be left in the place. This state of things explains the need of the regulations which have just been quoted. It results in a constant formation and dissolution of branches in particular places, quite aside from any change in the strength of the organization as a whole.

On joining the association a local must define the limits of its jurisdiction. The limits may not go beyond a radius of 25 miles, unless by the special sanction of the executive board. The executive board has power to grant a charter for a new local within the jurisdiction of an existing one, provided the hours and wages are equal at the time of application.

**Independent locals.**—The stonecutters of New York, Philadelphia, and Boston are united in local unions which are not affiliated with the national body. Their relations to the national union are entirely friendly, and the national union regularly exchanges cards with them; i. e., it receives men on certificate of membership from them, and they in turn receive its members on its certificate. The constitution of the national union provides for the exchange of cards with all bona fide stonecutters' unions within its jurisdiction, provided they charge not less than \$10

initiation fee, and provided they reciprocate and furnish a monthly report of general union members whom they receive. The Journeymen Stone Cutters' Journal regularly publishes a list of these independent locals and the names of their secretaries after the list of the locals of the national union and their secretaries.

The constitution provides that if a local union which has been a member of the association recedes, its initiation fee, if it desires to return again, shall be fixed by the executive board.

**Membership.**—The constitution prescribes that the members of the association shall be journeymen stonemasons and carvers only. "Any man shall be considered a practical stonemason who can complete stone work true and perfect. This will include all kinds of stone work—plain, molded, or carved."

**Apprenticeship.** The branches may regulate the number of apprentices in each yard within their jurisdiction, but in no case may the number exceed 1 in a yard where less than 15 men are employed, 2 where less than 100 are employed, or 4 in any case whatever. An apprentice can not begin to learn the trade before he is 15 years old nor after he is 18. An apprentice must register his name, age, and residence, and the name of the firm that he is apprenticed to, with the branch. The term of apprenticeship is 4 years. An apprentice who is registered under a contractor is to be compelled to finish his time under him. If he leaves his employer and engages with another, in violation of the rules of the branch he is to be treated as a scab.

It is declared to be "the imperative duty of shop stewards and members to see that all apprentices in their respective shops are given good work, in order that they may become skilled workmen, fitted to take their places as journeymen in our midst."

It is asserted by the general secretary that while formal contracts of indenture are no longer made, the rules of the association regarding apprenticeship are generally enforced. It is said that the association takes pains to see that apprentices are given opportunities to learn all kinds of work, instead of being kept upon one kind, as the interests of the employer would dictate. If an employer refuses to give an apprentice proper opportunities, the apprentice is taken away from him and put in another shop. The unsatisfactory employer is not allowed to take another apprentice until the term of the first has expired. Apprentices generally receive \$1 a day the first year, \$2 the second, and \$3 the third.

**Traveling cards.** If a member leaves a branch without a traveling card, on going to another branch he must make a deposit of \$1, to be held until his card is produced. The branch is to keep not less than 25 cents for the trouble of sending for the card.

**Discipline.**—It is unlawful for any member or branch to issue any circular letter or document having reference to the general affairs of the organization, except through the executive board. Any branch which makes a false charge against a candidate for one of the general offices is liable to a fine of \$100. These paragraphs seem to be very little enforced. No fine has ever been levied on account of a false charge against a candidate for office, though such charges have been made. One reason may be that the enforcement of the law would devolve upon the accused person or upon his immediate associates, and that they feel a delicacy about putting the law in motion.

The constitution provides that any man who has ever "committed himself" (the stonemasons' phrase for scabbing) can not hold any general office or be a delegate to the convention. For such an offense a member may be fined by the branch where the offense was committed not less than \$15 nor more than \$80. No part of such a fine can be remitted, except with the approval of the executive board.

The Stone Cutters have for many years published quarterly a list of scabs, arranged according to the locals by which they were reported. When any union detects a man whose name is on the list in such a position that he can be forced to pay a fine, it asks the union which reported him as a scab what fine stands against him. It often happens that his offense and he have been forgotten. As the general secretary says, in such cases, "on general principles somebody makes a motion to collect a \$100 or \$150 fine. The only reason given is, 'We need the money.' " The constitution provides that when a branch disbands without specifying the fine against any scab in its jurisdiction, the branch which collects the first part of such fine shall fix the amount and be entitled to 20 per cent, the remainder to go to the general union.

In February, 1900, the secretary complained that over 2,000 names were standing on the scab list, many of which had been there for years, and many of which were the names of masons, quarrymen, and others who were not properly stone cutters at all. Mr. J. Clifford, in a letter to the Stone Cutters' Association, on

<sup>1</sup> Stone Cutters' Journal, February, 1900, p. 3, February, 1900, supplement, p. 19.

coming into the presidency of it in December, 1896, said: "I am inclined to believe our methods of creating scabs are altogether too ready. Personal feeling often helps to get a man on the scab list that never should be there. I believe that if a man could take his case before the executive board without depositing the full amount of his fine, which is sometimes \$100 or \$150, we would have less men on the scab list than at present. Putting \$150 on a man is practically scabbing him for life. Then he always keeps up a guerrilla warfare on the trade as long as he lives. The sooner you put a stop to that kind of business the better."

In the convention of 1891 an effort was made to declare a general "jubilee," during which those who had "committed themselves" should be admitted for an initiation fee of \$20 in lieu of all fines and penalties. The proposition for such a general jubilee was voted down, but it was resolved that any branch which chose to proclaim a jubilee in its own locality might do so. A large proportion of the branches did declare jubilees, and some men came in under them, but not so many as was expected. Says the secretary: "The only time that a man comes in who has been fined and expelled is when he is compelled to."

**Finances.** The charter fee for new locals is \$10 for every 100 members or fraction thereof. The per capita tax is 25 cents a month. The general office also receives half of all initiation fees and fines. These go to the strike fund. An assessment of \$1 for this fund is also levied every year. Any member four months or more in arrears must be compelled to pay 25 per cent of his earnings each pay day until he is clear on the books.

The general initiation fee is \$10. An apprentice who has completed his term of 4 years within the jurisdiction of the association is admitted on the payment of \$2.50, provided he applies within 1 month after his term expires. Any applicant from a foreign country, without a card from a recognized stonecutters' union, is charged \$25. One who brings such a card is not admitted free, because the number of American stonecutters who wish to go abroad is not great enough to justify the American union in exchanging cards, but he is admitted, in consideration of his faithfulness to unionism, for the same fee as an American citizen—\$10. Any man who leaves the jurisdiction of the union (the United States and Canada) without a foreign traveling card, must pay an initiation fee of \$50 on his return. Foreign traveling cards, authorizing travel outside of the United States and Canada, are issued by the general office on application by a branch, but no member can get such a card twice within 3 years.

This regulation of foreign travel requires explanation. The stonecutters, particularly in the Eastern cities, have complained bitterly of the "harvesters," who come from Europe, work during the busy season, and return. In 1888 several propositions for high initiation fees for foreigners were discussed in the convention and rejected. The convention finally fixed a uniform initiation fee of \$10, with a provision that any member who should leave the jurisdiction of the union and afterwards return should be charged a reinitiation fee of \$15, and that for leaving and returning a second time he should be charged \$50. This was not satisfactory to some of the Eastern unions. The New York city union immediately rebelled and resolved to charge \$50 to all applicants for admission who should come from any place outside of the United States, and to refuse to exchange cards with any union which should not maintain the same initiation fee. First the Newark union, and then other unions in Eastern cities followed the lead of New York. The Western unions which did not sympathize with the movement were compelled to join it or see the national union go to pieces. Self-interest pressed the same way for the foreigners were flocking West to avoid the high Eastern initiation fees. Within about 6 months the national union had yielded to the demands of the rebels.

Initiation fees are directed to be paid in installments, at the rate of 25 per cent of the applicant's earnings.

If a branch collects dues or fines for another branch it is entitled to a fee of 10 per cent. Thus, together with the expense of forwarding the money, is to be paid by the member.

**Benefit.**—On the death of a member in good standing his heirs are entitled to a funeral benefit of \$100. A member who is in arrears for dues and assessments for more than 1 month forfeits his claim to the funeral benefit, and does not recover it until 1 month after he has paid up. If a member has paid his dues to his branch, and the branch has failed to forward the per capita tax to the general office, the branch is liable for the funeral benefit.

Loans may be made by a branch to a member who is out of work, and if a trav-

<sup>2</sup> Journal supplement, September, 1891, p. 4.

<sup>3</sup> Journal, January to August, 1888.

eling card is issued to him the amount of the loan is noted upon the back. If he deposits the card with another branch he must make payments on the loan at the rate of 25 per cent of his wages, whenever he works, together with the cost of remittances.

**Strikes and lockouts.**—The constitution says "A strike is where the men themselves take the first step to raise their wages or to enforce some article in the general union constitution and by-laws. A lockout is where the employer makes the first move to reduce wages, increase hours, or introduce rules in opposition to the general union constitution and by-laws."

A strike can not be declared without a three-fourths vote in favor of it at a special meeting of the local branch. After such a vote a statement of the demands, of the state of trade, of the number that would be out of work, the number in and out of benefit, and the number of members who voted for and against a strike must be laid before the executive board. If the board considers the case clearly stated, the question is to be presented to a vote of the branches; and a strike is not sanctioned unless a majority of the votes cast by the branches are favorable to it. When such a vote has been given, the board is directed to make every effort to reach an amicable settlement before finally ordering a strike.

During a strike members are directed to work for any contractor who agrees to their rules, provided he confines himself to his own contract and does not work for the firm whose men are out.

The president, at the request of a local branch which is on a strike, may visit the place and undertake a settlement, and he may also call for help on the nearest members of the executive board. The president and the members of the board are to receive for such services the common rate of wages, their railroad fare, and \$2.50 a day additional, all to be paid by the local branch.

No branch may strike within 1 year of its organization. No branch may strike and receive strike pay while 10 per cent of the aggregate membership of the National Union are already on strike.

Strike and lockout pays \$5 a week. A daily report must be made to the general office of the names of all members on strike. Any member forfeits his strike pay for any day on which he may fail to answer roll call, and a branch forfeits its pay for each day on which the strike roll is not sent in. No strike pay is allowed for the first week. A member not in good standing can not draw strike pay.

**Difficulty of paying strike dues.**—Despite its age and strength the union has been most remiss in keeping the promises which it has made to strikers. A strike of the Stone Cutters in Toronto in 1890 entailed strike payments by the National Union of \$8 651. The National Union had not money in its treasury to meet the payments, and the members were reluctant to pay the necessary assessments. At the convention of 1892 a levy or assessment of \$1.50, to be paid in 3 installments, at intervals of 6 months, was declared, but the secretary-treasurer complained in the *Journal* 6 weeks after the convention that only 2 branches had made a payment.<sup>1</sup>

Another levy of \$1.50 was laid at the convention of 1894 to pay the old strike claims of Toronto, as well as others of Detroit and Milwaukee. The Toronto debt was finally settled in 1895, 5 years after it was incurred, but in March, 1895, replying to a complaint from the Detroit local that its claim was still unsettled, the general secretary-treasurer declared that only about one third of the members had paid the last levy. In July, 1896, a member of the executive board offered a proposition that this levy be annulled and those who had paid it be credited with the amount on account of per capita tax and that a new levy of \$1.50 be laid, to be paid within 6 months. This proposition was carried by a vote of 11 locals against 27, only about one-third of the locals voting at all.<sup>2</sup>

In 1900 provision was made for a strike fund, to be maintained by an annual levy of \$1, payable on or before the 31st of August of each year. The *Stone Cutters' Journal* for September, 1900, published when the time for the first levy had expired, declared that the plan was a complete failure, and that out of a membership of about 10,000 only 833 had paid the levy. In the October *Journal* the secretary said in desperation that it would be better to remove the strike laws from the constitution, to nullify the annual levy, and return the money to those who had paid it. The secretary continued: "You have had 14 years' experience with promises to pay strike claims, and it has been conclusively proven to my mind that the rank and file of the general union do not propose to pay strike bills, and we base our statement on the fact that they have never done it so far."

The president said in December, 1896, "I notice the branches and executive board vote to legalize any strike that takes place; vote to grant any loan whenever a

<sup>2</sup> *Stone Cutters' Journal*, August, 1895, p. 3; September 1895, p. 2; March, 1896, p. 11; July, 1896, p. 9.

branch requests one, but bitterly complain whenever a levy is put on to pay the bills with which they just voted should be paid. I have often heard men say, 'Of course, pay the death benefit, he was a good fellow,' and it was an oversight that he allowed himself to run out of benefit. It's the same way with strike pay. They say 'What good is the general union if it does not pay strike claims?' They vote without a moment's hesitation to allow a strike claim of two or three thousand dollars for strike pay, and stoutly maintain that the men were entitled to the money and ought to have it. At the same time, if a levy of 50 cents is put on to pay it with, you will see the same man kick desperately against its collection, and demand to know why the general union can not get along without all the time levying its members."

**Wages and hours.** A resolution of convention recites that a few branches tolerate what is known as the grading system, but that such a system tends to destroy that friendship which is essential to true unionism, and that the branches where the grading system is in use ought to make an earnest effort to abolish it.

The policy of the organization is to fix a standard wage and to expect all members to conform exactly to it. The general secretary declares that he has scarcely ever known an instance in which an employer has paid more than the standard wage by reason of superior ability or speed, except when the purpose has been to get a fast man to set a killing pace for his companions. 'If a man is known to accept pay beyond the regular rate, he is said to be taking blood money, and he is despised as much as a man who works below the rate.'

Members over 50 years of age and physically unable to earn the standard rate of wages may be granted "exempt cards" on the recommendation of an investigating committee. The committee is to regulate the wages of exempt members.

The association adopted a law in 1892 which prohibits members from receiving pay in any other form than legal currency. It is explained by the secretary that this rule was not necessitated by the existence of company stores, which have never troubled the stone cutters. It resulted from the action of several real estate boomers in western towns, who induced stone cutters to take a part of their pay in town lots of problematical value.

The stone cutters were one of the first trades to obtain, in some places, the 8-hour day. It is said that in Washington, D. C., after the civil war the regular day was 8 hours, and wages were \$1.50 a day. During the hard times, from 1873 to 1879, the stone cutters in many cities suffered severe losses of wages, as great, it is said, as a fall from \$1 a day to \$1.50 or even \$1.25. At Washington along with a fall to \$1 there was a lengthening of the hours to 10. The 8-hour day was not recovered till 1882. But in most places where the stone cutters had obtained the 8-hour day they did not relinquish it. The Journal said in March 1889, "Every man who has enough common sense to know right from wrong knows that wages are certain to rise to a certain point, and the stone cutter who dropped from \$1 to \$1.25 knew he could get back to \$1 without saddling 2 hours more a day on himself and forcing his brother to walk the streets in idleness, hungry and wretched."

In August, 1893, and again in September, 1897, the secretary-treasurer of the Stone Cutters published statistics of the hours and wages of a considerable number of branches, and also of those of unorganized stone cutters in certain places. The following tables are a summary of his figures. The secretary-treasurer presented the facts as proving that short hours make high wages. "It is invariably the case where the least number of hours prevail the wages are the highest." The averages are simple averages, in which each place, without regard to the number of men employed there, has the same weight.

*Average wages per day of organized stonecutters, in the number of places given, under the systems of 8, 9, and 10 hours, respectively.*

Hours per day	Number of places		Wages per day	
	1893	1897	1893	1897
8	42	16	\$3.97	\$3.63
9	51	51	3.65	3.27
10	8	7	3.11	3.29

*Average wages per day of unorganized stonecutters, in the number of places given, under the systems of 8, 9, and 10 hours, respectively.*

Hours per day	Number of places		Wages per day	
	1894	1897	1894	1897
8	-	3	-	\$3.62
9	8	32	\$3.53	3.66
10	18	61	3.24	2.92

**Piecework.**—The association prohibits subcontracting and piecework, on pain of expulsion of any branch which permits it. This rule applies to plain and molded work. Carving is left to the option of the branches.

**Machinery.**—The stone pick is declared in the constitution not to be a stonecutter's tool, and members are directed to use every effort to discourage its use. The stone pick is a heavy tool, shaped like a digger's pick, and used in a similar way. The stonecutters admit that stone can be cut faster with it than with a hammer and chisel, but they exclude the use of it on the ground that to use it requires nothing but brute strength, and that it affords a means of supplanting skilled stonecutters with mere laborers.

The constitution instructs branches to make every effort to prevent the introduction of planers, and it provides that it shall not be permitted to ship planer work into any city where the union has succeeded in abolishing planers. The introduction of planing machinery has threatened greatly to interfere with the employment of skilled stonecutters in building work. The machines can be run by men of little skill. The union has in some cases tried to prevent the use of them altogether, and in others has insisted on their being run by union stonecutters. In 1896 the Chicago union demanded that planers be run by union stonecutters at a wage of 50 cents an hour with an 8-hour day. After a strike of 12 weeks a compromise was made by which one-half of the machines were to be run by stonecutters and one-half by planer hands. In 1898 the journeymen demanded that the contractors employ 8 hand stonecutters for every planing machine. After a strike of about 10 weeks it was agreed that the contractors should employ 4 members of the stonecutters' union for every double planer and 2 for every single planer. It was testified before the Industrial Commission that this agreement was to last till May, 1900, but that in January, 1899, in violation of this agreement, the journeymen demanded that no machines be operated after April 1, 1899. The contractors got the time extended to June 1, 1899, but were compelled to stop the machines then, and were not able to use them again until they conquered the right in the great building-trades strike or lockout of 1900. The action of the stonecutters on this question was one of the complaints of the contractors in that great contest.

Complaint was also made by Chicago employers that the Marble Cutters' Union would not permit the use of the pneumatic tool for carving. The employers asserted that this tool is used all over the world, and is almost indispensable for delicate work.

**Competition between places.**—The association does not countenance the transportation of cut stone from one place to another unless the wages and hours are equal, except where the interchange of work between two branches is mutually agreeable without regard to wages or hours.

**Convict labor.**—The constitution says that the association will not sanction the introduction of stone cut by prison labor.

**Army and militia.**—The constitution says: "This association does not approve of or sanction any of its members belonging to any volunteer military organization, except on a call from the Government for the defense of their country." The general secretary explains that this rule is established because the principal use of militia companies in ordinary times is considered to be to hold down the workmen. During the war with Spain many stonecutters enlisted with such entire approval of the organization that they were kept in good standing on the books, according to the statement of the secretary-treasurer, without the payment of any dues during their military service. It is asserted with pride that at the beginning of the civil war the whole union of the stonecutters in Washington, D. C., enlisted as a body, pursuant to a unanimous vote.

<sup>1</sup> Reports of the Industrial Commission, vol. viii, Testimony, p. 356.

<sup>2</sup> Reports of the Industrial Commission, vol. viii, Testimony, p. 291.

At the time of the Homestead strike in 1892, the Stone Cutters' convention adopted resolutions offering the Homestead workmen their "sincere sympathy and unqualified approval in the determined course they have followed from first to last in their bitter conflict with the monopoly known as the Carnegie Steel Company," and saying: "While we deplore and deplore deeds of violence and bloodshed which sometimes ensue between employers and employees in the settlement of disputes, and maintain that extreme measures should only be resorted to when life and liberty are involved, we believe that the violent resistance to the band of mercenary cutthroats and illegal henchmen known as the Pinkerton detectives, by the locked-out Homestead workmen, was justifiable. At the time of the great railroad strike of 1894 the Stone Cutters' convention, after endorsing the stand taken by the governor of the State in his earnest appeal to the President of the United States asking for the withdrawal of the Federal troops until such time as the State was unable to enforce the laws, resolved: 'That we discontinue all efforts that are being made to use the powers of the Government in the interest of the employing classes, to the detriment of the masses of toilers who are not guilty of crime, but simply asking a fair return for their labor.'

**Journal.**—In 1886 a monthly paper called the Stone Cutters' Journal, was established by the secretary of the union as his private property. It was published in this way until May, 1888. Beginning with June, 1888, an official journal, under the title of The Monthly Circular, was published by the organization. The title was changed to The Stone Cutters' Journal in September, 1892. Under that title the paper is still published. The subscription price is \$1 a year. The paper is furnished free to members, a sufficient number being sent to each branch to supply all the members of it.

The Journal is a monthly paper of about 20 pages, 10 x 14 inches. A large part of it is filled with business of the union, appeals and disputes, and decisions of the executive board upon them. A letter from each member of the board is published, containing a statement of his vote on each matter on which he is ready to give a decision. There are also informal reports of the state of trade at various places, and of jobs open. There are lists of locals, and of members admitted, transferred, and disciplined. Some space is given to technical matter.

The constitution makes it the duty of the corresponding secretaries of branches to make a report to the general secretary of the condition of trade and of contracts that have been let, to be printed in the journal. It is the policy of the general secretary to make the dissemination of information as to opportunities for work the most important feature of the paper. The editorial columns constantly contain complaints of the slackness of the corresponding secretaries in regard to the required reports.

## MOSAIC AND ENCAUSTIC TILE LAYERS AND HELPERS' INTERNATIONAL UNION.

**History.**—The Mosaic and Encaustic Tile Layers and Helpers' International Union was organized in 1898. Its members are engaged in tiling floors, walls, ceilings, and fireplaces. In August, 1900, the secretary reported the number of locals as 32 and the number of members as 150. The membership for 1898 is given as 200 and for 1899 as 430.

**Conventions.**—The convention is held annually on the second Monday in June. Each local is entitled to 3 delegates. Each delegate has 1 vote, and there are no proxies. The expenses of delegates are paid by the international union.

**Constitutional amendments.**—The constitution may be amended either by a two-thirds vote of the convention, confirmed by a two-thirds vote of the members on a referendum, or by a recommendation of the executive council between conventions, approved by a two-thirds vote of the members.

**Officers.**—The officers are a president, 3 vice-presidents and a secretary-treasurer. They constitute the executive board. All officers are elected by ballot in the convention, and a majority is necessary to elect. When there are more than 2 candidates, the lowest is dropped after each unsuccessful ballot. The term of office is 1 year.

**Membership.**—To be eligible to membership one must be an encaustic tile layer or helper and competent to command local wages. An application for membership must be signed by the applicant and indorsed by two members in good standing. The executive committee must examine into his qualifications and report to the local. No person who has been expelled or suspended from any local, or who is in arrears to any local, is eligible to membership, except by the consent of the

local of which he was a member. No candidate can be initiated on the night on which he is proposed. Election to membership is by ballot, and a two-thirds vote in the affirmative is sufficient.

**Discipline.**—Any officer or member who becomes an habitual drunkard, or commits an offense that will bring the union into discredit, or tries to create dissension among the members, or works against the interests and harmony of the union, or advocates or encourages dissolution or division of the funds of any local, or separation of a local from the international union, is to be expelled. Any officer or member who slanders a fellow-member, or violates the trade rules of the locality, or fraudulently receives or misapplies the funds of the union, or injures the interests of a fellow-member by undermining him in his wages or by any other wilful act which places his situation in jeopardy, or who reveals the business of the union without authority, is to be fined, suspended, or expelled. Any officer or committeeman who fails or neglects to perform any duty required of him is to be fined 25 cents for each offense. Violations of trade by laws adopted by the local executive council. A member who has been suspended or expelled for any misdemeanor can be received into the union again only by a two-thirds vote of the local, approved by the general executive council.

**Cards.**—A working card, good for 3 months, may be issued to any member who desires to travel, on payment of dues in advance. The member must sign his name on the back of the card when he receives it. This furnishes a means of identification. Before the card expires he must deposit it with the local union under whose jurisdiction he is employed. If there is no local there he must send 3 months' dues to the local which issued the card and procure a new one before the first expires.

A withdrawal card may be granted by a two-thirds vote of the local to any member who retires from the trade. It is valid during the good conduct of the person receiving it, but may be annulled for any gross violation of the interests of the trade.

**Finances.** The charter fee collected from new local unions is \$15, for which, besides the charter, a ledger, a daybook, and 15 constitutions are furnished. No seal and no other supplies seem to be included in the outfit. The per capita tax is 10 cents a month, of which 5 cents goes to the general fund, and 5 cents is devoted to the payment of the mileage of delegates to and from conventions. The executive committee has power to levy an assessment of 25 cents a member whenever there is a deficiency in the general fund, but not oftener than once a month. A union 3 months in arrears is to be notified, and after 1 month's notice is to be suspended.

The local initiation fee may not be less than \$2, nor the local dues less than 50 cents a month. Local unions are forbidden to levy assessments except by a two-thirds vote of all members present, and the vote on an assessment can not be taken until at least 2 weeks after the meeting at which it is proposed. No appropriation of money can be voted by a local union later than one hour and a half after the beginning of the meeting. Any member 3 months in arrears for dues is not in good standing. His name is to be announced by the financial secretary at the next meeting, and if he does not settle his account in 1 month he is to stand suspended.

For the fiscal year ending June 15, 1900, the total receipts of the international union were \$908 and the total expenditures \$710.

**Strikes.** When a difficulty with employers arises, the members must lay the matter before their local. If the local approves of their position the local president must appoint an arbitration committee to call on the employers and try to adjust the difficulty. If the committee is unsuccessful, the question of sustaining the members may be voted on at the next meeting. A two-thirds vote by secret ballot is necessary to sustain a strike. If the assistance of the international union is desired, the local must not inaugurate a strike without the consent of the international union, given either by the executive council, or, if it fails to consent, by a general vote of the members on appeal. A two-thirds majority of all the members voting is necessary to sustain such an appeal. The executive council is forbidden to permit more than 1 strike at the same time. Any local may inaugurate a strike without the consent of the international union, but such action is entirely at its own risk.

Strike benefit is \$6 a week, beginning with the second week after the strike is authorized. No member is entitled to strike benefit unless he has been a member in good standing for at least 3 months before the strike.

The constitution directs each local to set aside 8 cents a member a month for a protective fund, to be held in the custody of the local, subject to the order of the executive council. The executive council has power to levy such special assessments as may be necessary to sustain strikes.

The president and executive council may declare a strike at an end, so far as the support of the international union is concerned, when they are satisfied that it should cease.

**Cooperation and profit sharing.**—The constitution of the Tile Layers says: "Rejecting with deserved contempt the puerile, when not mischievous, schemes of which cooperation and profit sharing are examples, we see the necessity of strengthening and developing the historic and natural form of working-class organization, the trade union."

**Piecework.**—Members are forbidden to perform piece or subcontract work or to work for a subcontractor, under a penalty of \$50 fine and suspension until the fine is paid.

**Hours of labor.** In August, 1900 the secretary reported that 10 of the locals, or about half, were working a 18-hour week.

### NATIONAL BUILDING TRADES COUNCIL.

**History.**—The National Building Trades Council was organized in December, 1897. It is composed of local building trades councils, national building trades unions, and local unions of building trades which have no national organization. The American Federation of Labor has repeatedly, by formal resolution of convention, manifested opposition to the idea of such a council or federation, on the ground that it constitutes a split in the labor movement. The Federation might not object to seeing the building trades form an alliance in acknowledged subordination to itself, as the metal trades are now doing. The National Building Trades Council, while denying any hostility to the American Federation of Labor or any wish to cause a division in the labor movement, is indisposed to make itself formally subordinate to the Federation. It has expressed to the Federation a desire to establish such mutual relations as exist in many places between the local building trades councils and the central labor unions, by the mutual sending of fraternal delegates. This would place the National Building Trades Council on substantially the same basis in relation to the Federation which the British Trades Union Congress stands on. They would meet on a footing of equality, as independent sovereignties, and their intercourse would be maintained by an interchange of ambassadors. The Federation is not disposed to accept such an arrangement.

While the general purposes and the general form of organization of the American Federation of Labor and the National Building Trades Council are similar, and while there seems to be no serious obstacle except lack of disposition to the ranking of the less general body as a branch of the more general, there are some differences of organization and method between them. The American Federation of Labor, though it aspires to gather within itself all labor organizations, is primarily a federation of national trade unions. It is they that have votes in the convention in proportion to their membership, while city central bodies have each only one vote. The National Building Trades Council is primarily a union of local building trades councils. In its convention each local building trades council has a vote for each trade represented in it, and the national unions have only one vote apiece.

**Objects.**—The National Building Trades Council mentions among its objects the establishment of the 8-hour day, abolition of the contract system on public work, the equalization of wages in the different building trades, the establishment of a national working card, the promotion of better feeling between employer and employee, and the securing of legislation in favor of building-trades workers; especially of a mechanic's lien law.

**Conventions.**—The convention meets annually. Each local building trades council is entitled to one delegate for each trade represented in it, and on a call of the roll may cast one vote for each of its trades without regard to the number of its delegates. Each national union and each local union which has no national organization is entitled to one delegate and one vote.

**Constitutional amendments.**—The constitution may be amended in convention by a majority vote. It may also be amended by referendum by a two-thirds vote, on a proposition of the executive board or of any affiliated body. On the referendum each body is entitled to the same number of votes which it would have in a convention.

**Officers.**—The officers are a president, who is also chief organizer, six vice-presidents, and a secretary-treasurer. The officers constitute the executive board. They are elected at the convention by roll call, and a majority is necessary to elect. The secretary-treasurer receives a salary of \$100 a month, and is allowed \$25 a

month to be expended for editing the *Labor Compendium*, the official journal of the organization. Officers or organizers when traveling or working for the organization are entitled to the highest rate of wages paid in their respective trades, and to expenses of transportation, with \$2 a day for hotel bills.

**Finances.**—The local building trades councils pay three-fourths of a cent a month for each member in good standing in the local unions affiliated with them. Local unions which have no national organizations and are directly affiliated with the National Building Trades Council pay 5 cents a member a month. National unions pay a lump sum of \$10 a year. Five dollars is charged for each certificate of affiliation.

**Working cards.**—It is the desire of the National Building Trades Council to enforce the general use of a national working card issued by itself. Its constitution requires all local building trades councils to procure the working card of the National Building Trades Council for their entire membership.

**Strikes and arbitration.** The constitution of the National Building Trades Council recites that it is one of its main objects "to abolish strikes and lockouts, or at least to reduce them to a minimum," and requests the local building trades councils to do their best to establish conference or arbitration boards with associations of master builders whenever practicable.

The National Building Trades Council does not undertake to restrict or govern the organizations connected with it in the declaration of strikes, though its constitution provides that its president and secretary-treasurer shall, if called upon, proceed to a place where trouble exists and take full charge of the management of the strike or lockout. It is forbidden to give assistance to any trade on strike unless the grievance has been endorsed by the local building trades council in the place where it occurs. The general executive board is authorized to levy an assessment of not more than 5 cents a member a week for not more than 10 weeks in any year for the support of strikes, and the constitution requires every affiliated organization to keep constantly on hand the amount of one strike assessment of 5 cents a member, so that it can be forwarded without delay.

## CHAPTER VII

### LABOR ORGANIZATIONS IN THE GLASS AND POTTERY TRADES.

#### GLASS BOTTLE BLOWERS' ASSOCIATION OF THE UNITED STATES AND CANADA.

**History.**—The secretary states that the glass-bottle blowers were first organized in 1843, and that the present association has been active since 1865. In August, 1900, the secretary reported 61 local unions and about 4,300 members. The organization has almost complete control of the trade. By a great strike during 1899 and 1900 it nearly destroyed nonunionism, except in 2 factories in southern New Jersey.<sup>1</sup> In the summer of 1900 the secretary asserted that there were less than 200 nonunion glass-bottle blowers in the country.

The prescription or bottle department of the Flint Glass Workers does substantially the same kind of work as the glass bottle blowers. The Glass Bottle Blowers have desired that the flint-glass-bottle blowers come into their union; but they have declined to take any official action which might be offensive to the officers and members of the flint glass organization. The Flint Glass Union on the other hand, proposed in 1900 that the 2 unions amalgamate, but the Glass Bottle Blowers rejected the plan which the Flint Glass Workers proposed.<sup>2</sup>

**Conventions.**—The convention is held annually on the first Monday after July 4. Any local which has 7 members in good standing is entitled to a representative, and larger locals have 1 representative for each 30 members, or fraction thereof not less than 20. The expenses of the delegates are paid by the locals. The convention has full authority to make price lists and regulate wages.

**Constitutional amendments.**—The constitution can not be amended except at the regular annual convention. Proposed alterations must be placed in the hands of

<sup>1</sup> Convention Proceedings, 1900, pp. 28, 29.

<sup>2</sup> Convention Proceedings, glass-bottle blowers, 1900, pp. 75-79.

the president at least 1 month before the convention, and the president must give notice of them to all branches. A two-thirds vote in the convention is required.

**Officers.**—The officers are a president, a vice-president, a secretary, a treasurer, and an executive board. The executive board consists of the president, the vice-president, and six other members. The present salaries of the officers are: President, \$1,500; secretary, \$1,500; treasurer, \$100.

**Membership.**—Any glass bottle blower who has served an apprenticeship in the United States or Canada in a union factory may be admitted to membership. A candidate must be proposed by a member in good standing, and is admitted by a majority vote of the local. Members are forbidden to work with any workman who persistently refuses to become a member of the association. Stockholders working in factories in which they had interests were formerly permitted to hold exempt or withdrawal cards, but since September 1, 1899, they have been required to be regular members and pay all assessments.

The by-laws provide that no foreign blower may be admitted into the association, but that the president and the executive board may authorize any branch to admit such workmen if it is thought necessary. This rule nominally applying only to the current year is annually renewed. It is intended to discourage foreigners from coming here, but it seems to have little effect. In practice they are usually admitted for an initiation fee of \$50, sometimes for the regular fee of \$5, sometimes, when they are in non-union factories, for nothing. The constitution provides that any member who encourages or assists any foreign glass blower to come to this country shall be fined not less than \$100 and suspended from work for 1 year.

**Apprentices.**—By the agreement of 1900 with the manufacturers, the number of apprentices, which had been 1 to every 15 journeymen, was made 1 to every 10. The manufacturers had tried hard in 1899 for a liberalizing of the rule.<sup>1</sup>

If an apprentice leaves the trade, the employer can not have another in his place, but if an apprentice dies during his first year he may be replaced during that season. No branch is permitted to debar its members from working with apprentices except it is manifestly injurious to the trade or association.

**Cards.**—Any member who travels in search of employment must carry a card showing him to be a member in good standing of the branch which he leaves, and he must surrender this card to the factory committee before going to work. Violation of this law involves a penalty of \$5. All dues, fines, and assessments must be paid up before a transfer card can be issued. If the card is not deposited within 3 months from its issue, the holder forfeits his membership.

An honorable withdrawal card is furnished to any member who desires to leave the trade, and who pays up all arrears. The holder of a withdrawal card may rejoin the union within 1 year, provided a committee finds that his conduct toward the association and its members has been correct during the interval, and provided the finding of the committee is sustained by a majority vote of the local. If the committee reports unfavorably a two-thirds vote is necessary to admit him. If a withdrawal card is not presented within 1 year the holder must pay the regular initiation fee on readmission. Any member who becomes a manager for a glass-manufacturing firm must take out a withdrawal card.

**Discipline.**—Any member who exposes any business of the union, or who works or offers to work for less than the established prices, is to be fined or expelled. Any member who makes any agreement with any manufacturer contrary to the laws of the association, in order to obtain work, is to be fined \$50.

All charges must be made in writing and referred to a committee of 5. The committee is to notify the accused, and after a hearing, to report to the branch and suggest such punishment as it may deem proper.

Every member is compelled to receive not less than \$20 per week in cash or \$10 every two weeks in cash, and all settlements shall be in cash. On the second payday of each month extra money, if any, is to be paid. No deduction is allowed for accounts or bills. By a resolution of the convention of 1900 it was ordered that any member who allows store accounts, rent bills, coal bills, or the like to be offset against his wages shall be fined \$25 for the first offense, \$50 for the second, and \$100 for the third. The president has power to order collection of money which members may owe to firms they have worked for. When such collection has been ordered the member can not receive a traveling card until the debt is paid.

In unionizing the factory of the Cumberland Glass Company in 1899, the president and the executive board agreed to collect debts due the company from 123 men who had worked for them. The president reported to the convention of 1900 that only a few of them had paid and the convention passed a resolution that each

<sup>1</sup> Glass Bottle Blowers' Association Convention Proceedings, 1900, p. 13.

of them be required to sign an agreement, before starting to work for the next season, to pay \$1 a week on the old debt. Any who should refuse to sign were to be suspended.

**Finances.**—The revenues of the association are derived from an assessment based on the earnings of the members. When no strike or lockout is on the assessment is 1 per cent on all money earned at the trade. When more money is needed to support a strike, the executive board, by a two-thirds vote, may raise the assessment as high as 10 per cent of all earnings, except that spare blowers who make less than \$10 a week are not required to pay more than 1 per cent.

Any member who tries to defraud the association by not paying the full assessment is to be fined not less than \$10 or suspended or expelled.

**Benefits.**—*Death benefit.*—The association pays a death benefit of \$500 to the heirs or the legatees of every member in good standing. The fund is supported by an assessment of 25 cents on each member for each death from the beginning of September to the end of June. The accumulated fund is then used to pay losses which occur during July and August, when the members are not at work, and as much longer as it may be sufficient. Assessments are not resumed until the fund is exhausted.

*Loans to members.*—If a member borrows money from the association or any branch, or from a member, the amount is to be written on the back of his card, and any branch where he may deposit his card is to collect the debt and forward it to the owner. The debtor must pay 10 per cent of all his earnings for this purpose. Any branch which fails to enforce this law is liable to a fine of \$100.

The president said, in his report to the convention of 1900, that the sections dealing with loans to members had been adopted to facilitate the rendering of aid to sick members and members out of work, but that they seemed to have resulted in loans to the unreliable, the idle, and the dissolute. In April, 1900, a collection list was sent out from the general office which contained the names of 141 members who had "borrowed money from every branch east and west, and no doubt are still borrowing;" men who traveled from one branch to another and, instead of clearing their cards of debt, were borrowing more and more. The national officers were ready to enforce the penalty against unions which failed to make collections according to the constitution, but the loose practices were so universal that there was scarcely ever a complaint by one branch against another.

**Strikes.**—No factory is permitted to go on strike without the consent of a majority of the executive board. Members on an authorized strike receive \$8 a week if they are married, and \$5 a week if they are single. Strike funds are provided by an assessment based on the earnings of members. It may be as high as 10 per cent of earnings, if necessary. Any member who refuses to work in a factory not affected by a strike is to be stricken from the relief roll. No member can deposit his card in a branch where trouble exists for the purpose of receiving strike or lockout benefits. Any member who accepts work where a strike is going on is liable to a fine of \$100.

*Financial results of strikes.*—In 1899 the association undertook to root out non-unionism from the factories of southern New Jersey. The great strike which resulted, lasting from April 8, 1899, to July 1, 1900, cost the association \$172,659. From May 1 to June 30, 1899, the members were assessed 10 per cent of their wages. From September 1, when they resumed work after the summer rest, until December 16, they were assessed 5 per cent. The assessment was then reduced to 2 per cent; but on March 1 it was raised to 3 per cent, and continued at that rate until the close of the season, June 30. For the whole period from May 1, 1899, to June 30, 1900, the average assessment was 4.5 per cent of the wages.

Discussing the wisdom of the strike expenditure, considered as an investment, the president said that the association received 4 per cent on its deposits with Pittsburg banks. The interest on the whole cost of the strike, from April 8, 1899, to July 1, 1900, would have been \$8,595. The association had received up to July 1, 1900, \$29,727 from members who were nonunion men before the strike. The association, as such, had therefore received interest at 13½ per cent upon its investment, or enough to pay back the whole investment with interest in 8 years and 1 month. Considering the matter from the point of view of the members, the old members had secured an increase in wages of 8 per cent, and those who were formerly nonunion had secured an average increase of 40 per cent; in each case as return for an investment of 4.5 per cent during a period of 12 working months.

*Abuse of strike benefits.*—At the time of the strike of 1899 a considerable number of window-glass workers, employed by some of the same establishments which

<sup>1</sup> Convention Proceedings, 1900, pp. 56, 57.

<sup>2</sup> Convention Proceedings, 1900, pp. 24-25.

had run nonunion bottle factories, struck in sympathy with the bottle blowers, and were supported from the bottle blowers' funds. The president of the Bottle Blowers' Association, in his address to the convention of 1900, complained that 32 of these men refused to leave the place where they had worked, though they could easily have got work elsewhere, and persisted throughout the year in living in idleness upon the bottle-blowers' money. The bottle-blowers were obliged to support them for fear of their going to work in the nonunion factories, some of them had threatened to do so. Their strike pay was finally stopped on March 2, and they then went so far as to threaten to sue the Bottle Blowers' Association for the continuance of it.

The president added that the association had had the same trouble with some of its own members. A considerable number who had left their working places in consequence of the strike, and had got employment elsewhere, came back, and it was the president's opinion that some of them did not care to work as long as they could get strike benefit.<sup>1</sup>

**Hours of labor.**—The hours of labor are 8½ a day, 51 a week. In 1900 the association attempted to reduce the day's work to 8 hours, but failed to carry the point.<sup>2</sup>

**Holidays and summer rest.**—Members are required to observe as holidays "Labor Day and night, Thanksgiving Day and night, Christmas Eve (or the day set apart for it when it falls on Sunday), Day and night, Decoration or Memorial Day and night. No member is allowed to blow glass during July and August.

In 1900 the curious phenomenon was presented of a cooperative glass plant, owned and operated by members of the Glass Bottle Blowers' Association, undertaking to run through July and August contrary to the rules which the union enforces upon employers. The union employers appealed to the union to enforce its rule upon its own members, and the convention referred the matter to the president and executive board. The recalcitrant members were suspended from the association, but they were reinstated in the fall.

**Piece work.**—All the work of the glass bottle blowers is done by the piece.

**Machinery.**—The president in his address to the convention of 1900 referred to the introduction of machines into the bottle-blowers' trade. He recommended that no effort be made to oppose the introduction of machinery, but that the union try to arrange for the gradual introduction of it, without strikes or lockouts, and for the working of it by members of the union only.

The convention adopted a resolution that none but members of the association and regularly indentured apprentices be allowed to finish any vials, bottles, carboys or demijohns with any tool or device or machine under the jurisdiction of the union.

## AMERICAN FLINT GLASS WORKERS' UNION.

**History.**—The American Flint Glass Workers' Union was organized July 1, 1878. It includes makers of lamps, lamp chimneys, shades, clear-glass bottles, known as prescription bottles, pressed ware and stoppers. It also includes engravers and cutters of glass. One hundred and forty-eight locals were reported by the secretary in August, 1900. The number of members reported on May 31, 1901, was 9,096, of whom 8,654 were reported as employed and 442 as unemployed. Of the unemployed 36 were reported locked out for being members of the union, and 48 on strike. The members were divided among the different branches of the trade as follows:

Press branch	2,022	Shade and globe branch	327
Chimney branch	1,929	Cutters' branch	314
Prescription (or bottle) branch	1,725	Caster-plate branch	197
Paste-mold branch	1,411	Lamp workers' branch	83
Iron-mold branch	613	Stopper grinders' branch	73
Mold-makers' branch	354	Engravers' branch	48

In the sketch of the Glass Bottle Blowers' Association, some mention is made of the relations between it and the Flint Glass Workers. (See above, p. 172.)

**General aims.**—The constitution requires the members to "use all their influence to bring all eligible workmen into this order, so that they may form one compact body for the defense of their rights, protection of their interests, and the elevation of the mechanic to the standing he is justly entitled to."

<sup>1</sup> Convention Proceedings, 1900, pp. 22-24.

<sup>2</sup> National Glass Budget, August 11, 1900.

<sup>3</sup> Convention Proceedings, 1900, pp. 51-53, 109-111.

A further object is "to create a cooperative spirit among those whose interests are alike, thereby enabling them to act promptly on any matter that may affect their interests."

The convention of 1899, by a vote of 13 to 36, adopted a resolution to "call upon the workmen of the world to unite under the banner of international socialism."<sup>1</sup>

**Conventions.** The convention is held biennially in July. This date is especially convenient, because during July and August glass factories regularly close down, and in that interval joint agreements are made for the next year's work. These agreements require the approval of the convention in those years when the convention is held. Special sessions of the national organization may be held whenever requested by a majority of the local unions.

Every local union is entitled to 1 delegate for the first 25 members or less, 1 for the second 25 or majority fraction thereof, and after the first 50, 1 for each additional 50 or majority fraction thereof.

An interesting provision is that which imposes a fine of \$150 on any local union failing to send a representative to the biennial convention.

The constitution may be amended only at these biennial meetings. All proposals for amendments must be sent in writing to the national secretary by May 1. He must notify all local unions of such proposals, and must furnish them with a programme of the business outlined for the convention.

**Officers.**—The officers are a president, a vice-president, a secretary, an assistant secretary, an agent and organizer, and an executive board. The president performs the duties of treasurer. The executive board is composed differently from those of most national unions. The president is not a member. The board consists of 31 persons, distributed in a fixed proportion among the various branches of the flint-glass trade. Apparently, however, the members of the executive board are elected by the general membership.

The president is directed to visit the local unions whenever necessary, watch carefully that in each union and factory all the local laws and the national laws are strictly observed, and see to it that no local works injury to the trade by low wages and high "moves." The president also acts as organizer. The secretary has general charge of the accounts of the union, and is required also to keep detailed records of the condition of the local unions, the number of men employed and unemployed, the number of apprentices, etc. He makes quarterly reports to all the unions on these subjects, and also a biennial report to the convention. Moneys on hand must be paid over to the treasurer monthly. The treasurer must deposit moneys in such manner as the executive board may direct.

Individual members of the executive board have the same duties for their respective districts and branches of the trade which the president has for the whole union. They are required to keep general watch of the condition of the unions, the enforcement of the laws, etc. The executive board also has general discretionary power in the intervals between the conventions, and acts as an advisory board to the president.

The president, the vice-president, the secretary, the assistant secretary, and the agent devote their entire time to the work of the organization. The president is paid \$2,000 a year, the vice-president \$1,500, the secretary \$1,500, and the assistant secretary and the agent \$1,000 each.

**Membership.**—The flint-glass trade embraces a considerable number of subdivisions, such as blower, presser, finisher, mold maker, cutter, etc. Any person engaged in any of these branches, however, may become a member of a local union, provided he is not under 18 years of age and is of sober and industrious habits. The qualifications of candidates for membership are investigated by a committee of 3 members of the local union. The vote is taken by ballot, and an affirmative vote of two thirds of the members present is required for admission. The membership fee is \$3; but foreigners who wish to become members must pay \$50, and must state their intention to become citizens of the United States. A foreigner must be elected to membership by a majority vote of the whole union; he can not be admitted by action of the local to which he applies.

The organizer reported to the convention of 1899, speaking of the difficulty which he had had in unionizing a certain factory, that several of the workmen were foreigners, and that they said they did not have the money to pay the initiation fee which was demanded of foreigners, and so were forced into a nonunion house.

<sup>1</sup> Convention Proceedings, 1899, p. 185.

<sup>2</sup> The move of any article is the number of pieces which constitute a half day's work by the rules of the union or by agreement with employers.

**Apprentices.**—By a resolution adopted in 1899 each mold shop employing 2 or more journeymen is entitled to 1 apprentice every 4 years, but where more than 2 journeymen are employed there may not be more than one-fourth as many apprentices. Apprentices must be 16 years of age and not over 21, and must be indentured to the firm for not less than 4 years. An apprentice who quits his place may not be allowed to work in any other shop, and a firm which discharges an apprentice without good reason can not replace him.<sup>1</sup>

**Discipline.**—The Flint Glass Workers' Union has strict rules with regard to the conduct of members, the wages which may be accepted, etc.

The local unions are required to abide strictly by the "moves," prices, and system of work adopted by the biennial sessions of the national union, except as to such matters as are particularly left to the local organizations. If a local union is found guilty of violating any of the laws or regulations, the president of the national organization must appoint an officer to investigate the charges and report to the national executive board, which shall render a decision, and may inflict any penalty on a local union which they see fit, subject to appeal to the next biennial convention.

No mold maker is allowed to work for less than \$15 per week, except that an apprentice who has just completed his time may work 1 year for \$12.

"Any member who uses his influence to disorganize his fellow-workmen, thereby making it difficult for them to carry out the objects of this order, shall be fined \$25.

"Any member known to go to his work drunk, or shall act in any manner detrimental to the interest of this order, or that will bring reproach upon the order or its members, shall be fined, reprimanded, suspended, or expelled from this union; and should said member be discharged for causing any trouble about the factory, the rest of the members will not uphold him.

"The members of this union shall not injure each other in their employment, such as undermining or conniving at members' jobs by seeking to or taking the place of a member who may be suspended from his job.

"Any member who, in order to obtain a place in a prescription factory, shall agree to make a certain number of bottles, shall, upon conviction of the same, be fined not less than \$25, and not to exceed \$100."

The provisions as to procedure in trials for offenses against the union are specially full.

A resolution adopted in the convention of 1899 recites that members of the union have used money in trying to be elected to various union offices, and enacts that any member who seeks election as an officer or as delegate to convention by bribery shall be fined \$50 and shall be deprived of a seat in the convention.<sup>2</sup>

**Collection of debts.**—The Flint Glass Workers' Union enforces the payment by its members of indebtedness due to other members, but a clause in the constitution forbids the collection of debts due to other persons by union action.

**Nonunion men.**—The rules of the Flint Glass Workers' Union regarding the exclusion of nonunion men and of nonunion material are stricter than those of almost any other national organization. The following provisions of the constitution are especially noteworthy.

"No nonunion man or no boy shall be allowed to take a place to work at any of the trades represented in this A. F. G. W. U.

"Mold makers shall refuse to make or repair molds and plates to be worked by nonunion glass workers.

"Glass workers shall refuse to work or to assist to work molds or plates made by nonunion mold makers. All molds shall be marked with the name of the manufacturer, and no blower shall be allowed to work any new mold not bearing the name of the manufacturer.

"No union glass worker shall be allowed to make bottles or stoppers for nonunion stoppers to work.

"Union glass makers will refuse to make blanks for nonunion glass cutters, and union cutters will refuse to cut blanks made by nonunion glass makers."

The organizer, in his report to the convention of 1899, said:

"The progress made in unionizing the nonunionists is sufficient to excite honest exultation, yet they impose upon every member of our organization a responsibility. We must be courteous and ever ready to extend a helping hand to them, and must drop the prejudiced feeling entertained by so many of our members.

<sup>1</sup> Convention Proceedings, 1899, p. 188.

<sup>2</sup> Convention Proceedings, 1899, pp. 218, 219.

We must treat them as human and not as brutes, in order to profit by our accomplishment."

The convention adopted the following resolution.

"Whereas the abuse of nonunion men by members of the association by its bad effects seriously retards the work of organizing, as it creates in the minds of nonunion men the thought that they have nothing in common with us; therefore, be it

*Resolved*, That we declare our position toward nonunion men to be that of consideration and tolerance, and recognize that they have the same 'inalienable right to life, liberty, and the pursuit of happiness,' the same right to earn a living at the glass trades, as have the members of the association, and be it further

*Resolved*, That any member of the association who abuses a member of the association who has recently come out of a nonunion house, or anyone who contemplates joining the organization, shall be guilty of having violated section 2 of article 11, and upon conviction shall be fined not less than \$5."<sup>1</sup>

While the preamble and the first resolution relate to nonunion men generally, it will be noticed that only men who have joined the association or contemplate joining it are protected by a penalty.

**Nonunion competition.**—Factories owned by the union. —In the president's report of 1899 it was stated that the manufacturers had called attention to the fact that the entire flask trade was in the hands of nonunion houses, from which the union manufacturers were compelled to buy because they could buy cheaper than they could manufacture. They had suggested that some plan be adopted for allowing one or more of the union houses to make flasks on such terms that the union manufacturers need not buy from nonunion houses.

The president said that flasks were very largely made by men who could blow nothing else, and that the finishers in the flask shops could do nothing else than finish. These workmen were willing to join the union, and willing to try to better their condition, but their incompetency made them helpless and handicapped the efforts of the union to help them. As a means of repressing nonunionism the president suggested that one or more plants be established, to be owned and controlled by the workers and the manufacturers jointly, to be manned by the members of the union at prices lower than the existing scale, until nonunion competition should be suppressed, and to be used to supply union houses with flasks. The convention voted to build and equip two factories, to be owned by the union, and to inform any bottle house, other than a flask house, that the factories owned by the association would furnish them flasks at such a price that it could resell and make a reasonable profit.

In accordance with this decision the union has built and is operating one bottle house of its own in Indiana.

**Finances.** The initiation fee is \$3 for Americans and \$50 for foreigners. The per capita tax is fixed at each convention by a two-thirds vote. At present it is 24 cents a quarter. The great mass of the receipts and expenditures are intended for strike purposes. The defense fund is supported by the regular payment of 2 per cent of the wages received by the members. The local dues range from 25 cents to 50 cents a month.

The balance in the treasury of the organization on June 1, 1900, was \$82,246. The receipts for the year ending May 31, 1901, were \$159,177, and the expenditures were \$174,001.

**Benefits.**—In 1893 the union adopted a provision for an assessment of 10 cents, to be levied on the death of a member in good standing. The union had about 7,000 members, and the death benefit was expected to amount to about \$700. The panic of 1893, and a great strike of the employees of the United States Glass Company, reduced the number of members employed to about 3,500. The result was that the heirs of deceased members were disappointed in regard to the amount of their benefit. Some of them threatened legal proceedings, but their claim was against the individual members who had failed to pay, and they seem to have had no legal ground for suit against the union. In July, 1896, the benefit law was changed so that it promised \$500 to the heirs of each member who should die. This law was abolished in November of the same year, and the organization failed to pay promptly the claims on account of those who died while it was in force. As late as 1899 the secretary reported to the convention that the heirs of one member threatened to bring suit to collect the benefit due under it, and that, according to a legal opinion which he had obtained, the claim on account of this member, and also more than 20 other claims, were enforceable at law. The claims were ultimately paid. The union has not since made any provision for sick or death benefits.

In the convention of 1899 it was proposed to appropriate \$100 to help certain

<sup>1</sup> Convention Proceedings, 1899, pp. 118, 248.

<sup>2</sup> Convention Proceedings, 1896, pp. 43, 44, 52, 181.

locals in securing pardon for 2 members who had been convicted unjustly, as it was believed, of certain crimes. The chair ruled that as the constitution prohibited donations from the strike fund, and as the fund derived from the per capita tax was no more than sufficient to pay the necessary expenses, the convention could not make any donation that was not included in the absolutely necessary expenses of the association.<sup>1</sup>

**Strikes and arbitration.**—*Authorization of strikes.* The authorization of a strike by a local union requires a ye-a-and-nay vote. The constitution especially declares that in case of the discharge of members for taking an active part in the affairs of the union all members must cease work. The question as to whether the discharge has been made on account of taking part in union affairs must be decided, however, in the same manner as questions regarding other strikes.

Should the union decide to strike, the secretary must furnish to the International president "a full and complete statement of the existing difficulty or grievances; also the number and names of men working in the factory, how many, if any, are stockholders, how many are members of the order, how many are not members; how much money the local union has in its general fund; and a thorough and impartial investigation shall be made and no strike shall be declared legal until all honorable means of avoiding the same have been used." The president, or, if he is sick or disabled, the vice president or some executive officer of the locality, after receiving such notice, shall go to the seat of difficulty, endeavor to effect a settlement, and, failing to do so, shall report a full and complete statement of the case, with his opinion of the chances of success or failure in case a strike is ordered. The case shall then be submitted to the different local unions, and work shall be continued until the local unions have decided according to law. "Should the decision of a majority of the members voting be favorable to the union where the grievance exists, the men shall then cease work, and when any one part of a factory shall be engaged in a legalized strike it shall be required that the men of all other departments shall also cease work until the difficulty is settled." When the national union sanctions a strike the secretary "shall at once prepare a written statement of all the facts, as near as possible, and forward the same to all local unions, warning all true men not to accept employment in such factory or factories."

**Strike benefits.**—Members engaged in authorized strikes are entitled to a weekly benefit of \$6. No union may receive such benefits unless it has been organized at least 6 months, and during a strike no union shall be allowed to receive members from other local unions with the intention of demanding strike benefits for them.

During a legalized strike the corresponding secretary of the local union must notify the national union at least once a month, how the strike is progressing, giving the number and names of men receiving benefits, and the amount; and the national secretary must report to the trade once each month.

This strike benefit is supported by the payment of 2 per cent of the earnings of each member to the national organization. The money thus collected is under the control of a board of trustees, consisting of the national president, treasurer, and secretary, who must each give a bond of \$25,000. Clerks are appointed in each factory to ascertain the exact amount of wages paid and to see to the collection of this assessment.

**Policy as to strikes.**—The president, in his report to the convention of 1899, said that the officers had adopted the policy of taking in the men in nonunion houses as rapidly as possible with the understanding that they were not to strike for union conditions until organization should have proceeded far enough to justify the union in a general demand. The previous practice of calling out the workmen in one factory as soon as a majority of them were organized, without reference to the action of other nonunion houses, had enabled the manufacturers to obtain help from other plants, and so to defeat the object of the union.<sup>2</sup>

**Hours of labor.**—By a resolution adopted in 1899, 55 hours ending at noon on Saturday, constitute a week's work in mold shops. Overtime is paid as time and a half.

In the discussion of the establishment of a new list on certain tubing, the president mentioned that the workers on it had been able to make their day's work in 5 or 6 hours; but new competition, foreign and domestic, had now to be met, and it seemed necessary to alter the amount of work assigned to a day. There would be no trouble in making the proposed day's work in from 7 to 8 hours, and the president seemed to regard this as reasonable.<sup>3</sup>

<sup>1</sup> Convention Proceedings, 1899, pp. 144, 145.

<sup>2</sup> Convention Proceedings, 1899, p. 19.

<sup>3</sup> Convention Proceedings, 1899, p. 188.

<sup>4</sup> Convention Proceedings, 1899, pp. 46, 48.

**Holidays and summer stop.**—Mold makers are paid time and a half if they work on May 30, July 4, Thanksgiving day, and Christmas, unless the employees in the glass working departments also work on those holidays; then only actual time is charged for. "No mold maker shall be allowed to work on molds on the Sabbath day."<sup>1</sup>

The summer stop varies from year to year, according to the circumstances of the trade, and it is different in the different branches. In view of the circumstances of one factory, which had worked longer than the rules allowed during the summer, to help out another factory which had been destroyed by fire, the convention of 1899 passed a resolution to permit members in such emergencies to work without the summer stop prescribed by the rules.<sup>2</sup>

The proposal of the union to the Western Flint Bottle Association for the summer of 1900 was a stop of 2 consecutive months, beginning on the last working day of June. The manufacturers protested against so long a stoppage, on the ground that the existence of so much nonunion competition made it unwise. A stoppage of 2 consecutive months, to take place at any time between July 1 and September 15, was ultimately agreed to by a very close vote.

The stop in the mold making department was fixed at 3 consecutive weeks, and that in the paste mold department at 6 consecutive weeks, beginning July 1.<sup>3</sup>

**Piecework.**—Nearly all the work of the Flint Glass Workers is paid for on a piece-work basis. Much of it is reckoned nominally by the day, but in most cases the number of pieces which shall constitute a day's work is definitely fixed. The prescribed limits seem to be generally observed, though the organizer referred, in his report of 1899, to his success in inducing the members of one local—at Philadelphia—to cease their practice of doing more in a day than the established task or "move."<sup>4</sup>

**Machinery.**—The Owen lamp-chimney machine occupied a prominent place in the president's report to the convention of 1899. The president said that the Workers in the conference with the manufacturers had stated that they were not opposed to machinery, but would insist, if the machine was to be worked, on arranging the terms for operating it on the basis of the labor which the machine saved. "They urged the elimination of the machine by purchase, the selling price of chimneys to be advanced to pay for its purchase."<sup>5</sup> Some of the manufacturers favor the Workers' plan of eliminating the machine, but express the feeling that it is now too late to accomplish that purpose.<sup>6</sup>

The president estimated that machine chimneys could be made at a labor cost not exceeding from 6½ to 9 cents, while the labor cost of the handmade chimneys was 15½ cents. The manufacturers wanted the workers to reduce their rates so that handmade chimneys should not cost more than 10 cents a dozen for labor. The president declared that this would be the height of folly. It would mean a reduction of about one-third in wages, and when the reduction had been made the machine would still be in competition. He proposed that the Workers raise a fund to buy the machine, and "advance wages to compel the consumer to pay for it." It had been ascertained that the machine could be bought, but there seemed to be a disposition to fix a price which would put it out of reach. If the machine could not be eliminated by purchase, then terms for the operation of it under union control must be arranged.

These plans were not carried out; but the machine is operated under union rules.

A new machine for tumbler making having been introduced, the union officers maintained that machine work should be paid for on such a basis as to allow simply for the work which the machine saved, that is, to give the same pay as before for the same actual work. The most of the blowers said that it would save about two-thirds of their work. A new scale was arranged, under which the feeders were to be paid one third of the previous list, with a guaranty of \$2 a turn. The manufacturers asserted that the production fell off materially under this list. They charged that the feeders took advantage of their \$2 a day guaranty. To prove the assertion, they submitted the results produced before and after the settlement. This course of the feeders, if it were followed, was also unfair to the gatherers, who were working on a piece-work basis.<sup>6</sup>

## AMALGAMATED GLASSWORKERS' INTERNATIONAL ASSOCIATION OF AMERICA.

**History.**—This is a new organization, formed in 1900. On July 1, 1901, the secretary reported the membership at about 600.

**General aims.**—The declaration of principles of the Glassworkers is verbally the same, excepting that it does not include the pulpit among the servants of the proprietary class and the betrayers of the working people, as that which is printed in full in the account of the Textile Workers.<sup>1</sup> The association names as its objects: "To establish an 8-hour workday and a fund for the protection of its members; to assist them to find work when unemployed to enable them to obtain a fair price for their labor; to provide for accident, disability, and death, and to regulate the relations between workmen and their employers and between workmen and workmen."

**Conventions.**—No time is fixed for conventions. One may be held on the motion of any local which has been affiliated for two years or more if approved by a majority of the local unions and a two-thirds majority of the members. Unions which have 100 members or less are entitled to 1 delegate, over 100 to 200, 2 delegates, and for every additional 300 members or major part thereof, 1 more delegate. One delegate may cast the entire vote of his union. A local must have been chartered 2 months and must not be in arrears to the general office over 1 month in order to be entitled to representation. The mileage of delegates is paid from the general treasury. The secretary receives \$2 a day and the president \$1 a day in addition to mileage for their attendance.

**Constitutional amendments.**—Constitutional amendments can be adopted only by a two-thirds vote of the members. They may be proposed at any time by the general council, or by any local, with the approval of 8 other locals. Once in 2 years, in September, locals are invited to suggest amendments, and all amendments so suggested at that time by any single local union are submitted to the general vote.

**Officers.**—The officers are a president, a secretary, and a treasurer. The general council consists of these officers and 1 other members. The secretary and the treasurer must be members of unions in the place where the headquarters are. The president and the 1 other members of the council must belong to locals in other parts of the United States and Canada, no 2 in the same State or Province. The term of office is 2 years. All officers are elected by the general membership on the Australian system. Each local may nominate 1 candidate for each office. The secretary supplies official ballots on which the names of all candidates are printed. A majority is necessary to elect. If there is a failure to elect for any office a new ballot is taken in which only the 2 candidates who have received the highest vote are eligible.

Local unions may nominate a city for headquarters when they make nominations for general officers, and there is a vote for headquarters, conducted like the vote for general officers.

The secretary receives all money due the general office and turns it over to the treasurer. He supervises the work of organization, and with the consent of the general council, appoints both district organizers without salary and salaried traveling organizers. He receives applications for charters, and issues charters without action by any other officer. He issues the official journal and furnishes to each local a monthly report of all receipts and expenditures, the rates of wages, the state of trade, and the hours of labor in organized districts.

No member is eligible to fill any general office until he has been 2 years continuously a member in good standing.

**Central committee.**—Whenever 2 or more unions are chartered in the same city or district they are required to form a central committee to regulate their joint affairs.

**Shop stewards.**—The locals are expected to appoint shop stewards to call and preside at shop meetings where business pertaining to the shops can be disposed of.

**Membership.**—The Association is intended to include "all wage workers engaged in the production and handling of glass, not already affiliated with a national or international union of glassworkers." It mentions a large number of occupations which it is intended to cover, among them those of glass cutters, glaziers, bevelers, silverers, glass-mosaic workers, glass-sign makers, glass packers, photographic-plate workers, and sand-blast workers. A candidate must be a capable workman, able to command the average wage, and of good moral character. In order to be

eligible to full beneficial membership he must be between 18 and 60 years of age and in good health. Candidates over 60 years of age, or in poor health, may join as honorary members, paying 25 cents a month as dues. They are entitled to all privileges except the death, disability, and accident benefits.

Every application for membership must be in writing, signed by the applicant and indorsed by a member in good standing. Applicants are elected to membership by a majority vote. The pledge taken on joining includes a promise "to be respectful in word and action to every woman; to be considerate to the widow and orphan, the weak and defenseless, and never to discriminate against a fellow-worker on account of creed or nationality, to defend freedom of thought, whether expressed by tongue or pen, with all the power at your command; to educate yourselves and fellow-workers in the history of the labor movement, and to defend to the best of your ability the trade union principle which guards its autonomy, and which regards capital as the product of the past labor of all toilers of the human race, and that wages can never be regarded as the full equivalent for labor performed."

**Cards.**—*Clearance cards.*—A member who wishes to travel or transfer his membership takes out a clearance card, paying at least 1 month's dues in advance and a fee of 10 cents. On going to work in any organized place the member must deposit his card at once.

*Withdrawal cards.*—Any member who wishes to retire from the trade may take out a withdrawal card. One who becomes an employer hiring two or more men, or becomes a member of an employers' association, must take such a card. This does not apply to stockholders in union cooperative shops or factories.

**Discipline.**—Charges against a member must be made in writing and investigated by a committee of 5. The local union then decides the case on the evidence gathered by the committee. A member may appeal to the general council. One who has been suspended for working against the interests of the organization, or violating his obligations or acting in a manner likely to bring the union or any of its members into discredit, can only be reinstated by a two-thirds vote of the members of the local union and the payment of such fine as the union may impose. Each local union is required to give the general secretary the names of all members expelled, with the reasons, for publication in the official journal.

**Finances.**—The charter fee for new locals is \$10. The per capita tax is 15 cents a month for honorary members as well as full members. The mileage of delegates to convention is defrayed by special assessments. If a deficiency is likely to occur the general council may levy an assessment, not exceeding 10 cents a month for each member in good standing, until the deficiency is made up.

The local initiation fee can not be less than \$1, nor the dues less than 25 cents a month. A member who fails to pay his dues for 2 months is to be notified, and if he does not pay by the end of the quarter he is to stand suspended from all benefits. Members who are sick or out of work may, however, retain their claim to benefits by paying only the per capita tax, provided they report at every regular meeting of the local. One who is suspended from benefits, unless he was sick or out of work, must pay a fine of not less than \$1 in addition to all dues and assessments before he is again entitled to benefit. Local unions are suspended from benefits when they owe an amount equal to 3 months' per capita tax.

**Benefits.**—On the death of one who has been for 6 months or more a member in good standing, and who was in good health at the time of his initiation or reinstatement, and has paid 6 months' dues, a funeral benefit of \$50 is paid. In case of the total disability of one who has been a member in good standing over a year, a benefit of \$150 is paid, provided the disability does not result from drunkenness or misconduct. Sick and accident benefits are left to be regulated by the local unions.

**Strikes.**—The constitution declares that strikes must only be sanctioned as a last resort, after every effort has been made to adjust the difficulty by arbitration. A local union must not take action to strike or formulate demands, except at a meeting of which all members in good standing have been notified. If two or more unions are interested, they must hold a joint meeting. A three-fourths vote by ballot is required to inaugurate a strike. Strike benefits will not be paid by the general organization unless the strike has been sanctioned by the general executive council. The constitution contains, however, a remarkable exception in favor of sympathetic strikes. A union which strikes, without consulting the general council, in support of the demands of another organization may receive strike benefit if the general council, after investigation, considers that the local acted with discretion. It is added, that even in sympathetic strikes local unions act entirely upon their own responsibility until the general council has approved their action.

The strike benefit is \$5 a week. None is paid for the first week. If the strike

fund becomes exhausted, the general council may levy an assessment of 25 cents a week on all members, except those on strike.

**Piecowork.** Locals are required to do all in their power to discourage piecowork. Members are forbidden to adopt piecowork where day work is established.

### THE NATIONAL BROTHERHOOD OF OPERATIVE POTTERS.

**History.**—The National Brotherhood of Operative Potters was organized on December 29, 1890. Fifty-one local unions in all have been established. The secretary-treasurer estimated the membership in the summer of 1900 at about 6,000, and supposed that about 25 per cent of the potters in the United States were non-union, and that not over 5 per cent were members of other labor organizations.

**Convention.**—The convention meets annually. Local unions are entitled to two delegates for the first 50 members or less and 1 additional delegate for each additional 50 members or majority fraction thereof. Representatives hold their office for 1 year. They must have been in good standing for 3 months. A local union can not be represented if it in arrears for its dues to the national union.

When a local union sends less than its full quota of delegates those whom it sends may cast the full vote of the local. If a delegate is absent without cause his vote is lost. The national union pays the mileage of delegates, but their other expenses are paid by the locals.

**Officers.**—The officers are a president, 2 vice-presidents, a secretary, a treasurer, a statistician, and 5 trustees. The secretary collects all dues from local unions and turns the money over to the treasurer. The trustees draw and deposit all money above \$100, that amount the treasurer is to hold for current expenses. The executive board consists of the president, the vice-presidents, the secretary, and three other members.

The constitution provides for statisticians, both national and local. The national statistician is to collect, both from the local statisticians and from all other available sources, all possible knowledge about the condition of the trade in this country and in Europe, and to report to the annual convention.

**Transfer and withdrawal cards.**—A member going from one place to another must carry a transfer card, and deposit it with the secretary of the local or the shop committee. Dues must be paid to the end of the month in which the card is issued.

A withdrawal card is granted, to a member withdrawing from the trade, by a majority vote of the union. If the member afterwards desires to deposit this card in any local union it may be done only after an investigation by a committee as to his conduct toward the order.

**Discipline.**—No saloon keeper is permitted to retain membership in the union. If a member attends a meeting under the influence of liquor he is liable to warning, and for repeated offenses to fines or further penalties. If a member goes to his work drunk he is liable to be fined or otherwise punished.

If a member is elected to office and fails to serve he is subject to a fine of \$3. A member who is appointed on a committee and fails to attend a committee meeting is liable to a fine. A member may not decline to serve on a committee unless he is already a member of another.

Charges against any member are tried by a special committee of 5, after at least 10 days' notice to the accused, and service of a copy of the charges. If the member is found guilty he has a further chance to be heard before the local union. A fine or a reprimand may be imposed by a majority vote of the union. A two-thirds vote is necessary for suspension or expulsion.

**Finances.**—The initiation fee is \$1.50, of which 50 cents goes to the national union. For women the fee is 75 cents. The per capita tax is 15 cents a month, and is payable quarterly. If any local fails to pay the tax within 30 days after it is due, it is subject to a fine of 1 cent for each member, besides suspension.

**Strikes.**—When a grievance arises the shop committee is to report to the local union, and the local union, if it so decides, is to lay the matter before the president. The president is to go to the place, or send a deputy, and all honorable means are to be used to avoid a strike. If a strike seems necessary the question is to be submitted to a popular vote of all the unions. If a majority of the members voting favor the strike, work is then stopped. A local must have been organized 6 months before it is entitled to strike benefit; and an individual member must have been 6 months in the union, and if suspended must have been 6 months reinstated, before he can receive strike benefit. Members who find employment outside of their trade are allowed to earn one-half of the benefits given them by the

brotherhood, without diminution of strike pay. Sums above that amount are deducted from the strike benefit.

If a member is discharged for taking an active part in the affairs of the order, and reinstatement is refused, the pottery is to cease work until it is granted. A defense or resistance fund is provided by a tax of 1 per cent of the earnings of all members. This is collected every pay day by a clerk in each pottery. To ascertain the exact amount due, the members are required to show their envelopes to the clerk.

The union reported to the Federation of Labor in the fall of 1900 that it had won one strike during the preceding year, involving 56 persons, at a cost of \$1,400.

**Piecework.**—Potters are paid on a piece price scale, and a uniform scale adopted by the national union is now in use throughout the United States. When a new article is introduced the members who first make it, together with their shop committee, and with the consent of the local, are to agree with the employers upon a proper price for it. The price so established is reported by the local to the national president, and by him to the trade in general.

---

## CHAPTER VIII.

### LABOR ORGANIZATIONS OF MINE WORKERS.

---

#### UNITED MINE WORKERS OF AMERICA.

**History.**—The organizations among the coal miners of the United States have been subject to marked vicissitudes. The present organization bids fair to be stronger and more permanent than any of its predecessors. The immense number of persons employed in mining, the widely differing conditions in the different districts, the large proportion of the foreign born, who are often willing to work for low wages and who fail to appreciate the benefit of organization, have all interfered with the permanence of the unions.

The first miners' organization which was of national scope was the American Miners' Association, established in Illinois in 1861<sup>1</sup>. This gradually extended to several more eastern States, but each State or district organization was practically independent. Dissensions among the officers and failures in strikes practically broke up the organization in 1867 and 1868.

In 1869 the Miners and Laborers' Benevolent Association was organized in the anthracite coal region. It soon spread to the bituminous regions of western Pennsylvania and Ohio where it became very strong. It also reached Indiana, West Virginia, Kentucky, and Maryland. It did not extend to Illinois or the more western States, but separate organizations in that region exchanged membership cards with it. It was finally absorbed in the Miners' National Association, a more widely spread body, in 1874. The new organization was prosperous for 2 or 3 years, having a membership of 21,200 in 1874. Later, however, wages fell, strikes were lost, and the organization was greatly weakened. Some of the lodges organized as local assemblies of the Knights of Labor, but not until 1878 and 1879 did miners' organizations again become important. For a few years there were strong local organizations in the different mining districts, but no very effective cooperation.

The growth of the competition among different coal fields led the miners to recognize the necessity of a national organization. At a convention held at Indianapolis in 1885, the National Federation of Miners and Mine Laborers was accordingly formed. This was the most effective organization yet established. It succeeded in inducing the employers of Pennsylvania, Ohio, Indiana, and West Virginia to meet in joint convention and establish scales of wages by annual agreement. Within a comparatively short time, however, this interstate agreement system broke down, although agreements were still made in particular districts between coal operators and the miners' organization.

The United Mine Workers was organized in 1890, and for the first time brought together practically all the organized miners throughout the country. The condition of the mining industry was, however, depressed during most of the early years of the new organization and its membership dwindled. It appears

---

<sup>1</sup> Sketch down to 1887 based on chapter by John McBride in *The Labor Movement*

that before the great strike of 1897 there were only about 11,000 members in the union. At that time it was resolved to make a strong effort to raise wages by a general suspension. The unorganized miners were willing to follow the leadership of the officers of the United Mine Workers. During the strike many thousands of them were added to its rolls, while the successful outcome was still more influential in building up the membership. During 1898 277 local unions were organized or reorganized, and at the end of the year there were 628 locals, with 54,771 members. The growth during 1899 and 1900 was even more remarkable. The secretary-treasurer reported on January 1, 1900, 931 local unions with 91,019 members. On January 1, 1901, the number of locals had risen to 1,433, and the number of actual paid-up members to 172,529, not including those who were exempt from dues on account of prolonged idleness. The average paid-up membership for 1897 was 9,731, that for 1898 was 32,902, that for 1899 was 61,887, and that for 1900 was 115,511. During the past 2 or 3 years the organization has spent very large sums in organizing. The amount was \$12,684 in 1899 and \$62,286 in 1900. This was \$1.15 for each person brought in in 1899, but in 1900 only 80 cts.

The following table shows the membership of the United Mine Workers in each of the States on January 1, 1899, 1900, and 1901.

*Growth of United Mine Workers.*

State	Membership on January 1			Average number of miners employed, 1899
	1899	1900	1901	
Alabama	2,304	4,098	6,713	13,481
Arkansas	720	1,898	818	2,333
Indian Territory	967			4,384
Colorado			908	7,160
Illinois	18,464	27,736	35,226	96,756
Indiana	5,752	7,180	10,373	9,712
Kansas	901	6,233	7,632	8,000
Kentucky	1,672	1,451	1,919	7,461
Iowa	1,111	5,511	8,911	10,971
Maryland		150	1,333	4,624
Michigan	250	870	1,601	1,201
Ohio	11,465	11,339	22,651	26,938
Pennsylvania				
Bituminous	7,513	10,102	17,948	82,812
Anthracite		8,993	51,161	138,098
Tennessee	524	2,737	3,751	6,919
West Virginia	355	421	897	23,625
Total	4,771	91,019	172,529	410,635

The table also shows the total number of miners, organized and unorganized, reported by the United States Geological Survey, employed in the mines of the different States during 1899. This will give some idea of the proportion belonging to the United Mine Workers. The total number of members in all the States, 172,529, is considerably less than one-half of the number of miners employed in the country. Since, however, the organization has scarcely a foothold in Colorado, and has not as yet made any effort to establish itself in Wyoming, North Carolina, and various other States which have a considerable number of miners, and since it has only begun to attempt to reach anthracite workers, a clearer view of the strength of the organization may be obtained by comparing the number of its members with the total number of miners in the individual States.

The ratio is largest in Illinois and Indiana. Ohio comes next among the great coal States; though the Ohio district, whose membership is given in the table, includes a few mines in Pennsylvania and several in the neighborhood of Wheeling, W. Va. In Pennsylvania the United Mine Workers have till lately been mostly confined to the bituminous mines of the western part of the State. Even there the organization has been much weaker than in Ohio, Indiana, and Illinois, as has been abundantly seen in the difficulty it has encountered in enforcing annual joint agreements. The table shows distinctly the effect of the efforts of the United Mine Workers to extend their membership outside the four central competitive States, Illinois, Indiana, Ohio, and Pennsylvania. The increase in Iowa and Kansas is particularly noteworthy. So far efforts to organize West Virginia have been comparatively unsuccessful.

The Mine Workers are one of those organizations, like the Brewery Workmen and the Typographical Union, which undertake to gather under a single jurisdiction all craftsmen employed about a particular industry. As the Printers have

contended with the Machinists, and the Brewery Workmen with the Engineers, Firemen, Coopers, Team Drivers, and Painters, so the Mine Workers have contended with the Stationary Firemen and the Blacksmiths. In all cases alike the principle of organization by industries as opposed by organization by trades seems likely to prevail.

The American Federation of Labor convention of 1900 declined to take any action on the controversy between the Mine Workers on the one hand and the Blacksmiths and the Firemen on the other, beyond offering the good offices of the Federation in adjusting the dispute. The committee which reported on the matter, however, expressed the opinion that jurisdiction over blacksmiths and firemen employed about mines should be vested in the United Mine Workers in the interest of solidarity among all workers in the industry. This recommendation accords with the decision of the convention in the case of the Brewery Workmen.

The Mine Workers' convention of 1901 resolved that members of the organizations of engineers, firemen, and blacksmiths should be admitted to the Mine Workers without initiation fee, on the presentation of membership cards of their own organizations, provided they joined the Mine Workers before May 1, 1901.

**Objects.**—The preamble of the constitution of the United Mine Workers declares that since without coal none of the grand achievements of civilization would be possible, it is just that those whose lot it is to daily toil under ground should receive a fair share of what they produce. The objects of the United Mine Workers of America are then stated: (1) To secure an earning capacity suitable to the danger and character of the work, (2) to secure proper methods of payment, including the proper weighing or measuring of coal, weekly payment, and payment in lawful money, "and to rid ourselves of the iniquitous system of spending our money wherever our employers see fit to designate," (3) to secure protection for life and health and to reduce the catastrophes of mining to a minimum by securing proper ventilation, drainage, roof supports, etc., through the enforcement of existing laws and the enactment of additional ones, (4) to secure an 8-hour work day, (5) to prohibit the employment in mines of children under 14 or of those who have not obtained a reasonably satisfactory education; (6) to secure legislation prohibiting the employment of Pinkerton detectives or other persons to take armed possession of mines during strikes or lockouts, (7) "to use all honorable means to maintain peace between ourselves and our employers, adjusting all differences, so far as possible, by arbitration and conciliation, that strikes may become unnecessary."

**Convention.**—The convention is held annually, on the third Monday in January. Each local is entitled to 1 vote for the first 100 members or less and an additional vote for each additional 100 members, or majority fraction thereof. One representative may cast any number of votes up to 5. It is expected that each delegate will normally cast 5 votes. The railroad fare of delegates is paid from the general treasury only for 1 delegate for 5 locals, or for such smaller number of locals as, taken together, may have 500 members. Any local which is situated 1 or more miles from another local is, however, entitled to send a representative and to have his fare paid from the general treasury.

No person is eligible as a representative who is not a miner or a mine laborer, or employed by the organization. No local can be represented which is in arrears for dues and assessments for 2 months preceding the month of the convention, nor any local which has not been organized at least 3 months, and paid 2 months' dues to district and national unions, before the convention.

**Officers.**—The officers of the United Mine Workers are a president, a vice-president, a secretary-treasurer, and an executive board composed of these and 1 member from each district, each member elected by his district. The officers, except the members of the board, are elected annually at the convention by a majority vote. Nominations must be sent in at least 2 months before the convention and transmitted to all the local unions, so that they can instruct their delegates for what candidates to vote.

The president's salary was raised by the annual convention in January, 1900, to \$1,500, the vice-president's to \$1,200; the secretary-treasurer's to \$1,300, and that of the editor of the journal to \$1,200, this increase being made in view of the increased wages of miners. Members of the executive board are paid \$3 per day and expenses while engaged in work for the organization. As a matter of fact, it appears that all the members of the executive board act as organizers and give practically their whole time to the work.

The president is directed to attend or visit, in person or by some other national officer, local unions, district conventions, and other places where his services are required. The vice-president is to act as general organizer under the direction of the president. The secretary-treasurer must give bonds for \$25,000, and may not have more than \$15,000 subject to his order at any one time, all other funds being

deposited subject to the order of the executive board. The executive board constitutes a national board of conciliation and arbitration, and between conventions has full power to direct the workings of the organization. It may even order a general suspension of work at any time it deems it necessary.

Any salaried officer accepting a nomination or appointment to a political office must immediately resign his position as an officer of the organization.

An organizer who establishes a new union receives \$7 of the charter fee. During 1900 the experiment was tried of paying him an additional \$8, being the balance of the charter fee, when the new local had paid per capita tax to the amount of \$45. It was thought that this would induce organizers to take an interest in maintaining the young locals and getting them on their feet. There seemed to be no such effect, however, and the additional payment of \$8 was abolished by the convention of 1901.

**Finances.**—The charter fee paid by new locals is \$15. The national union is chiefly supported by a per capita tax of 10 cents a member a month. If the members of a local have been idle for more than a month they are exempt from the tax. The national executive board may levy additional assessments. Boys under 16 are known as half members, and pay half as much tax and assessment as full members.

The local dues may not be less than 25 cents a month.

In order to support the several strikes which it was prosecuting, the executive board levied an assessment of 25 cents a member a month from March to November, 1900. The amount collected under this assessment up to December 31, 1900, was \$173,629. This was 64.4 per cent of the amount that should have been paid, according to the monthly reports of membership made by the different locals. President Mitchell, in his next report, expressed his "keen disappointment at the failure or refusal of some of our local unions to contribute their share to the support of the men, women, and children who for months had battled and struggled, not in defense of themselves alone, but in defense of every coal miner in America." He added "There are thousands of our members who received an increase in their wages last year which would amount to as much in any one day they worked as the organization required them to pay in any one month; yet these same men refused to comply with the laws and requirements of the organization, and threatened its very existence if the assessment were enforced." The convention of 1900 gave the executive board authority to enforce the payment of the assessment, under penalty of expulsion, on all locals which could not give a good reason for being excused. It was admitted by the president and by all that some locals, especially those in the anthracite region and some others which had received comparatively little benefit from the organization, might properly be exempted.

The convention of 1900 submitted to the members a proposal to create a defense fund by a tax of 25 cents a member a month. Twenty thousand one hundred and thirteen votes were cast for it and 11,510 votes against it. The total number of votes was less than 30 per cent of the whole membership, and the affirmative votes less than 20 per cent. Under these circumstances the executive council, considering that it is hard enough to collect an assessment when a majority of the members have voted for it, determined not to put the law in force, but to submit it to the next convention. At the convention it was defeated.

The receipts and expenditures for 1900 were as follows:

## EXPENDITURES.

Salaries and expenses of organizers, agents, etc.	\$62,622.91
Supplies, printing, etc.	12,887.96
Office expenses	1,297.38
Telegrams, postage, and express	3,516.21
Donations for aid of strikers	154,676.82
Miscellaneous	10,484.81
<b>Total</b>	<b>245,516.09</b>

## INCOME.

From tax	\$138,625.28
From supplies	12,291.48
From Journal	7,188.61
From Journal roll of honor fund and other contributions	986.98
From assessment	173,629.40
From miscellaneous	1,220.52
<b>Total</b>	<b>333,945.27</b>

The amount of cash on hand was \$39,378 on January 1, 1900, and \$127,807 on January 1, 1901.

It will be seen that the amount paid out during 1900 for the relief of those on strike was about \$155,000. At the convention in January, 1901, it was reported that the organization was then paying about \$5,000 a week for strike benefits, and in June, 1901, the secretary stated that payments were still going on at about the same rate.

**Strikes.—Authorization.**—The constitution gives a very considerable degree of control over strikes to the central officers. The union has as yet no regular defense fund or provision for systematic strike benefits, but special assistance may be granted to strikers, and the moral influence of the organization is so important that the approval of the central officers is very likely to be sought before a strike is inaugurated. The constitution provides that where a difficulty is of a purely local character, the officers of the local union must first try to bring about an amicable settlement, and if they fail to do so, must appeal to the district organization of the United Mine Workers. The boundaries of the district are made to conform as closely as possible to the limits of local competition. They usually correspond roughly to those of the State. No single district, however, is exactly co-extensive with a State, except in the cases of Illinois, Iowa, and Michigan. Indiana is divided into two districts. In Pennsylvania there are three districts of anthracite workers, besides two of the bituminous. The district officers must investigate and try to bring about a peaceable adjustment. If they fail, they may, if they deem best, order a strike. Appeals may be taken from the decision of the district board to the national executive board. In case the dispute is of wider importance, so that it affects the interests of mine workers outside of the particular district, the president and secretary of the aggrieved district must appeal to the national president. He has power to approve or disapprove the action contemplated. The district may appeal from the national president to the national executive board, and from it to the national convention itself. Strikes not receiving official approval are not regarded as legal strikes. The constitution also declares that the national executive board shall constitute a national board of conciliation and arbitration, and the records of the work of the organization seem to show that these officers accomplish a great deal in the peaceable settlement of disputes by negotiation.

**Number and character of strikes.**—Notwithstanding these provisions of the constitution and notwithstanding the system of joint agreements, the United Mine Workers carry on a considerable number of strikes. This is doubtless natural in view of the comparative newness and weakness of the organization. As it extends its scope it is forced to inaugurate strikes in order to compel recognition by employers. Attention has already been called to the frequent strikes caused by refusals of employers to abide by the joint agreements adopted by the interstate conference. Other strikes are conducted in the States not covered by the conference, and when the miners are successful the result is usually the introduction of the annual agreement system. Thus the report of the annual convention of 1900 refers to various strikes in West Virginia, Tennessee, Kentucky, and Alabama for the recognition of the organization and improvement in mining conditions. There were also several strikes in the central district of Pennsylvania, which is not covered as yet by the interstate agreement, and in the anthracite region. In other instances the organization has been strong enough to secure improved conditions without strikes.

**Proposed establishment of defense fund.**—In view of the frequency of the occasions for striking, the officers of the United Mine Workers urged at the annual convention of 1900 that a permanent defense fund should be established and that the national executive board should be given power to levy assessments when necessary to support strikes. The previous practice of requiring a special vote of the organization to levy an assessment was held to be unsatisfactory. A proposition for the establishment of such a fund was submitted to a vote of the local unions during 1900,<sup>1</sup> but was ultimately defeated, as is stated above under "Finances."

**Recent wage movements, strikes, and agreements.** *Strike in Kansas, Arkansas, and Indian Territory, 1899.*—The Kansas Bureau of Labor, in its reports for 1898, pp. 328-354, and 1899, pp. 459-467, gives a detailed description of the great strike in the coal fields of Kansas in 1899. The strike began in Indian Territory and was caused primarily by the refusal of the four great companies operating in that Territory and also in the adjoining States—the Western Coal and Mining Company, Southwestern Coal and Improvement Company, Kansas and Texas Coal Company, and

<sup>1</sup> Proceedings Eleventh Annual Convention, p. 20. Second quarterly report of national secretary-treasurer, 1900, p. 2.

Central Coal and Coke Company—to recognize the United Mine Workers and deal with its officers. Indeed these companies, it is charged, were trying to get rid of their union employees by gradually discharging them. The strike began on March 1, 1899, and continued for some weeks in Indian Territory and Arkansas before it was extended to Kansas. In April the president of the Kansas district of the United Mine Workers called a convention of the organization, which invited the mine operators of the State to a conference. The four companies chiefly concerned in the strike in Indian Territory and Arkansas also had mines in Kansas, but only one of these appeared at the conference. The efforts at a settlement with this company failed. A general strike was soon after ordered at the Kansas mines of the four companies concerned.

The officers of the United Mine Workers now decided that the time was opportune for a general movement throughout Kansas and adjoining States to obtain shorter hours and higher wages. Miners in the Eastern States were for the most part working 8 hours a day. A referendum vote of the members of the United Mine Workers in Kansas was taken and upheld the demand for the 8-hour day and for a uniform run-of-mine basis for wages, at the rate of 58 cents per ton for the summer months and 64 cents per ton for the winter months. Practically all the operators except the four companies involved in the great strike agreed to meet the miners in conference and to establish an arbitration board in case a scale of wages could not be agreed upon. As a matter of fact the conference, after a session of 6 days, in which the chief work was done by a joint committee of five members on each side, arrived at an agreement, which was signed June 21, 1899.

This agreement granted the 8-hour day, to take effect September 1, 1899; established the run-of-mine basis at the rate of 60 cents per ton the year round; and provided for a board of arbitration, to consist of 2 operators and 2 miners, and in case of failure to agree, of a fifth member chosen by these 4. It further provided that on June 1, 1900, the operators and miners who were parties to the agreement were to meet in conference to formulate a new contract, and that any difference which could not be settled in conference should be submitted to a board of arbitration, formed in the manner just described. This contract was a source of great satisfaction to the miners.

Meantime the 4 companies whose men were on strike had advertised in the Southern States for colored miners. About 175 negroes were secured in this way, but most of them were induced by the union miners not to go to work. They had no previous knowledge of the existence of a strike. Although, as stated by the report of the Bureau of Labor, there was no violence the United States district court issued an injunction, at the instance of the mining companies, restraining all persons from interfering with or obstructing the business of the Western Coal and Mining Company. Some of the other companies also obtained an injunction against the strikers in anticipation of violence. Stockades were erected and policed with armed guards, but there was no serious disturbance. Before the issuance of this injunction, one of the State district courts had issued an injunction against the Kansas and Texas Coal Company, forbidding it to bring undesirable classes of people into the State to work at its mines. This order declared that the defendant had repeatedly and flagrantly violated the laws of the State relating to coal mines, had wholly ignored the rights of employees and of the public, and that the bringing of an undesirable and criminal class of people into the State was likely to cause riots and bloodshed, and to add to the public expense. The hearing on this temporary injunction was postponed from time to time, and finally the injunction of the United States district judge, above referred to, prohibited local courts and other officers from interfering with the importation of men and the operation of the mines of the company.

Mr. John P. Reese, of Iowa, a member of the national executive board of the United Mine Workers, had been sent to Kansas to help in directing the strike. On October 18, 1899, he held a meeting at Yale, Kans., where one of the mines of the Western Coal and Mining Company is situated. On November 17 an order was issued directing Mr. Reese to show cause why he should not be considered in contempt of court for violating the injunction. The judge found him guilty of contempt, and sentenced him to 3 months in jail. The opinion of the court, as quoted by the Kansas Bureau of Labor, seems to indicate that the evidence of contempt consisted largely in the fact that from 29 to 100 of the men went through the property of the company on the way to the meeting instead of following the public road; that they went as near to the mine shaft as the guard would let them, and that the men underground were intimidated by the announcement sent to them that the strikers "were on top." The court said: "I admit that the charge of the respondent's having used violent language is not clearly proven, but that this meeting on that day was intended and did have the effect of intimidating these men, making them quit their work, is undoubted." Mr. Reese was confined

in jail from November 23 to December 24. He was then released by order of the United States circuit court on habeas corpus proceedings. The circuit court said in its opinion, "It can not be adjudged that, upon the state of facts heretofore recited, the restraining order extended to and bound the petitioner. If it be assumed that such was the true scope and purpose, then it was void, in the sense that it was beyond the power of the court to make it."

Negotiations for the settlement of the difficulty continued without interruption. On May 15, 1900, the lessee of several of the Kansas and Texas Company's mines offered an amended contract to his employees, which they accepted. By June 25 the other companies had made similar contracts, and the difficulty was settled, except that the Kansas and Texas Company refused to make a contract for two of its mines, which it was operating without the intervention of a lessee. The contracts made are similar in character. They provide for the 8-hour day, for the payment of the rate of wages prevailing in the district, after July 1, 1900; and the employment of check weighmen where the miners desire it. No discrimination is to be made between union and nonunion men. Each company agrees to meet its men either individually, by committee, or as a whole for the purpose of considering grievances or other matters of business. No suspension of work is to take place except after written presentation of grievances and the allowance of a reasonable time for considering them and giving an answer.

The strike in Arkansas and Indian Territory was most serious and disastrous. The United Mine Workers had issued a call for a convention of miners and operators covering that district, but the operators ignored the invitation, and one railroad company in particular discharged a number of employees simply because of their membership in the miners' organization. After the operators had refused a second time to meet the miners in conference a general strike was inaugurated, beginning in March. The national executive board of the United Mine Workers issued appeals to the various local lodges to send aid to the striking miners, whose condition had become very serious by the latter part of the summer. The convention of the United Mine Workers held in January, 1900, voted to levy an assessment to be used in supporting this strike.<sup>1</sup> The strike failed of its object. The president reported to the convention in January, 1901, that over 800 men were still idle in consequence of it. The executive board had offered to remove them to other districts where they could have work in union mines, but many owned their homes and plots of land and were reluctant to leave them.<sup>2</sup>

*Anthracite strike, 1900.*—The United Mine Workers had been trying for some years to organize the anthracite miners. By 1896 they had formed about 94 locals. After the great strike of 1897 in the bituminous fields, with its partial success in western Pennsylvania, the officers of the union were increasingly active in the anthracite region. It was not until 1899, however, that national organizers and members of the national executive board were stationed there. For more than a year before the strike of 1900 these officers were at work preparing the miners for the struggle.

"The monumental task which they accomplished in such a short time can not even be imagined by one unfamiliar with the actual conditions in the anthracite region. They had to organize men of 11 different nationalities and with almost as many different languages, religions, customs, and standards of living; they had to allay distrust on all sides, born partly of ignorance and partly of a past full of failures in efforts to attain the very objects that the United Mine Workers were striving for. They had to overcome a most bitter feeling of jealousy and hatred which had grown up between the miners of the three fields as a result of past strikes, and they had to encounter conditions of mining differing to such an extent in the separate districts as to make almost impossible common and general grievances."<sup>3</sup> They had to deal with a constant surplus of labor; they had to face a market oversupplied with coal; they had to fight the bitter opposition to organized labor of the operators and the railroads. They had to contend against the gloomy predictions of old and influential miners who testified that the condition of the mine workers had always been worse after strikes than before.

The anthracite coal region is divided into three fields—the northern or Wyoming and Lackawanna, the middle or Lehigh, and the southern or Schuylkill. The United Mine Workers organized each of these regions as a separate district. The men of the Wyoming and Lackawanna field, District 1, were the first to be thoroughly organized, and they were the first to take steps toward bettering their condition. As

<sup>3</sup> The Anthracite Coal Strike, by Frank Julian Warne. Publications of the American Academy of Political and Social Science, December 11, 1900, p. 25. The present sketch is largely drawn from Mr. Warne's article.

early as January, at a meeting of this district, President Mitchell was petitioned to call a general strike of all anthracite miners. After conferring with the presidents of the other districts, the petition was refused. The matter was again discussed at the next quarterly meeting of District No. 1 in April, and at the July meeting the national executive board was petitioned to call a convention of all three districts. The petition was granted and on August 13 a convention was held at Hazleton. This convention invited the operators to meet representatives of the miners in joint convention on August 27. It also detailed the grievances of the miners. The operators ignored the invitation to a joint convention. The miners then drafted a scale of wages for each district, together with demands as to general conditions of employment, and asked the national executive board for permission to strike unless a settlement was effected within 10 days after the application was made. The strike was actually declared on September 12, to take effect on the following Monday, September 17. On the day fixed at least 80,000 men and boys quit their accustomed work, the United Mine Workers claimed 112,000. Before the week closed 125,000 of the 190,000 anthracite mine employees in Pennsylvania were idle. The strike lasted 12 days, and the number of strikers increased gradually to over 130,000.

One considerable independent establishment, G. B. Markle & Co., had for many years hired no one without his agreeing to a contract which provided that any difficulty between the company and its men should be submitted to arbitrators, of whom 1 should be chosen by the company, 1 by the men, and the third by these 2. The agreement also provided that the men should not under any consideration enter into a strike, or be governed by any labor association in settling any dispute. Notwithstanding this agreement, a great majority of Markle & Co.'s employees went out with their fellows. Their action seems to involve a breach of faith. Their position was, however, that the grievance complained of could not be settled by concessions made by any single operator, and that the only course for the men was to stand together until the railroad coal-mining companies should unite in a settlement.

The same reasoning induced the employees of the Philadelphia and Reading Coal and Iron Company, numbering more than 25,000 men, to remain out when this company independently posted notices offering them an advance of 10 per cent in wages. The strike leaders insisted that a break in the ranks, even though the terms were satisfactory in themselves, would weaken the cause of the workers as a whole. They were able to hold their followers firm.

The scale of wages which the miners demanded differed for the three districts. Similar conditions of employment were, however, demanded for the whole region. These conditions were:

(1) "An advance of 20 per cent on all day labor now receiving less than \$1.50 per day, 15 per cent over present prices on all classes of day labor now receiving \$1.50 and not over \$1.75 per day, and 10 per cent advance on all day labor receiving more than \$1.75 per day.

(2) "Abolishment of the sliding-scale system now in practice in the Lehigh and Schuylkill regions."

(3) "No miner shall have at any time more than one breast, gangway, or working place, and shall not get more than his equal share of cars or work.

(4) "Abolishment of the erroneous system of having 3,360 pounds to the ton, and that 2,240 pounds shall constitute a ton.

(5) "A checkweighman shall be hired by the miners, and allowed to represent them on the head of each breaker and see that the weight is correct and that the dockage is fair."

(6) "Reduction in the price of powder to \$1.50 per keg."

(7) "Abolishment of the company store system.

(8) "Abolishment of the company doctor system for miners and compulsion to pay one."

(9) "Compliance with the State law which says that all industrial concerns shall pay their employees semi-monthly and in cash."

The demands were not all granted. The strikers went back to work on a promise of an increase of 10 per cent, with abolition of the sliding scale where it existed, and with an agreement by the operators to take up with their men any further grievances they might have. The price of powder was reduced to \$1.50 a keg where it had been \$2.75, but the difference was deducted from the increase of wages.

It was the first time that the entire anthracite region had been involved in a strike for increased wages. All past strikes, with the possible exception of that of 1887-88, were against reductions of wages. It was the most successful strike that the anthracite coal fields ever saw. The United Mine Workers went into it with a membership of less than 8,000 among the anthracite coal workers; it came out

of it, it was said, with more than 100,000.<sup>1</sup> The union asserts that the aggregate increase in wages resulting from it amounts to about \$5,000,000 annually. Accepting the union's estimate that 140,000 men were involved in the strike, this would give an annual increase in wages of \$35.71 a man. Since the increase was 10 per cent, this estimate seems to be based upon an estimated annual wage of about \$350.

The concessions granted by the operators expired April 1, 1901. As the time approached the operators posted notices promising to continue the same terms until April 1, 1902. In spite of this it seemed probable at one time that the miners would strike. Their chief demand was for recognition of the union. A convention of the three anthracite districts met at Hazleton, and on March 16 authorized the national executive board, together with the officers of the three districts, to negotiate for a joint conference of miners and operators, to be held before April 1, and, in the event of failure, to decide by a majority vote the course of the union, "even if it is necessary to resort to suspension of work to enforce the justice due us as producers of wealth fully equal with our employers." No formal and public conference was obtained. Through the help of outside friends of the labor movement, however, the leaders had an interview with representatives of the coal railroads. According to the public statement of the representatives of the union, the railroad men, besides reiterating the promise to adjust grievances with representatives or committees of the mine workers, "held out the hope that if during the present year the mine workers demonstrated their willingness and ability to abstain from engaging in local strikes, full and complete recognition of the organization would unquestionably be accorded at a future date." The authorities of the union thought it best to be content with what they had gained.

**Machinery.**—President Mitchell referred to the growth and effects of machine mining in the following terms in his annual report published in January, 1901:

"The machine-mine operator, by reason of his ability to produce coal at a cost considerably less than his competitor who operates a hand-pick mine, enjoys advantages in the market to which I feel he is not entitled.

"In 1899 there were approximately 11,000,000 tons of coal won out by mining machinery; this is 12,000,000 tons in excess of the amount produced in machine mines in 1898. Of the total output of bituminous coal in the United States in 1899, 23 per cent was produced in machine mines. If this rapid increase is continued a few years longer, the skill now required by those engaged in the mining of coal will be no longer necessary, and instead of being a body of tradesmen or skilled workers we shall become simply coal shovellers, whose only essential qualification in securing employment will be the possession of a strong back and an abundance of physical energy. While we owe it to ourselves and our craft to protect our trade, even against the encroachment of mining machinery, I do not wish to be regarded as one who would obstruct progress or favor retrogression, but I am unalterably opposed to a system which places a premium upon machinery, all of the benefits of which are given the mine owners. If machine mining is to be the system through which coal is to be produced in the future, and if the cost of production is thereby lessened, labor is entitled to and should receive a reasonable portion of the financial advantages, and I should advise this convention, and particularly the delegates who attend our joint convention, to give this problem their most earnest thought, and, if possible, correct in our next agreement this objectionable feature which was a part of the one entered into last year."

**Run-of-mine system v. screening system.**—One of the grievances of the organization is the custom which prevails in some regions of screening coal before it is weighed, and paying miners on the basis of the screened coal. Many of the operators assert that this is a highly advantageous plan, in that it induces care on the part of the miner, and results in the production of a smaller quantity of fine and comparatively worthless coal. They say that the actual earnings of the miner are not less when he is paid for screened coal than when he is paid for run-of-mine. The price per ton for screened coal is, of course, larger. The view of the miners' organization is, however, that if the miner is paid only for the screened coal he is robbed of pay for a part of his product. The miners have succeeded in getting laws passed in many States requiring payment for all coal mined; but such laws have uniformly been declared unconstitutional. The union, however, has not ceased to press the question to the best of its ability in its dealings with employers.

In the convention of 1901 the following resolutions were offered:

"Resolved, That we, the representatives of the United Mine Workers, condemn the action of the supreme court [of Ohio] in declaring the antiscreening law unconstitutional.

<sup>1</sup> The official report of actual paid-up members for December, 1900, shows a total of 53,161 for the anthracite districts. The secretary explains that the difference represents the members who had been exonerated from payment of dues because of the strike.

*Resolved*, That we appeal to our State and national organizations to formulate such plans, as well as awaken our members to the fact, that those who constitute our judiciary should be men free from the influence of corporations and corporate wealth."

The committee on resolutions reported that the decision complained of was in accordance "with the letter and the spirit of the constitution of the State of Ohio and the Constitution of the United States, and that there is nothing to be gained for our cause by denouncing decisions of this character. The committee therefore favored 'a revision of the Constitution of the United States and of each State, in order that laws favorable to the rights of the laboring masses of this country may be legally enacted.' The convention, however, voted down the recommendation of the committee and adopted the original resolution.

**Eight-hour day.** The American Federationist of March, 1899, contains the following statement from a circular issued by the officers of the United Mine Workers:

"When the Chicago agreement was entered into 1 year ago, which provided for the establishment of an 8-hour day in the States of western Pennsylvania, Ohio, Indiana and Illinois, grave fears were entertained as to the probable outcome. That the influence it would exert over the trade of the States in question would be detrimental was freely argued by many—but we find at this the close of the first year that its adoption has not only proven a priceless boon to our craft, but also is looked upon with favor by many of our employers.

Early in 1901 the president and the secretary-treasurer issued a circular letter to the local unions in which they declared that the institution of the 8-hour day in the 1 competitive States on April 1, 1898, was "the most important event from the standpoint of a miner since the formation of trades unions began. They therefore requested that Monday, April 1, be set apart as a holiday in commemoration of this event and celebrated by local unions with suitable meetings and exercises. They asked that the holiday be observed also in districts where the 8-hour day has not been obtained as a means of indicating the desires of the workers there, and encouraging the further advance of the 8-hour movement.

**Saturday holiday.** The convention of 1901 passed the following resolution:

*Resolved*, That we are in favor of Saturday being a holiday provided the same become national.

**Wages.** President Mitchell said in his report of January, 1901:

A careful computation places the average annual increase secured by the bituminous miners for the year ending March 31, 1901, at \$12,000,000 over that paid for the preceding year, or a per capita increase of \$50 per annum. This does not include the advance secured by the anthracite miners, which in itself will not amount to less than \$5,000,000 per annum."

**Public employment.** The convention of 1901 adopted the following resolution:

"Whereas our Government is now and has been for some years, expending large sums of money and sacrificing many lives for the purpose of making a market for goods that can not, because of wage-earners' inability to purchase them, be sold in our market at home. Therefore, be it

*Resolved*, That we urge organized labor in our country to do its utmost to secure legislation, both State and national, for the making of good roads and for other public improvements, and that the minimum wage shall be \$1.50 for a day of 8 hours."

**Journal.** The official journal of the organization, The United Mine Worker, is a weekly newspaper. For 3 years preceding 1901 two pages were printed in the Bohemian language. This was found to be unprofitable. Only 836 subscribers of this tongue were reported in January, 1901, while many other members of foreign birth considered themselves discriminated against. It was found that these Bohemian pages worked against the paper in the minds of advertisers—who considered that only a part of the readers of the paper could read their advertisements. The convention of 1901 voted that thereafter the whole paper should be printed in English.

The number of subscribers, as reported in January, 1901, was 15,639. The total income for the year 1900 was \$5,213, and the cost was \$11,266.

## THE NORTHERN MINERAL MINE WORKERS PROGRESSIVE UNION.

**History.**—The Northern Mineral Mine Workers' Progressive Union of America is not strictly a national organization, since it is confined to Michigan, Minnesota, and Wisconsin. It is given a place here because it is classified as a national union.

by the American Federation of Labor. It was organized on November 27, 1895. In July, 1900, it reported only 1 locals and 1,500 members.

**Convention.**—The convention meets annually, and the representatives of the locals have 1 vote for the first 100 members or less and 1 additional vote for each additional 100 members or fraction greater than 50. No representative can have more than 3 votes. Expenses of representatives are paid by the locals.

**Constitutional amendments.**—The constitution may be amended by the convention by a two-thirds vote.

**Officers.**—The officers are a president, a vice-president, a secretary-treasurer, and an executive board of 11 members, 3 of whom are the president, vice president, and secretary-treasurer. All officers are elected at the annual convention by roll call. A majority is necessary to elect. The secretary-treasurer's salary is \$300 a year, besides legitimate expenses. The members of the executive board receive \$2.50 a day and expenses when employed by the organization. The executive board constitutes a general board of conciliation and arbitration, and between conventions has full power to direct the workings of the union.

**Finance.**—The initiation fee for all locals is fixed at \$3 and the monthly dues at 50 cents. Out of these sums the locals pay to the general treasury \$1 from each initiation fee and a monthly per capita tax of 35 cents. The executive board has authority to levy assessments for the support of strikes or lockouts.

**Benefits.** Any member injured in the mines or in any legitimate calling is entitled to \$1 a week for 26 consecutive weeks. On the death of a member his friends are entitled to a funeral benefit of \$10. Membership must have been maintained for 3 months and 3 months' dues must have been paid before injury or death gives title to a benefit. It is especially provided that benefits shall not be paid on account of accidents in bicycle races or sports of any kind. Any member who indulges in alcoholic beverages to intoxication, while receiving benefits, forfeits all further sums which he might have received.

**Strikes.** No strike can constitutionally be supported by the general organization unless its inauguration was approved by the general officers. When a strike has been legally declared, the executive board may levy an assessment, not less than 10 cents a week per member, to be continued as long as the board thinks it necessary.

**Eight-hour day.** The Northern Mineral Mine Workers declare in their preamble that one of their objects is to "demand that 8 hours shall constitute a day's work, and that not more than 8 hours shall be worked in any 1 day by any mine worker."

## CHAPTER IX

### LABOR ORGANIZATIONS IN THE WOOD WORKING AND ALLIED TRADES.

#### AMALGAMATED WOOD WORKERS' INTERNATIONAL UNION OF AMERICA.

**History.**—The Amalgamated Wood Workers' International Union of America was organized in November, 1895. It was formed by the amalgamation of the International Furniture Workers, organized in 1873, and the Machine Wood Workers' International Union of America, organized in 1890. The Varnishers' International Union, which had been formed in 1881, was dissolved about the same time, and its locals joined the Amalgamated Wood Workers.

The union includes machine workers, cabinet and bench wood workers, and finishers. Such different grades of work as the dressing of lumber and the finishing of fine office furniture come under its jurisdiction. It claims the right to control the box makers and sawyers on the one hand, and the piano and organ workers on the other. The American Federation of Labor has refused charters to unions of each of these crafts as national bodies because of the opposition of the Wood Workers. The Painters have complained that members of the Wood Workers have infringed on their territory by finishing hard wood in the interior of buildings.

The number of locals and the number of members at the ends of successive fiscal years are reported by the secretary as follows.

	Years ending June 30	Locals	Members
1895		43	
1896		51	2,000
1897		67	4,000
1898		74	6,000
1899		84	10,400
1900		120	13,500

**General aims.** The Wood Workers proclaim among their objects the 8-hour day, the establishment of a fund for the protection of the members, assistance in finding work for the unemployed, the obtaining of fair prices for the labor of the members; provision for sickness, accident, disability, and death, "and to regulate the relations between workmen and their employers and between workmen and workmen."

Prefixed to their constitution is a declaration of principles, which is the same as that of the Textile Workers word for word, with two or three exceptions, and which is substantially the same sentence for sentence, as that of the Brewery Workers and the Bakers. It is given in full in the account of the Textile Workers (p. 77). The secretary explains that this declaration of principles was that of the International Furniture Workers' Union, which is now a part of the Amalgamated Wood Workers. One of the conditions of the amalgamation was that the declaration of principles should be prefixed to the constitution of the amalgamated body. It is possible, therefore, that it does not express the sentiments of the present officers or of the majority of the members of the existing organization.

**Conventions.** There is no fixed time for conventions. Any local union which has been in the Amalgamated Union for not less than 2 years may propose to hold a convention, and the proposition is submitted to a general vote if it is supported by 8 other locals. If it is approved by a majority of the locals and by two-thirds of the members a convention is held. Two conventions have been held since the Amalgamated Union was formed, one in October, 1896, and one in March, 1900.

No union is entitled to representation if it has not been chartered 2 months before the convention, nor if it is over 1 month in arrears to the general office. Unions which have 100 members or less are entitled to 1 delegate, over 100 to 200 members, 2 delegates, and for every additional 300 members or major part thereof, 1 delegate.

If a union sends only a part of the delegates it is entitled to, they may cast its full vote. A member is not eligible as a delegate unless he has been a member in good standing for 12 months, provided his union has existed so long. The mileage of delegates is paid from the general fund. The president and the secretary may speak in the convention, but have no vote except that the president has a casting vote in case of a tie.

**Constitutional amendments.** The constitution can be amended only by a two-thirds referendum vote.

**Officers.** The officers are a president, a secretary, and a treasurer. The officers and 4 other members make up a general council. The secretary and the treasurer must be members of unions in the city where the headquarters are. The president and the 4 other members of the council must live in other parts of the United States and Canada, no 2 in the same State.

All officers and members of the council are elected by popular vote on the Australian system. Elaborate rules are provided for nominations by the locals, and for the preparation, casting, and counting of the official ballots. A clear majority is necessary to elect, and if a second election is necessary only the 2 candidates who have polled the highest votes for each individual office, and the 8 candidates who have polled the highest votes for membership in the council, are eligible.

The general secretary collects all money and turns it over to the treasurer. He has power to issue charters to locals. He edits the official journal. He is required to issue a quarterly report containing a statement of receipts and expenses, rates of wages, the state of trade, and hours of labor.

**Membership.**—Any number of employees, not less than 10, in mills, furniture factories, car shops, woodenware factories, and the like, who are between 18 and 60 years of age, capable workmen, able to command the average wage, of good health, and of good moral character, may obtain a charter for a local union. The qualifications of members are not otherwise prescribed. Applications for membership

are referred to a committee, who are to inquire into the character and qualifications of the candidate and report at the next meeting. No candidate can be initiated until at least 1 week after his application. A majority vote of the members present is necessary to elect an applicant. A rejected applicant may not apply again within 3 months.

**Cards.**—Clearance cards, on which members may transfer their membership to other locals, are issued on payment of all back dues and 1 month's dues in advance, with 10 cents for the card. A withdrawal card is granted to any member who desires to withdraw from the trade. If a member becomes an employer, living more than 2 men, or becomes a member of any employers' association, he must take a withdrawal card. This does not apply to stockholders in union cooperative shops or factories.

**Isolated members.**—When a local union surrenders its charter those who wish to retain their membership in the national union may do so by paying their per capita tax to the general secretary.

**Discipline.**—Charges against any member must be presented in writing and investigated by a special committee of five. The local union then decides the case according to the evidence gathered by the committee. An aggrieved member may appeal to the general council.

A member suspended for working against the interests of the union or acting in a manner likely to bring the union or any of its members into discredit, can be reinstated only by a two-thirds vote of the members and on payment of such fine as the union may impose.

No member can be excused from serving on a committee unless by a two-thirds vote of the members present, but no member need serve on more than two committees. If a local officer fails to answer the roll call for three consecutive meetings, without a good excuse, his office is to be declared vacant.

**Finances.**—The charter fee is \$10. For this a full outfit, including seal and necessary books, cards, and blanks, is furnished. The per capita tax is 15 cents a month, of which 3 cents is set aside for a strike fund, and the remainder goes into the general fund. The mileage of delegates to convention is defrayed by a special assessment. The general council has authority to levy assessments whenever there is a deficiency. Any union which is more than 3 months in arrears for dues, assessments or fines, or which owes the general union a sum equal to 3 months' per capita tax, is to be suspended, and is not entitled to benefits until 3 months after all arrears are paid.

The initiation fee of local unions may not be less than \$1, and the dues may not be less than 10 cents a month. Members who fail to pay their dues for 3 months are to be suspended and are then not entitled to any benefits. If a member is sick or out of work he may maintain his membership by paying only the per capita tax. He must report at every regular meeting. If he works any part of a month he must pay the regular dues for the month.

Men over 60 years of age or of poor health, and consequently unable to join the union as beneficial members, may join as honorary members. They pay 25 cents a month as dues, of which 7 cents goes to the general office. They are to receive strike benefits, but not death or disability benefits.

The receipts and expenditures for the fiscal year ending June 30, 1900, are reported as follows:

RECEIPTS.	
Per capita tax .....	\$15,283
From other sources .....	1,577
Total .....	19,860
EXPENSES.	
Strikes .....	\$3,142
Death benefits .....	2,350
Journal .....	2,125
Organizing .....	2,335
Convention expenses .....	2,019
Other expenses .....	4,353
Total .....	16,315
Balance on hand July 1, 1900 .....	4,375

**Benefits.**—On the death of any member who was in good health at the time of his initiation or reinstatement, has been 6 months or over in good standing, and has paid 6 months' dues, a funeral benefit of \$75 is payable.

A total disability benefit of \$250 is paid to one who has been over a year in good standing before the disability is incurred and who is not disabled through drunkenness or misconduct.

Sick and accident benefits are often provided by the local unions.

**Tool insurance.**—A separate tool insurance fund to which members are at liberty to contribute or not is provided and placed under the control of special officers. The insurance is against damage by fire, water, falling of building, explosion, etc. No loss is to be paid which is incurred while the member is working on Sunday or after the regular working hours.

Insurance may be taken for not less than \$25 nor more than \$100. The majority of the participating members take insurance to the amount of \$50, some take \$75, and some \$100. Upon joining the fund a member pays 7 per cent of the sum for which he wishes to be insured. This is intended as a guarantee fund and not as an insurance premium. A member who receives a withdrawal card may withdraw five-sevenths of the 7 per cent, and if a member dies his relatives receive the whole 7 per cent. Two sevenths of the guarantee fund is sent to the secretary of the tool insurance fund, and five-sevenths remains under the administration of the local union. When a loss occurs it is paid in the first instance out of the guarantee fund in the hands of the local union, but this fund is reimbursed from the general treasury. The payment is to bear the same proportion to the actual loss which the insured value of the tools destroyed bears to the actual value. When the aggregate amount in the hands of the general secretary of the fund and in the hands of the local unions falls below 7 per cent of the full amount of insurance in force, an assessment of 1 or 2 per cent of the insurance in force is to be levied. At the end of 1899 the insurance fund had 210 members, and the amount of insurance in force was \$12,100. The amount of the local and general insurance funds on hand was \$1,388.47, or about \$50 more than the 7 per cent guarantee fund.

The members of the tool insurance fund pay to the treasury of their local union 7 cents each half year, to cover the local expense of conducting the fund. The general secretary of the fund receives 4 cents each half year from each member.

**Strikes.**—A strike can be declared by a local union only by a three-fourths vote by ballot at a meeting of which all members in good standing have been notified. A local union is not entitled to receive strike benefits from the general body unless its strike has been duly sanctioned by the general council, but sympathetic strikes are exempted from this rule provided the general council is satisfied, after investigation, that the local union acted with discretion.

The strike benefit is \$5 a week. No benefit is paid for the first week. If the strike fund becomes exhausted the general council can levy an assessment of 25 cents per month.

The union reported to the Federation of Labor in the fall of 1900 that it had won 16 strikes during the preceding year and lost 2, and that 3 were pending. Two thousand nine hundred and thirty-one persons were involved, of whom 2,531 were benefited. The cost of the strikes had been \$1,345.

**Hours of labor.**—In 1900 the secretary reported that 3 unions were working 8 hours, 23 were working 9 hours, and the remainder 10 hours. In June 1901, the secretary reported that after several conferences with the planning-mill men of Chicago, during which they pointed out to the representatives of the union the competition they had to contend with, the union voluntarily surrendered the 8-hour day accepting extra pay for the ninth hour in place of it. All time over 9 hours in Chicago is paid for at the rate of time and a half. The 8-hour day has been gained in San Francisco, so that the Wood Workers now have it in San Francisco, Galveston, and Colorado Springs. Thirty-six cities in the United States, besides several in Canada, were at the date of this report working 9 hours.

**Piecework.**—Local unions are directed to do all in their power to discourage piecework. It is forbidden to introduce the piecework system in shops where it does not exist.

**Child labor.**—The constitution directs local unions to do all in their power to discourage child labor.

**Union label.**—The Wood Workers' union label was adopted in 1896. The secretary reports that 7 firms used it in that year, 80 firms in 1897, 190 firms in 1898, and about 200 firms in 1899. The label is affixed to the better class of work, such as saloon and office furniture, by the decalcomania process, before the work is var-

nished. On common work, such as moldings, sash, doors, and the like, the label is printed with a rubber stamp.

Since the Wood Workers are strongest in Chicago, it is natural that their union label should have been most effective there. The secretary declares that the first firm in Chicago which made use of its label doubled the number of its employees within 6 months. The secretary attributes this result largely to the thorough advertising of the firm as a union establishment. Another firm, which had to spend an additional \$20,000 a year in wages in consequence of signing the union agreement, is alleged to have admitted repeatedly that it never made another investment so good. The secretary says that in the early part of 1897 the Chicago wood workers worked 10 hours a day and that their minimum wage was \$1.25. The union raised the minimum wage to \$2 and afterwards reduced the working day, without reduction of pay, to 8 hours, though it afterwards seemed necessary to give this up. But the 8-hour day in San Francisco, Galveston, and Colorado Springs, and the 9-hour day in over 30 other cities are largely attributable, in the opinion of the secretary, to the union label. In April, 1901, the carpenters and other building workmen of Minneapolis struck or were locked out as a result of their attempt to enforce the recognition of the Wood Workers' label.

### UNITED ORDER OF BOX MAKERS AND SAWYERS OF AMERICA.

**History.** The United Order of Box Makers and Sawyers of Chicago, sent a representative to the American Federation of Labor convention of 1896 to plead for recognition and for a charter. It had applied to the officers of the Federation for a charter in February, 1896, and had been denied because of the opposition of the Amalgamated Wood Workers, which claimed jurisdiction over the craft. The box makers of Chicago claimed to be an old and well-organized union which controlled the box trade. Its representative declared that it included paper-box makers, cigar-box makers, and others. It denied the jurisdiction of the Wood Workers, and pointed out that the Wood Workers had given the Tobacco Workers permission to take in tobacco box makers. The delegate of the Wood Workers admitted that, rather than enter into a contest with the Tobacco Workers, they had allowed the tobacco box makers of St. Louis, who had organized under the Tobacco Workers, to remain with them. He, however, opposed the present application, and the convention upheld the unfavorable action of the executive council.<sup>1</sup>

At the Federation convention of 1897 another petition for recognition was presented by the Boxmakers' and Sawyers' Union. The petition was referred to the executive council of the Federation with instructions to try to bring about harmony and amalgamation between the two unions. The effort was not successful, and the box makers still maintain an independent existence, under the disadvantage of exclusion from the Federation. The executive council of the American Federation of Labor reported to the convention of 1900 that several unions of box makers and sawyers already belonged to the Wood Workers' Union, and the council earnestly urged all these workers to join it. The locals at Louisville and St. Louis, two of the best locals of the organization outside of Chicago, were among those which went over to the Wood Workers. At St. Louis, however, the Box Makers organized a new local, and the secretary-treasurer claimed, in June, 1901, that they had more members there than ever before.

The organization is strongest in Chicago, where most of the workers belong to it, but it also has strong locals in several of the leading Western cities. It has no strength in the East. The majority of the Chicago members are Bohemians, but there are also Germans, Swedes, and members of other nationalities. In June, 1901, the secretary reported 12 locals and 5,500 members.

**General aims.**—Every member is pledged at his initiation not to make any agreement with his employer, unless authorized by the organization, which will debar him "from participating in any labor movement sanctioned by the order, having for its object the shortening of the hours of labor, doing away with overtime, securing or retaining a Saturday half holiday, securing or retaining a weekly pay day, or securing an increase in wages."

**Convention.**—The convention is held annually. Each local of 25 members or more is entitled to one delegate, a local of 100 members to two delegates, and larger locals to one additional delegate for each additional 100 members. Each delegate has one vote, but delegates of the larger locals have one vote for each 100 members that they represent. The national union pays each local \$5 a day,

<sup>1</sup> Convention Proceedings, 1896, p. 76.

including Sunday, for the attendance of each delegate, and for the time necessarily spent in traveling, together with the cost of transportation by the shortest route.

**Officers.**—The officers are a president, five vice-presidents, and a secretary-treasurer. The officers constitute the executive board. They are elected in the convention by ballot, each delegate having a vote according to the number of members he represents. A majority of votes on this basis is necessary for election. A member must have been in good standing for not less than a year in order to be eligible to any office.

The president countersigns all orders for money, including checks. He has power to suspend individual members or officers of locals for incompetency or negligence, and he has power to appoint deputy organizers on the nomination of locals, with such remuneration as may be agreed on, not exceeding \$100 a month and railroad fare.

**Local unions.**—A local union may be formed by seven persons engaged in the trade of box making. Charters are issued by the secretary-treasurer with the consent of the national executive board. In cities where more than one local exists, an advisory board of three members is to be elected.

**Finances.**—The per capita tax is 10 cents a month. Local dues are uniformly 50 cents a month. Every local is required to elect a shop committee in every shop where its members are employed. The duty of the shop committee is to collect all dues, fines, etc., and to pay them to the local secretary at each regular meeting. The financial secretary of each local is required to send an itemized monthly statement to the national secretary, showing all receipts and expenditures, and the names of members retired, withdrawn, suspended or expelled. A financial secretary who makes false reports is subject to a fine of \$2 for each offense. Any member who obtains money or benefits under false pretenses or appropriates money belonging to the union to his own use, is ineligible to hold any office, local or national, and can not receive any benefit until the defalcation has been repaid.

Each local union is required to elect an auditing committee of three. The duty of the committee is to make a quarterly audit of the financial books of the union. The committee is subject to a fine of not less than \$2 for failure in its duties, and any officer or member who obstructs it or fails to submit any books or papers is to be fined not less than \$25.

The national executive board has power to levy assessments at its discretion, not exceeding 1 per cent of the wages of members. During a strike this limitation is suspended. Of assessments raised to prosecute a boycott, 60 per cent is to be used nationally and 40 per cent locally.

The national executive board is directed to select semiannually three unions within 500 miles of the national office, which are to select each a member for the purpose of forming a committee to audit the books of the secretary-treasurer. The members of this committee receive \$3 a day and railroad fare.

**Strikes.**—When any difficulty arises with employers, three officers of the local union must furnish a full statement for submission to the national executive board. If the board, after investigation, approves the position of the local, the national secretary issues a circular setting forth the facts to all local unions. If the difficulty involves more than 25 members, it can not be sustained except by a two-thirds majority on a popular vote. Each member who takes part in an authorized strike is entitled to \$5 a week from the date on which the difficulty is sanctioned by the authorities of the national union.

**Cooperative factories.**—The president says that productive cooperation has been introduced to a considerable extent in the box making trade, and that the organization is using its influence to extend the system further. There are two cooperative box factories in Chicago, one of which employs 16 men and the other 12. One of these establishments has been in operation more than 12 years. There is a recently established cooperative factory in Milwaukee, which has been highly successful thus far. A movement is on foot to establish such a factory in Cleveland and another in Louisville. The organization urges its members to save money in order that they may establish these plants. If each of several men puts in a few hundred dollars a satisfactory plant can be started. The plants are strictly cooperative, the profits being divided equally, with no added compensation to the manager or the member who solicits patronage. The system is considered advantageous in places where the purchasers of boxes are disposed to favor fair conditions of labor. Where one or more such cooperative plants exist the labor organization is strengthened in its dealings with manufacturers since in time of strike or dispute consumers can get their boxes from the cooperative plant.

## 200 THE INDUSTRIAL COMMISSION: --LABOR ORGANIZATIONS.

**Piecework**—While the agreement of the box makers which is customary in Chicago provides a scale for piecework, the system of payment by the hour or the day is preferred by the union, and prevails almost altogether in the union shops in Chicago. The organization is attempting to abolish the system of piecework in other cities also.

**Labor day**—The constitution directs that members who work on Labor Day shall be fined \$2.

**Union label.**—The box makers have a union label, which is furnished free, at the expense of the national organization, to employers or members. It is allowed to be used only in shops where all persons who are eligible are members of the order. Manufacturers who operate more than one shop are not allowed the use of the label unless all their shops are strictly union. Provision is made for legal prosecution of infringers of the label in cases approved by the national executive board. In such cases the local union which conducts the prosecution is allowed \$25 for committee work, in addition to attorney fees.

### PIANO AND ORGAN WORKERS' INTERNATIONAL UNION OF AMERICA.

**History.**—The Piano and Organ Workers' International Union was organized on August 8, 1898. An earlier organization, the Piano and Organ Workers' League, had disbanded in 1892. The present union is meant to include all workmen engaged in the manufacture of pianos and organs. In New York and Boston separate locals representing different branches of the work, are organized. The following table gives the number of local unions and the number of members on certain dates, as reported by the president:

	Number of unions.	Number of members.
Aug. 8, 1898	5	2,300
Aug. 1, 1900	11	4,700
Aug. 1, 1901	19	6,400
June 18, 1901	25	7,658

The union has repeatedly tried to get a charter from the American Federation of Labor, but has been refused on account of the opposition of the Wood Workers' Union, which claims jurisdiction over the piano and organ workers.

**Convention.**—The convention meets annually in July. Each local of not less than 25 members is entitled to 1 delegate, and each local of more than 300 members to 2 delegates. Delegates are entitled, however, to cast 1 vote in the convention for every 25 members they represent. The International Union pays to the locals \$5 a day, including Sundays, for the attendance of each delegate, and necessary cost of transportation.

The constitution is amended in the convention by a two-thirds vote.

**Officers.**—The officers are a president, 7 vice-presidents, and an organizer; they constitute the executive board. The duties of secretary and of treasurer are performed by the president. This, and many other features of the constitution, including the financial system, are copied from the Cigar Makers. The officers are elected by the convention.

**Membership.**—Every person engaged in the piano or organ industry, who is 18 years of age, and has been in the occupation at least 3 years excepting a foreman, is eligible to membership, provided he is of good moral character and a competent workman at his branch of the trade.

Persons learning piano and organ making are required to serve 3 years before they are eligible to admission to the union.

**Cards.**—Any member who leaves the jurisdiction of his local must provide himself with a traveling card on pain of a fine of 50 cents. On getting employment in another place he must deposit his card with the nearest union on pain of a fine of 10 cents a day for 30 days, and suspension at the end of that time.

**Discipline.**—General officers are tried for any misconduct by the executive board, with a right of appeal to the general vote.

Local unions can not impose fines greater than \$10, except with the approval of the international executive board. All fines of \$5 and upward must be reported to the international president, with the names of those fined, for publication in the official journal.<sup>1</sup>

**Finances.**—The essential features of the financial system are patterned after those of the Cigar Makers' International Union. There is a uniform initiation fee of \$5 and a uniform weekly payment of 10 cents. In paying initiation fees, dues, assessments, or fines a member buys adhesive stamps representing the amount and attaches them in proper places in his membership book. Local unions are permitted to spend for local purposes, including the picketing of shops during strikes a percentage of their gross receipts, which varies with the number of members of each local: 50 per cent for 30 members or less, 50 per cent for 30 members to 50 members, 10 per cent for 50 members and upward. The president draws from time to time on such locals as he may select for such sums as are needed to support the central office. At the end of each year the funds remaining are equalized among the several locals by remittances from those which have paid out less than their per capita share for national benefits to those which have paid out more. The constitution of the Piano Workers, like that of the Cigar Makers, provides for the appointment of financiers, whose duty is to examine the accounts of the local unions and report to the central office.

The financial secretary of each local union is required to send to the international president every month an itemized statement of receipts and expenditures and a detailed account of all changes in membership. A financial secretary who sends false reports is liable to a fine of \$2. Each local is required to elect a finance committee of 3 members, whose duty is to examine the financial accounts of the secretary and the treasurer and report to the international president. Failure in this duty entails a fine of \$2.

Local unions may levy an assessment, by a two-thirds majority of those voting, for any purpose except to help an unauthorized strike. Local assessments in aid of a strike in another trade are limited to 50 cents a week and can not be levied for a longer period than from one meeting to another.

The aggregate receipts and expenditures of the local unions since August 1, 1898, have been as follows:

	Receipts	Expenditures
Year ending Aug. 1, 1899 . . . . .	\$30,500	\$18,330
Year ending Aug. 1, 1900 . . . . .	31,980	33,992
Aug. 1, 1900 to June 1, 1901 . . . . .	57,062	29,320

**Benefits.**—*Sick benefit.*—After 6 months of continuous membership one who is sick or disabled for at least 2 weeks, provided the sickness is not caused by intemperance, debauchery, or other immoral conduct, is entitled to a sick benefit of \$5 a week. This benefit can not be drawn for more than 6 weeks in any calendar year, beginning July 1 and ending June 30. Local unions are expected to appoint visiting committees of at least 3 members, whose duty is to visit the sick at least once a week, no 2 members of the committee at the same time. Failure to perform this duty is punishable by a fine of 50 cents. Any member who is taken sick while traveling may draw his benefit by depositing his card with the union under whose jurisdiction he is. An officer who grants sick benefits otherwise than as provided in the constitution is liable to a fine of \$25.

*Death benefits.*—On the death of one who has been a member for 1 year, a death benefit of \$50 is paid.

**Strikes.**—When any local union gets into a dispute with employers, it must report the case to the executive board through the president. The executive board has power to authorize a strike unless the difficulty involves 50 members or more. In such cases the question must be submitted to a general vote of the members. An appeal to the general vote may be taken in any case in which the executive board refuses to authorize a strike. In all cases a two-thirds majority of the members voting is necessary. Without the approval of the executive board or of the members at large no strike can legally be begun. All votes of local unions on strike questions must be by secret ballot. It is forbidden to approve or sustain a strike for an increase of wages between June 1 and September 1 or between January 1 and March 1; but this does not apply to strikes against reduction of wages or against the truck system or against the introduction of the contract system.

Members who participate in an authorized strike are entitled to \$5 a week for

## 202 THE INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

16 weeks, beginning with the second week of the strike, and to \$3 a week thereafter until the strike is ended. The local secretary must send to the international president every week a complete itemized statement of strike expenditures. The constitution provides for a sinking fund or emergency fund, which is never to be suffered to fall below \$3 a member.

**Lockouts.**—The constitution says that "a declaration on the part of an employer or combination of employers to the effect that their employees must cease their connection with the union or cease to work, or any combination entered into by any number of employers for the purpose of throwing their employees out of employment without any cause or action on their part, shall be deemed a lock-out." A reduction of wages does not constitute a lockout.

**Obtaining employment.**—A shop delegate must be chosen in every shop. One of his duties is to collect the amounts due from members to the local. Another is to report to the local corresponding secretary every opportunity for employment. If he neglects this duty, or if the corresponding secretary fails to designate an unemployed member for a vacancy, a fine of \$1 is to be levied on the delinquent; and any member who knows where a job is open and does not report it to the corresponding secretary is subject to the same fine.

**Labor Day.**—The constitution lays a fine of \$2 on any member who works on Labor Day.

**Union label.**—A union label has been adopted, which may be pasted on each instrument made in a strictly union shop. If a manufacturer operates more than one shop, he can not use the label in any unless all are strictly union. If one who already has one factory establishes another in another place, he can not use the label unless the rate of wages in the second shop is at least as high as in the first. One who makes instruments for another manufacturer can not use the label unless he pays at least as high wages as the other. An instrument which is made both in union and in nonunion shops can not bear the label.

**Journal.** The Piano and Organ Workers' Journal is supported by a per capita assessment of 25 cents a year, and is sent to all members. The subscription price to outsiders is \$1 a year.

## THE INTERNATIONAL WOOD CARVERS' ASSOCIATION OF NORTH AMERICA.

**History.**—The International Wood Carvers' Association of North America was established in 1884. It includes carvers in wood and modelers in clay, wax, and other materials. The number of locals and the number of members as reported by the secretary for recent years are as follows:

Year	Locals	Members	Year	Locals	Members
1892	20	1,767	1897	8	749
1893	16	1,434	1898	10	983
1894	10	851	1899	26	1,776
1895	8	785	1900	25	1,859
1896	8	804	1901 (June)	26	2,036

The Wood Carvers have complained that the Wood Workers receive carvers into their organization. In 1900 the Wood Workers proposed an amalgamation of the two unions, with autonomy to the Carvers as to all the affairs of their trade. The Carvers rejected this proposition.<sup>1</sup>

**General aims.**—The Wood Carvers' Association mentions among its objects the regulation of the apprentice system, the insurance of the tools of members, the abolition of contract and piece work, and the establishment of a normal 8-hour work-day. The convention of 1900 adopted the following preamble to the constitution:

"Whereas we, the wood carvers of North America, realize that unity of action and organization are of stringent necessity for the protection of our rights and against the growing aggressiveness of combined capitalists; we therefore have adopted the following constitution as a guide for our action and to maintain and

<sup>1</sup> Carvers' Convention Proceedings, 1900, p. 31.

advance the standard of life, the rate of wages, and to assist the labor movement in general. To accomplish the latter we must employ labor's most powerful weapon, which is independent political action so that labor's interest be represented in all branches of local, State, and national administrations."

A preamble proposed by the New Haven branch, declaring that all means of production and distribution ought to belong to the people in common and be operated for the common good, was defeated by a vote of 27 to 2.<sup>1</sup> But the convention adopted unanimously a resolution in favor of national, State, and municipal ownership of all public utilities.

**Convention.** The constitution provides that the convention shall be held triennially on the third Monday in September. Special conventions may be called by vote of two-thirds of the locals. The regular convention which should have been held in 1899 was postponed by popular vote to 1900.

A local which has 20 members and less than 100 is entitled to 1 delegate, from 100 to 200 members, 2 delegates; from 200 to 400 members, 3 delegates; over 400, 4 delegates. One delegate may cast the full vote to which his local is entitled, but no local can give its proxy to the delegate of another local. A local with less than 20 members may unite with the nearest local of similar size in sending 1 delegate. Delegates are paid \$2.50 a day and railroad fare out of the general treasury.

**Constitutional amendments.**—The constitution may be amended either by a two-thirds vote of the convention or by a vote of the locals on propositions submitted by or through the central committee. A two-thirds majority is necessary. Resolutions other than proposals to amend the constitution may be submitted to a general vote in the same way, and may be carried by a simple majority.

**Officers.** The Wood Carvers' Association has no president. Its officers consist of a central committee of six and a board of supervisors of five. The central committee is composed of a secretary, an assistant secretary, a treasurer, and three trustees. As a committee it has general executive control of the association, and is directed to pay particular attention to contemplated strikes. The board of supervisors is a board of visitation and appeal. All decisions of the central committee are subject to appeal to it, and it is provided that it shall "control the action of the central committee in its administration." It has power to suspend any member or members of the central committee for dereliction of duty.

The several officers, in their separate official capacities, perform the usual duties of their positions. The secretary receives all money from locals and turns it over to the treasurer. The secretary is bonded for \$2,000 and the treasurer for \$1,000. The secretary is directed to "issue a monthly report, giving the number of working hours per week, pay per hour, state of trade, number of shops in city, and men employed, etc., with admissions, clearance cards, and honorable suspensions granted and received, and also expulsions." The trustees have general supervision over the property of the association, and are expected to audit all bills, to attest all orders drawn on the treasurer, and also to attest all bank checks and drafts drawn against association money.

The members of the central committee are elected by the local union of the town selected by the international convention for the holding of the succeeding convention. The term of office is 3 years. The board of supervisors is elected by the local union of some other town, designated by the convention. The local which elects the central committee is responsible for any defalcation of the secretary or the treasurer.

Up to 1900 the Wood Carvers had had no officer who devoted his time to the organization. The secretary's duties were divided between a financial secretary and a recording and corresponding secretary. The convention of 1900 determined to establish the office of general secretary, and to pay for the full time of its incumbent. This convention fixed the following salaries: General secretary, \$18 a week; assistant secretary, \$10 a year; treasurer of the central committee, \$75 a year; 3 trustees, each \$20 a year; secretary of board of supervisors, \$15 a year, 4 other members of the board of supervisors, 50 cents a meeting.<sup>2</sup>

**Local associations.**—A local association may be established on the application of 10 wood carvers. The local is required to hold meetings at least twice a month, and to "make statistical researches into the condition of their members with regard to wages, working hours, and the state of trade," and report to the central committee. These reports seem to be quite generally prepared by the local officers, and a tabulated summary of them is published monthly by the secretary.

<sup>1</sup> Convention Proceedings, 1900, p. 2.

<sup>2</sup> *Ibid.*, p. 47.

**Membership.**—The constitution does not define the qualifications for membership nor fix the method of admission.

**Honorary members.**—Members who have attained the age of 60 years, and have been members in good standing for 10 years consecutively, may be enrolled as honorary members, free of dues and taxes, except death assessments. Such members have voice but not vote in the association.

**Apprentices.**—The Wood Carvers' Association allows 1 apprentice to firms employing only 5 men on the average during the year, 2 to those employing 10 men, 3 to those employing 15 men, and 1 additional apprentice for each additional 25 men. Apprenticeship is to cease 1 year from entering the trade. After working at the trade for that period, if a man has reached the age of 18, the rules forbid that he be allowed to work as an "improver" at less than the regular wages. He must take his chances as a journeyman.

Upon payment of the quarterly per capita tax and one-half of each death assessment when levied (but without local dues) registered apprentices are entitled to one-half of the amount of insurance paid for the loss of tools, to one-half of the amount paid to single men when on strike, and to a death benefit of \$50.<sup>1</sup>

**Clearance certificates.**—A clearance certificate must be granted to any member who is working under the jurisdiction of another local, on payment of all dues, fines, and assessments. The membership card must be shown to the delegate upon entering a shop; otherwise the privilege of going to work must be denied.

**Discipline.**—The association provides for the bringing of charges by any member against another whom he believes to have willfully injured him through unfair means, and for the infliction of a penalty of not less than \$5, if the person accused is found guilty after a fair investigation. Members who make charges and fail to substantiate them must pay a fine of not less than \$5. An appeal lies from the local to the central committee, thence to the board of supervisors, and thence to the convention.

**Finances.**—The charter fee for new locals is \$10, including the cost of an outfit of stationery, but apparently not the cost of a seal. The per capita tax is 50 cents every 3 months. Of this sum 30 cents goes to the general fund, 5 cents to the insurance fund, and 15 cents to the defense fund. The last can be used for strikes and lockouts only, and the constitution requires that it be maintained at a minimum of \$1 a member. The central committee has power to levy assessments to meet any deficiency. Special assessments are regularly levied to pay death benefits.

The treasurer is forbidden to retain cash in hand exceeding \$25. All sums above this amount are to be deposited in such bank as the central committee may select. The local association which elects the central committee is to be responsible to the international association for all losses sustained by defalcation of the financial secretary or treasurer. The bonds of these officers are executed in favor of the local union which elects them but the premium on them is paid by the general body. The same local union which elects the central committee elects also an auditing committee of 3, which is to investigate all the financial business of the union quarterly and to report to the board of supervisors.

The receipts and expenses for 1899 and the balances in the several funds at the end of that year were as follows.

	Receipts	Expenses	Balance
General fund . . . . .	\$1,229	\$78	\$1,005
Fire insurance . . . . .	367	114	2,305
Strike fund . . . . .	707	171	2,122
Death benefit . . . . .	1,473	1,600	341
Organization . . . . .	499	563	124
Total . . . . .	4,285	3,186	5,899

**Benefits—Death benefit.**—Upon the death of any member in good standing, \$50 is paid to his wife, next of kin, or legatee. If the member has been in good standing for 6 months the payment is \$150. The death benefit fund is maintained by

<sup>1</sup> Convention Proceedings, 1900, p. 37.

assessments of 25 cents each, which are to be levied whenever the fund falls below \$600. The following payments have been made from the fund in recent years

	Year ending August 31	Benefits of \$150	Benefits of \$50
1897		7 \$1,050	1 \$50
1898		12 1,800	—
1899		7 1,050	2 100
1900		12 1,800	—
Total		38 \$9,700	3 \$150

*Tool insurance.*—The Wood Carvers' Association maintains a fund to insure the tools of its members against fire or unavoidable accident by a tax of 5 cents per member quarterly. If the amount of this fund proves insufficient to cover losses, the central committee is empowered to levy a tax sufficient to make up the deficit. The payment in case of loss is limited to \$30. During the 4 years from September 1, 1896, to August 31, 1900, \$554.40 was paid from this fund to 49 members. The balance in the fund grew from \$1,551.25 on January 1, 1897, to \$2,407.83 on September 11, 1900, in spite of transfers of \$125 to the general fund and \$150 to the organization fund. During this time, however, the quarterly tax for the insurance fund was 8 cents.

*Legal protection.*—The locals are recommended to give their members all necessary legal protection.

*Strikes.*—Local associations are expected to apply to the central committee for sanction before ordering a strike. They may strike upon their own responsibility, but are not entitled to the benefit of the strike fund until the central committee has approved their action. When a strike is sanctioned, the strike benefit is \$8 a week for married men and \$6 for single men after the first week, but if the strike lasts longer than 8 weeks, the benefits to be paid after that time are to be fixed by the central committee.

Between January 1, 1892, and September 1, 1896, locals applied to the central committee of the Wood Carvers' Association for sanction of strikes on 30 occasions. Seven times sanction was refused, 24 times it was granted. Of the 23 strikes sanctioned, 10 were reported successful, 8 were reported unsuccessful, and of 5 the result was reported unknown. Between September 1, 1896, and September 1, 1900, 13 applications were made. Three were refused. Of the 10 which were approved, 2 were for reduction of hours, 3 for increase of wages, 2 against reduction of wages, and 3 for other causes. Two were won, 2 were lost, 4 were partly successful and the result of 2 is unknown.

On the other hand according to the report of the secretary of the American Federation of Labor for the year ending October 31, 1900, the union reported to him that it had won 10 strikes during the year, compromised 3, and lost 2. About 150 persons were involved, of whom 125 were benefited. The cost of the strikes was \$1,016. These statements are apparently inconsistent with those above taken from the published reports of the organization.

Between January 1, 1897, and September 11, 1900, the strike fund, maintained by a quarterly tax of 15 cents on each member grew from \$83.03 to \$2,350.41. The expenditure for strikes during this period was \$887.36, and \$125 was transferred from the strike fund to the general fund.

*Hours of labor.*—The association provides that no shop shall increase its normal work day, and that the several local associations shall prohibit their members from working overtime.

*Piecework.*—Local associations are required to prohibit their members from establishing piecework in any shop. This provision has, of course, no application to shops in which piecework already exists. The convention of 1900, however, adopted a resolution declaring that the piecework system had given rise to abuses that wrought grievances to the members, and instructing the local and national officers "to accuse all members against this obnoxious piecework system and make all possible efforts to have it abolished." The convention also resolved that no subcontractor should be an active member of the organization.<sup>1</sup>

*Official journal.*—The convention of 1900 determined to publish a monthly journal under the control of the central committee. It was resolved that the discussion of economic subjects in a nonpartisan spirit be allowed in the journal.

<sup>1</sup> Convention Proceedings 1900, pp. 5, 6.

## COOPERS' INTERNATIONAL UNION OF NORTH AMERICA.

**History.**—The Coopers' International Union of North America was organized in 1890. It includes workers on slack barrels for holding dry substances, on tight barrels for sundry liquids and on beer barrels. The secretary reports the number of locals and the number of members as follows:

Date	Locals	Members
September, 1897	32	1,690
September, 1898	57	2,400
September, 1899	72	3,290
September, 1900	93	4,335
March, 1891	115	About 5,000

**General aims.**—The Coopers propose the following objects in the preamble of their constitution. To prohibit the employment of children under 16; "to gain some of the benefits of labor-saving machinery by a gradual reduction of the hours of labor;" to abolish contract convict labor, to secure protection against imported pauper labor; to demand the repeal of all conspiracy laws that abridge the rights of labor organizations; to encourage the adoption of proper apprentice laws, to secure the employment of members in preference to nonunion men; to secure recognition of the union and contracts for the maintaining of strictly union shops, to settle differences with employers by arbitration, "to cooperate with bosses to advance the price of making and the price of barrels when practicable," "to make industrial and moral worth—not wealth—the true standard of individual and national greatness.

**Convention.**—The convention is held biennially. Locals are entitled to one delegate for 50 members or less, and one additional delegate for each additional 50 members or major fraction thereof. No delegate can cast more than one vote. Each delegate must be an active cooper and must have worked at the trade at least 3 months before his election. He must have been a member in good standing for 6 months, if his local has existed so long. No local can be represented unless all money due the international union has been received by the secretary-treasurer at least 3 days before the convention. The expenses of delegates are paid by locals.

The members of the national executive board have seats and votes in the convention whether or not they are delegates.

**Constitutional amendments.**—An amendment may be adopted by popular vote on the proposal of any local seconded by one third of all of the locals. An affirmative majority of two-thirds is necessary to carry an amendment, and the vote is void unless half of all the members take part in it. But the constitution may be amended by a majority vote at the convention.

**Officers.**—The officers are a president, three vice presidents, a secretary-treasurer, and a general organizer; all are elected at the convention, and a majority vote is necessary. The president, the three vice-presidents, and the secretary-treasurer constitute the general executive board. The secretary-treasurer and the general organizer receive \$21 a week apiece. Three hundred dollars a year is allowed to the secretary-treasurer for clerk hire. The general organizer is allowed mileage and hotel bills in addition to his salary, but no other expenses. The members of the executive board receive for attendance at meetings \$1 a day for actual time lost, railroad fare, and \$2 a day for hotel expenses.

**Local union.**—A local union may be formed by any seven coopers or machine operators working at the trade, with the consent of the nearest local, or with the approval of the executive board notwithstanding the objection of the nearest local. A local is forbidden to withdraw from the international union, or dissolve, so long as seven members in good standing object.

**Membership.**—An applicant for membership must sign a regular application blank, and have it certified by a member in good standing as a voucher for his fitness. Employers and foremen may be enrolled, subject to payment of dues and assessments, but can not be initiated. Such membership does not give a right to a transfer or traveling card. Members of cooperative shops working in their own establishments are entitled to full membership. Candidates are received by a majority vote of the local after recommendation by the committee. One who has been expelled, suspended, or rejected by any local can not be received by any other local except with the consent of the first.

**Apprenticeship.**--No member can take an apprentice without the consent of his local. No apprentice can begin under 16 years of age. Not more than 1 apprentice can be allowed for every 10 members of the local. The apprentice must serve 3 years at the bench, and the local may decide what wages he shall receive during the term. The secretary explains that while the apprentice law is applied in machine factories as well as among hand coopers, it is not attempted to apply it in organizing machine factories that have not been organized before. At such times all workmen are taken in, provided they are men of good character. When union control of the shop is once established, an experience of 3 years is required for admission to the union.

**Cards.** A transfer card is granted on payment of all dues to date of application, together with a fee for the card not exceeding 25 cents. Such a card must be received by any local without any extra charge. If, however, the local in which it is deposited is in the same State as that which issued it and has a higher initiation fee, the difference in initiation fee may be collected. This can not be done if the locals are in different States, but in any case a local which has a higher initiation fee is not obliged to pay sick and death benefits to a member who comes from a local with a lower initiation fee.

A traveling card is issued, good for any time not exceeding a year, on payment of all dues in advance for the full period of the card, together with a fee not exceeding 25 cents.

If a member gets employment in a strictly union shop in a place other than that where his own local is situated, he must transfer his membership within 2 weeks to the local which has jurisdiction of the shop, unless he holds a traveling card or other card showing dues paid in advance. In that case membership must be transferred within 2 weeks after the card expires.

**Discipline.** Charges against any member must be made in writing, but the name of the person who makes the charge is not to be made public. When the charges have been read to the local by the secretary they are referred to the local board. The board cites the member to appear before it at a fixed time and place. He may select any member to appear as counsel for him. If the board finds the defendant guilty it fixes the punishment. An appeal lies to the general executive board.

**Finances.**--The charter fee for new locals is \$10. Fifty cents is paid into the national treasury for each new member initiated and for each suspended member reinstated. The per capita tax is 25 cents a quarter. All locals are obliged to buy their stationery and supplies from the central office, and this is a source of some revenue. The local initiation fee may not be less than \$1 nor more than \$10. Any member who is in arrears for 3 months is to be suspended and is not entitled to benefits for 30 days after he is reinstated.

**Strikes.**--All difficulties with employers must be referred first to the local executive board, which constitutes a board of arbitration, and which alone has power to order strikes. But no board can order a strike until two-thirds of the members concerned have voted for it by secret ballot.

Locals are required to notify the secretary-treasurer before going on strike or as soon thereafter as possible, giving full particulars of the trouble, the number of members in the local, and other circumstances. The secretary-treasurer must lay the case first before the executive board, and then before all the local unions. Any local which fails to send in its vote within 2 weeks after receiving the notice is to be fined 50 cents for each member in good standing. The approval of the majority of the locals (not the majority of members) is necessary to sanction a strike. "Cases where discrimination is used by an employer against a member, the reduction of the scale of wages and hours, shall be sufficient cause for a local to declare a strike without sanction from the general officers."

Members in good standing involved in an authorized strike are entitled to \$4 a week, but no benefit is given for the first 3 weeks. Not more than one strike can be legalized at a time, and the executive board can declare strike benefits at an end whenever they think it necessary. A local is not entitled to strike benefit until it has been organized 3 months.

The union reported to the Federation of Labor in the fall of 1900 that it had won 15 strikes during the preceding year, compromised 3, and lost 7; 3 were still pending. Five hundred persons were involved, of whom 415 were benefited. The cost of the strikes was \$3,110.

**Boycotts.** Locals are forbidden to place any concern on the unfair list without the consent of the general executive board. This consent is not given till the board has made its own investigation and its own attempt at settlement. The secretary says: "The general executive board always tries by every honorable

means to reach an honorable settlement before declaring a firm unfair. We write them a nice letter on the subject. Some employers positively decline to correspond with us. In that case we consider them unfair, but even then we sometimes send a representative to see them in person. In response to our attempt at settlement we sometimes receive insulting letters, containing threats of prosecution and such assertions as 'We don't want anything to do with the people you represent, we propose to run our own business.' In those cases we usually conclude that such employers are unfair. In all cases we try by every honorable means to settle disputes, disciplining if possible our own members when they are proved to be in the wrong."

**Machinery.** For several years the union fought against the introduction of machinery in the trade. It would not admit machine coopers, and would not allow its members to operate machinery. Its representatives asked the American Federation of Labor convention of 1895 to declare against ale and beer packages made by machinery and in favor of hand made. A representative of the Brewers expressed the opinion that the convention could not go on record as fighting machinery, and that it would be better for the Coopers to organize the men in the machine cooperage factories. This view was adopted by the convention.<sup>1</sup>

At the American Federation of Labor convention of 1898 a representative of the Brewers introduced a resolution which recited that the Coopers' Union had failed to comply with the resolution of the American Federation of Labor convention of 1895, instructing it to organize the machine coopers, and were even trying to use the power of the American Federation of Labor in fighting a hopeless battle against the use of machinery in the coopers trade. The resolution, as ordered, would have instructed the Coopers' Union to organize the machine cooper shops at the earliest possible date. The convention declined, out of respect to the autonomy of the Coopers' Union, to pass a resolution of instruction, but it indicated its approval of the policy which the resolution suggested.

In September, 1899, the laws of the organization were so changed as to provide for the admission of machine coopers' unions. The report of the executive council of the American Federation of Labor to the convention of the Federation held the next December contains the following passage: "A peculiar condition of affairs was presented to us by reason of the coopers' union in Milwaukee refusing to permit their members to work on machines. The Pabst Brewing Company, a union house, required additional cooperage in order to supply the trade. This supply was impossible without the operation of machines. The coopers' union assumed the peculiar attitude of giving the company permission to purchase cooperage made by nonunion men, or boys, or made by machinery or made by nonunionists by machinery, but refused to allow its members to operate the machines. The company, desirous of operating a union establishment, refused to purchase nonunion cooperage. The union directed its members to strike and, as a result, affected all other trades employed in the brewery. It would have resulted in a lockout, and employers of Milwaukee generally refused to enter into agreements with our various unions unless they could be assured that a union house desirous of conducting its affairs upon union conditions, might be assured of fair treatment. The officers of several international unions affected protested against the course being pursued by the coopers' union, and insisted that an adjustment on trade union lines ought to be effected. Our good offices were invoked, and, notwithstanding a protracted controversy, it is with pleasure we report that the matter has been entirely adjusted. The Coopers' International Union has determined to recognize the machines and to permit its members to operate them, providing fair union conditions are obtained." It should be noticed that it was the Milwaukee branch, and not the Coopers' International Union, which assumed the peculiar attitude that Mr. Gompers criticizes. The president of the international union was a member of the Milwaukee local, and was partly responsible for its action, but he was not sustained by the other officers or by the members generally.

The coopers of Detroit went on strike in the summer of 1900 to enforce the right to operate machines.<sup>2</sup>

**Cooperative shops—Employees.**—At the convention of the American Federation of Labor, held in December, 1899, immediately after the Coopers' Union had voted to take in machine men, a protest was received from the local union of machine coopers in Minneapolis, declaring that to place them under the jurisdiction of the Coopers' Union would be to place them at the mercy of their employers. The members of the Coopers' Union, according to the statement, were almost all stockholders

<sup>1</sup> Convention Proceedings, 1895, p. 91.

<sup>2</sup> Convention Proceedings, 1898, pp. 64, 136.

<sup>3</sup> Convention Proceedings, 1899, p. 57.

<sup>4</sup> American Federationist, August, 1900, p. 218.

in cooperage plants, and machine coopers were employed by them. If the machine coopers were compelled to join the Coopers' Union, these union employers would be entitled to free admission to their meetings. Moreover, since the machine coopers were in the minority, they would be controlled by their employers even in the union itself. The convention of the Federation, however, still thought it advisable that all coopers be brought under the jurisdiction of the Coopers' Union.<sup>1</sup> The complainants are now organized within the international body, but as a separate local.

**Hours of labor** -- The constitution names 8 hours as the maximum of a day's work. This is understood and treated, however, as a declaration in favor of an 8-hour day, and not as an ironclad rule.

**Labor Day** -- Each local union may require the observance of Labor Day by its members, under such regulations as it may fix.

**Piecework** -- The most of the work of the coopers is done by the piece.

**Union label** -- The coopers have found it desirable to use two different labels, one for "slack" cooperage, which holds dry articles, such as flour, apples, and potatoes, and another for "tight" cooperage, designed for liquids. On slack barrels the label is printed with a rubber stamp. Tight barrels are often painted, and it is found desirable, largely on this account, to press the label into the wood.

Union stamps or labels are furnished free of charge to strictly union shops. No shop is considered strictly union unless all coopers and machine operators are members of the Coopers' International Union, nor unless the apprentice laws of the International Union are complied with. If one manufacturer operates more than one shop in the same locality he can not use the stamp unless all his shops are union. In order to use the stamp a shop must employ at least one journeyman cooper.

The union label was adopted in 1896. In the summer of 1900 the general secretary estimated that 10 per cent of the output of the trade was sold under the union stamp. The Coopers complain that union-made goods, such as beer, are often put up in slack barrels and yet bear the label of the union whose members made the goods. They try to induce unionists to look out for the label of the coopers, as well as for the labels of the brewers or other workers. They have proposed to the Brewery Workmen that the two unions adopt a joint label, but the Brewery Workmen have not consented. The Brewery Workmen have of late shown considerable activity, however, in demanding that the breweries use union-label cooperage.

In April, 1901, the secretary wrote: "The demand for union-labeled barrels has become so great that we are having difficulty in supplying it. We have found the label to be our main hold."

**Official journal** -- The official journal is a monthly paper, printed partly in English and partly in German. The constitution directs that the union labels of all labor organizations be printed in it each month. No advertisements may be accepted but those of firms "known to be fair to organized labor." The journal is sent free to all members.

## CARRIAGE AND WAGON WORKERS' INTERNATIONAL UNION OF NORTH AMERICA.

**His. org.** -- The Carriage and Wagon Workers' International Union of North America was organized on August 10, 1891. There had existed previously District Assembly 247, the Carriage Workers' National Trade Assembly of the Knights of Labor. The union embraces blacksmiths, wood workers, painters, and trimmers. In some places, where many are employed, the different trades are organized into separate locals. Thirty-five local unions were reported in August, 1900, and 1,070 members, of whom 20 were women. The number of locals reported at the end of each fiscal year, August 10, is as follows: 1892, 15; 1893, 17; 1894, 17; 1895, 16; 1896, 14; 1897, 12; 1898, 10; 1899, 20; 1900, 35.

During 1900 the officers submitted to the members a proposition to withdraw from the American Federation of Labor and join the Socialist Trades and Labor Alliance. A similar proposition had been rejected by the previous convention. The executive council of the American Federation of Labor in its report to the convention of 1900 declared that it had every evidence that the members of the organization were not fairly represented by their officers. This may be indicated

<sup>1</sup> Convention Proceedings, 1899, p. 121.

by the fact that the proposition to withdraw from the American Federation of Labor was defeated by the popular vote. It has been reported that the officers, defeated in their purpose to carry the organization with them, have planned to break it up.<sup>1</sup>

The officers, on their part, make the same kind of accusations against the conservatives—accusations of scabbing and trying to destroy the organization—which the conservatives make against them and other Socialists. They appear, however, to be out of harmony with the general policies of the trade-union movement. They seem, for instance, to despise the union label of their own organization.<sup>2</sup>

**Objects.**—The Carriage and Wagon Workers name among the objects of their organization, to uphold a fair rate of wages, to lessen the hours of labor, to educate the worker in economic and political questions, and to try to replace strikes by arbitration and conciliation.

The preamble of the constitution is as follows:

"Recognizing that organization is necessary to secure the amelioration of the condition of our fellow-craftsmen, better remuneration for our labor, the regulation of the hours constituting a day's work, and the elevation of ourselves socially, morally, and intellectually, we have organized the Carriage and Wagon Workers' International Union of America."

**Conventions.**—The constitution of the Carriage Workers provides that conventions shall be held at such time and place as a general vote shall determine. Each local union has one delegate, irrespective of the number of its members.

No convention has now met since 1896. A proposition to hold one in 1900 was defeated by the popular vote.

**Constitutional amendments.** The constitution can not be altered or amended except by a general vote.

**Officers.**—The Carriage and Wagon Workers have no president. Executive power is lodged in the hands of an executive board of seven members. Supervisory power is in a board of appeals of seven members, to which appeals from the decisions of the executive board, the secretary-treasurer, and other officers of the International Union or of local unions may be made. A further appeal lies to the whole body of members, on demand of two local unions in different cities.

These two boards are not composed, wholly or in part, of officers performing other duties in the union. The other officers are a secretary-treasurer and an undefined number of organizers. Such officers are chosen by popular vote, upon the Australian system. Nominations are made by locals, and any union which fails to make nominations is fined \$5. The secretary-treasurer furnishes printed ballots, bearing the names of the candidates who have been nominated and have accepted the nomination, arranged in alphabetical order, with the names of their local unions, and with the names of the offices for which they are nominated. Any member who fails to vote in the election is fined 25 cents, unless he is reported sick or holds a traveling card.

The executive board is elected by the local unions of the place from which the secretary-treasurer is chosen. The board of appeals is elected by the local unions of another town, which is designated by general vote.

In every election a majority is necessary for a choice, if no choice is made in the first ballot, a second ballot is held, in which all candidates are dropped except the two who have received the highest votes.

The secretary-treasurer gives bonds for \$2,000, and receives a salary of \$50 per year, together with \$1 a day while attending the convention, and railroad fare to and from the convention. The organizers receive \$15 a week, with railway fares and hotel expenses, to be determined by the executive board.

The secretary of each local union is required to collect statistics regarding the hours of labor, the wages of day workmen and of piece workmen, and all matters of interest which the international secretary-treasurer may demand, and make a full report to the secretary-treasurer every 3 months.

**Membership.**—The Carriage Workers provide that a member engaging in the sale of intoxicating liquors shall not remain in any local union. There is no further mention of qualifications for membership except in connection with charter members of locals: they are required to be persons working at the carriage and wagon industry or allied branches, and to be persons of good moral character.

The Carriage Workers have a provision for the election of honorary members, apparently persons not directly connected with the craft, by a two-thirds vote of any local union. "No man who follows a calling violative of the laws of morality shall be elected an honorary member."

<sup>1</sup> American Federation of Labor Convention Proceedings, 1900, pp. 68, 69.

<sup>2</sup> See Carriage and Wagon Workers' Journal, January, 1901, p. 120.

**Traveling and transfer cards.**—Any member who wishes to travel may obtain a traveling card, good for 3 months. It entitles him to recognition and assistance from any local of the International Union. If a member wishes to transfer his membership from one local to another, he must pay up all dues and assessments and a fee of 25 cents for a transfer card.

**Finances.**—The revenue of the International Union is derived from a per capita tax of 20 cents a quarter. There are no restrictions on the initiation fees or dues of the local unions. Payment of all initiation fees, dues, fines, and assessments is evidenced by adhesive stamps, which are pasted in the member's book, canceled and dated.

The receipts and expenditures in certain years have been as follows:

Fiscal years	Receipts	Expenditures
1892	\$523	\$540
1893	601	612
1894	659	653
1895	1,392	1,041
1896		

**Strikes.** Any local union which is about to present a demand or grievance must notify all its members to be present at a regular or special meeting, when a vote by ballot shall be taken, and a two-thirds majority is necessary to determine that the union will insist upon the demand or grievance. If such is the decision, the union must send to the international secretary-treasurer a statement of the grievance and of the action of the union. The secretary-treasurer is then to proceed to the place of difficulty, personally or by deputy and, if possible, effect a settlement. No member is allowed to work in the shop where trouble exists while the grievance is pending. Strike benefits are paid only from the date of sanction by the executive board. If sanction is refused, the union must declare the strike off, and if it fails to do so it may be suspended at the option of the executive board.

The strike benefit is \$3 per week for single men and \$5 per week for married men, and for single men with others dependent upon them for support. A local union must be organized 6 months before it can be entitled to strike benefits.

To create a strike fund the executive board has power to levy an assessment of not more than 10 per cent, nor less than 1 per cent, of the amount earned by each worker per week. Such an assessment can not be levied oftener than once in 3 months except in case of strike or lockout, but in such cases an assessment may be levied weekly.

The union reported to the Federation of Labor in the fall of 1900 that it had won 4 strikes and lost 2 during the preceding year. Three hundred persons were involved, of whom 120 were benefited. The cost of the strikes had been about \$2,800.

**Hours of labor.**—The convention of Carriage Workers in 1896 adopted the following resolution:

“Whereas the unscrupulous competition has manifested itself in the ranks of the carriage and wagon craft, as well as in the Manufacturers' Association, and

“Whereas it seems impossible for the great army of unemployed to obtain a mere subsistence under the present conditions of employment, and

“Whereas it has been demonstrated beyond any possible chance of controversy that the labor of the world can be accomplished in less than 10 hours. Therefore, be it

“Resolved, That the international union use its utmost efforts to reduce the hours of labor to such number as will insure to each worker of the craft an equalized state of employment and a more advanced state of civilization and education, and a strict enforcement of the child-labor laws.”

In 1900 the secretary-treasurer reported that the prevailing hours were 10 a day, except in 6 local unions, which had obtained a 9-hour day.

**Piecework.**—The constitution of the Carriage Workers contains no provision about piecework. The secretary-treasurer reports that it is allowed under protest.

**Journal.**—The union maintains a monthly journal of 16 pages, for which a subscription price of 50 cents a year is charged. The executive board has power to levy an assessment for any deficit in the cost of it. One-fourth of the space, and no more, may be devoted to correspondence in the German language, and 3 or 4 pages are regularly printed in German. The journal is published under the super-

vision of the executive board, and the editor is chosen by general vote of the union or unions where the executive board is located. The paper is an ardent advocate of socialism.

**Union label.**—The union label was adopted in 1894; 57 manufacturers were reported to be using it on January 1, 1900, and in August, 1900, it was reported that 7,000 labels had been issued since the adoption of it.

The secretary-treasurer procures the official labels and distributes them to the local unions; but the local unions pay the cost of them. No shop is entitled to the use of the label unless every worker employed in it is a member of the union in good standing.

## CHAPTER X.

### LABOR ORGANIZATIONS IN THE METAL AND MACHINE TRADES.

#### NATIONAL AMALGAMATED ASSOCIATION OF IRON, STEEL, AND TIN WORKERS OF THE UNITED STATES.

**History.**—As its name implies, the Amalgamated Association is the result of the consolidation of various other orders and societies. The present order was organized at Pittsburg in August, 1876. The societies which were consolidated were known as the United Sons of Vulcan, consisting of boilers and puddlers; the Associated Brotherhood of Iron and Steel Heaters, Rollers, and Roughers of the United States, consisting of men employed at the furnaces and rolls, and the Iron and Steel Roll Hands Union, composed of catchers, hookers, helpers, and others engaged about the trains of works. The oldest of these three bodies was the United Sons of Vulcan, which originated in Pittsburg, where a local union was formed April 17, 1858, known as Iron City Forge. It consisted exclusively of boilers. This order was founded by a few men who had held meetings secretly for some time for the purpose of discussing the advisability of organization. There was a fear at first that the order might be betrayed, and the employers might learn of all the features of the movement; and the consequent secrecy kept the order small until the year 1861. In that year, when, as a result of the civil war, a great revival in the iron trade took place, great efforts were put forth to extend the organization. Local forges were instituted in eastern Pennsylvania, New Jersey, Delaware, Maryland, West Virginia, Ohio, Kentucky, Indiana, Illinois, Wisconsin, and Missouri. A call was issued for a national convention to be held in Pittsburg September 8, 1862. At this convention a constitution and by-laws were adopted. The convention declared that the association should be known as the National Forge of the United States, United Sons of Vulcan.

Up to 1867 strikes and lockouts were inaugurated solely by the men employed in the mill where the grievance arose, and the financial support for members involved in labor difficulties was obtained entirely by voluntary subscriptions. At the convention held at Harrisburg in 1867 the system of legalizing strikes and supporting them systematically was adopted, and remained as then ordered until the amalgamation. The question of establishing sick and death benefits was brought before several conventions of the order, but the proposition was always defeated, the main object of the organization for years being to educate its members and to solidify those employed in the trade.

The second order, chronologically, which was merged into the new association was the Associated Brotherhood of Iron and Steel Heaters, Rollers, and Roughers. This order was instituted in August, 1872, with a general office at Springfield, Ill. The membership consisted chiefly of those who were in charge of furnaces and rolls in the finishing departments of the Western mills, but few of the members working east of the Allegheny Mountains. The organization lasted 4 years, or until the amalgamation which took place in 1876 as the result of the efforts of the order of the United Sons of Vulcan.

In the case of strikes voluntary contributions were made for the support of those on strike or who were locked out. No sick or death benefits were established, and the legalizing of strikes was left entirely with local bodies, as was also the arranging of wages.

The third organization which became a member of the Amalgamated Associa-

tion was the Iron and Steel Roll Hands' Union, composed of catchers, hookers, helpers, and others engaged about the trams of works. This order was organized June 2, 1873, with its general office at Columbus, Ohio. The custom of legalizing strikes was the same as that which prevailed in the Associated Brotherhood of Iron and Steel Heaters, Rollers and Roughers—that is the ordering of the strike was left to the local bodies. Strike benefits were created through voluntary contributions but neither sick nor death benefits were paid. This order had a brief life, practically struggling for existence until 1876, when it merged itself with the other organizations.

The organization has had its ups and downs corresponding to a great extent with the ups and downs of the iron industry. Its first year was one of great success, but in 1878 the price of iron fell, and there were many strikes both against reductions of wages and against the "contract system," by which the first 4 weeks' wages and 25 per cent of all subsequent wages were retained to the end of the year, then to be paid to the men if profits should "justify such payment." In 1879 trade revived, and there was a cessation of strikes. In this year the first president, Joseph Bishop, resigned his office because his salary was reduced from \$1,500 to \$1,000. Mr. John Jarrett was elected president and held the office until 1883.

In 1881 it was voted to include Canada within the jurisdiction of the association, and colored men were made eligible to membership. This was the year of the organization of the Federation of Trades and Labor Unions, which has since become the American Federation of Labor. The Amalgamated Association took a prominent part in the formation of the Federation and Mr. Jarrett was its first presiding officer. The Amalgamated Association left the Federation the next year, however, because the plank in favor of protection, which had been put into the platform of the Federation, was removed. In 1883 steel rail manufacturers reduced wages 33 per cent. In 1892 the association undertook the celebrated strike at Homestead.<sup>1</sup>

The number of sublodges of the Amalgamated Association in good standing, as reported at the convention of 1892, was 292, with 24,000 taxable members. In 1895, 34,000 members, in 290 locals, were reported.

**Conventions.**—The convention meets annually on the third Tuesday in May. One-fourth of the whole number of representatives elected constitutes a quorum. "A sublodge with less than 100 members shall be entitled to 1 representative; a sublodge with 125 members shall be entitled to 2 representatives, and 1 representative for each additional hundred." Each representative is entitled to 1 vote, but must cast his vote in person. Representatives hold their office for 1 year. After their terms expire they continue to be permanent members of the convention, with the right to sit at any session of it—but they have no vote.

It is made the duty of one of the representatives of each lodge to forward to the secretary-treasurer the quarterly report of the lodge, together with all assessments levied by the national president on or before the last days of March, June, September, and December. A lodge whose report for March 31 is not sent before April 10 loses its representation.

Representatives are elected annually, by written ballot, in the month of April. When 2 or more delegates are to be elected by a sublodge each ballot is to contain as many names as will make up a complete delegation. When one candidate has received a majority of all votes he is to be declared elected. On subsequent votes each ballot is to contain a sufficient number of names to complete the delegation. The candidate who has received the least number of votes is each time to be dropped. Delegates must be clear on the secretary's book, must be working at some of the trades which make up the association, and must have served 6 months in some office of the sublodge.

The actual railway fare of the delegates is paid by the national lodge, all other necessary expenses are paid by the locals.

A programme of business, containing any suggested alterations or amendments of the laws, originating either with the national officers or with any local lodge, is to be sent to each local by the secretary-treasurer 6 weeks before the convention. No resolution bearing upon matters of law or prices, not contained in the programme, can be entertained by the convention unless by consent of two-thirds of the delegates, except resolutions relating to the "base of scale," or minimum price of iron or steel on which the sliding scale of wages is based. An executive session is to be held at each convention with closed doors. The first business in executive session is the consideration and adoption of a scale of prices, and during such session no person may be present except the representatives to the national convention.

The constitution may be amended by a majority vote in convention.

<sup>1</sup> See below, pp. 216, 217.

<sup>2</sup> Carroll D. Wright, *The Amalgamated Association of Iron and Steel Workers*, pp. 4-7, 14-19.

**Officers.**—The elective officers are a president; an assistant president, who is also the organizer; a secretary-treasurer; an assistant secretary, a managing editor of the *Amalgamated Journal*; three trustees, and a vice-president for each district or division of a district. The headquarters are fixed at Pittsburgh, and it is required that the president and the secretary-treasurer live there.

All the officers are elected by the convention. The president is elected from among the delegates to the convention, or those who have been delegates at previous conventions. He is required to give all his time to the association. He gives a bond for \$5,000, and his compensation is fixed by the convention. He has power to appoint vice-presidents and trustees when vacancies occur.

The secretary-treasurer is also elected from the delegates at the convention, or those who have been delegates at previous conventions. His bond is \$25,000 and his compensation is fixed by the convention.

The vice-presidents are the chief executive officers within the several districts or divisions of districts in which they live. They are required to visit the several lodges of their districts once every 6 months, and to render such other assistance as the president may require. They are to appoint each three deputies to assist them, and the deputies are required to report to their respective vice-presidents every 3 months.

The board of trustees receive and hold the bonds of the president, secretary-treasurer, and assistant secretary, and they, together with the president and secretary-treasurer audit all accounts of the association every 3 months. The trustees give bonds of \$5,000 each, which are deposited with the president. The trustees and other officers constitute an advisory board to the president, "with whom he shall consult at his discretion."

All the national officers who do not devote their whole time to the association, including deputies, and also members of executive and conference committees, are paid for the time they lose in doing association work, at the wages they would have earned in the mill. When their mills are not working they are paid \$2.50 a day for time devoted to the association.

In case of a vacancy in the office of president the vice-president of the first district is to assume the office temporarily, and call a meeting of the vice-presidents and other national officers to elect a successor for the unexpired term. In case of a vacancy in the office of secretary-treasurer his duties are performed by the president till the vacancy is filled by action of the officers.

**Membership.**—The constitution of the Amalgamated Association provides that it "shall be composed of all men working in and around rolling mills, tin mills, steel works, chain works, nail, tack, spike, bolt and nut factories, pipe mills, and all works run in connection with the same, except laborers." Laborers may be admitted at the discretion of the subordinate lodges. Any person employed as a foreman, superintendent, or general manager is ineligible to membership. A candidate must be proposed by a member of the lodge in good standing, and reported on by the committee at the next stated meeting. A ballot is then taken, and if two or more black balls appear the case is referred to a special committee. If the persons who cast the black balls fail to give their reasons, or if the special committee finds no good cause for rejecting the candidate, another ballot is taken, and a two-thirds vote is then enough to admit him.

**Unskilled workmen and helpers.**—Members are forbidden to give instruction to unskilled workmen in any of the trades represented in the association, on pain of suspension or expulsion.

The unskilled workmen here referred to are to be distinguished from the helpers in the skilled work. The secretary-treasurer of the association says, referring to this rule, "The ranks of skilled workmen are filled by men who fill the minor positions, hence we endeavor to prevent men from learning the skilled positions before they have served in the minor ones. If they were permitted to learn the skilled jobs first, it would necessarily mean that those holding the minor positions would have no opportunity for improvement."

Members are to have the privilege of hiring their own helpers without dictation from the management, and no member may discharge a helper except for just cause, or reduce the wages of a helper during the scale year.

**Cards.**—Every member must provide himself with a due card and a working card. Without a working card a member can not go to work in any mill controlled by the association. In removing from one place to another a member must provide himself with a withdrawal card. To obtain a withdrawal card one must be in good standing and clear on the secretary's books. Dues may be paid for not more than 1 month in advance, and the payment must be indicated on the withdrawal card. Withdrawal cards not deposited within 4 weeks in the lodge to whose jurisdiction a member removes are annulled. Cards may be deposited in any lodge of

the association, except that if a holder works by the day or hour in steel mills he must deposit his card in a lodge composed of men who work in the same way, if there is one within reach. No subordinate lodge has power to reject a card. If a member fails to deposit his card he is subject to such fine as the lodge with which he ought to have deposited it sees fit to impose.

**Discipline.**—Any member who defrauds or slanders a brother member, or divulges any of the proceedings of the lodge, or advocates division of the funds of the lodge, or acts contrary to the rules of the association in any matter affecting the price of labor or the system of working, is subject to such penalty—fine, suspension, or expulsion—as may be determined by a vote of two thirds of the members present. An officer of a sub lodge who fails to attend a regular meeting is to be fined 25 cents unless he gives a satisfactory excuse. Any member who fails to attend meetings of his lodge at least once a month is to be fined 10 cents unless excused for sickness or some unavoidable cause. Any member who fails to attend the last stated meeting in June or December is to be fined 50 cents unless he can give satisfactory evidence that it was impossible to attend. The chairman of any committee who fails to report at the time required unless further time is granted, is to be fined \$1. Any member who uses unseemly language or acts offensively in the lodge room is to be fined \$1 for the first offense, and if he persists is to be excluded from the room.

If any member goes to his work drunk and is discharged the lodge is forbidden to take any steps to restate him. A member who enters a subordinate lodge under the influence of liquor is to be fined \$1 for the first offense and \$2 for every subsequent offense.

Any member who has got credit for groceries, provisions or clothing during a strike and who refuses to pay is not to be protected by his lodge if he is discharged by the manager on complaint of his creditor.

When a member is accused of violating any rule, charges must be brought in writing, signed by a member and the accused must have a copy at least 7 days before the time appointed for trial. The trial takes place before a special committee. The committee reports the proceedings and its conclusions, in the form of resolutions, to the lodge. The accused may then be heard before the lodge. The decision is by ballot, and a two-thirds vote is necessary to convict.

Charges against a local lodge are tried before a board of investigation consisting of the national president, the vice-president of the district, and his deputies. Its decisions are final unless overruled by a two-thirds vote of the convention.

Nation officers are tried by a board of 7 members, 1 elected by each of 7 lodges which are selected by the president. If the president is to be tried the lodges are selected by the vice-president of the first district. A member who has been expelled may renew his connection with the association after 6 months, on such conditions as may be imposed by the lodge which expelled him. If reinstatement is refused by the lodge, he may appeal to the advisory board, and it may order him to be received on such terms as it may think best.

An appeal lies from the decision of the sub lodge to the vice-president of the district, and from him to the national president. The president's decision is final unless overruled by a two-thirds vote in the convention.

**Nonunion men.**—The mill committee of each works is required to ask each new workman for his withdrawal card and to deliver it to the secretary. If any workman has no card and is not a member of the association, "steps shall be taken to persuade him to join it." Members are forbidden to loan tools or render any assistance to any workman who persistently refuses to become a member of the association. The constitution provides that no person shall be allowed to work at tonnage work or in any way assist a tonnage workman in the performance of his duties until he has become a member of the association. Elsewhere in the constitution it is said that those who have a situation and are not members shall be given 4 weeks to join; after that the president of the sub lodge is to see that they are not allowed to work.

**Finances.**—The charter fee for new lodges is \$25. A per capita tax sufficient to defray the expenses of the national association is assessed quarterly by the president. There are, however, fixed taxes of 30 cents a quarter for the Amalgamated Journal and 60 cents a quarter for a strike fund. It is forbidden to use the latter fund for any purpose except the support of victimized members and those who may be engaged in approved strikes. When the amount in the national treasury is less than \$25,000, it is the duty of the president to levy a special assessment of from 1 to 5 per cent every 4 weeks, and to continue it until the national treasury contains \$25,000.

The initiation fee can not be less than \$1.

Any member 3 months in arrears is to be reported to the lodge, and the president is to declare him suspended unless the lodge directs otherwise. A member

suspended for nonpayment of dues must apply in writing for reinstatement and may be admitted by a majority vote. If a member is unable, from inevitable causes, to pay dues, fines, or other money, he may be excused by a two-thirds vote of the lodge. A member who is sick or out of employment for a full month may be excused from paying the 20 cents due to the national protective funds if he reports to the lodge.

**Strikes.**—Each sub lodge is required to have a mill committee, consisting of three members on each turn or shift of workmen, from each department represented in the lodge. In case a grievance arises the committee of the department in which it occurs, if it can not adjust the difficulty, is to call a joint meeting of the lodges, to be attended by all members of each lodge working in that mill. If the joint meeting considers the grievance sufficient the corresponding representative of the lodge which has the grievance is to notify the vice-president of the district, under the seal of the lodge. Work is to continue until the vice president has investigated the case. The vice president is to forward the communication to the general office, as a guaranty that the sub lodge has complied with the law.

If the vice-president thinks it best, after a careful investigation of the question, he is to call together the executive committee of the district. It is in this committee that the power to declare a strike lies. The committee consists of the vice-president of the district, his deputy, the national president, and the president of the lodge in which the grievance has arisen. But no person may serve as a member of the executive committee who is personally or directly interested in any grievance that may come before the committee.

When a strike has been legalized, the national secretary-treasurer is to print a full statement of the case and forward it, under the seal of the national lodge, to all sub lodges, "warning all true men to not accept work in such mills, shops, or factories." When a strike is legalized in any one department of the mill or works, the men of all other departments are required also to cease work until the difficulty is settled. If there is a difficulty in one mill of a combine or trust, all the mills in the combine must cease work.<sup>1</sup> Each local lodge on strike is entitled to \$1 a week for each member actually engaged in the strike, provided the amount in the national treasury is not less than \$10,000. In order to draw strike pay members must remain in the vicinity of the strike, or notify the corresponding representative of the lodge each week where they are and that they are unemployed. No person who has been a member less than six months, and no member who is in arrears, can draw strike pay, and none can be drawn by a lodge which is not in good standing in the national association. No benefits are paid for any strike during the months of July and August, unless it has been legalized 3 months before July 1. No strike pay is given in any case for the first 2 weeks. A member who has been suspended or expelled can not draw strike pay until 6 months after he has been restored to membership. One who has 3 days' work in any week can draw no benefit for that week, and anyone who refuses to work a third day in a week, in order to secure benefit, is to be stricken from the benefit list. Members who are out of employment from causes unconnected with the strike can not draw strike pay. The executive committee has power at any time to declare a strike at an end.

A member victimized for taking an active part in the affairs of the association is entitled to \$6 a week for 8 weeks.

The Amalgamated Association has always been a fighting organization. While it has constantly undertaken to settle its differences with employers by peaceful negotiation, it has from the first condemned the idea of arbitration, involving the calling in of third parties, and it has always been ready to maintain its judgment of its rights at any cost. Its most celebrated strike was that at Homestead, in 1892. The cause was a proposal of Carnegie & Co. to reduce the basis of scale from \$26.50 per ton to \$23, and to make the scale terminable at the beginning of January instead of the beginning of July. The men objected that they could not afford to stop work in midwinter, and could not at that time of year resist any demands of the employers. They believed that the profits of the company had increased since the McKinley tariff was passed, and that there was no occasion for a reduction of wages. The Amalgamated Association rejected the proposals. Carnegie & Co. discharged all who refused their terms, and announced that they would have no further negotiation with the association. They had already surrounded their works with a fence 3 miles long and 12 feet high, standing on a parapet 3 feet high, and covered with barbed wire. They now undertook to introduce 300 armed

<sup>1</sup> But when the Homestead dispute was extended sympathetically to the 2,000 men employed in the Carnegie mills at Pittsburg, the Amalgamated Association declined to authorize the movement and to pay strike benefits to those who had thus left their work. (Hall, *Sympathetic Strikes and Lockouts*, p. 97.)

Pinkerton men for the purpose of protecting the works from invasion and making it possible to run them with nonunion employees. The Pinkerton men were brought up the river by water. The strikers were waiting for them, and when they attempted to land there was a battle in which several on each side were killed. The struggle lasted 2 days. Attempts were made to set fire to the barges by pouring burning oil upon the river. The Pinkerton men finally surrendered to the leaders of the Amalgamated Association. They were imprisoned in a rink until evening, and were then sent away by rail. They were beaten and maltreated on their way to the rink and to the station, though the association leaders seem to have done their best to protect them. The town was put under martial law, and State troops were stationed there for many weeks. A considerable number of strikers ultimately returned to work. They returned, however, as nonunion men, and Carnegie & Co. have never since had any dealings with the Amalgamated Association.

**Division of work.**—If any mill runs double turn 3 months or more in the year, it is to be considered a double-turn mill, and if it goes on single turn the work is to be divided. The night-turn roller is to receive an equal share of work, at night-turn roller's wages. If any department of a mill is stopped, through overproduction or other causes the work is to be equally divided, except when a furnace is out of repair. The sublodges may, however, enact laws of their own to control this subject.

**Limitation of work.**—The constitution provides an elaborate series of provisions as to the size of charges in furnaces of various sorts and as to the number of heats which shall constitute a day's work. The output of tin-plate rolling mills is strictly limited, and if any crew is found to have surpassed the limit the lodge is to collect the equivalent of the overweight or surplus earning, and an additional fine, for each offense, of 25 cents, from the roller and from the doubler. It is the duty of the mill committee to inform the financial secretary of the amount of overweight in each case.

**Hours of labor.** The tonnage men in large steel mills, working rails or soft steel billets, with an average output of 300 tons or more in 12 hours, are required to work in three turns of 8 hours each.

**Sunday and Labor Day.**—Steel and rod mills are forbidden to work on Sunday and are required to stop rolling not later than 5 p. m. on Saturday. Any member who works on Labor Day is to be fined not less than \$5 nor more than \$25. If the lodge permits the offense to be repeated, the president is to revoke its charter.

## INTERNATIONAL ASSOCIATION OF MACHINISTS.

**History.**—The International Association of Machinists was organized in 1888. Almost alone among national labor organizations, excepting the railroad brotherhoods, it put a clause in its constitution excluding colored men from membership. It desired to join the American Federation of Labor, but the Federation at that time refused to admit unions whose constitutions recognized distinctions of color. Upon the continued refusal of the Association of Machinists to remove the color line, the executive council of the Federation called a conference of unions of the trade in 1891, to which the old organization sent no delegates. A new organization, the International Machinists' Union, was formed. President Gompers, in his report to the convention of 1890, said that it was not desired to divide the machinists permanently, and that the new organization had pledged itself to amalgamate with the old when the old was ready to drop the color line and to amalgamate on an honorable basis.<sup>1</sup>

At the Federation convention of 1892 the president of the Association of Machinists appeared before a committee of the Federation, expressed satisfaction with the action of the executive council, and stated his belief that the next convention of the Machinists' Association would eliminate the color line from its constitution.<sup>2</sup> It was not until 1895 that affiliation with the Federation was finally effected. The Federation convention of 1895 withdrew the charter of the International Machinists' Union.<sup>3</sup>

The long dispute between the machinists and the printers over the control of the linotype machinists is mentioned in the account of the Typographical Union.<sup>4</sup>

The membership of the Association of Machinists was reported in the summer of 1900 as about 40,000, distributed among about 400 locals.

<sup>1</sup> Convention Proceedings, 1891, pp. 12, 37, 38.

<sup>2</sup> American Federation of Labor Convention Proceedings, 1892, p. 38.

<sup>3</sup> Proceedings, 1895, p. 32.

<sup>4</sup> Above, pp. 82, 83.

**General aims.**—The Machinists declare in the preamble of their constitution that it is the "natural right of those who toil to enjoy to the fullest possible extent the wealth created by their labor," and "that under the changed industrial conditions of our times and the enormous growth of our syndicates and their aggregations of capital, it is impossible for us to obtain the full reward of our labor except by united action." They declare that they established their union in the belief that "organization, based on sound principles and directed by conservative intelligence, furnishes the best medium by which we may secure a more equitable share of the wealth which we create, and also promote the general welfare of our members by improving their trade and social conditions, thereby elevating the plane of citizenship."

The union recommends to its members to "set about securing the nomination and election of pronounced trade unionists in municipal, State, and national legislatures," in order that it may "not be necessary to humiliate our citizenship in the future with fruitless petitions."

The president, in his report to the convention of 1899, deplored attempts to bring the members of the union or of any local union into any one political organization. He declared that because of such attempts in local lodges, several lodges had gone out of existence during the preceding 2 years. He mentioned in particular the local at Lynn, Mass., which was broken up, he declared, by the attempt of the members of one political party (the Socialist-Labor party), who were apparently in the majority, to bring the whole to their way of thinking.<sup>1</sup>

In the same convention a resolution was offered which seemed to commit the organization to the support of the Socialist party organization. It was voted down. At least 1 of the delegates who voted against it, including the president, said that they were Socialists, but that they did not believe that the time had come for an attempt to force their opinion upon the whole body.<sup>2</sup>

**Convention.** The convention meets once in 2 years. Each local is entitled to one delegate; but the delegate casts one vote for each 25 members. A local may give its proxy to the delegate of another local, but no delegate can hold more than two proxies.

**Constitutional amendments.**—The constitution requires each local to select a committee on revision of constitution, whose duty is to forward to the general secretary-treasurer any amendments which the local may desire, on or before March 1 in the years in which the convention meets. The secretary-treasurer must issue all such suggested amendments to the locals, in the form of a circular, 6 weeks before the convention, in order that the delegates may be instructed on them. The convention is forbidden to consider amendments which have not been submitted in this way, "except emergency questions, where the law is silent, which may arise in the intervening time." The implication seems to be that the adoption of an amendment by the convention gives it validity.

Amendments may also be adopted by popular vote, on the proposition of any local, endorsed by five other locals from five different States. Propositions so received are to be printed by the general secretary-treasurer in the form of a circular in such numbers that each member may have a copy, and sent out to the locals not later than 1 week before the expiration of each quarter. The proposed amendments must be read in each local at three successive meetings, and at each meeting any member who has not already voted must be given an opportunity to vote. The vote is by yeas and nays on roll call. An amendment which receives a majority of all the votes cast is adopted.

**Officers.**—The International Association of Machinists places its executive power in a board of trustees, consisting of the international president and five other members. Judicial powers are vested in the international president and the international vice-president. The hearing of grievances and the sanctioning of strikes are reckoned among the judicial duties. All officers are elected by viva voce vote, on roll call, in convention. The president receives \$1,500 a year, the vice-president \$1,000, and the secretary-treasurer \$1,200. The members of the board of trustees receive \$1 a day, while in discharge of their duties, and actual railroad fare and hotel expenses.

**District lodges.**—Local lodges are authorized to form district lodges for their mutual protection whenever they consider it desirable. It is also provided that in cities where there are more than one local, the delegates from the several lodges shall meet at least once a month to consider the condition of the order and its members, and report the results of such meetings to the locals.

<sup>1</sup> Journal of Association of Machinists, June, 1899, p. 338.

<sup>2</sup> Journal, June, 1899, p. 363.

**Business agents.**—The constitution provides that the grand lodge shall assist lodges to maintain business agents to the extent of 50 per cent of their legitimate expenses, if the international officers consider that the business of the locality warrants the expense.

**Membership.**—The constitution says "Any competent, sober, and industrious machinist, who has worked at the trade 1 year or more, and receives the minimum rate paid in his locality, may be admitted to membership."

An effort was made by the principal Chicago lodge, at the convention of 1899, to strike out the word "competent" from the qualifications for membership. It was said that the Cigar Makers and the Typographical Union take in anybody who gets work in the shop, and the Bricklayers take in anybody who can show that he gets the standard wages. The amendment was voted down.<sup>1</sup>

During the 20 months from July 1, 1897, to March 1, 1899, the number of members initiated and reinstated was as follows:

Number initiated by local lodges	5,651
Number reinstated by local lodges	1,051
Number initiated under charters granted	1,527
Number initiated by grand lodge	60
Number reinstated by grand lodge	337
Total	8,626

**Apprentices.**—The union allows 1 apprentice to each shop, irrespective of the number of machinists employed, and 1 to every 5 machinists thereafter, and no boy shall begin to learn the trade of machinist until he is 16 years old nor after he is 21 years of age. An apprentice is expected to serve 1 year. After 21 years of service apprentices are eligible to membership in the union by paying one-half initiation fee and half dues and assessments. They are then entitled to half sick, vacationed, loan, and strike benefits. They are to pay full quarterly dues to the grand lodge (25 cents per quarter) for which they receive the monthly official journal and are entitled to full death benefit.

The practice of indenturing apprentices has passed away in the machinists' trade as in most others. The machinists try, however, to limit the recruiting of the craft to those who set about learning the trade while they are boys and work several years for low wages as learners. They provide that "members introducing any person or persons other than a member of the International Association of Machinists into the trade and assisting them shall be heavily fined for the first offense and expelled for the second. But if any man has succeeded in working at the trade 1 year and gets the minimum rate of wages paid in his locality, he is then eligible to membership."

**Discipline.**—Any member entering a lodge under the influence of intoxicating drinks or using indecent or profane language, shall be fined, suspended, or expelled. Habitual drunkenness or disgraceful conduct shall be punished by expulsion.

Members must not refuse to do any kind of work that belongs to the trade.

They must not take a job for less than it formerly paid.

**Finances.**—The secretary-treasurer supplies stamps, which serve as receipts for sums due to the international body, as follows: Monthly due stamp, 20 cents; initiation stamp, \$1; quarterly due stamp, 25 cents; reinstatement stamp, \$1; reinstatement through grand lodge stamp, \$1; individual membership stamp, 50 cents; loan stamp, from \$1 to \$5 each. The denominations of these stamps indicate the taxes collected by the international body, \$1 on initiation, 20 cents a month and an additional 25 cents every quarter to cover the cost of the official journal. The constitution provides that the initiation fee may not be less than \$3 and the monthly dues may not be less than 50 cents. Out of the initiation fee and the monthly dues the payments to the grand lodge are taken. The provision for reinstatement through grand lodge is for the benefit of members of lodges which have lapsed or been suspended. The individual membership stamp of 50 cents represents the monthly dues of such members and also of individual machinists who may be "obligated" by organizers, as long as they are not connected with any local lodge.

The union permits its general secretary-treasurer to deposit all moneys up to \$2,000 in his own name in a bank. It appears to be necessary for the international president to countersign all checks. Sums above \$2,000 are to be invested as directed by the president, the vice-president, and the board of trustees, in such a way that they can not be withdrawn without the signatures of the president, the

<sup>1</sup> Journal, June, 1899, p. 371

<sup>2</sup> Journal, June, 1899, p. 330

secretary-treasurer, and one member of the board of trustees, together with the seal of the grand lodge.

An auditing committee of three members is to be appointed each year; in convention years by the lodge or lodges in the city where the convention meets, and in the years between by the lodge or lodges in the city where headquarters are situated. An expert accountant is to be employed by this committee, and it is to make a full and complete report in printed form. The accountant is to receive a sum of not more than \$50 for his services, and the members of the committee are to receive \$3 a day.

**Finances of local lodges.**—The receipts and disbursements of the local lodges for the 2 years preceding the convention of 1899 were as follows:

Total receipts from all sources .....	\$187,836.40
Paid in sick benefits .....	\$11,054.00
Loaned to members on cards .....	3,806.00
Personal loans to members .....	2,838.00
Paid in local benefits, contributed to local lodges and to organizations outside of the association .....	12,981.62
Losses by defaulting officers .....	602.52
For hall rent, salaries, supplies, per capita tax, etc. ....	108,761.56
Amount of money in hands of local treasurers.....	47,793.70
	<hr/> 187,836.40

As nearly as could be ascertained there was due to local lodges from loans on cards \$918. There was also due to local lodges on personal loans to members \$765.

The "loans on cards" are the loans of \$5 each to which traveling members are constitutionally entitled. The "personal loans" are granted by vote of the lodges, as a matter of grace, and usually to their own members.

At the convention of 1899 the president reported the results of inquiries as to the number of members who were in debt for dues to the local lodges. One hundred and thirty lodges, about one half the whole number, made reports from which the following totals are obtained. The monthly dues to the local lodges, and the quarterly journal tax, are tabulated separately: 5,336 members owing from 1 to 3 months' dues, 2,103 members owing from 3 to 6 months' dues; 1,129 members owing from 6 to 9 months' dues, 619 members owing from 9 to 12 months' dues; 406 members owing over 12 months' dues; 2,209 members owing 1 quarter's dues; 1,107 members owing 2 quarters' dues, 712 members owing 3 quarters' dues, 510 members owing 4 quarters' dues.

**Benefits.**—The National Association of Machinists provides for a burial benefit of \$50 to be paid out of the general treasury. Subordinate lodges may establish sick benefits under their local laws. A member traveling in search of work may borrow \$5 from any lodge, and his own lodge is responsible for it. The loan is entered on the member's book, and he is not entitled to any further loans till he has repaid it. In practice the lodges often make further loans to their own members.

Every lodge is to set aside a certain percentage of its dues as an "emergency" fund. No local lodge may levy compulsory assessments for the benefit of other organizations. No lodge can vote donations to such organizations without the sanction of the national president.

**Strikes.**—When a local union considers a grievance, its action is determined by secret ballot, and a three-fourths majority is necessary to decide upon a strike. If such action is determined on, the lodge is to report its grievance to the international president and vice-president. If they approve the grievance, they send a member to the seat of trouble to investigate, and if possible, to effect a settlement. If the action of the local lodge is not sanctioned by the international officers, it must be rescinded, and a lodge which fails to rescind it may be suspended by the judicial officers. Men who quit work on account of grievances properly sanctioned receive \$6 a week, if they are married, or if they have others dependent upon them for support; if they have no one to support but themselves, \$4 a week. The international president and vice-president have authority to levy such assessments as are necessary to meet strike expenses. No benefits are paid for the first week. A strike may be declared off by a majority vote by secret ballot of the members of the local. The International Union maintains a strike fund equal to \$1 for each of its members.

The president in his report to the convention of 1899 deplored the impossibility of inducing the local lodges, and especially newly organized lodges, to comply with

<sup>1</sup> Journal, June, 1899, p. 331.

<sup>2</sup> Journal, June, 1899, p. 330.

the constitution in the method of inaugurating strikes. The lodges frequently strike without consulting the national officers, as the rules require, and then consider that they ought to receive the support of the national body, and threaten to disband if they do not receive it. The president thought that strikes could have been saved in many cases if the executive board had had an opportunity to send an officer to the scene of the trouble before a strike was declared.

Another source of trouble is the tendency of lodges which have just been organized to go immediately upon a strike on account of disputes which have been pending long before the lodges are formed. The president recommended the very mild rule that a lodge should not be permitted to take up any grievance, unless one that arose after the organization of the lodge, until it had been organized at least 30 days.

Under the rules and decisions of the Machinists' Union, strike benefits are not paid to those who are not members when the strike occurs nor to any member who is over 3 months in arrears.<sup>1</sup>

During the fiscal year ending April 1, 1898, the association paid out \$4,428 on account of strikes. In the year ending April 1, 1899, it paid out \$10,116.50.<sup>2</sup>

The union reported to the Federation of Labor in the fall of 1900 that it had won 24 strikes during the preceding year, compromised 9, and lost 5; 12,000 persons were involved; the cost was \$15,258.

**Provisions for securing employment.**—Every unemployed member must register his name and address in the unemployed book of the local organization. Each lodge must endeavor to keep members in employment, giving preference to those who have been out of employment longest but having regard to the condition of the individual. Members must report vacancies which come to their knowledge.

**Hours of labor.** Overtime. The president's report to the convention of 1899 contained the following statements:

"Our members have succeeded in many cities in securing the Saturday half holiday, in other cities have secured a 9-hour day. There is but one shop, however, outside of Government employees, where we have an 8-hour day with 10 hours' pay. That shop is owned and operated by Mr. Jones, of Toledo. It is strictly a union shop and operated under the best conditions."<sup>3</sup>

The president pointed out the relation between the shorter day and overtime in the following words in his report to the convention of 1899: "If we expect to bring about a reduction of the hours of labor in our trade the men of our craft must first learn to work less overtime, thereby creating a greater demand for machinists. The constitution requires the members to discourage the working of overtime as much as possible."

The agreement of 1900 with the National Metal Trades Association and the struggle of 1901 for the 9-hour day are treated below (pp. 355-360).

**Classification.**—The Machinists object to the classification of their members by the War and Navy Departments, with payment of different rates of wages. The union desires that all machinists shall be in one class to which the standard rate of wages shall be paid.<sup>4</sup>

**Piecework and limitation of work.**—The Machinists provide that "any member introducing or accepting piecework or running two machines in any shop where they do not exist shall be subject to expulsion." Where piecework does exist the judicial officers are given discretionary power to make agreements under the premium system, "thereby controlling and eventually abolishing piecework in any form."

The premium system is a combination of day and piecework. A minimum day wage is fixed which every man is to receive so long as he is employed, without regard to his performance. For work done in excess of a fixed standard amount premiums are paid. In spite of the comparatively favorable judgment of the premium system which has been embodied in the constitution, many members of the union consider it worse than piecework. The premium for extra work is likely to be far less, it is alleged, than the value of the extra work upon a piece-price basis.

The president in his report to the convention of 1899 referred to the matter in these terms: "There is no denying the fact that piecework and the premium plan are constantly growing in our trade. Although we have succeeded in many instances in preventing the introduction of piecework, yet the volume of the same is increasing. It is useless for us to any longer hide our heads under a bushel, refusing to squarely face the matter. There is no one who believes more firmly than I do that

<sup>1</sup> Journal, June, 1899, p. 331.

<sup>2</sup> Journal, June, 1899, p. 343.

<sup>3</sup> Journal, June 1899, p. 338.

<sup>4</sup> American Federation of Labor Convention Proceedings, 1901, p. 76.

piecework is detrimental to our trade; it not only works injury to the tradesmen, but results disastrously to the employer."<sup>1</sup>

The American Federation of Labor convention of 1898 passed a resolution, on motion of the Machinists' representative, reciting that the directing boards of the navy-yards and arsenals had been trying for 2 years to introduce piecework and the two-machine system, and that "the piecework system lowers the standard of living by reducing wages, while the two-machine system crowds the already overstocked market with unemployed by seeking to have one man perform the labor that should be done by two." The resolution promised the support of the Federation in securing a change of Government policy.<sup>2</sup>

In 1899 a firm in Philadelphia precipitated a strike of machinists, molders, and bricklayers by introducing a system of piecework.<sup>3</sup>

The leaders recognize that the most serious obstacle in the way of the abolition of piecework is the desire of members to take it because it increases their earnings, at least for the time being. It can be got rid of only by sacrifices, whether or not the sacrifices are likely to be permanent. One possible form of sacrifice was described by a delegate from New Britain, who declared in the convention of 1899 that his lodge had driven out piecework "by a man taking 4 weeks to do a job he could have done in 2, and so on."<sup>4</sup>

The convention of 1899 passed a resolution forbidding members to run two machines under any circumstances, and at the same convention the president stated that 12 lodges reported having prevented the introduction of the running of two or more machines. The agreement with the National Metal Trades Association of May 18, 1900, provides, however, that the International Association of Machinists will place no restrictions upon the management or production of the shop and will give a fair day's work for a fair day's pay.

**Journal.**—The journal of the Machinists is a monthly magazine, which is sent to all the locals in sufficient numbers for distribution to all their members. The cost of it is paid by a tax of 25 cents a member a quarter.

### THE AMALGAMATED SOCIETY OF ENGINEERS.

**History, number of members, etc.**—The Amalgamated Society of Engineers is a British organization, but has branches scattered quite generally throughout the English-speaking world. It is one of the oldest and strongest British trade-unions, dating from 1851 and having a membership at the close of 1899 of 81,957. The number of branches in the United States and Canada is 11 and the number of members 1,797. The majority of the members in this country have emigrated from Great Britain. The importance of the Amalgamated Society and the elaborate system of benefits which it pays warrants a full description, although the organization is essentially a foreign one.

Those who have been members of it before coming to this country are loath to leave it, not only for sentimental reasons, but because of its large insurance benefits. There are, however, several American unions which substantially divide its field among them. They object to the existence of a rival organization which trenches on territory that they regard as theirs.

Complaint was made to the American Federation of Labor convention of 1900 that the Pattern Makers and the Machinists refused to recognize membership cards issued by the Amalgamated Society of Engineers. The committee to which the matter was referred reported that since the Engineers held a charter from the Federation their cards should be recognized by other affiliated bodies, but the convention referred the matter without a definite decision, to the executive council.<sup>5</sup>

Early in 1901 the Pattern Makers, Machinists, and Blacksmiths petitioned the American Federation of Labor to revoke the charter of the Amalgamated Society. The executive council of the Federation declined to take this action, but expressed the opinion that better results would be secured if all machinists, blacksmiths, and pattern makers were members of their respective unions. It accordingly asked the Amalgamated Society of Engineers to change its constitution so as to permit its members in the United States and Canada to hold membership in the unions of their crafts while still continuing their beneficial membership in the Amalgamated Society; this on condition that such members should be admitted to the American unions without initiation fee. The American organizer, the chief officer in

<sup>1</sup> Journal, June, 1899, p. 335.

<sup>2</sup> Convention Proceedings, 1898, p. 79.

<sup>3</sup> American Federation of Labor Convention Proceedings, 1899, p. 165.

<sup>4</sup> Journal, June, 1899, p. 391.

<sup>5</sup> Convention Proceedings, 1900, p. 185.

America, asserts that there is not the slightest desire among the members to join the several American unions, but that, on the contrary, efforts will be made to amalgamate them. The general convention which met in Manchester, England, in May and June, 1901, decided to establish a permanent paid general secretary for the United States and Canada, with headquarters at New York, and to publish at New York a monthly official journal for the American branch. This convention also changed the constitution so as to admit the handy men or machine tenders, whose position has caused much controversy of late years.

**General aims.**—The constitution names the following objects:

By the provision and distribution of funds and by other means to protect and regulate the conditions of labor; to promote the general and material welfare of its members, to assist them when out of work or in distressed circumstances; to provide them with legal assistance in trade disputes and in obtaining redress for accidents, to support them in sickness, accidents, and superannuation, to provide for their burial and for the burial of their wives, and to provide compensation for loss of tools by fire or water; and, by extending its system of investments for cooperative productive purposes to assist in altering the competitive system of industry to a cooperative system in order to secure the full share of the fruits of labor.

The preface to the constitution dwells upon these same objects more fully and points out the necessity of mutual assistance and strong organization in order to raise the status of the workmen in the trade. The uncertainty of employment is especially referred to as necessitating joint action for the relief of members.

**Convention and constitutional amendments.** Each year a general vote of the members of the entire society is taken as to the advisability of holding "a delegate meeting" in the following year. This meeting consists of one delegate for every 2,000 members of the society, elected from districts especially arranged for the purpose. Proposed amendments to the constitution to be acted upon by this meeting must be submitted by branches 6 months in advance and laid before all the separate branches 8 weeks before the meeting. The meeting then has power to enact rules or amendments but it can not abrogate the various essential benefits except by a vote of three-fourths of the members of the society. Apparently there is no appeal to the delegate meeting from the general council or court of appeal described below.

**Officers.** The chief executive body of the Amalgamated Engineers is the executive council. This, unlike the chief executive bodies of many other organizations is elected by the members of the society according to districts. There are eight districts specially created for the purpose, each of which elects one member triennially. Candidates must have been members of the society for 7 years. The council elects its own chairman annually. He has few independent powers. All the members of the council must give their full time to the work of the office and must locate at the headquarters in London. Each is paid £2 10s. per week. The council has general control of the affairs of the organization, orders the payment of bills and determines all matters not regulated by the constitution. Appeals from its decisions lie to the "general council."

The general council is purely a judicial body, and is composed of one representative for every 5,000 members of the society, elected from separate districts established for the purpose. Its members are chosen biennially.

The general secretary-treasurer is elected by vote of the entire membership. Any member who has been in the society for 7 years may present himself as a candidate by self-nomination. If no candidate receives an absolute majority on the first vote a second vote is taken on the two highest. The secretary is paid £1 weekly, and has also certain perquisites. He has two assistants elected in the same way as himself and receiving £2 10s. weekly.

The American-Canadian district council consists of five members elected by members throughout the United States and Canada, but belonging to branches situated within 35 miles of the New York City Hall and living within that territory. Their term of office is 12 months. The American council has a certain degree of independent power as regards trade matters and strikes where necessary for the protection of members and by appeal to vote of the members in this country it may levy assessments for certain funds and fix the rate of weekly dues. (See below, p. 224.)

**Local unions.**—The constitution regulates quite fully the organization and working of local branches. The number of officers varies according to the number of members in the branches, as does also the salary of such officers as are paid. The officers are elected quarterly. Aside from the ordinary executive officers there is a "branch committee" of 5 to 7 members which has general control in the interval between meetings, subject to appeal to the members. This committee also

acts in negotiations with employers and in strikes, unless joint committees with other branches exist for these purposes.

**Membership.**—Persons engaged in any of the numerous branches of the engineering trade enumerated in the constitution are eligible to membership in the Amalgamated Society of Engineers. No person may be admitted to full membership who has not worked 5 years at the trade, except in countries where a shorter period of apprenticeship is customary. In America the term is 4 years. Since the organization pays sick and superannuation benefits, only persons in good health and free from various defects are eligible to full membership. Persons otherwise qualified but unfitted to be entitled to the sick benefit may be admitted and pay 2d. per week less than the regular contributions. No person may be admitted who is at the same time a member of another trade society. Admission is decided by a majority of the members present at a meeting of a local branch.

The rules provide for the admission of persons, under the name of "trade members," at lower rates of contribution than the regular members, and with fewer benefits. They are not required to show the same standard of health as applicants for membership in the ordinary section. Candidates must not be less than 30 nor more than 40 years of age. The entrance fee is one-half of the amount paid by full members of the same age. The contributions are 8d. per week, as compared with 1s. for ordinary members. Members of this section are entitled to donation or unemployed benefit, limited to 52 weeks, to 15 funeral benefit, and to the full contingent benefit in case of strike. They are not entitled to sick, tool, or accident benefit.

There is also a section for what are known as "trade protection members," who are entitled only to funeral benefit of £5 and to contingent benefit in case of strikes. They pay an entrance fee of 7s. 6d. and a contribution of 1d. per week.

Apprentices may also be admitted to a special section of the organization, provided they are not less than 15 nor more than 20 years of age, of good moral character and good health. They pay an admission fee of 2s. and a contribution of 3d. per week. Members in good standing for 12 months are entitled to 5s. per week sick benefit for 26 weeks, and 2s. 6d. for 52 weeks. They are also entitled to one-half contingent benefit and to £5 funeral benefit. Apprentices also have their tools insured for not over £5.

**Finances.**—There is no distinction between local revenues and funds and those of the general body. The membership fee varies according to age, in view of the risks connected with the benefit system. For a person over 22 years old it is 5s. (in the United States, \$1.75), for a person from 14 to 15, £3 12s. (in the United States, \$25.20). The special fees for "trade members" and "trade protection members" and apprentices are noted above. Aside from these fees and from miscellaneous receipts the regular revenue of the society is derived from a weekly contribution of 1s. (in the United States, 30 cents). Whenever the general funds of the society are reduced to £3 per member the weekly contribution is to be increased sufficiently to keep the funds at that amount. When not more than 5 per cent of the members are unemployed the executive council shall take the votes of the members as to the desirability of increasing the reserve fund by extra contributions. There is a separate superannuation fund.

The American Canadian council is empowered to submit to members in this country the question of what shall constitute the American standard of payments. The rate may not be more than 50 per cent higher than in Great Britain.

There are also several special funds supported by separate payments. These are the contingent funds for use in strikes, the benevolent fund, the legal assistance fund for use in helping members to recover damages for injury, etc., and the fund for granting assistance to the engineering and other trades. The amount of the assessments levied for these funds is determined by a vote of the members from time to time. The amount of assessments for these funds in the United States is left entirely to vote of the members in this country, and the funds raised here are used exclusively for their benefit.

The funds of the society are held, in the first instance, by local branches. Each local receives the regular payments of its members and pays out whatever claims arise for benefits or other expenses. Once every 12 months there is an equalization of the funds among the locals on the basis of their membership. The debtor branches pay over to the creditor branches the amount of money due. The American-Canadian council has power to order remittances from one branch to another in this country.

The moneys of each branch are deposited in banks in the name of the society by 5 trustees elected yearly. A bond may be drawn up where practicable in such form that the trustees may not dispose of any of the society's money contrary to its true purpose and intent. The general executive council is directed to invest surplus funds of the whole society in municipal bonds or certain other securities.

The general reserve fund of the Amalgamated Engineers at the end of 1899 amounted, despite the great outlay for the strike of 1897, to no less than £1,001,540, while the special superannuation reserve fund was \$531,295, the grand total reserve being \$1,535,835.

(For further financial statements see under Benefits.)

**Benefits.**—The following benefits are paid by the Amalgamated Society of Engineers (in the United States the payments are all at the rate of 20 cents per English shilling—\$6 per pound sterling.)

(1) *Unemployed or "donation" benefit.*—The unemployed benefit is 10s. per week for the first 14 weeks, and thereafter 5s. per week for a certain period and 6s. per week for another period, varying with the length of membership. Persons who have been members for 10 years or more receive the 6s. so long as they remain out of employment. Those who have been members from 5 to 10 years can not receive the benefit for more than 14 years, while members of from 1 to 5 years standing are limited to benefits for 4 years. (See below for provisions regarding the securing of employment for those receiving benefits.)

Any member discharged for holding office in the organization is entitled to full wages until he again finds employment.

(2) *Contingent or strike benefit.*—The contingent benefit is supported by a special assessment. It amounts to 5s. per week, and is paid in the case of authorized strikes or lockouts. Members on strike receive the regular unemployment benefit also.

(3) *Tool benefit.*—Any member losing his tools by fire or water receives their value to an amount not greater than £10.

(4) *Sick benefit.*—The amount of the sick benefit and the duration of its payment varies according to the length of membership in the organization. A person who has been a member for 10 years is entitled to 10s. per week for 26 weeks, 5s. per week for 26 weeks more, and 1s. per week as long as he continues ill. Persons from 5 to 10 years' members are limited to 2 years, and those of less than 5 years' membership to 1 year of benefits.

(5) *Accident benefit.*—Any member totally disabled by accident, blindness, or paralysis, not the result of intemperance or improper conduct, is entitled to £100 in cash.

(6) *Superannuation benefit.*—Any member 55 years of age, who has been 25 years successively in the society and who is unable to obtain the ordinary rate of wages, is entitled to 7s. a week for life, if he has been 30 years a member, 8s.; 35 years 9s.; 40 years or upward, 10s. No member receiving this benefit is allowed to work at the trade. There is a special reserve fund for the superannuation benefit, supported by an assessment of 1s. per quarter.

(7) *Funeral benefit.*—On the death of a member a funeral benefit of £12 is paid. If the wife of a member dies he may receive £5, £7 remaining to defray his own funeral expenses.

In addition to the regular system of benefits the society has established a benevolent fund which is used for relief in special cases, a fund for legal assistance in prosecuting claims for injury, etc., and a fund for aiding members of the trade or of other trades not belonging to the organization.

The following table shows for the years 1890, 1897, and 1899 the expenditures of the Amalgamated Engineers for the leading benefits together with the amount of the expenditure for each member of the society. The table also shows the percentage of the total membership receiving the different classes of benefits during the year. It will be noticed that in 1897 the great strike in the engineering trade which affected thousands of numbers called for an enormous expenditure. The donation or unemployed benefit paid in that year was more than \$1,400,000, or \$15.29 for each member of the society. There was also an expenditure of nearly \$600,000 for assisting persons not in the society. The funds of the society were reduced by the strike from more than \$1,250,000 to a little over \$,000,000, but the great bulk of the unusual expenditure of the year was met out of current assessments upon the members. The total outlay for the year, including administrative expenditures, was \$3,451,995. The outlay for 1899, which may be considered a fairly normal one, was \$1,125,330, or \$13.21 per capita. Of this amount \$11.63 per capita was spent for the various benefits, thus turning directly to the advantage of individual members, while \$1.60 covered the expenses of administration, including local organizations as well as the general body.

## 226 THE INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

The following table gives the aggregate payments of the society throughout the world for the objects named and in the years referred to.

### *Benefit payments by Amalgamated Society of Engineers.*

Object	1896			1897			1899		
	Expend- tures	Per cap- ita	Per cent of mem- bers re- ceiving	Expend- tures	Per cap- ita	Per cent of mem- bers re- ceiving	Expend- tures	Per cap- ita	Per cent of mem- bers re- ceiving
Unemployed	\$167,620	\$2.48	1.6	\$1,405,875	\$15.29	14.8	\$231,985	\$2.75	2.4
Sick	184,765	2.71	2.2	210,890	1.79	2.3	232,320	2.74	2.4
Superannuation	213,800	3.15	2.7	343,800	3.74	3.2	306,290	4.66	4.4
Accident	9,450	14		13,950	15		7,035	08	
Funerals	58,100	85		63,675	69		69,750	81	
Total expendi- ture	768,695	6.31		3,151,965	37.51		1,125,390	13.24	

The benefit payments in the United States and Canada alone for 1899 and for the 10 years ending with 1899 are reported as follows by the international organizer.

### *Benefit payments of the Amalgamated Society of Engineers in the United States and Canada.*

Objects	10 years ending with 1899	1899
Unemployed	\$90,225	\$9,225
Sick	61,570	6,157
Superannuation	130,350	13,065
Funeral	20,750	2,062
Special relief	3,000	300
Moving of tools	200	42
Assistance to other trades	4,500	410
Total	310,595	31,321

During the 49 years of the existence of the Amalgamated Society it has paid out no less than \$26,574,020, the average cost to the members during that period being \$11.94 per year.

For the same period the average cost of the unemployed benefit, which has proved the most expensive, has been \$5.11 per member per year. The sick benefit has amounted to \$2.17 per member per year. The superannuation benefit has, of course, increased greatly in amount as the society has become older, so that an average can not properly be given. The cost per member for 1899 was \$4.01. The average cost of the accident benefit for 49 years has been 18 cents per member yearly, while the average cost of the funeral benefit has been 75 cents per member.

**Relations with employers, strikes, &c.**—The branch committee above described has general charge of the relations with employers in places where only one branch exists. In towns where there are two or more branches a joint "district committee" is established to have jurisdiction of these matters. The committee in either case has power to deal with employers with a view to having their shops worked exclusively by union members, or regarding any matter affecting the interests of the trade. Subcommittees or deputations may be appointed by the committee to visit employers with a view to effecting amicable settlement of difficulties. In order to dem and from employers changed conditions in the district, the committee must obtain a vote of the members in the district. Each shop has also an officer, known as the steward, who deals with the employer in that shop.

No member shall leave his employment in a shop dispute without the approval of the district committee. No general strike in any district shall be entered upon unless favored by three-fifths of the members in the district voting thereon. In the case of shop disputes the district committee has power to take a vote of the members of the district upon the advisability of assisting by a local assessment, not to exceed 6 pence weekly.

Persons engaged in certain classes of strikes may receive strike benefits from the general funds of the society without special action by the executive council. Thus, in the case of strikes against reduction in wages, increase in hours, intro-

duction of piecework or of the 2-lathe system, or in the case of lockouts because of membership in the society, members receive pay without awaiting the approval of the council. Strikes for advance of wages or other improved conditions of labor must receive its sanction if benefits are to be paid.

**Strike benefits.**—Members out of employment on strike receive the same pay as those unemployed for other reasons (40 shilling per week), and also 5 shillings per week from the contingent fund. (The two payments in the United States make \$5.55 week y.)

The contingent fund is, unlike the superannuation fund and other benefit funds, dependent upon special assessments. The executive council is authorized to take a vote of the members whenever they deem it necessary, on the propriety of raising such a fund, the amount of the assessment, etc. The same holds true of the special fund for granting assistance to members of the trade and to other trade societies not connected with the Amalgamated Engineers.

In the American-Canadian district the contingent fund is entirely distinct from that in Great Britain. The amount is fixed by vote of the members in this country, and the fund is supported by contributions of members in this country only, and is used only for their relief.

It has already been noticed that local branches are authorized to vote special assessments in case of strikes. The general executive council is also directed in the event of any widespread strike to levy a general assessment not to exceed 6 pence per member per week, and not to continue for more than one month without a vote of all the members.

**Provisions for obtaining employment.** In connection with the system of benefits for unemployment the Amalgamated Engineers have an elaborate method for obtaining situations for those out of employment. Every member who is out of employment must immediately, and daily during his unemployment, enter his name in the 'vacant' book of the local branch to which he belongs, unless he resides more than 2 miles from the office, when less frequent registration is permissible. The names on this vacant book are to be read at each branch meeting, and all members signing it must attend the meetings at least once each month. Whenever a member knows of any vacancy or leaves any situation for another he must, within 24 hours, give information of the fact to the secretary of the branch to which he belongs and also to the nearest branch, or be fined 2s. 6d. for neglect. In five or six large cities, one of which is New York, there are established central employment offices where complete lists of unemployed members are kept. Furthermore, many towns where there are three or more branches a special register of members out of employment must be kept under the control of the district committee of the town.

If the secretary of any branch receives word from the general secretary or from any branch or from any employer that men are wanted in a particular district he must immediately send thither any members who are receiving unemployment benefit. No member may refuse to go to a situation in which he will receive the usual conditions of the district to which he is sent. Traveling expenses under these circumstances are paid, but must be refunded if the fare is afterwards received from the person furnishing employment.

**Overtime.**—The constitution declares that systematic overtime shall not be allowed in any district and that district committees shall also try to minimize incidental overtime as far as possible.

**Piecework.**—The Amalgamated Engineers are strongly opposed to piecework, although they are not able entirely to decline to work under that system. There is a fine upon any member who shall take work by the piece in any establishment where piecework is not at present found. District committees are also required to see that members have a proper minimum wage guaranty, altogether apart from the piece rates, and are also required to draw up rules for the protection of members from encroachment by employers through piecework. It is further provided that a member doing work by the piece must share equally in proportion to his wages any surplus made over and above the weekly wages paid to members and other persons working on the same job.

**Affiliation with other unions.**—Branches of the Amalgamated Engineers are authorized to assess their members, not over 6 pence per annum, to permit affiliation with local trade councils and other trade associations.

**Representatives in legislative bodies.**—An interesting provision of the constitution of the Amalgamated Society of Engineers, growing out of the English practice of not paying salaries to members of Parliament and other legislative bodies, is that the general executive council or the officers of any local branches may, by vote of the members, levy assessments to support labor representatives in municipal councils or other local public bodies or in Parliament.

## BROTHERHOOD OF BOILER MAKERS AND IRON SHIP BUILDERS OF AMERICA.

**History.** The Brotherhood of Boiler Makers and Iron Ship Builders of America dates its existence from 1881. The organization which was formed in that year was called the National Boiler Makers and Helpers' Protective and Benevolent Union. In 1881 the name was changed to International Brotherhood of Boiler Makers and Iron Ship Builders, Protective and Benevolent Union of the United States and Canada. In 1891 this organization was consolidated with another union of boiler makers, called the National Brotherhood of Boiler Makers of the United States. At this time the present name of the organization was adopted.

The successive reports of the secretary contain the following statements of the number of members in good standing:

June 1, 1891, 3,007; December 31, 1891, 1,571, April 30, 1895, 1,579, July 31, 1895, 2,170; October 31, 1895, 2,341; January 1, 1896, 2,343; April 30, 1896, 2,759, June 30, 1896, 2,981; December 31, 1898, 2,373; November 23, 1899, 3,579; June 1, 1900, 1,835; April 1, 1901, 5,181. On November 23, 1899, when the number of members in good standing was 3,579, the whole number of names on the books was 8,073.<sup>1</sup> On June 15, 1901, the whole number on the books was 14,760. The number reported as in good standing includes only those whose dues are paid to within 3 months, and whose locals have made reports to the central office during the preceding quarter. The secretary-treasurer says that possibly 90 per cent of the lodges now report regularly, though the proportion was formerly smaller. During the year ending April 30, 1901, 151 members withdrew, 60 died, and 955 were suspended, 2,182 were initiated, and 631 were reinstated. This gives an apparent gross increase of 2,836, diminished by a gross decrease of 1,166. In addition, however, 857 members received transfer cards dismissing them to other lodges, while only 662 were admitted by the presentation of such cards.

**General aims.** The convention of 1900 proposed a declaration of principles, to be prefixed to the constitution, which was afterwards adopted by referendum, by a vote of 1,112 to 517. It opens with a reference to "the class struggle between the privileged few and the disinherited masses, which is the inevitable and irrepresible outcome of the wage system," and closes as follows:

"As members of the Brotherhood of Boiler Makers and Iron Shipbuilders of America, we shall constantly keep in view its great object, namely, the summary ending of that barbarous struggle at the earliest possible time by the abolition of classes, the restoration of the land and all the means of production, transportation, and distribution to the people as a collective body, and the substitution of the cooperative commonwealth for the present state of planless production, industrial war, and social disorder; a commonwealth in which every worker shall have the free exercise and full benefit of his faculties, multiplied by all the modern factors of civilization."

**Convention.**—The convention meets biennially. Each local is entitled to one delegate and one vote for the first 10 members or major part thereof; to one additional delegate and vote for the next 20 members or major part thereof, and to one additional delegate and vote for each additional 10 members or major part thereof. Representation is based on the per capita tax paid by each lodge for the last quarter preceding the convention. One delegate may cast the full vote of his lodge.

**Constitutional amendments.**—The constitution is amended by popular vote on measures submitted either by the convention or by the local lodges. In the latter case the proposed amendment must be endorsed by 10 per cent of the lodges in good standing before being submitted to a general vote. All locals are required to vote, at the last meeting in the month following the submission, on amendments or other questions submitted to the referendum. The amendment is also to be read at two meetings thereafter within the next 30 days, and members who have not already voted are to be given an opportunity to do so. Any measure is carried by a majority of the valid votes cast. The result, together with the result of the vote in each lodge, is published in the Journal.

**Officers.**—The executive authority of the Boiler Makers' Brotherhood, when the grand lodge is not in session, is vested in the executive council, which consists of the president organizer, five vice-presidents, and the secretary-treasurer. This council has power to make orders in all cases not provided for by the constitution or by the action of the grand lodge. It also hears and determines charges against any local lodge or any officer or member of the grand lodge, and all appeals from decisions of the subordinate lodges. It has power "to provide revenue

<sup>1</sup> Boiler Makers' Journal, August, 1896, p. 222; August, 1900, p. 231; December, 1899, p. 382.

for the grand lodge by means of a per capita tax on each subordinate lodge under its jurisdiction." All officers are elected by popular vote.

The president receives \$1,200 a year and traveling expenses. The secretary-treasurer receives \$1,000 a year. They must live at the headquarters city and must occupy the same office. If one of them has to move in order to be at the headquarters, the brotherhood pays the cost.

The constitution provides that at each election three members shall be chosen to form a grand board of trustees; and in alternate years, the years in which the convention meets this board is to examine the books of the president and the secretary-treasurer, and make a detailed statement of receipts and expenditures and have it published in the Journal.

Local lodges are directed to elect business agents in cities where there are enough members to support them, for the purpose of keeping up the membership, collecting dues, and performing such other duties as the local lodges may require.

Local unions. A charter for a local union may be obtained by five qualified persons. A charter is not to be granted to any body of boiler makers while they are on strike, and a charter is also to be refused if it is shown that the applicants mean to make demands upon their employers as soon as they get it. Local unions are required to meet at least twice a month and to hold quarterly meetings on the last meeting nights in March, June, September, and December, at which all arrears, fines, and assessments must be paid and all debts of the locals canceled. If a lodge lapse or surrender its charter, the members are forbidden to divide its funds among them, but are directed to forward all funds to the general secretary-treasurer. Fifty per cent of the amount is to be placed to the credit of the lodge, in case it is ever reorganized and 50 per cent is to go to the credit of the general fund. Any 5 members can retain the charter. Any smaller number who may wish to retain their membership are to be enrolled as members of the nearest lodge.

District lodges.—The constitution contains general provisions for district lodges, to be composed of not less than three subordinate lodges in any city or cities. The district lodges have power to enact by-laws, adjust disputes, and call strikes.

Membership.—An applicant for membership in the Brotherhood of Boiler Makers must be a free-born male citizen of some civilized country, 19 years of age, a practical boiler maker or iron-ship builder, and an efficient workman, able to command the average wages of the yard or shop employing union men.

Applications for membership must be in writing. The applicant must be recommended by a member in good standing, and the application must be indorsed by two other members who know the candidate. The application must be read at a regular meeting and laid over until the next stated meeting, when it is to be voted on. The vote is by ball ballot, and three black balls reject, but they must be explained.

Apprentices. An apprentice may apply for membership in the Brotherhood of Boiler Makers between the ages of 18 and 21 if he produces a voucher that he has served 2 years at the trade. He is to pay half fees and, if beneficial, to receive half benefits. On coming of age or being able to command full wages, he is to pay the other half fee, and, after being clear on the books for 30 days, to be allowed all the privileges of a full member.

Traveling and transfer cards.—Any member who is leaving the neighborhood of his lodge is to apply to the financial secretary for a "combination card." He must pay all dues, fines, and assessments, and dues in advance to the end of the quarter. On accepting employment in any place where a lodge exists he must deposit the card and become a member of that lodge within 30 days on pain of a fine of \$1. The corresponding secretary of the lodge which receives the card must return it within 5 days to the lodge which granted it. So long as the member holds his card he is liable for all assessments on members of the lodge he has left.

Discipline.—The Brotherhood of Boiler Makers prescribes reprimands or suspension for various offenses, including neglect of duty, obtaining membership through fraud, divulging to an applicant for membership the name of a member who opposed receiving him, and entering a lodge in a state of intoxication. Any member who takes the place of a person out on a strike is to be expelled from the order. Provision is made for the trial of accused persons before a trial committee of three members and the defendant has the privilege of selecting one member as counsel.

Any member who fails to attend a quarterly meeting is to be fined 25 cents. A member who fails to attend the annual meeting, when the election of officers takes place is to be fined 50 cents. Sickness, being compelled to work, or absence from the city is a good excuse.

The constitution provides that no member shall contract for any boat or full

piece of work from any corporation, firm, or employer, so as to monopolize it for subcontracting, but that all giving of work by the piece and all hiring of men must be done by the employer, and all men so hired must be paid by the employer. Any member violating this rule is to be expelled.

The constitution also provides that "all religious and partisan discussion, or any other language or recriminations calculated to create discord among members, shall be strictly prohibited and excluded from the proceedings of the lodge."

**Finances.**—The charter fee, including the cost of a set of supplies, is \$15. The per capita tax is 20 cents a month. One dollar from each initiation fee goes to the national union. Since January 1, 1901, all payments to the national office have been made by the stamp system. The initiation fee must be at least \$5, and may be made higher by any local. The local dues may not be less than 50 cents a month. Assessments may be levied, on the proposal of the executive council, by vote of a majority of the locals.

Any member who lets his dues, fines, and assessments run behind to the amount of 3 months' dues is to be notified, and if he does not pay within 30 days is to be suspended. When his total arrearages amount to 6 months' dues his name is to be stricken from the roll, and he can not become a member again without first paying up all dues in arrears, with fines and assessments, unless such dues are remitted by vote of the lodge they are due to.

The receipts and expenditures for successive years have been as follows:

	Receipts	Expenditures
1895 .....	\$6,560	\$4,828
1896 .....	9,518	10,874
1897 .....	5,591	5,800
1898 .....	7,230	7,061
1899 .....	11,422	11,034
1900 .....	21,071	19,014

**Benefits.**—While the national union as such provides no sick or death benefits, a resolution was passed in 1900 directing the subordinate lodges to establish sick benefits of not less than \$3 and not over \$5 a week.

**Tax dodging.**—The tendency of locals to avoid payment of the full per capita tax is indicated by this provision: "Any lodge that shall misrepresent their membership to the grand lodge in order to keep down their per capita tax shall be disciplined in some manner to be determined by the executive council."

In August, 1899, the secretary said that the grand lodge was receiving per capita tax on 3,894 members; 6,973 members were on the register, and the secretary believed that taxes ought to be paid on at least 5,000. In November, 1899, the auditing committee reported that the number of members in good standing was 3,579, out of 8,073 registered on the roll book. The auditing committee confirmed the opinion of the secretary, that a large number of the lodges did not pay the per capita tax that they should pay. In an article in the journal of the brotherhood, the secretary explained one way in which the national organization loses. Members let their dues run behind, and their local reports them not in good standing, and does not pay the per capita tax upon them. Afterwards they pay up their dues. The per capita tax for the period of delinquency ought to be remitted to headquarters, but in many cases it is not.<sup>1</sup>

The president, at the convention of 1900, called attention to the failure of some lodges to pay their per capita tax on their full membership, and to the fact that this constitutes a fraud upon the remainder of the lodges. He recommended that the stamp system already used by several labor unions, be adopted for the purpose of making such frauds impossible.<sup>2</sup>

**Strikes.**—Each lodge is directed to appoint a shop committee, consisting of from two to five members, to look after the interests of the order. But a shop committee may not order a strike under any circumstances. No shop can strike except by a two-thirds vote of the members present at the lodge at a regular meeting, or at a special meeting of which due notice has been given to every member. No assistance can be given from the general treasury unless authority to strike has been obtained from the executive council before the strike has begun. Members who take part in an authorized strike are entitled to \$7 a week if married and \$5 a week if single; but no strike benefits are paid until 2 weeks have expired.

<sup>1</sup>Journal of Boiler Makers, September, 1899, p. 275, December, 1899, p. 362.

<sup>2</sup>Boiler Makers' Journal, August 1, 1900.

A new regulation gives district lodges authority to call strikes, but provides that the district lodges shall also pay the cost.

A member discharged while acting under instructions of his lodge or of a committee of the lodge is entitled to receive full pay (by which seems to be meant his full rate of wages) until his case is adjdusted or he obtains employment.

The auditing committee, in its report of November 13, 1899, said that many lodges, by hasty strikes, had deprived themselves of that assistance from the general body which is essential to success. If they would look up the law as given in the constitution, and have patience to let the grievance and the application for the strike go through the regular course and receive the approval of the executive council, less strikes would be lost.<sup>1</sup>

The president, in his report to the convention of July, 1900, stated that over 90 per cent of the strikes which had been sanctioned by the executive council of the brotherhood had been successful. Seventeen strikes had been lost, most of them through the bad judgment of the members involved in undertaking the strike without the sanction of the council. Besides a greater chance of hasty and unwise action through this course it cuts off the strike benefits. It is admitted that such action may sometimes be justifiable, since the delay involved in waiting for the council's sanction would cause the moment for action to be lost.

The most expensive fight which the president reported was that in Chicago for an 8-hour day with wages of 30 cents an hour. This began July 17, 1899. The majority of the employers yielded, but the strike was not over until May 1, 1900. The final result was a compromise, and the president declared that the same result could have been reached 1 or 6 months earlier if reasonable business methods had been employed. A strike at Bay City, Mich., the president's own home, could also have been adjusted, he thought "had good ordinary business judgment been used by the committee in charge of the strike." Another important strike, at Erie, Pa., was lost, in the president's opinion, through misunderstanding among the men, resulting in misrepresentation to the executive council. It was said when the strike was proposed that only 45 members would be called out; in fact, 131 members had to be supported.

The president added that 16 lodges had secured increase of wages or reduction of hours either with or without strikes.<sup>2</sup>

The union reported to the Federation of Labor in the fall of 1900 that it had won 19 strikes during the preceding year, compromised 3, and lost 4. The number of persons involved in strikes was 2,612, and the cost was \$15,003.

**Eight-hour day.**—A resolution was adopted by referendum vote in 1900 that 8 hours should constitute a day's work on and after June 1, 1901.

**Journal.**—The Boiler Makers publish an official journal, a monthly magazine of 32 pages. It contains a list of subordinate lodges and their officers, and lists of members admitted, suspended, withdrawn, reinstated, etc. It also contains a tabulated statement of the condition of trade in each local and of the number of hours of weekly work. A large proportion of its space is filled with communications from lodges.

## INTERNATIONAL ASSOCIATION OF ALLIED METAL MECHANICS.

**History.**—This organization was established, under the name of International Union of Bicycle Workers and Allied Mechanics, in 1897. The present name was adopted in 1900. Its former name indicates the character of the occupations which its members most commonly follow.

**General aims.**—The union announces its aims and objects in the following terms:

"1. To unite fraternally all workers of good character coming under our jurisdiction for the purpose of promoting education in these lines and questions relative to bettering the conditions of the working classes in general.

"2. Reduction in the hours of labor.

"3. The creation and maintenance of a scale of wages that will enable its members to live and enjoy the comforts of life as wealth-producing citizens should.

"4. Opposition to child and female labor; equal pay for equal work.

"5. Opposition to convict labor in competition with free labor and the passage of laws compelling convict-made goods to be stamped "Convict-made."

"6. Opposition to the piecework system, as it is not productive of good workmanship and detrimental to the consumer.

<sup>1</sup> Boiler Makers' Journal, December, 1899, p. 362.

<sup>2</sup> Boiler Makers' Journal, August 1, 1900.

"7. Opposition to trusts and combinations of capital, which act not alone to curtail competition and limit production, but are used as weapons to crush and degrade the wage-worker. Such trusts are now fast reducing the wage-worker to a degree of slavery without parallel in the world's history."

The Allied Metal Mechanics have declared, by a resolution of their convention, that they "favor in every manner governmental control of the telegraph, railway, and telephone, and call upon all subordinate unions to endeavor by all possible means to have their Senators and Congressmen work to that end."

Another resolution of the convention condemns all action of subordinate unions for the advancement of party ends.

**Convention.**—Local unions of 150 members or less are entitled to 1 delegate; those with more than 150 and less than 500, to 2 delegates, those of 500 and less than 1,000, to 3 delegates, those of 1,000 or more, to 1 delegate. To be eligible to election one must have been a member in good standing for 6 months immediately before the election, unless his union has been organized within that time.

**Constitutional amendments.** The constitution may be amended by action of the convention, confirmed by popular vote, or by popular vote on propositions supported by seven subordinate unions. A majority vote is sufficient.

**Officers.**—The officers are a president, who is also general organizer, five vice-presidents, and a secretary-treasurer. Candidates are nominated by the subordinate unions. The five candidates for each office who are nominated by the greatest number of unions are eligible. Their names are printed in alphabetical order on the official ballot prepared by the secretary-treasurer, and each member makes a cross opposite the name of each candidate whom he wishes to vote for. For president and treasurer a clear majority is necessary. If a clear majority is not obtained on the first ballot, a second ballot is taken, for which only the two candidates who have received the most votes are eligible. For the other offices the candidates who receive the highest number of votes on the first ballot are elected. The president has power to suspend officers for cause, and to fine, suspend, or expel any member of the union who has been guilty of any act unbecoming a union man. An appeal lies to the executive council, and thence to the convention. The president's salary is \$300. The secretary-treasurer gives a bond of some solvent guaranty company for \$2,000, and his salary is \$900. The executive council is composed of the officers.

The convention has adopted the following resolution: *Resolved*, That none of our officers be permitted (unless absolutely necessary for the success of the international) to work more than 8 hours per day."

**Apprentices.** Local unions may make regulations limiting the number of apprentices to be employed in each shop.

**Scabbing.**—The constitution of the Allied Metal Mechanics defines this term as follows: "A member of a union engaging to take a situation in the jurisdiction of another union at a lower rate of wages than the scale of prices of the latter union calls for, and failing for any cause to obtain the same, is guilty of 'scabbing.'"

"When a member has deliberately scabbed it is not necessary that he should be cited to appear for trial, but he may be summarily expelled."

**Finances.**—The charter fee for new local unions is \$5. Fifty cents is paid to the international union for each new member. The per capita tax is 20 cents a month. Half the per capita tax goes to the general fund and half forms a defense fund. The executive council may levy an assessment when absolutely necessary, but no such assessment can be more than 50 cents, and assessments can not be levied more than three times in any calendar year, except by referendum vote of all the members.

**Strikes and lockouts.**—When a disagreement arises with employers the president is to be notified, and is to make all possible efforts to settle the dispute. If he does not succeed, a strike may be authorized, either by the executive council or, if necessary, by the president. A meeting of the local union is then to be summoned, of which all members are to be notified. If two-thirds of the members present decide in favor of a strike, it is inaugurated.

Where more trades than one have subordinate unions in the same place under the Allied Metal Mechanics, they are to create a joint standing committee to secure united action. In such places, if a majority of the local unions fail to support a proposition to strike, the union in which the grievance has arisen may appeal to the executive council. If four-fifths of the members of the executive council think a strike is absolutely necessary, it may be ordered, and any who disregard it are to be expelled.

Ten cents a month per member, being one-half of the per capita tax, forms a defense fund, which is directed to be drawn on only for the sustaining of strikes,

for resisting the encroachments of men too strong for the local union to contend with, and for advancing and defending the principles of unionism in the trade. Out of this fund a benefit of \$4 per week is payable to participants in an authorized strike. To be entitled to benefit a man must report daily to the proper officers. One who gets work as much as four days a week is not entitled to benefit. Benefits cease at the end of eight weeks, except where both the union interested and the executive council think it necessary to continue them longer.

**Labor Day.** A resolution of the convention declares that no member is to be permitted to work on Labor Day, and that local unions shall have power to fine or punish members for violation of the rule.

## METAL POLISHERS, BUFFERS, PLATERS, AND BRASS WORKERS' INTERNATIONAL UNION OF NORTH AMERICA.

**History.**—The Metal Polishers, Buffers, Platers, and Brass Workers' International Union of North America was organized in 1886. In 1896 it was amalgamated with the Brotherhood of Brass Workers. The organization now includes the following trades: Polishers, buffers, platers, brass, copper, aluminum, and britannia finishers, brass molders, chasers, cock-grinders, chandelier makers, spinners, engravers, britannia sand buffers, solderers, burnishers, and finishers. According to the statement of its secretary, the number of its locals in July of each recent year has been as follows: 1896, 60; 1897, 80; 1899, 120; 1900, 150. The secretary gives the membership in July, 1896, as 1,000; 1897, 5,000; 1898, 5,500; 1899, 8,000; October, 1900, 13,500. On April 20, 1901, the membership by branches of industry was reported as follows: Polishers, 9,153; brass molders, 2,263; chandelier makers, 612; brass workers, 1,639; mixed locals containing members of various trades, 2,557; total, 16,186.

The union has had some disputes over jurisdiction with the Bicycle Workers, now the Allied Metal Mechanics. The two organizations came to an agreement in 1897 dividing the work of emery grinding by a provision that in bicycle factories where roughing is done by the members of the Bicycle Workers' Union they should use no emery higher than 80.

**General aims.** The preamble to the Metal Polishers' constitution pledges the efforts of its members for the following objects: Reduction of the hours of the work-day; government ownership of national monopolies; election of all public officers by popular vote; and abolition of government by injunction in controversies between capital and labor.

**Conventions.** The convention meets annually on the third Tuesday of April. Each local is entitled to one delegate for the first 200 members or less, and one additional delegate for each additional 200 members or major part thereof. Delegates are entitled to one vote for the first 50 members or less, and one additional vote for each additional 50 members or major part thereof, but no delegate can cast more than six votes. The organization pays the mileage of delegates.

**Officers.**—The officers are a president, seven vice-presidents, and a secretary-treasurer, and the officers constitute the executive board.

The president has power to decide all questions of law and controversies between locals and members, or between locals and the international organization, subject to appeal to the popular vote. He is required to give his whole time to his office, and his salary is \$1,200. The first and second vice-presidents are also expected to give their whole time to the work of the union. They are to act as organizers and to undertake the settlement of grievances. They receive \$500 a year each.

The secretary-treasurer issues a numbered due book and card, bearing his signature and the date of initiation of the owner, to each member. He is editor of the monthly journal. He gives a bond of \$5,000, and his salary is \$1,000.

The executive board has power to decide all questions between the locals and between the districts, subject to appeal to the referendum vote. It also has power to impeach any officer.

All officers are elected by popular vote on the Australian system. The general secretary issues official ballots containing the names of the candidates duly nominated by the locals.

**Membership.**—Any person who works at one of the trades included in the union may be admitted to membership, if he is not a suspended member and has done nothing detrimental to any organization. No superintendent or manager, or foreman who has full power to hire and discharge and to regulate wages, or person who is financially interested in any establishment except a cooperative shop, can be admitted to membership. If one comes from a city in which a local exists and

has not joined that local, he can not, without its permission, join any other local, unless upon an order of the executive board. Candidates for membership are elected by a majority vote.

No member of the union is eligible to office if he holds a political position. Any man who leaves the trade to go into the liquor business, as a proprietor or partner, is required to take out his withdrawal card.

**Apprentices.**—An apprentice may be admitted to the union after working 3 months at the trade. The constitution requires an apprenticeship of 3 years before the issue of a journeyman's card. An apprentice member has no vote on questions of wages or strikes, but has the same vote as a journeyman on other questions.

**Discipline.**—Any member who goes to work where members are out on strike is to be fined \$25, "unless acting as agent by the authority of the international union." A member who undermines or attempts to undermine a brother in his job is to be fined or suspended, at the option of the union.

If any member violates the constitution, it is the duty of any other member who knows of it to give notice in writing to the local president. An investigating committee is to be appointed. The committee is to notify the member and set a time and place for the investigation. After a hearing the committee must report to the union, giving a synopsis of the testimony, their judgment on the guilt of the accused, and such recommendation as they deem best. The ultimate determination of innocence or guilt and the fixing of the penalty rest with the union. An appeal lies to the general executive board, and ultimately to a vote of the whole membership.

**Finances.** The charter fee for new locals consists of "a national initiation fee of \$1 for each member." The local initiation fee, out of which the national is paid, is uniformly \$5. The per capita tax is 25 cents a month. Ten cents goes to the strike fund, 3 cents to the death fund, 8 cents to the general expense fund, 2 cents to the journal fund, and 2 cents to the sinking fund. It is forbidden to use the money of one fund for another, unless by a two-thirds vote of the executive board. At present, in consequence of a heavy indebtedness caused by strikes, an additional tax of 10 cents a month is collected.

All initiation fees, dues, assessments, and fines are payable by stamps, which are obtained by the national president delivered by him to the secretary, and furnished by the secretary to the local unions.

The initiation fee varies from \$1 to \$5, and the local dues from 50 cents to \$1 a month. The constitution provides that no member shall be allowed to go to work in a card shop unless his due book is stamped up to date, except that one who has been out of employment 3 months or more, through sickness or other unavoidable cause, may have 30 days to pay up arrearages. A local which fails to send in its monthly report within 10 days after it is due is to be fined 50 cents, and when 30 days delinquent it is to be fined \$1.

**Death benefits.**—On the death of a member who has been in good standing for 3 months a death benefit of \$25 is paid, after 6 months \$50, after 1 year, \$100. A suspended member upon reinstatement occupies the same position as a new member.

**Strikes and lockouts.** If a local union thinks that a pending dispute may result in a strike it is its duty to notify the general secretary, and he is to send the general organizer of the district or the nearest member of the executive board to the scene of the trouble. If an amicable settlement proves to be unattainable, and a majority of the executive board consider that a strike is necessary, it may be authorized. It can not be inaugurated except by a three-fourths vote of the members present at a meeting of the local union. No member can vote on the question of striking unless he has been a member 3 months.

The strike benefit is \$5 a week. In order to draw it every member on strike must report to the strike committee at roll call every day. A member can not draw strike pay for any week in which he has 4 days' work, and any member who refuses to work while on strike forfeits all benefits. A local union one-third of whose members are on strike may refuse to receive due books for 3 months, or, with the approval of the International president, for 6 months. At all other times the acceptance of due books—that is, the admission of members coming from other locals—is compulsory.

A defense fund is maintained by a payment of 10 cents a month from each member. It may be drawn on only "for the sustaining of legal strikes; for resisting the encroachments of unfair and disreputable men when too strong for the local union to contend with, for the purpose of advancing and defending the principles of unionism as applied to our own trade."

The union reported to the Federation of Labor in the fall of 1900 that it had won 14 strikes during the preceding year, compromised 2, and lost 1. Four thousand persons were involved, of whom 3,600 were benefited. The cost was \$27,000.

**Hours of labor.**—In April, 1901, the president reported that a movement for the 9-hour workday was begun on January 1, and that up to the time of his report it had been successful in about 500 shops. Two years before, it was said, there was not a shop in the United States or Canada where the members worked less than 59 hours a week.

**Overtime.**—Members are forbidden to work overtime until all vacant places have been filled, and then they may not work overtime unless it is absolutely necessary. The penalty is a fine of \$10, of which half is to go to the local and half to the international defense fund.

**Contract work.**—Any member who accepts a contract is subject to a fine of not less than \$50, with suspension until the fine is paid. A contractor is defined as a foreman or overeer who agrees to perform a definite amount of work and to accept any other remuneration for it than a regular salary. It is specified that the rule is not intended to interfere with the right of members to work in piece-work shops.

**Official journal.** The official journal is a monthly paper which is sent free to all members, and is sent to outsiders at a subscription price of 50 cents. It is forbidden to give up the paper to any party politics, but its pages are open to the discussion of social and economic subjects by the members of the organization.

**Union label.** The union label of the Metal Polishers was adopted in July, 1897. The president reported in October, 1900, that 40 manufacturers were using the label, that about one-tenth of the total output of the trade was sold under it, and that about 300,000 labels had been issued during the preceding fiscal year.

A union label for bicycles is issued by the Bicycle Workers (now the Allied Metal Mechanics), the Metal Polishers, and the Machinists, jointly.

The constitution provides that any member who buys any commodity without a label, when union-label goods can be had, shall be fined \$2.

### AMALGAMATED SHEET-METAL WORKERS' INTERNATIONAL ASSOCIATION.

**History.** The Amalgamated Sheet-Metal Workers International Association was organized in 1888. Its members do all kinds of work in tin plate, cornice work, and work in sheet metal generally up to No. 1 gauge. In October, 1900, the secretary reported 122 locals and 3,886 members, and in June, 1901, 160 locals and about 4,500 members.

**Objects.**—Among the objects proposed in the constitution of the Sheet-Metal Workers are the encouragement of a higher standard of skill by the formation of schools of instruction in the local unions, and the settlement of disputes with employers by arbitration.

**Conventions.**—The interval between conventions is not fixed by the constitution, but each convention fixes the date of the next. Each local is entitled to 1 delegate for the first 50 members or less, 2 delegates for more than 50 and less than 100 members, 3 delegates for more than 100 and less than 150 members, and 1 additional delegate for each additional 100. A single delegate may cast the full vote to which his union is entitled. Mileage and expenses of the delegates are paid by the locals, except that for locals more than 800 miles from the meeting place the international association pays mileage, at 10 cents a mile, for the distance above 800. A delegate must have been 6 months a member of his local, if his local has existed so long.

**Constitutional amendments.**—The constitution may be amended by a majority vote of the convention. It may also be amended by a two-thirds majority on a popular vote on propositions submitted by the executive board, or proposed by one local and seconded by 10 others.

**Officers.**—The officers are a president, four vice-presidents, and a secretary-treasurer. The president and the vice-presidents constitute the executive board. The board elects a chairman, who must be another than the president. The vice-presidents act as general organizers. The president determines points of law subject to appeal to the board. With the consent of a majority of the board he fills vacancies in the general offices. The executive board decides appeals from the decisions of the president, and attends to disputes with employers. The vice-presidents, when acting as organizers, receive \$18 a week, \$1.50 a day for expenses, and railroad fare. If they work at their trade their wages are deducted from their allowance. The secretary-treasurer gives a bond for \$4,000, and his salary is \$1,000 a year.

If any officer of the executive board fails to answer an official communication within 3 days, he is to be fined \$5 for the first offense and \$25 for the second, and for the third is to be expelled by the president.

The officers are elected by the convention, by a majority vote. If no candidate receives a majority, the lowest is dropped and the ballot is repeated.

**Local unions.**—Only one local union of members working in the building trades may be established in a city. A separate local of makers of sheet-metal ware may be established when it seems desirable.

The constitution directs that the locals use a uniform system of bookkeeping, books and blanks for which are furnished by the general secretary-treasurer. The by-laws of the locals are required to be submitted to the executive board for approval.

The constitution provides that no local shall withdraw from the International Association or dissolve so long as five members in good standing object, and that the association shall not be dissolved while there are five dissenting locals.

**Membership.**—The sheet-metal workers include tin and sheet-iron workers, roofers, cornice workers, range and furnace workers, jobbers, copper-smiths, and those who put on iron ceilings and sidings. The union does not claim jurisdiction over work in iron heavier than No. 1 gauge.

An applicant for membership must sign a regular application blank, and it must be countersigned by two members in good standing. A two-thirds vote elects to membership. No one who has been expelled or suspended from any local or who is in arrears for dues to any local can be admitted by another local without the consent of the first.

**Apprenticeship.**—The sheet-metal workers recommend a legal apprenticeship system, and forbid more than one apprentice to six journeymen.

**Cards.**—A clearance card is to be issued to any member who wishes to travel or transfer his membership, on payment of all dues to date and for a future period of not less than 1 month nor more than 1 year. The signature of the member is placed upon the card for purposes of identification. On going to work in a new place the member must immediately deposit his card with the local union, and the financial secretary of the union must report the receipt of it to the local which issued it.

A withdrawal card is issued by a two-thirds vote to one who has ceased to work at the trade.

The local president is expected to appoint a shop steward in each shop, whose duty is to see that nonunion men join the union and that union men deposit their cards with the locals. He is required to demand 50 cents a day from any union man who goes to work in his shop without a card. When the man joins the local the money is returned.

**Discipline.**—The most heinous offenses, in the judgment of the Sheet-Metal Workers, are habitual drunkenness, attempts to create dissension among the members, working against the interest and harmony of the union, advocating dissolution of the local or division of the funds or separation of the local from the general body, and the commission of any offense which will bring the union into discredit. For any of these acts a member is to be expelled. For misapplication of funds, for willful slander of a fellow-member, for willful violation of trade rules, or for unauthorized betrayal of union business a member may be expelled, suspended, or fined.

Charges must be brought in writing and tried before a committee of 5, selected by lot from among 10 members named by the local. The accused has a right to challenge any 3. The committee reports to the local and a vote of the local determines the final decision. An appeal lies to the executive board.

Charges against any general officer must be made by affidavit, and the case is apparently tried and the penalty, if any, fixed by the president alone, or by the first vice president alone if the president is the defendant. An appeal lies to the convention.

Any member who brings false charges against another is to be fined, suspended, or expelled.

**Finances.**—The charter fee paid by new locals is \$15. This includes the cost of seal, books, and blanks. The per capita tax is 15 cents a month. The initiation fee may not be less than \$1, or, for the first 3 months after a new local is established, not less than \$1. A local can not levy a tax or assessment except by a two-thirds vote. A member 3 months in arrears is to be suspended, and when 6 months in arrears his name is to be dropped from the books. A local 3 months in arrears is to be notified, and if it does not then pay within 1 month it forfeits its charter.

**Strikes.**—A grievance against an employer can be insisted on only by a two-thirds vote, by secret ballot, of the members present at a meeting of the local, of which all members in good standing have been duly notified. When such a vote has been taken a full account of the case must be given to the executive board, and a strike can not legally be declared until the board has given its consent. The board is required to discourage a second strike when one is in existence under its jurisdiction, unless in case of emergency. The strike benefit is \$5 a week for men of family and \$1 for single men. It commences the second week after the strike is authorized and is not paid for any fraction of a week. The defense fund is maintained by the appropriation of 5 cents a month from the per capita tax of each member. When it amounts to less than \$500 the executive board is to levy an assessment. The executive board has power to declare a strike at an end. No strike may be declared between December 1 and April 1, except in case of extreme provocation. A member who goes to work where there is a strike is to be fined \$5 a day.

In the case of a lockout, assistance begins from the day of the application. A lockout is defined as "a declaration on the part of an employer or combination of employers to the effect that their employees must cease their connection with the union or cease work, or a combination" by a number of employers for the purpose of throwing their employees out of work without any cause or action on their part.

**Piecework.** Piecework or subcontracting is forbidden in building work. The rule does not apply to the making of sheet metal ware.

**Union label.** The sheet-metal workers use a paper label on ware made by them. To outside work they attach a stamped brass label. The labels are furnished free of charge to employers but are issued by the general office to the locals at a charge which is meant to represent the cost. The present charge is \$10 a thousand for the brass labels and \$1 a thousand for the paper labels. The labels can not be used on ware made in factories by machinery or by children.

### IRON MOLDERS' UNION OF NORTH AMERICA.

**History.**—The Iron Molders Union of North America was organized on July 5, 1859, by delegates from 12 existing local unions. By January 1, 1861, 28 locals acknowledged allegiance to it. The war nearly destroyed it, but by great and self-sacrificing work, especially on the part of William H. Sylvan, one of its founders, its fragments were brought together. Fourteen locals reported at the convention of January, 1863, and 30 at that of 1864. The next year 46 new locals were formed and were reorganized. From that time, though the growth of the union has not been steady, it has always been a strong and healthy organization. In July, 1900, the secretary reported 321 locals and 35,000 members.

**General aims.**—The preamble of the constitution is as follows:

"Believing that under the present social system there is a general tendency to deny the producer the full reward of his industry and skill, and that the welfare of a community depends upon the purchasing power of its members, and that the only means of resisting the power that the centralization of power has placed in the hands of the few is by organized effort. Therefore we, the iron molders of North America, in order to promote our craft interests and enable us to maintain our rightful position as citizens, have organized the Iron Molders Union of North America."

The following is among the standing resolutions of the union.

**Resolved,** That while we are opposed to entering any political party as a body, we declare it our duty to use our influence with the law-making power to secure the following objects: (1) The regulation of the employment of women and children, (2) securing the adoption of a State apprentice law by which all apprentices to a trade would be properly indentured, (3) securing the adoption of proper laws regulating the hours constituting a day's work, (4) reform in prison labor so as to prevent the product of convict labor coming into competition with honest labor, and to encourage the principle of arbitration whenever practicable."

**Convention.**—The iron molders hold a convention every two years if it is desired by the members. Before the time for the convention all local unions are asked to vote on the question of holding one. If the vote is in the negative, another vote is taken yearly until an affirmative vote is returned. Each union is entitled to one delegate for 100 members or less, and to an additional delegate for every additional 100 members or majority fraction thereof. The organization pays the fare of each delegate and \$3 per day during his attendance.

No convention was held between 1895 and 1899.

**Constitutional amendments.**—The constitution may be amended either by vote of the convention or by general vote on motion of any local. The executive board, on receiving a proposed amendment submitted by any local union, must, if a majority of the board approve of the amendment, submit it to a vote of the local unions. If a majority of the votes of the members are in favor of the amendment it becomes a law. If the proposed amendment is not approved by the executive board, 10 local unions may appeal, whereupon the executive board, after publishing its reasons for disapproval, must submit the amendment to the vote of the local unions.

**Officers.**—This organization has a larger number of officers than most of the national unions. There are a president, four vice-presidents, a secretary, an assistant secretary, a financier, a treasurer, an editor of the journal, and seven trustees, who, with the president, constitute the executive board. The president has no vote in the board, but in all other respects acts with it. The president is paid a salary of \$1,500 a year and traveling expenses, the vice-presidents are each paid \$1,100 a year and traveling expenses, the secretary is paid \$1,200 a year and must give bond for \$5,000; the assistant secretary receives \$1,000; the financier is paid \$1,100 and the treasurer \$800, the editor receives \$1,200; the trustees are paid \$6 per day and mileage while discharging their duties.

The president has a casting vote in case of a tie in the annual convention, he is ex officio a member of all committees, he acts as chief organizer, and is required to visit unions involved in disputes with employers, or send a deputy if he can not attend. The vice presidents act as assistant organizers and visitors of unions.

The financier has general charge of the benefit and relief funds, keeping account of the finances of the various local unions.

The trustees have charge of the investment of moneys, and must each give bond for \$4,000. They also possess the general executive powers and judicial powers of the organization. They are empowered to approve or disapprove strikes by local organizations and to levy assessments when necessary to support strikes.

The executive board may, by a vote of five members, remove any officer for incompetency or unfaithfulness. No member of the board can hold any other elective office in the organization.

**Corresponding representatives.**—One delegate to the convention from each local acts as corresponding representative, and his duty is to report monthly to the secretary of the national organization the names of all members initiated, suspended, expelled, etc., with details, the number of members employed and unemployed, the condition of trade, the receipts and expenditures of the local union, etc. If a local has only one delegate to the convention, this duty falls upon him as a matter of course. If a local has several delegates, one of them is selected. The delegates hold their offices until their successors are elected.

**Membership.** Any molder who has served an apprenticeship of 1 year, or who has worked at the trade 1 year, and who is competent to demand the general average of wages, may be admitted by vote of the local union. The vote is by ball ballot, and if one-third of the balls are black the candidate is rejected.

**Apprentices.**—The constitution requires that any boy who engages to learn the trade shall be required to serve 1 year and shall not be permitted to leave his employer without just cause. It is forbidden to let any boy begin to learn the trade before he is 16 years old. The number of apprentices is restricted by the rules to "1 to each shop, irrespective of the number of molders employed, and 1 to every 8 molders employed thereafter." The union has not found it possible to enforce this restriction. It is said that the stove founders have more apprentices than 1 to 6 journeymen, and that the union, in its conference with the Stove Founders' National Defense Association in 1900, was willing to agree to a ratio of 1 to 6, while the employers would not accept anything less than 1 to 1.<sup>1</sup>

**Discipline.**—The constitution says: "No member of this union shall be allowed to injure the interests of another by undermining him in prices or wages, or any other willful act by which the situation of any member may be placed in jeopardy."

Any member engaged in the liquor trade is ineligible to hold any office or to act as a delegate to convention.

A member against whom charges are brought is entitled to a hearing, after due notice, before a special committee, with the privilege of introducing testimony and of cross-examining witnesses. The committee reports to the union, and the union votes first on sustaining the committee's report as to the guilt or innocence of the accused. If the verdict of the union is guilty, the penalty is then voted on. The vote is by ballot. The first question is on reprimand. If this is not carried, the next ballot is on fine; then, successively on suspension and expulsion. If no deci-

<sup>1</sup> Report of the Industrial Commission, vol. 7, p. 865.

sion is reached when all these grades of punishment have been voted on, the process is repeated, beginning with reprimand. Two ballots can not be taken on the question of expulsion, and no adjournment can take place until a decision is reached.

An appeal lies from any action of a local to the president of the international union, from him to the executive board, and ultimately to the convention.

Any local union may prefer charges against any local or general officer for violation of the constitution or laws, or for any act calculated to impair the dignity of the organization. Charges are tried before the executive board. The accused has the right to question witnesses. A popular vote is necessary to approve the findings of the executive board.

**Finances.** The charter fee paid by new unions is \$1. The initiation fee is \$5, of which \$3 goes to the local union for its local purposes, and \$2 is sent to the general treasurer for the death and total disability fund. The dues are uniformly 15 cents a week. The division of them is explained below under the heading *Benefits*.

The constitution provides that when the sum of \$6,000 shall have accumulated in the hands of the treasurer it shall be invested in the name of the trustees. Similarly any moneys above \$1,000 in the hands of the secretary are to be invested or deposited in the name of the trustees. Another provision, however, declares that the secretary shall not have at any time more than \$750 in his possession. The secretary is directed to draw orders on the treasurer for all expenditures and to keep accounts of the finances. His orders must be countersigned by the president.

**Benefits.**—This organization provides for a strike benefit of 8, per week, payable to all members engaged in a legally authorized strike. The same allowance is made to members thrown out of employment for following the instructions of the union or conforming to its principles. A sick benefit of 5 per week is allowed to any member who has been in good standing for not less than 6 consecutive months. This is payable after the first week's sickness, and may not be granted for more than 13 weeks in any one year. Any member taken sick while traveling is entitled to benefits from the nearest local union. In case of the death or total disability, by blindness, paralysis or loss of an arm or a leg, of a member who has been in good standing for not less than 1 year, he or his heirs are entitled to \$100. Members who have been in good standing for from 5 to 10 years are entitled to \$150, from 10 to 15 years \$175, over 15 years \$200. The out-of-work benefit consists of exemption from weekly dues only. This relief may not be given for more than 13 weeks in any one year, and to be entitled to it a member must have been in good standing for at least 6 months and must not owe more than 6 weeks' dues when he loses his employment.

The constitution provides that sick members must be visited each week by a committee of at least two, and the findings of the committee must be reported at the regular meeting of the union. A local union may also provide in its by-laws that a physician's certificate shall be furnished before sick benefits are paid. If the visiting committee is refused entrance to the house or the sick room, except by order of the attending physician, it is not obligatory on the union to pay the weekly allowance. If a member is working under the jurisdiction of the union, but at too great a distance to be visited by the sick committee, a physician's certificate, attested before a notary public, must be furnished before benefits are paid.

All benefits are ultimately payable by the national union, although the local unions keep a portion of the funds on hand subject to draft or to replenishment from the central treasury. Out of the local weekly dues of 25 cents 8 cents are placed to the credit of the local benefit fund for the payment of sick and out-of-work benefits. Ten cents per week are forwarded to the international treasurer, of which 16 per cent is placed in the death and disability fund, 26 per cent in the monthly fund, and 58 per cent in the strike fund. In case of emergency the executive board has power to make transfers from one fund to another. The central organization has an officer known as the financier, who keeps account of the funds of the locals for relief purposes, as well as of the relief funds of the international organization. If the sick fund of a local becomes depleted, he must, with the consent of the president, order such a remittance from the international relief fund as is necessary. He has power also to call in from the balances of the sick-benefit funds of the local unions such amounts as are necessary for the general relief funds.

During the year ending June 30, 1900, strike benefits were paid to the amount of \$71,348, death benefits to the amount of \$16,000 and sick benefits to the amount of \$85,420. This includes practically all the expenditures of this sort by both local and national organizations. The general expenses of the national union were \$67,647. The payments out of the 7 cents a member a week, which remains under the control of the locals, are not reported.

**Strikes.**—The Iron Molders' Union used to be one of the most aggressive of labor organizations. In its first year, \$5,511 out of a total income of \$6,125 was spent on strikes.<sup>1</sup> Its constant demands, culminating in a great strike in 1886, are said to have destroyed the stove manufacture in Troy, N. Y., which was a great center of the stove trade. In the midst of the contest of 1886 the stove founders of the country organized the Stove Founders' National Defense Association. Their avowed purpose was to fight the molders, and they did fight them steadily for 4 or 5 years, and won. This experience probably contributed, as the employers say it did, to reduce the molders to a more peaceable frame of mind.<sup>2</sup> Their policy for 10 years past has been one of peace. Their relations with their employers have been regulated, so far as they have been able to effect it, by formal agreements, national or local. An account of these agreements is given on pages 317-351. They have not, however, forgotten how to fight, as is shown by the important strike in Cleveland in 1900. This strike, which is closely connected with the agreement between the union and the National Founders' Association, is described on page 352.

**Authorization of strikes.**—In order to appeal for the official authorization of a strike a local union must hold a meeting and take a secret ballot on the question of accepting conditions proposed by employers or of making demands. An affirmative vote of three-fourths of all the members present is required, and no member can vote who has not been continuously a member for at least 3 months. If the decision is in the affirmative, the members must remain at work and lay their cause before the president of the national organization. He must proceed to the place of difficulty, personally or by deputy, to investigate, and, if possible, bring about a settlement. If he fails in this he must send a copy of the grievance to each of the seven members of the executive board, whose decision as to the approval or disapproval of the proposed action is final. If a local union decides to strike in opposition to the order of the executive board, the action may be considered sufficient provocation for suspension from the rights and privileges of the national union, at the option of the president and executive board. The members working in a shop are forbidden to strike without authority.

The constitution also defines certain cases which are to be considered as lockouts, and consequently as justifying a refusal to work. Thus if the employer demands of members that they sign contracts, or work for store pay, or work "buses," or quit the union, it constitutes a lockout. So, too, if an employer whose men are on strike attempts to get his work made in shops other than that owned by him, it is the duty of all members to refuse to work on these jobs, and they are to be considered as locked out.

A resolution of the union, adopted at one of its national conventions, declares that it is the policy of the organization to render assistance to sister organizations among workmen connected with the foundries if they submit their grievances and request assistance before striking. If such assistance is likely to involve the members of the Iron Molders' Union in a strike it must receive the same sanction from the president and the executive board as a strike of the members of the union.

**Benefits and assessments.**—Striking members are allowed a benefit of \$7 per week. This is paid out of the national funds. Fifty-eight per cent of the weekly per capita tax of 10 cents is set aside for the strike fund. If this fund becomes depleted the executive board has authority to levy such assessments as are necessary, without a vote of the local organizations. The same allowance is made to victimized members as to those on authorized strikes.

**Hours of labor and piecework.**—The constitution contains the following paragraphs: "No member shall do work of any kind before the hour of 7 a. m. or after 6 p. m., nor shall it be permissible for a member of this union to do more than a day's work in a day for equivalent pay."

"Molders shall not be paid less than time and a half for overtime, and double time for Sundays and legal holidays."

"Believing that the piecework system in the several branches of our trade has given rise to abuses that have wrought the most grievous injury to our members, and that our best interests lie in making an effort toward its abolition and the substitution of the day-work system in all branches. Therefore, be it

"Resolved, That it be an instruction to all of our officers, local and national, to make every effort to promote the growth of the sentiment in favor of the abolition of the obnoxious piecework system among our members, and that our national

<sup>1</sup>American Federationist, April, 1901, p. 115.

<sup>2</sup>See the testimony of the secretary of the Stove Founders' National Defense Association before the Industrial Commission. Reports, Vol. VII, pp. 861-865.

officers stand pledged to take advantage of every opportunity to further the policy herein outlined."

The convention of 1899 submitted to a vote of the members the question of taking steps to put an end to piecework and to establish the 8 hour day. The action proposed was an instruction to future officers to try to secure these modifications in agreements which might be made with the foundry men. The proposition to attempt the abolition of piecework was approved by a vote of 12,449 to 1,049; the proposition for the establishment of the 8-hour day by a vote of 12,367 to 796. The secretary says: "We realized that it would be an impossibility to enact a law abolishing a system that has been in existence, I might say, since the Christian era. We realized that it was, in a measure, a system that was very damaging to the workman, and felt that it could only be abolished, if at all, through agitation with those who imposed the system on their workmen. We can not hope for immediate results on either of these propositions, but we do expect through agitation to improve on these conditions if we are not able to accomplish all we desire."

**Machinery.**—The convention of 1899 resolved to extend its jurisdiction over machine molders and all who work at molding, and advised all members to accept jobs on molding machines and to bring out their best possibilities.

**Journal.**—A monthly journal is published at a subscription price of 25 cents a year. It is not sent free to members. An editor, who must be a member of the union, is elected at each convention. It is directed that the minimum number of pages for reading matter shall be 24. 6 pages are reserved for the exclusive use of the editor. The constitution provides that the columns of the journal shall be open to all shades of thought on political, religious, and economic questions; but any article on trade matters is to have the preference, in the month it is received, over articles on such subjects.

**Union label.** The label of the Iron Molders, adopted in 1896, is printed on paper and attached to union-made castings. It was determined in 1899 to abandon the paper label and adopt a device which could be impressed on the molds and become a part of the casting itself.

The molders admit that their label has not proved as effective a weapon as those of other trades. The reasons which they give are: First, the molder does not usually turn out a completed product, and by reason of the disorganized condition or unfair treatment of kindred trades the molders' label would sometimes work injury to struggling fellow-unionists. Second, machinery castings and the like are sold to people who can not be expected to discriminate in favor of union-made goods. Third, articles of cast iron which go to the general public are likely to be expensive articles like stoves and purchasers can not so readily be induced to discriminate in favor of the union label as they can be in the purchase of cigars or hats. This is especially true when the women do the buying.<sup>1</sup>

### PATTERN MAKERS' LEAGUE OF NORTH AMERICA.

**History.**—The Pattern Makers' League of North America was organized in 1887. Its members are employed in making the wooden patterns from which castings are made.

The membership, as shown by the secretary's report for certain years, is given in the following table. The fiscal year ends April 30, and the reports are understood to refer to that date.

Year	Number	Year	Number
1888	683	1894	846
1889	802	1895	954
1890	977	1896	1,281
1891	1,105	1897	2,202
1892	1,065	1898	2,484

**Object.**—The objects of the league are declared to be

1. To elevate the conditions and protect the interests of the craft.
2. To establish fair wages and trade conditions.
3. To influence the apprenticeship system in the direction of intelligence, competency, and skill in the interest alike of employer and employee.

<sup>1</sup> American Federationist, March, 1900, p. 79

4. To endeavor to avoid conflicts by means of arbitration and conciliation.
5. To provide superannuation, sick, death, and total-disability benefits, and tool insurance.

**Convention.**—Conventions are held every 2 years, unless otherwise decided by a referendum, in which each local has the same number of votes that it would have in a convention. The question of holding a convention is to be voted upon by the several locals in January; if the vote is negative the convention is postponed for a year, and the question recurs in the following January. Locals are entitled to 1 delegate for each 50 members or fraction of 50 not less than 25. Representation is based on the number of members for whom per capita tax is paid for the month of March. One delegate may cast the full vote to which his local is entitled. Delegates receive \$1.50 a day and mileage from the general fund, but it is paid only for 1 delegate for the first 50 members and 1 additional delegate for each additional 100 members, not for a full representation of the large locals. A local must have been in existence 6 months before the 1st of March preceding the convention in order to be entitled to representation. The Pattern Makers make the unusual provision that all elective and executive officers shall have votes in the convention on all questions except the election of officers, provided they are in good standing in their associations. In most national unions the general officers have seats in the convention, but no votes, unless they are delegates from their locals.

**Constitutional amendments.**—The constitution may be amended only by a two-thirds vote of the biennial convention, confirmed by a two-thirds vote of the locals. The vote of each local for this purpose is computed according to the representation to which it would be entitled in a convention, on the basis of the number of members for whom it has paid per capita tax for the previous month.

**Officers.**—The officers of the Pattern Makers' League are a president, a vice-president, a secretary-treasurer, and an executive board consisting of these three officers and six other members of the League. None of them can be owner or foreman in any business employing pattern makers. The powers of the board are broad. It has general supervision of the work of the League, passes upon all appeals from local associations or members thereof, approves the by-laws of these associations, and has power to investigate proposed strikes, and to endeavor to bring about a settlement, or to authorize or refuse aid from the national funds. It may remove any officer, local or national, by a two-thirds vote. The report of the board to the convention of the League held in June, 1900, comments on the recent decision of the board to appoint an organizer, as had been authorized by the previous biennial convention. The president was appointed organizer, and the report declares that he has accomplished a considerable work in extending the membership and the influence of the League. An amendment to the constitution adopted after this convention made the president the general organizer, requiring him to devote his entire time to the League and granting him a salary of \$1,200. The secretary-treasurer, also, is now required to give his whole time to his League work, and is paid \$1,200 yearly. Up to 1900 he received only a small payment from the League, and was obliged to support himself by regular work at his trade, and to do the League work nights and Sundays.

**Salaries.**—Organizers may be appointed by the general executive board, and may receive such pay as it deems just. The cost of the president's 10 months' service as general organizer, by appointment of the executive board, during the fiscal year 1899, before the constitution made him organizer by virtue of his office, was \$1,811. Three thousand one hundred and one dollars was expended for organization purposes during the two years from May 1, 1898, to April 30, 1900. The membership increased some 80 per cent during that time.

**Business agents.**—The constitution of the Pattern Makers' League contains fuller provisions concerning the appointment and duties of business agents than are found in the rules of most trade unions. It is provided that a local association may, in its discretion, elect an organizer or business agent, who must devote his whole time to the business of the association. His term of office may not exceed 6 months, though he may be reelected. Up to 1900 his pay was the prevailing rate of wages. This limit is now removed.

The business agent is strictly subject to the orders of the executive committee of the local association. He may hold no other office in the union, unless it be that of financial secretary. He may under no circumstances take such action as will involve the members in disputes or the association in expense, without special and specific instructions from the association. His duties must be such as will increase the membership of the association and extend its influence. For this purpose he must keep track of the names of members of the organization and of

nonunion men in the trade. He must also help members of the union to find work, keeping records of vacancies, etc.

It will be seen from these provisions that the Pattern Makers' League desires that the business agent shall be the servant and not the master of the local organization.

**Metal Trades Councils.**—A movement is on foot to establish in the various cities of the country councils somewhat similar to the building trades councils, representing the separate trade unions in the different branches of the metal trades, and also to bring about closer relations between the national organizations of the metal trades. The report of the biennial convention of the Pattern Makers' League, held in June 1900, states that the local association of that League in St. Louis had formed, nearly 2 years before, a federation with the other unions of the metal trades in that city. In December 1899, this local association requested the sanction of the Pattern Makers' League to enter into a movement with the other trades represented in this Metal Trades Council to secure joint contracts with their employers. These contracts were to provide for arbitration to settle disputes arising under them. The attempt fell through, since the molders signed individual agreements instead of adhering to this plan of joint agreements.

At the convention of the Pattern Makers' League the St. Louis association urged the desirability of forming throughout the country councils of the metal trades similar to that in St. Louis. It argued that the policy of the recently formed employers' organization, the National Metal Trades Association, as shown by its conference with the International Association of Machinists in New York in May, was evidently to deal with the trades separately and to keep them from working in harmony. It appears, in fact, that the officers of the National Metal Trades Association took no definite action upon the proposals of the representatives of some of the other organizations in the metal trades that similar agreements to that made with the International Association of Machinists should be made with them also. The St. Louis association declared that this policy on the part of the employers emphasized the desirability of closer harmony between the different unions connected with the metal trades. It declared that the results already accomplished by the metal trades council in St. Louis had been very advantageous.

On the basis of this recommendation of the St. Louis association, the Pattern Makers' League adopted a resolution to the effect that all local associations should use every effort to form metal trades councils in their vicinity, and that when a sufficient number of these local councils have been formed an international council should be established. (See the account of the Metal Trades Federation, page 255.)

**Membership.**—The constitution requires that an applicant have served a regular apprenticeship or have worked five years at the trade. He must be proposed in writing by a member and recommended by two other members. The local executive committee must make a careful investigation of his character and fitness, and may demand an examination by a physician at the candidate's expense. A two-thirds vote of the members present is necessary to admission. Any member who gives false answers to any question asked by his proposers or by an examining committee, or who conceals facts of any kind that should be known to the League, is to be expelled on discovery. Any member that assists in any deception in regard to the admission of candidates is to be fined not less than \$10 nor more than \$40, and may be expelled.

An apprentice may be admitted in the last 6 months of his apprenticeship.

**Apprenticeship.**—The Pattern Makers' League declares that 4 years should be the term of apprenticeship, and that it will use its influence to establish that rule. There is not to be more than 1 apprentice in any shop employing less than 8 journeymen, 2 where more than 7 and less than 12 journeymen are employed, and not more than 4 in any shop, regardless of the number of journeymen. The local associations are required to insist that apprentices serve the recognized time, and that they comply strictly with the terms of their indentures.

The secretary-treasurer wrote, on June 15, 1901: "In regard to the enforcement of a regular apprenticeship, I would state it is almost universal. Now and then a man may work from another trade into ours, but the number is so small that it is practically nil, and does not throughout the entire country and Canada average 10 per year. Graduates from trade schools also, as far as we can learn, go into the shops and serve a regular apprenticeship. This in a great measure is due to the fact that of all the trades pattern making combines a greater amount of intelligence and skill than is required in any other, and to follow it successfully a work-

<sup>1</sup> Proceedings of Ninth Regular Session of the Pattern Makers' League, pp. 24, 25, 54 and 60.

man must have a thorough knowledge of all kinds of molding and of drafting. The number of apprentices working at the business is also satisfactory to the organization, as during the last year but one complaint was entered by a local as to any shops working more than our rules called for. There are, though, throughout the country some few shops in which the limit of apprentices as laid down in the rules is exceeded, but this is by tacit arrangement with the local organizations, as the number of journeymen employed in these instances is so out of proportion to the average shop that to enforce this rule would be an injustice. These shops (5 in number) are, with one exception, in localities organized to such an extent that were it found advisable to limit the number of apprentices it could no doubt be done. I can state for our organization that so far as the apprenticeship system is concerned, both as relates to the serving of same and number, it is satisfactory.

**Working and transfer cards.**—Each member is provided with a metal-bound card, suitable for carrying in the vest pocket. The color is changed every 6 months. The card shows the dates of meetings, and is provided with spaces indicating the dues for each week, and with spaces for assessments. Upon it a record is made of the owner's attendance at meetings, and also of his financial standing with the association. It must be produced and shown to any member on demand.

Any member who removes to the jurisdiction of another local must deposit his transfer card within 30 days, on pain of forfeiting his membership. On doing so he is entitled to all privileges and benefits of a member of the new local. However, when a local is involved in a strike members who leave the place can not be transferred from it, but must continue to pay to it all their dues and assessments.

**Finances.** The Pattern Makers have definitely adopted the policy of high dues and benefits. Before 1898 the constitution provided that the initiation fee should not be less than \$2, and local dues should not be less than 50 cents a month. In 1898 the minimum initiation fee was raised to \$3 and the minimum dues to 20 cents a week. In 1900 the minimum dues were raised to 25 cents a week. Candidates who are over 50 years old, or who fail to pass the medical examination, may be enrolled as nonbeneficial members, and their dues may not be less than 15 cents a week. They are entitled to all benefits except sick and funeral benefits.

Up to 1898 the National League, besides collecting several special funds, levied a per capita tax at the discretion of the general executive board, but it was provided that this per capita tax should not exceed the actual cost of management. In 1899 the per capita tax was fixed at 40 cents a month for beneficial members and 30 cents a month for nonbeneficial members. In 1900 the tax was made uniformly 50 cents. Five per cent of the tax is set aside for the superannuation fund, 25 per cent for the sick-and-death-benefit fund, 20 per cent for the assistance or strike fund, and 50 per cent for the general fund. A small additional assessment is levied for tool insurance.

When a member is 8 weeks in arrears he is to be notified, and when 11 weeks in arrears he ceases to have a claim for benefits. He does not re-open his claim until he has been in good standing—that is, less than 11 weeks in arrears—for 4 consecutive weeks. When 13 weeks in arrears he must be suspended.

The official journal of the League declared in March, 1900, that the experience of 2 years had shown "that the policy of high dues and benefits, national in character, was the only proper policy. The membership has been more than doubled since the last convention."

After 4 consecutive weekly reports of idleness a member's dues may be paid by his local for 3 months, if he continues to be out of employment. At the end of 3 months he must either resume his payments or be dropped from the roll.

**Benefits.**—*Superannuation benefit.* The Pattern Makers made a new provision in 1900, for a superannuation fund, from which payments are first to be made in 1920. Five per cent of the per capita tax, or, at present, 2½ cents a member a month, is set apart to provide it. It is intended "for the benefit of aged members who have retired from active work as pattern makers, and for members who are permanently disabled, through accident or otherwise." Members 60 years old and 25 years in the league are to receive \$12 a month, members 65 years old and 30 years in the league, \$16 a month. All members who were in good standing on July 1, 1900, who maintain their membership continuously until July 1, 1920, and are then over 60 years old, are to be entitled to superannuation benefit. No other benefit is to be paid to a member who is receiving superannuation benefit; but on the death of such a member the regular funeral benefit is to be paid. One who has been granted superannuation benefit, and who returns to work at the trade, is to have no further claim on the fund for 5 years.

*Sick and death benefits.*—A member who was less than 45 years old when he

joined, who was free from any local or permanent disease or injury, and who has been in good standing 52 consecutive weeks, is entitled to sick and funeral benefits, provided his sickness or death is not caused by his own improper conduct. A member who joined between the ages of 15 and 50, and who otherwise fulfills the requirements is entitled to one-half sick and funeral benefits. The full sick benefit is \$1 a week, less all payments due to the league. Full funeral benefit is \$50.

Sick benefit is not paid for a sickness of less than 11 days, and not for more than 13 weeks in any consecutive 12 months. Where the sickness is longer, the member may be exempted from payment of dues, if he desires, after the payment of sick benefit ceases.

A relief committee is to be appointed by each local, and two members of it are to visit each sick member, "not together, nor by mutual agreement, but independent of each other, and satisfy themselves as to the validity of his claim," they are also to require from the applicant a physician's certificate.

When the Pattern Makers' League first established national sick and death benefits, in 1898, the sick benefit was fixed at \$6.35 a week, and the death benefit ranged from \$50 after 1 year's membership to \$100 after 15 years' membership. The insurance laws of Massachusetts at the time required fraternal organizations which paid sick benefits larger than \$5 a week or death benefits larger than \$125 to comply with certain requirements as to incorporation and as to deposits with State officers. The Pattern Makers' League suspended its benefit provisions rather than comply with these laws, and ultimately reduced its benefits to the present scale of \$1 a week for sickness and \$50 at death. The Massachusetts insurance laws were modified in 1899 so that trade unions are exempted from their requirements.

In 1899, the first year of the sick and death benefits, \$965 was paid for sickness and \$200 for deaths. Additional sick and death benefits are often paid by the locals.

The president said in his report to the convention of 1900 that the adoption of the national sick and death benefits had added greatly to the stability and permanence of the league. It had brought the local associations closer to each other and made them feel that they were one united body. He recommended that if any changes be made they be additions rather than subtractions.

*Tool insurance.*—A separate department for the mutual insurance of tools, on a voluntary plan, was established in 1888. In 1898 tool insurance was made compulsory on all members, though the amount of the insurance may be as little as \$25 or as much as \$150. An annual assessment of 1 per cent of the amount insured is levied to cover the cost, and it is provided that the insurance fund shall be kept separate, and that when a reserve fund of \$5,000 has accumulated in this department the assessment for each year shall be only enough to cover the payments of the preceding year. The balance in this fund was \$1,117 on May 1, 1899, and \$2,392 on May 1, 1900.

The secretary noted in his report of 1900 that the compulsory character of this insurance and the assessment levied under it caused dissatisfaction. He suggested that much friction would be done away with if means could be devised for raising the funds by assessing the associations instead of the members individually.

*Strike benefits.*—Members engaging in an authorized strike are entitled to a benefit of \$7 per week. Members victimized because of their adherence to the principles of the league are entitled to the same benefit, from the date of application to the general secretary treasurer.

The amounts paid out for tool insurance and strike benefits by the Pattern Makers, in successive periods ending May 31, are given in the following table. After 1890 the amounts are for biennial periods.

Year	Tool insurance	Strike benefit
1889	\$135	
1890	295	
1892	50	\$130
1894	61	2,306
1896	89	448
1898	122	2,522
1900	1,544	3,020

*Strikes and arbitration.*—The constitution of the Pattern Makers formerly contained a declaration "that strikes are deplorable in their effect and contrary to the best interests of the craft," and that the constitution therefore gave no sanction to

them, except in strict accordance with the law which it laid down. This declaratory statement was eliminated in 1900. The laws referred to in it were much less detailed than those which many organizations provide. The general executive board, which consisted of the president, the vice-president, the secretary-treasurer, and four other members, was directed to make a thorough investigation when an appeal for strike aid was made. It might then grant assistance out of the reserve fund, but if this fund became depleted and an assessment was necessary, an affirmative vote of every local was required. The constitution did not make it necessary, as the constitutions of most national organizations do, that the consent of the executive committee be obtained before beginning a strike. The executive board had, however, adopted the policy of voting no help for strikes which it had not authorized. In referring to its consistent enforcement of this policy, in its report to the convention of 1900, it says: "We believe that individual and unsanctioned movements result in injury to the league and members involved."

In 1900 this policy, which the executive board had put in force by its own authority, was embodied in the constitution, at least by implication. Detailed regulations for the inauguration of strikes, similar to those which are generally found in the constitutions of national bodies, were adopted. There must be, first, a two-thirds vote of the local, and no member may vote unless he has been a member for at least 6 months. The general officers must then be notified, and, if necessary, the general president is to proceed to the spot, in person or by deputy, and try to effect a settlement. If he fails, "a strike may be declared, with the sanction of the general executive board, and benefit granted." A member who works in a shop during a strike against it, or does its work elsewhere, is liable to fine, suspension, or expulsion. The general executive board has power to declare a strike off, but must give at least 2 weeks notice to the local. A popular vote is required to authorize assessments in aid of strikes.

The strike benefit is \$7 a week. Each member who receives it must sign a voucher for each week or part of a week, and the voucher must be sent to the general executive board with a full weekly report. There is a reserve or "assistance fund," which is supported by an appropriation of 10 cents per member from the monthly per capita tax paid to the national organization. In case the amount in this fund is insufficient, assessments may be levied by vote of the local unions. There are no restrictions as to the length of time during which strike benefits may be paid.

The biennial report of the executive board for the 2 years ending April 30, 1900, enumerates various instances in which the local unions have appealed for support of strikes by the general organization. In several of these instances the executive board refused, on various grounds, to sanction the strike. In the case of a very important strike in New York, the approval of the organization was given, but no assistance was asked for or granted. Permission to inaugurate strikes and to receive strike assistance was granted in five instances, and in one of these, that at Boston, where the 9-hour day was the chief demand, it proved necessary to appeal to the unions for a strike assessment. The approval of the local unions was given and the strike was continued for fully 6 months. The total expenditure by the national league was \$2,600. The executive board finally decided to withdraw further support from the Boston association, but more than 80 per cent of the members of the union in that city had already obtained the 9-hour day.

The president of the league in his annual report declared that the importance of the strikes which had been carried on during the preceding 2 years showed the necessity of a larger reserve fund. He recommended, accordingly, that an assessment of \$1 per year be levied upon the members in addition to the regular sum set aside for the assistance fund. The convention did not comply with the recommendation, but increased the monthly payment to this fund from 8 cents to 10 cents. The total amount of the assistance fund of the Pattern Makers' League on May 1, 1898, was \$1,133. After an expenditure of \$3,020 during the ensuing 2 years and a transfer of \$400 to the general fund, a balance of \$1,261 remained in the fund.<sup>1</sup>

**Policy regarding arbitration.**—The statement of the objects of the Pattern Makers' League in its constitution mentions as one of them "to endeavor to avoid all conflicts, and their attending bitterness and pecuniary loss, by means of arbitration and conciliation in the settlement of all disputes concerning wages and conditions of employment." The constitution, however, contains no provision for introducing such methods of settling disputes. The reply of the secretary of the league to the schedule of inquiries sent out by the Industrial Commission states that some local unions have written agreements with their employers fixing the conditions of labor, and doubtless providing for arbitration of disputes arising under them. No

<sup>1</sup> Report of Proceedings of Ninth Regular Session of Pattern Makers' League, pp. 7-27, 66.

detailed information is given concerning these local agreements. There have been as yet no instances of arbitration or conciliation agreements by the national organization, nor of the reference of particular disputes to arbitration. The leaders are desirous, however, of effecting a national agreement with the employers. Some account of their efforts to this end is given on page 360.

**Hours of labor.** In July, 1900, the secretary reported that 1 local was working 8 hours a day, 3, 9 hours, 3, 9 and 10 hours, and 26, 10 hours. On June 15, 1901, the secretary wrote: "The last few weeks have made considerable changes. At this time 8 of our local associations, comprising about 10 per cent of the entire membership, are working 9 hours a day. This applies to practically every shop within their district. Seventeen associations, comprising nearly 30 per cent of the membership, are working 9 and 10 hours a day. In these cases I am unable to say what proportion of this 30 per cent works 9 and what 10, as this office is not directly informed as to that. The balance of the associations 21 in number, work on a 60-hours a-week basis, though some will have a Saturday half-holiday during the warm months. Those first mentioned are independent of any summer arrangement, it being understood that the hours apply the year around. This change in the conditions has been brought about in a great measure by the National Metal Trades Association giving the 9-hour day on May 20. There are also at this time, in those cities where the 9 and 10 hours are worked, several strikes on, which have for their purpose the more general enforcement of the 9-hour day."

**Overtime.** The constitution says: "Overtime being detrimental to the interests of the craft the league prohibits so pernicious a system." Only in cases of absolute necessity may members be permitted to work overtime. In such cases they must be paid at least time and a half and on Sundays and holidays double time. A fine of \$10 is prescribed for violation of these rules.

**Piecework.** Piecework is prohibited, and is defined to mean "any system other than a stated wage per hour or per day. Violation of the rule is punishable with a fine of \$10."

**Journal.** The official organ of the league is the Pattern Makers' Journal, published monthly, and supported out of the general fund. The president and the secretary-treasurer have general supervision of it as associate editors. Each member receives a copy.

**Union tool.** The executive board of the Pattern Makers' League adopted a union label in April, 1899. In their report to the convention of 1900 they admitted that it had been of little value and might prove of little value in the future, as it could not be expected that there would be any demand for it, unless the union molders forced it. The officers have made no considerable effort to promote the use of it; they doubt whether it can be made effective.

## CORE MAKERS' INTERNATIONAL UNION OF AMERICA.

**History.**—The Core Makers' International Union was formed on December 18, 1896, though some of the local unions which compose it had existed for years, in direct affiliation with the American Federation of Labor.

The Core Makers have repeatedly complained that the Iron Molders encroach upon work under their jurisdiction.

**Convention.**—The convention is held every 2 years provided the members desire it. The question of holding a convention is voted on by all the local unions in the month of March preceding the regular time for the convention. If the decision is affirmative, nominations of delegates are made on the last regular meeting night in June and delegates are elected on the first regular meeting night in July. Properly prepared ballots are provided by the union and members must vote for the whole number of representatives to be elected. Each local is entitled to one delegate for the first 50 members or less and to one additional delegate for each additional 50 members or majority fraction thereof. A delegate must be working at his trade at the time of the election, unless he is unable to get employment at his trade. He must have been continuously a member of his local for 6 months, unless the local has organized within that time. Delegates receive \$3 a day and their expenses from the general treasury.

**Constitutional amendments.**—The constitution may be amended either by a majority vote of the convention or by a vote of the local unions. Before a proposition can be submitted to the locals it must have been approved either by the executive board or by vote of five local unions.

**Officers.**—The officers of the Core Makers are a president, three vice-presidents, a

secretary-treasurer, and five trustees. All the officers are elected by the convention. A majority is necessary to elect and if there is no choice the candidate who has the least votes is dropped and the ballot is repeated.

The executive board consists of the president and the five trustees. The president has no vote in the board unless a tie vote occurs through the death of a member.

The president is chief organizer and the vice presidents are assistant organizers, and as such are subject to the president's orders. The secretary-treasurer receives and pays out all moneys and is required to publish a quarterly report of all receipts and expenses. His salary is \$300 a year and his bond is \$1,500. The trustees receive \$1 a day and mileage while discharging their duties. When \$1,000 has accumulated in the secretary-treasurer's hands, 500 is to be withdrawn and invested in the name of the executive board. The trustees are required to deposit all moneys in such a way that no amount can be withdrawn without their joint signatures.

Each local corresponding secretary whose duties include the transaction of all financial business with the general union and each local financial officer must give security in some surety company for at least \$500. The cost is paid by the local.

**Membership.**—Any core maker who has served an apprenticeship of 1 year at the trade, or who has worked at the trade 1 year and is competent to command the average wages, is eligible to membership. "Any person knowingly proposing any person for membership who has not served a full apprenticeship of 1 year shall be fined \$5 by his local union, and shall stand suspended until the same is paid." Candidates for membership are voted on by ball ballot, and are rejected if one-third of the balls are black.

**Apprentices.** Employers are allowed to have one apprentice to each shop, irrespective of the number of core makers employed, and one additional apprentice to each eight core makers. No boy may begin to learn the trade before he is 16 years old. A boy who has engaged to learn the trade and has left his employer is forbidden to work under the jurisdiction of any local. A standing resolution of the union declares it to be the duty of the members to secure the adoption of a State apprentice law, under which all apprentices to a trade shall be properly indentured. The union tries to insist on a 1-year apprenticeship. The indenturing of apprentices is not common, and the union finds it hard to enforce its apprenticeship rules.

**Transfer and withdrawal cards.** The core makers provide a "clear card," to be used by members going from one union to another, and an honorary card to be granted to members quitting the trade. It is a memorandum, subject to a fine of \$5, for any member to work under the jurisdiction of a local without depositing his card in it. A clear card must be granted to any member on application, provided he is clear on the books. One who holds such a card more than 12 weeks without paying dues on it stands suspended. Regular dues seem to accrue while the card is held and to be collectible by the local with which it is deposited.

**Discipline.**—The Core Makers provide penalties of fine, suspension, or expulsion for divulging any of the secret work of the union, for going to work in a shop which is regularly declared on strike or lockout, for misappropriating union funds, for attempting to undermine a brother in his prices, or offering to work at a reduction of prices or wages, and for refusing to give the price or giving a false price of any work. If a local officer is absent from three local meetings without a reasonable excuse the president may declare the office vacant. Any member engaged in the liquor trade is ineligible to hold any union office. A suspended member can only be reinstated by a majority vote of the union which suspended him, and he must pay a reinstatement fee of \$3.

Any member who knows of any violation of the constitution of the union by another member is under obligation to give notice in writing to the president. The president refers the charges to a committee. The committee sets a time and a place for a hearing and notifies the accused. The accused may introduce testimony and may cross examine witnesses in person or by attorney, the attorney being a member of the union in good standing. The committee reports to the union a synopsis of the testimony. The union votes, first, on sustaining the report of the committee as to the guilt or innocence of the accused. If he is found guilty the union proceeds to ballot on the penalty, first, on reprimand; next, if the first vote is negative, on fine; next, if the vote is still negative, on suspension; and last, on expulsion. Only a majority vote is necessary to sustain the report of the committee as to guilt or innocence. A verdict of expulsion can not be enforced without the approval of the general president.

Charges against the general officers can be brought only by officers of a local union, and must be sworn to or affirmed before a notary public or a justice of the peace. They are tried before the executive board, and the findings of the board

must be approved by a general vote of the locals. Each local has the same number of votes that it would be entitled to in a convention.

Appeals are in all cases to the general president, from him to the executive board, and from the board to the convention.

**Finances.** The initiation fee is uniformly \$5, of which \$3 goes to the general treasury and \$2 belongs to the local union. The current dues are uniformly 20 cents a week, of which 10 cents goes to the general treasury and 10 cents belongs to the local. The charter fee for new locals is \$10.

**Benefits.** No benefits are provided for by the laws of the national organization, except relief from payment of dues, for not more than 12 weeks in a year, when a member of at least a year's standing is out of work.

**Strikes.** When a difference with employers arises, a secret ballot must be taken to determine whether the proposals of the employers shall be accepted or not. A three-fourths vote is necessary to insist on rejection. No member can vote on the question who has not been continuously a member of the local for at least 3 months. If the vote is in favor of insisting, the members concerned are directed to remain at work while a statement of the case is sent to the president. The president is to proceed to the place in person or by deputy, and try to adjust the difference. If he fails, a full statement of the case must be submitted to the executive board. If the board refuses to sanction a strike and the local strikes notwithstanding, the president and the executive board have power to suspend the local. If the strike is authorized, single men who take part in it are entitled to \$1 a week strike pay, and married men, and single men who have others dependent upon them, to \$3 a week. Benefits begin after the first week. A local union which is entitled to receive strike pay must choose three competent persons to take charge of all disbursements, one is to act as receiver, one as clerk, and one as paymaster. Strike pay rolls are made out by the clerk in triplicate, one copy to go to the general president, one to the local union, and one to the paymaster.

The executive board has power to levy such assessments as are necessary to maintain strikes. The president and the executive board, when satisfied that a strike is lost, may declare it at an end, so far as financial aid from the general treasury is concerned, after 2 weeks' notice.

The Core Makers have adopted the following standing resolution: *Resolved*, That strikes are not beneficial to our organization, and that it would be to our interest to evade as much as possible all strikes, and not resort to them until all other means at our disposal are exhausted.

**Lockouts.** The constitution says that a requirement by an employer to sign contracts "or to work for store pay, or to quit the union or the shop" shall constitute a lockout if endorsed in accordance with law. It is held that a reduction of wages, or resistance to a demand for increased wages, or the employment of more apprentices than the men allow, does not constitute a lockout.

**Victimized members.** Any member who is thrown out of employment for following the instructions of his union or is ostracized for union principles, is entitled to the same weekly allowance as a member on strike.

**Overtime.** A standing resolution provides that core makers shall be paid not less than time and a half for overtime and double time for Sundays and legal holidays.

**Female labor.** In 1899 the Boston local of the Core Makers threatened to strike on account of the employment of girls in making cores. The demand that the girls be excluded was granted without a strike.<sup>1</sup>

**Journal.**—Since January, 1897, the Core Makers have published a monthly organ, called the International Journal. It is devoted chiefly to the interests of the organization.

## GRAND UNION OF THE INTERNATIONAL BROTHERHOOD OF BLACKSMITHS.

**History.**—The International Brotherhood of Blacksmiths was organized in 1889, and was practically reorganized in 1898. In the summer of 1900 the secretary reported 75 locals and a membership of about 1,000. On June 1, 1901, the locals were reported as 160 and the membership as over 10,000.

**General aims.**—The preamble of the constitution of the Brotherhood of Blacksmiths is as follows:

"The purpose of the International Brotherhood of Blacksmiths is to effect a

<sup>1</sup> International Journal of the Core Makers, October, 1899, p. 27.

uniform plan of elevating the social, moral, and intellectual standing of its members, and for the protection of their interests, individually and collectively, the promotion of their general welfare, extending to each other the hand of friendship, to bury the dead, care for the sick and distressed, and provide for the future welfare of the widows and orphans. We are opposed to strikes and favor the settlement of all grievances by arbitration and we shall endeavor to create and maintain harmonious relations between employers and employees, and denounce any attempt to antagonize the interests of labor and legitimate capital."

**Convention.**—The convention meets biennially. Each local union is entitled to 1 delegate for the first 30 members or less, and 1 additional delegate for each additional 30 members or major fraction thereof.

**Officers.** The officers are a president, a vice-president, and a secretary-treasurer and organizer. These officers perform the ordinary duties of their positions. Appeals may be taken from the decisions of the president to the executive board and further to a popular vote of the members. The president receives \$100 per year and actual expenses incurred in the line of duty. The secretary-treasurer and organizer receives \$300 per year and actual expenses.

It is provided that the president, the vice-president, and the secretary-treasurer and organizer shall constitute the executive board. Various provisions seem to imply, however, that the executive board has also other members. The board has power to hear appeals from the decision of the president, to decide on appeals for aid, and to levy assessments for the support of strikes and lockouts up to 25 cents per member per week. Each member of the board receives \$1 per day and his necessary expenses. The officers are elected by ballot at the biennial convention.

**Membership.**—Any man who is a competent, sober, and industrious blacksmith, hammer man, bolt maker, machine bolt maker, bulldozer, angle-iron smith, flue welder or chain maker, tool dresser, granite tool dresser, carriage and wagon smith, or mine smith who is competent in his class and can command the average rate of wages in his locality, is eligible. Candidates are admitted after election by ball ballot. If two and not more than four black balls are voted, the application lies over to the next meeting. The members who cast the black balls must give their reasons in writing to the president. He reads them to the union omitting the names, and destroys the papers. Another ballot is taken, and three or more black balls then reject. If the members who first cast the black balls fail to give their reasons in writing, the applicant is declared elected.

**Apprentices.** The constitution provides that any boy engaging himself to learn the trade of blacksmithing must serve 4 years. After 2½ years he may join the union by paying half the initiation fee and half dues. One apprentice is allowed to each shop and one additional for each five blacksmiths. No boy is to be permitted to begin to learn the trade before he is 16 or after he is 21. The secretary admits that under the present initiatory system these rules are practically void. Very few boys set about learning the trade as regular apprentices. A boy enters a shop as a helper and is advanced according to his ability and experience until he becomes a full-fledged blacksmith. It is declared that the present system results in a specialization of the trade and that it is very hard and will doubtless become harder to secure competent all-around blacksmiths.

**Discipline.** Any member who causes a quarrel, swears, or uses abusive language in a meeting of the union is to be fined 5 cents. A member who refuses to obey the president when called to order three times is to be fined 30 cents, the total of such fines not to exceed \$1.50. Any officer who is absent from the meeting is to be fined 25 cents, unless otherwise ordered by the union. Any member who consents to serve on a committee and does not attend to his duties is to be fined 50 cents. Any member who enters the union intoxicated is to be fined or suspended or expelled, as the union may determine.

**Finances.**—The revenue of the brotherhood is derived from a charter fee of \$15, which includes the cost of supplies for the new local union, and a per capita tax of 50 cents per quarter. If necessary for the support of a strike or lockout the executive board can levy an assessment of not less than 10 cents nor more than 25 cents per week. If a higher assessment is required it must be referred to a popular vote. The minimum initiation fee is \$1, and the minimum local dues are 50 cents a month.

A member 3 months in arrears for dues, fines, or assessments, is not in good standing and not entitled to vote, hold office, or receive benefits. When 6 months in arrears he stands suspended. A local union 6 months in arrears to the national union is suspended.

**Strikes.**—If the shop committees and the local union are unable to settle any grievance they are directed to forward a statement of the case to the president

and a copy to each member of the executive board. If the board refuses to sanction the grievance, the union may appeal to a popular vote. A demand for shorter hours or increase of wages can not be made by a local union except by a two-thirds majority of all the members involved, on a secret ballot. Such a vote must be taken and the sanction of the executive board must be obtained before the demand is presented to the employer. Members who take part in an authorized strike receive strike benefit at the rate of \$5 per week.

**Labor Day.**—The constitution directs that any member of the brotherhood who works on Labor Day be fined \$3, unless he can give satisfactory excuse.

**Piecework.**—The constitution provides that local unions must do all in their power to discourage piecework and overtime.

## CHAIN MAKERS' NATIONAL UNION OF THE UNITED STATES OF AMERICA

**History.**—The Chainmakers National Union of the United States of America is a new organization, established on August 27, 1900. In June, 1901, it reported over 500 members, or, according to the statement of the secretary, about half the workers at the business in the United States.

**Convention.**—The convention meets annually in August. Each local is entitled to one delegate. The national union pays mileage at 3 cents a mile, and those who travel over 350 miles are allowed a sleeping car. The president and the secretary-treasurer receive the same mileage as delegates, and \$5 a day for lost time, to cover wages and expenses. All expenses of delegates except mileage are paid by the locals.

**Constitutional amendments.**—The constitution may be amended by a two-thirds vote of the convention.

**Officers.**—The officers are a president, a vice-president, a secretary-treasurer, and organizers. These officers constitute the executive committee. The salary of the secretary-treasurer, the only salaried officer, is at present \$150 a year.

**Local unions.**—A local union may be established by any seven chain makers and can not be dissolved as long as seven members dissent.

**Members.**—Manufacturers, superintendents, foremen, and chain inspectors are ineligible to membership. Any member who is promoted to such a position must be requested to resign his membership at once.

**Nonunionism.**—No member in any shop shall render assistance, speak to, or associate with, or loan his tools to any chain maker who deliberately refuses to become a member of the organization, or refuses to pay his arrearages or fines or assessments to the same, or uses his influence to disorganize his fellow-workmen.

**Finances.**—The charter fee for new locals is \$7. The per capita tax is 15 cents a month. The local initiation fee may not be less than \$1.

**Strikes.**—The constitution says that strikes must not be sanctioned except as a last resort, but if there is a difficulty which a local can not settle it is to be referred, through the executive committee, to a referendum vote.

The constitution declares that any member who loses his job through drink shall not be upheld by the union.

## STOVE MOUNTERS' AND STEEL RANGE WORKERS' INTERNATIONAL UNION OF NORTH AMERICA.

**History.**—This union was organized in 1892. The trades included are stove mounting, steel range making and gas and gasoline stove making. It affiliated with the American Federation of Labor in November, 1898. The organization began with 4 locals. In 1898 it had 17, and in July, 1900, it had 30. At the latter date the secretary reported 1,100 members.

**Convention.**—The convention meets annually in July. Each local has one delegate for the first 50 members or less, and one additional delegate for each additional 50 members or major part thereof. No votes can be cast on behalf of any union beyond the number of its delegates present. The expenses of delegates are paid by their locals; those of such international officers as are required to be present, by the international union.

**Officers.**—The officers are a president, three vice-presidents, and a secretary-treasurer. They constitute the executive board. The secretary is also editor of

the official journal. His salary is \$65 a month. The third vice-president is also organizer. It is his duty to organize new locals under the direction of the general executive board. He receives \$75 a month and mileage. He is on probation for the first 3 months of his term, and may be dismissed by the executive board if his services are not satisfactory. The executive board has power to try charges against any officer and to impose as a penalty a fine of \$25 or expulsion from office, or both. All charges and evidence must be supported by affidavits.

The convention of 1900 passed a resolution requiring all locals to furnish the general secretary with a quarterly statement of the average day's wages made and the number of hours which constitute a day's work, and requiring the secretary to give the information to all locals.

**Membership.**—Apprentices who have served the required term may be elected to membership by a majority vote of the members present at a regular meeting.

**Apprentices.**—The constitution forbids any local to allow more apprentices than 1 to every 15 journeymen or majority fraction thereof. Apprentices are required to serve 3 years at the trade before they are eligible to membership.

**Helpers and partnerships.**—No member who works by the piece is allowed to employ or work with a helper. Mounters are not allowed to work in partnership with out obtaining the consent of the members, and in no case may a partnership include more than two.

**Finances.**—The per capita tax is 10 cents a month. It can not be increased except by a referendum vote. The general executive board may, however, levy an assessment of 1 cent a member a day for 2 months for organizing purposes only. Assessments may also be levied by the board to support strikes. The convention of 1900 instructed the executive board to introduce the uniform stamp system of receipting for dues.

By resolution of the convention of 1900 current dues and assessments continue to be charged against members under suspension.

During the 2 years from July 1, 1898, to June 30, 1900, the receipts were as follows:

Receipts from per capita tax	\$1,443
Receipts from journal	690
Receipts from strike tax	2,119
Receipts from supplies	317
Receipts from advertisements	53
Total	4,622

The total expenditures were \$3,605, of which nearly \$2,000 was paid out for strikes and the remainder for running expenses. The balance on hand July 1, 1900, was \$1,248.

**Benefits.**—The general body has no sick or death benefit, but the convention of 1900 recommended the locals to establish sick and death benefit funds.

**Strikes.**—Members involved in a strike which has been approved by the executive board are entitled, after 30 days from date of approval, to \$1 a week strike pay. This is payable for not more than 3 months, but the executive board may extend the time. No local is entitled to strike benefits until 3 months after it is chartered. The executive board has power to order any local to strike, on pain of a fine not less than \$25. Any member who goes to work in a shop which is declared to be on strike or lockout is to be fined not less than \$25 nor more than \$100, or expelled.

At the convention of 1900 the president reported that the union had had 11 strikes during the preceding 2 years, and had lost only 2.

**Hours of labor.**—The usual length of the day's work seems to be 10 hours, without any provision for a higher rate for overtime.

**Wages.**—The constitution declares that no member shall be allowed to mount stoves by the day for less than 25 cents an hour or \$15 a week.

**Piecework.**—Practically all the work of the stove mounters is paid for on a piecework basis.

**Limitation of output.**—A limitation of the amount of piecework which a stove mounter may accomplish seems not to be unusual. For instance, Local No. 1, at Detroit, does not allow any member to earn more than \$1.50 a day. The Detroit scale for daywork is \$2.75.

**Official journal.**—The official journal is published monthly, and is sent to all locals in sufficient numbers to supply the members. A tax of 5 cents a copy is levied for it.

## TIN PLATE WORKERS' INTERNATIONAL PROTECTIVE ASSOCIATION OF AMERICA.

**History.**—The Tin Plate Workers' International Protective Association of America is composed of men who perform the final operations in the manufacture of tin plate, coating the "black plate" with tin and finishing it. The association has branches in Ohio, Indiana, Illinois, Michigan, Pennsylvania and West Virginia.

The organization dates only from December, 1898. The tin plate industry, in its large development, is comparatively recent, and although the workers in iron and steel who make the black plates for tinning have been strongly organized in the Amalgamated Association of Iron, Steel, and Tin Workers, the workmen engaged in coating the plates and completing their manufacture were formerly little organized. At the convention which formed the association eight locals, with a membership of about 900, were represented. The organization has grown rapidly in strength and has succeeded in commanding the recognition of the manufacturers, although as yet it falls considerably short of controlling all the workers in the trade. The reported membership was 1,560 in April, 1899, and 2,580 in March, 1900. In August, 1900, the secretary reported 28 locals and 3,000 members.

**Objects.**—"The object of this association shall be the elevation of its members, the maintenance of the best interests of the association, and to obtain, by conciliation, or by other means just and legal, a fair remuneration to members for their labor and to afford mutual protection to members against broken contracts, obnoxious rules, unlawful discharge, or other systems of injustice or oppression."

**Convention.** The international convention is held annually in May. Each sub-branch with less than 10 members is entitled to one representative, lodges with 125 members are entitled to two representatives, and large lodges to one for each additional 100. The chief work of the international convention consists in fixing the scale of prices, in electing officers, and in amending the constitution. The necessary expenses of representatives are defrayed by the local lodges.

**Officers.** The officers are a president, a secretary-treasurer, a vice-president for each of the four districts, and three trustees. All the officers are elected by the national convention. The president and the secretary-treasurer must be elected from among the delegates to the convention, or those who have been delegates to preceding conventions, or previous officeholders.

The president is also organizer of the association. He has power to visit any sub-branch personally or by deputy, inspect its proceedings, and require compliance with the rules of the association. He may fine or suspend a sub-branch for refusing to exhibit its books. He appoints important committees at the international convention. His salary was raised from \$1,000 to \$1,100 by the convention of 1900.

The secretary-treasurer must draw warrants for moneys paid out by him, and they must be signed by the president. Checks on the bank must be signed by the secretary-treasurer and countersigned by the president. The secretary-treasurer must give bond for \$5,000. His salary was raised from \$900 to \$1,000 by the convention of 1900.

The several vice-presidents act as executives in their particular districts, visit the sub-branches once every 6 months, and render assistance to the president.

The trustees hold the bonds of the officers of the international association and have some control of its finances.

The executive committee consists of the president, the vice-presidents, the secretary-treasurer, and the chairman of the board of trustees. Their powers are not specifically defined. It is stated in the constitution that the trustees and officers constitute an advisory board to the president.

All unsalaried officers are paid \$3 per day for actual services, and traveling expenses.

**Membership.**—Any person employed in a tinning house, such as tinner, risers, picklers, sorters, may join the union. Foremen are not eligible to membership. The names of candidates must be referred to a committee of the local organization. If the report of this committee be favorable, a vote of the members is taken. If two or more black balls appear, the case must be referred to a special committee for investigation, and should the persons casting the black balls refuse to give their reasons, and should the special committee find no just cause for rejection, the committee must report favorably. A ballot is then taken, and if two-thirds of the votes cast are favorable the applicant must be declared elected. Should either committee report unfavorably, they must state their reasons for so doing, and the lodge then receives or rejects the candidate by a majority vote.

**Apprenticeship.**—The organization has no formal rules as to apprenticeship. It is provided that should any member of this association undertake to instruct an unskilled workman in any of the trades represented in this association, it shall be the duty of the mill committee to notify him that this association can not tolerate such proceedings. This is not meant to exclude learners, but to prevent those who have not been accepted as learners, but are performing unskilled work about the mills, from picking up the trade.

**Nonunion men.**—Though there is no rule of the Tin Plate Workers entirely prohibiting members from working with nonunion men, it is the general policy to attempt to organize completely any plant in which the union obtains a foothold. It is provided in the constitution that when a new workman appears at a mill who has not a union card, steps shall be taken to persuade him to join the union. When it is found that a manager or foreman is using his influence to persuade men not to join the association, he is to be notified by the mill committee that such action must be stopped.

The attitude of the officers toward nonunion men may be further judged from the following statement of the president in his annual address before the convention of 1900: "There is no language too severe that we can frame in condemnation of men who live upon the sacrifices and efforts of others without making any effort themselves. There is hardly a lodge under our jurisdiction but what has had trouble with this very question, and we recommend that such action be taken on this question by this convention as will decree that the men who work in our midst and share the same benefits must sacrifice and put forth the same efforts to better their condition, by coming into themselves with the organization, or get out and make room for men of nobler principles, who believe in the union movement. Let such action be explicit, that the company themselves may see that our minds are made up to operate the plants with union men."

**Finances.**—The charter fee collected from new locals, including the cost of seal and supplies, is \$15. The initiation fee is \$2. The chief source of revenue of the Tin Plate Workers' international organization is a per capita tax of 25 cents per month, 15 cents of which is used for running expenses and 10 cents for the protective fund. Whenever the amount in the protective fund is less than \$10,000, it is the duty of the president to levy a special assessment of from 5 to 25 cents per capita every month till the protective fund reaches \$10,000. At the present writing, June, 1901, an assessment of 10 cents a member is in force.

**Strikes.**—The relations to employers in individual mills are under the control of a mill committee of each subordinate lodge. This committee consists of three members from each department represented in the lodge. The committee is to take cognizance of any grievance, and endeavor to adjust it peacefully with the employers, and where this fails must immediately call a meeting of the lodge or lodges affected. If the meeting considers the grievance sufficient, the vice-president of the district is to be notified. In mills where the employers absolutely refuse to recognize the mill committee, the meeting of the local lodge is to be called immediately without further negotiations.

For each of the four districts there is an executive committee, consisting of the vice president, his deputies, the president of the international lodge, and the president of the particular local lodge affected by any grievance coming before the committee. The vice-president must examine in conjunction with the local mill committee any grievance laid before him, before calling the executive committee. The executive committee has power to authorize a strike, and also to declare strikes at an end. No sub lodge is permitted to enter upon a strike without its authorization. When a strike has been legalized in any department of a plant, the men of all other departments must cease work until the matter is settled. All works in the same district operated by the same corporation must also stop. If the strike is not settled in 7 days, all plants everywhere, operated by the same company, must stop. It should be remembered that nearly all the members work for the American Tin Plate Company. The union claims to control 95 per cent of its plants.

When a strike has been authorized, the secretary-treasurer of the international lodge must at once send a printed statement of the facts in the case to all sub lodges, warning true men not to accept work in the mill.

The amount of strike benefit in the case of an authorized strike is \$1 per member weekly. The benefit is not payable until after the first 4 weeks of the strike. The payments are sustained by a protective fund which receives 10 cents weekly from the per capita tax, and special assessments, to be ordered by the president whenever the funds of the organization fall below \$10,000.

Victimized members of the organization—that is, those discharged for taking an active part in union affairs—are entitled to \$1 per week for not more than 8 weeks.

**Secret cutting of wages.**—Members are required to work at the regular scale of prices fixed by agreement with the employers. When it shall be found beyond doubt that any member of this association in any mill under its jurisdiction, is working below the prices established by it, the men in such mill shall cease work until such prices are rectified.

### AMERICAN WIRE WEAVERS' PROTECTIVE ASSOCIATION.

**History.**—The American Wire Weavers' Protective Association was organized about 1889. Its members are engaged exclusively in weaving foundrymen wire-cloth for the use of paper makers. The secretary says that the first of this cloth made in the United States was woven in 1847 at Belleville, N. J. The manufacture is still carried on there. The members of the organization are not restricted to this work, but it is highly skilled and well paid work, and there is demand enough to keep all the members busy at it. In the summer of 1900 the organization was reported as having two locals and 226 members. It seems to have been so fortunate as to make but little history. The attitude of employers toward the organization is described as friendly. It has not been necessary to try to secure any written agreements with employers. The secretary says: "A schedule of wages has been in existence as far back as wire weavers can remember, and is still in existence. We are satisfied to keep the wages as at present and do not attempt to get more. The secretary estimates that about one eighth of the workers at the trade are outside the union. Many of these own from one to four looms and work them themselves."

All work of the wire weavers is piecework.

**Finances.**—For the fiscal year ending June 30, 1899, the receipts were \$2,716 and the expenditures \$1,311. For the year ending June 30, 1900, the receipts were \$3,034 and the expenditures \$3,104. The principal expenditures are for sick and death benefits. The death benefits amounted to about \$200, and the sick benefits to about \$500 in the year ending June 30, 1899. The balance in the treasury on July 1, 1900, was about \$15,000.

These financial statements are understood to include all sums collected and paid out by the local unions. It is by the locals, and not by the national body, that sick and death benefits are paid.

### METAL TRADES' FEDERATION OF NORTH AMERICA.

Pursuant to a call issued by President Gompers, of the American Federation of Labor, the representatives of various metal-working industries in attendance at the convention of the Federation in December, 1900, met and arranged the preliminary basis of an alliance. It is intended that the Machinists, the Iron Molders, the Pattern Makers, the Metal Polishers, the Brass Smiths, the Boiler Makers, the Core Makers, the Electrical Workers, and the Allied Metal Mechanics shall be included. The name provisionally chosen for the alliance is Metal Trades' Federation of North America. It was arranged that a convention should be held in July, 1901, to form a permanent organization. It is expected that local councils, composed of representatives of the affiliated trades, will be formed wherever it is possible, and that the convention of the Federation will consist of one representative from each national union and one from each local council, or will be made up on some similar basis.

## CHAPTER XI

### LABOR ORGANIZATIONS CONNECTED WITH TRANSPORTATION.<sup>1</sup>

#### INTERNATIONAL SEAMEN'S UNION OF AMERICA.

**History.**—The International Seamen's Union of America is an amalgamation of three unions on the different coasts, which as district organizations, still main-

<sup>1</sup> An account of the Brotherhood of Locomotive Engineers, the Order of Railway Conductors, the Brotherhood of Locomotive Firemen, the Brotherhood of Railroad Trainmen, the Order of Railroad Telegraphers, the Brotherhood of Railway Trackmen and the Brotherhood of Railway Carmen, is given in the report of Mr. S. M. Lindsay, on Railway Labor, in this volume.

tain a semi-independent existence. They are the Lake Seamen's Union, the Atlantic Coast Seamen's Union, and the Sailors' Union of the Pacific. On the lakes there have been organizations of sailors, with short intermissions, since the sixties. On the Atlantic coast the Amalgamated Sailors and Firemen's Union was organized in 1889. The firemen withdrew in 1891, and the sailors reorganized as the Atlantic Coast Seamen's Union. The organization on the Pacific coast was formed in 1885. The amalgamation into the International Seamen's Union took place in 1892. In 1900 there were reported 11 local unions on the lakes, with a membership of about 1,000, and 7 on the Atlantic coast, with a membership of 1,189. The locals and the members of the Atlantic coast organization are reported as follows for successive years:

Year	Locals	Members	Year	Locals	Members
1891	1	179	1896	1	450
1892	1	150	1897	1	400
1893	1	350	1898	1	500
1894	1	400	1899	7	878
1895	1	500	1900	7	1,182

The headquarters of the Atlantic branches are Boston, Bangor, Portland, Providence, New York, Philadelphia, Baltimore, Norfolk. The membership of the international organization was reported by the secretary, in August, 1900, in reply to inquiries by the Industrial Commission, as follows:

Year	Number	Year	Number
1893	4,000	1897	4,000
1894	4,000	1898	4,000
1895	4,000	1899	4,500
1896	4,500	1900	7,000

The members are chiefly engaged in the coasting trade, rather than in the foreign trade. The officers attribute largely to the efforts of the organization, however, the acts which have been passed in the last few years for improving the condition of seamen. They declare that before these acts seamen had very few rights under the law. The Maguire act of February 18, 1895, abolished imprisonment for the breaking of a contract to labor, abolished the practice of making allotments and advances of wages in the coastwise trade and made it illegal for a boarding master or any other person to hold a seaman's clothing for debt. The White act of February 20, 1899, abolished imprisonment for desertion in American ports and in those of foreign countries near by. It also reduced the amount of allotment of wages permitted in the deep-water trade, and improved the food scale in that trade. Another act went into effect March 31, 1900, which protects the seamen in some degree from falling to the boarding-house runners or crimps.

**General aims.**—The international organization seems to have been devoted to the securing of legislation for the improvement of the condition of sailors. The local affairs of the various districts, which include practically all matters that are ordinarily subject to trade-union regulation, are left wholly to the control of the district organizations.

The union, through its officers, has taken a position on the question of ship subsidies directly contrary to that which might have been expected. The secretary of the Sailors' Union of the Pacific has been particularly active in fighting subsidies. He says that our artificially maintained coastwise vessels are not an American merchant marine in the true sense; they are built and owned by Americans and sail under the flag, but they are not manned by Americans. The wages of sailors and firemen are the same in any port for vessels of all nations. There are differences between ports, but these have no relation to the nationality of the vessels. The officers on American ships get slightly higher wages than on European ships because it is necessary that they be American citizens. But it does not cost more on the whole to run an American vessel than a vessel of another nationality. The higher pay of officers is offset by the cheaper fuel and oils, cheaper spars, canvas, and ropes. The food required by law on American vessels has recently been raised to a standard considerably above that of England, about equal to that of Norway, but below that of Denmark or Germany, and about 50 per cent below the contract scale of Australia as furnished by the Union Steamship Company.

"The subsidy bill, if passed, will 'put money in the purse' of a few vessel owners, probably the railroads. There is no assurance that we will get cheaper freights or more vessels, and certainly no possibility that under its operation we shall bring the American to sea, and thus get a real national merchant marine and the necessary number of native seamen to man our navy. Sea power does not come in this way."

**Convention and constitutional amendments.**—The conventions of the international organization are held annually. The delegates are elected by the 3 district organizations. Each of these is entitled to 1 delegate for 500 members, 3 delegates for 500 members, and 1 delegate for each additional 500. In voting, however, each delegation has 1 vote for each 100 members of the district organization; these votes being divided equally among the delegates from the district.

Constitutional amendments may be adopted at the convention by a two-thirds vote.

**Officers.** The officers of the international organization are a president, a vice-president, a secretary-treasurer, and an executive board consisting of the president, the vice-president, and the secretaries of the districts, five members in all.

The president must counter-sign all orders on the treasurer. The secretary-treasurer must give bonds in the sum of \$1,000, deposit moneys in a bank designated by the union of the district in which he resides, prepare a full financial report quarterly and forward it to the subordinate unions. He is the only paid officer, his salary being fixed by the convention. Each district is required to make a quarterly financial report to the secretary. The executive board has general power to decide appeals, remove officers, and manage the affairs of the organization, subject to appeal to the membership at large.

**Finances.** The constitution provides that the regular income shall be derived from a per capita tax of 15 cents a quarter, payable by the district unions, and "from such contributions made for a specific purpose as the convention or the executive board shall recommend and the districts enforce."

**Asiatic sailors' Government service.** In the autumn of 1900 the San Francisco Labor Council unanimously adopted a resolution setting forth that the great majority of the vessels engaged in the United States transport service between the Pacific coast ports and the Philippines and China were manned by Chinese and Lascar crews, that repeated representations to the authorities of the transport service, to the War Department and to President McKinley, setting forth the injustice and danger of these conditions, had produced no result excepting a promise to substitute whites for Chinamen on one vessel, and that that promise had not been fulfilled; and that the Labor Council therefore appealed to the press and public to demand the complete manning of army vessels with American seamen and firemen.<sup>1</sup>

**Sailors' Union of the Pacific.** The district organizations are so largely independent that it seems well to give a little sketch of their constitutions, and particularly of that of the strongest, the Sailors' Union of the Pacific.

**Officers.**—The officers are a chairman, who is elected at each meeting; a secretary, a treasurer, an editor, a manager of the journal, and 3 patrolmen. The secretary is the executive officer. He receives all fees and dues and all money for subscriptions to the journal and advertisements in it. He pays the small running expenses of the office, and turns over all money not so used to the treasurer. The treasurer keeps in his own hands a sum not exceeding \$500, and deposits all further sums subject to the order of a banking committee. This banking committee consists of 5 members, of whom the treasurer is one. No money can be withdrawn from any bank except upon resolution passed at a regular meeting of the union, 15 members must be present, and the affirmative vote must be two-thirds. All the members of the banking committee must be present at the bank and sign the check when money is withdrawn. A copy of the provisions which govern the matter must be filed in every bank where money is deposited in the name of the union. The patrolmen have regular beats along the water front. They are to examine the cards of members on incoming and outgoing vessels, and to collect dues.

**Membership.**—Candidates for membership must be practical sailors and must either be American citizens or have declared their intention to become such.

**Finances.**—The initiation fee is \$5. The dues are 75 cents a month.

**Benefits.**—A shipwreck benefit is paid to members who have lost clothes or belongings by shipwreck. The amount is \$50. On the death of a member who has been in good standing for 6 months, if he dies near the headquarters or any of the branches, he is to be decently buried by the union at an expense not exceeding \$75.

<sup>1</sup> American Federationist, October, 1900, p. 339.

**Strikes.**—Though the position of the Sailors' Union has not been such as to justify attempts to better the condition of its members by strikes, its constitution contains somewhat full provision for them. Branches are forbidden to declare strikes. In case of any difficulty the agent, the head of the branch, is to notify the headquarters. The secretary is to call a special meeting at headquarters. The action of such a meeting is final, provided it is adopted by a two-thirds vote of a full quorum.

**Journal.**—The Coast Seaman's Journal is a weekly paper devoted "to the interests of all classes who have a direct or indirect connection with maritime affairs and the labor class generally." It is published by the Sailors' Union of the Pacific, and every member is entitled to one copy a week. The Lake Seamen's Union subscribes for it on behalf of all its members.

**Lake Seamen's Union.**—The constitution of the Lake Seamen's Union is very largely copied from that of the Sailors' Union of the Pacific. Among other provisions, it has the same elaborate machinery for the extraction of money which has been deposited in a bank, except that the banking committee consists of 25 members of whom the signatures of five are required. The initiation fee is \$3 and the monthly dues are 50 cents. The shipwreck benefit is not to exceed \$30. The funeral benefit is \$75, and if the member is not buried by the union, his widow or children under 15 years of age, or nearest relative dependent solely upon him for support, is entitled to the \$75. The Sailors' Union of the Pacific formerly paid the amount of funeral benefit to the wife or mother of the dead member when he had not been buried by the union, but it removed this provision from its constitution in 1892.

**Atlantic Coast Seamen's Union.**—The initiation fee is \$2.50 and the dues are 70 cents a month. The receipts are accounted for to headquarters. The shipwreck benefit is \$25, and the burial benefit is \$50 in the case of members whose bodies the union can secure. Any member in good standing, meeting with an accident that permanently disables him, receives a benefit not exceeding \$200, raised by an assessment of 25 cents per member. The amount of benefit is decided by the regular meeting at headquarters. During the fiscal year ending June 30, 1900, the receipts were \$9,221 and the expenses \$8,061. The balance at the end of the year was \$1,032.

### NATIONAL MARINE ENGINEERS' BENEFICIAL ASSOCIATION OF THE UNITED STATES OF AMERICA.

**History.**—The National Marine Engineers' Beneficial Association of the United States of America was established in 1875. The number of members was estimated by the secretary at about 5,500 on October 1, 1900, and about 7,000 on June 1, 1901. The membership was given as follows for the close of each of the years named:

Year	Number	Year	Number
1887	1,604	1891	4,136
1888	1,261	1895	4,375
1889	3,355	1896	4,006
1890	3,625	1897	3,867
1891	4,562	1898	4,630
1892	4,559	1899	4,850
1893	4,438	1900	6,000

The secretary reports that about 19,500 marine engineers' licenses of all kinds are issued by the United States Government, but that 20 or 25 per cent of these are held by men who work on shore and do not compete in actual marine service. About 4,000 or 5,000 are licensed only for small yachts and tugs. The secretary believes, therefore, that the association has from one-half to two-thirds of all the eligible licensed engineers. The most of those who are not members, he says, are on the Southern and Western rivers, on the south Atlantic coast, and on the Gulf of Mexico.

**General aims.**—The situation of the Marine Engineers has led them to give even greater attention than most labor organizations to matters of legislation. The legislation which interests them is not altogether the same which interests labor organizations in general. Their hours of labor are exceedingly long, and they have made efforts for a direct legal limitation of them, but without success. They have tried to secure the same end indirectly by requiring that vessels of given sizes and vessels which run more than a given number of hours per day carry an

increased number of engineers. They have made some effort for a law requiring the constant presence of two men, one of whom must be a licensed engineer, in the engine room. They have interested themselves in the maintenance and increased strictness of the law as to the citizenship of licensed engineers.

Their interests have also led them to favor measures designed to increase American shipping. At the convention of 1897 the secretary advocated the bill which had been introduced in the previous year, to lay a discriminating duty of 10 per cent upon goods imported in foreign vessels.<sup>1</sup>

The convention of 1900 adopted the following resolution: "That in our opinion it is the duty of Congress at the earliest possible day to extend such aid by subsidy to American-built mail carriers and freighters as will enable them to successfully compete with the subsidized merchant ships of foreign countries in the carrying of our imports and exports. *Provided*, That such ships shall be fully officered by citizens of the United States, and in addition thereto at least 35 per cent of the balance of the crews shall be citizens of the United States."

The marine engineers rank as officers, and an increase of the number of ships of American registry, so long as their officers must be citizens, would therefore increase the demand for American engineers. The engineers have, therefore, a much stronger personal interest in such an increase than the leaders of the American sailors consider that they have.

**Conventions.** The convention meets annually. Local associations are entitled to 1 delegate for the first 50 members or less, 1 delegate for the second 50 members or less, and 1 additional delegate for each additional 100 members. Each local association may cast its full vote, though it send only a part of the representatives which it is entitled to. Local associations of less than 50 members may unite in choosing a delegate. Such a small association may, if it prefers, give its proxy to the delegate of another association. A proxy vote can not be cast for officers.

From 1891 to 1900, inclusive, the annual conventions were held at Washington. The great advantage of meeting in Washington was the possibility of dealing directly with members of Congress and with the officials of the Treasury Department, upon whose actions the conditions of the marine engineers are so largely dependent. It seemed to be the settled policy of the association to meet there; but in 1900 it was resolved that the next convention be held at Cleveland, in order that the delegates might meet the executive committee of the Lake Carriers' Association.<sup>2</sup>

**Constitutional amendments.** The constitution can be amended only by popular vote, and on motion of a subassociation. Proposed changes must be promulgated by the national president and the advisory board at least 90 days before the convention.

**Officers.**—The officers are a president, a vice president, a secretary, a treasurer, and an advisory board of three members. All are elected at the annual convention, and a majority vote is necessary to a choice. The members of the advisory board are nominated by delegates representing the subassociations. The president has somewhat general supervision over the affairs of the association, including power to fill vacancies in office. He devotes his whole time to the association, and receives \$2,400 a year and expenses. The secretary collects all money due the association and turns it over to the treasurer. His salary is \$500. The treasurer gives a bond for \$1,500 in a reliable security company, at the expense of the association. No regular salary is provided for him, but a donation is sometimes voted to him at the end of the year. Members of the advisory board receive \$1 a day, with hotel expenses and cost of transportation, while attending meetings of the board.

No member, except the national president, is eligible to office when he is not a delegate to the convention from his local association.

**Membership.**—Members must be United States licensed or commissioned marine engineers in good standing, of good moral character and known qualifications, and citizens of the United States. Candidates must be proposed by one member and seconded by another, referred to an investigating committee, and balloted for. The conditions of the ballot are determined by the local association.

**Discipline.**—Charges against a member must be brought in writing and served upon the accused, personally, if possible; otherwise by mail. An investigation must be held either by the local association or by a committee. If by a committee, all testimony must be reported to the association, and the guilt or innocence of the accused is decided by vote of the association. A two-thirds vote is necessary to convict. The penalty is also fixed by a two-thirds vote. It may be expulsion, indefinite suspension, suspension for a definite period, public reprimand,

<sup>1</sup> Convention Proceedings, 1897, pp. 718, 719.

<sup>2</sup> Convention Proceedings, 1900, p. 445.

<sup>3</sup> Convention Proceedings, Marine Engineers, 1900, pp. 429-431.

private reprimand, or a fine of not more than \$25. An expelled member can never be reinstated unless by permission of the convention. A vote of expulsion can not be reconsidered. An appeal may be taken to the National Association from any decision of the local.

In 1897, upon an application by a local for permission to admit a man who had been expelled, the president said that his case had been considered at the national convention of 1896, and that a committee had reported adversely upon it. The president disclaimed authority to grant dispensations to reinstate expelled members, and did not think that such authority should be vested in a single individual.<sup>1</sup>

No person who is engaged in the sale of intoxicating liquors can be elected to membership, and any member who engages in the business must be dropped from the roll.

**Withdrawal cards.**—A withdrawal card must be granted to any member in good standing, on request, and the holder of it must join the most convenient local association within 3 months, otherwise he forfeits his membership. On presenting a withdrawal card, a candidate is balloted for like a new member, and on admission he pays a fee of \$1.

**Finances.**—The charter fee for new locals is \$50. A per capita tax is fixed each year by the convention, the usual rate is about \$1.25 a year. It is reckoned on the number of members in good standing on December 31. In addition to the per capita tax, the national association makes a profit on the furnishing of forms, books, pins, etc., to the locals. The cost of such supplies is about \$500 a year, and more than half of it is profit.

Local associations regulate their own dues and assessments, but they can not levy an extraordinary assessment of more than \$5 a member. The initiation fee ranges from \$5 to \$25, and the local dues from \$2 to \$12 a year.

The records of the association give repeated evidence of the difficulty of inducing the locals to contribute their proper share to the general expenses. The secretary stated in his report of 1893 that he had "records to show where at least one association suspended a large percentage of its membership on the 31st of December for nonpayment of dues, thus evading the amount of per capita tax upon them, only to reinstate them at the subsequent meeting," so that the report of members in good standing did not show the whole number of men who were really in the order or who contributed to the local association.<sup>2</sup> In his report to the convention of 1898, discussing the sale of good standing buttons to locals, the secretary says that many associations, after reporting a certain number of members in good standing in their annual report, will, within 6 weeks afterwards, require twice that number of buttons. This leads the secretary to believe that the national body is not getting the per capita tax on its full membership.<sup>3</sup>

The receipts, expenses, and balances in the treasury for a series of years have been as follows.

Year	Receipts	Ex- penses	Balance
1890	\$6,880	\$5,005	\$1,662
1891	4,763	5,359	1,406
1892	7,505	5,774	3,137
1893	4,484	5,985	1,630
1894	6,197	5,705	2,658
1895	5,259	6,051	1,245
1896	5,354	5,303	1,363
1897	5,141	5,007	1,407
1898	5,673	5,733	838
1899	5,326	5,420	735
1900	7,001	6,179	1,556

**Strikes.**—The attitude of the Marine Engineers toward strikes has been essentially different from that of labor organizations in general. The constitution does not provide for them. On January 27, 1886, the national president issued a circular to the association in which he said: "The Marine Engineers' Beneficial Society is not a trades union. \* \* \* Strikes are not encouraged nor countenanced, as our constitution plainly states that 'no association shall set a standard of wages for its members.'" The next convention of the association, held in January, 1887, struck out the words "no association shall set a standard of wages for its members" from the constitution. In spite of this the convention of 1892 passed a declaratory

<sup>1</sup> Convention Proceedings, 1898, p. 844.

<sup>2</sup> Convention Proceedings, 1893, pp. 886, 887.

<sup>3</sup> Convention Proceedings, 1898, p. 917.

resolution that it was not constitutional for a subordinate association to adopt a standard of wages.<sup>1</sup>

There seems to have been an abortive local strike against the Cleveland vessel owners in the spring of 1891.<sup>2</sup> But the secretary in his report to the convention of 1895 called attention to the false report which had been circulated during the railroad strike of 1894, that the Marine Engineers would refuse to run boats which had any connection "with any of the so-called boycotted railroads." He continued, "I consider it one of the highest testimonials that can be said of our organization that in the 20 years of our existence we point with pride to the undeniable fact that at no time in its history has this organization ever been involved in a strike."

The later declarations of the officers seem to indicate a certain change of attitude. The president in his report to the convention in 1900 declared "The policy that has for years dominated our methods . . . has outlived its usefulness. \* \* \* The policy of conservatism and reserve is no longer sufficient to meet the conditions that they once overcame, for the inclination on the part of the owners, managers, agents, and others to be just and fair has given away in a majority of instances to an arrogant spirit of self-sh presumption that can only be met by the defiant courage of a body of men who have not forgotten that we have as much right to name our price as the great trusts of to day have to offer remunerations that hereafter can only be spurned as not worthy of consideration." At the same time the president wished to make it clear that he was not suggesting "any method of doubtful character," and whatever means were adopted "must be fair and honorable means, and must not partake of the nature of conspiracy or be of a dishonorable or reprehensible nature, and must be able to withstand fair and just criticism under all conditions."

During the summer of 1899, preceding this report, freight rates on the lakes rose to an enormous height, and the president of the Marine Engineers engaged in a long and doubtful struggle to get some part of the profits for his constituents. It was not until September 25 that he got an advance of 20 per cent in wages, to take effect October 1. He did not get it until he notified the Lake Carriers' Association that if he did not receive an answer by noon he would "take such steps at once as will, in our judgment, best protect the interests of the men that I represent." He did not receive an answer by noon, and he says that before he did receive it he had already written telegrams for all points on the lakes advising his members of the situation.<sup>3</sup>

The dispute at the beginning of 1901 is referred to below (pp. 262, 263.)

**Wages and hours**—At the convention of 1887 the committee on statistics reported that engineers who held licenses of the same grade and worked on similar vessels received wages which differed by 10, 25, and even 50 per cent. The highest wages of one who held the grade of chief engineer seemed to be \$150 a month; the lowest, \$50 a month.

From 30 points on seaboard, lake, and river the average hours of labor for an engineer were found to be 14 out of 21. Forty Chicago tugboat engineers were found to be averaging 17½ hours a day. The average yearly earnings of these 40 men were \$760. During the summer it was asserted that men had to work as much as 22 hours out of each 24.

At the convention of 1889 the committee on statistics reported that they found, by correspondence with 181 individual engineers, that the average hours of labor for those upon the coast in the tugboat service was 16.75 hours, "or about the same as during 1887." Wages were reported not to have gone down during the preceding year, and it was thought that the organization had tended to force them up. One local secretary said "Wages have gone up 25 per cent since this order was started, and we are not yet [locally] 3 years old."

On October 26, 1895, the boiler of a Chicago tug exploded and killed 3 men. The president of the Marine Engineers' Association undertook, at the investigation, to bring out, as he says, "some of the conditions of the life of the average Chicago river-tug men, which go to prove that the theory of long hours and exhausted nature was responsible for the loss of life occasioned by this terrible accident." He declared that the testimony was the most degrading exhibition of fear and cowardice that he had ever seen. Under the fear of losing their positions men did not hesitate to perjure themselves as to the hours which they and those

<sup>2</sup> Convention Proceedings, 1892, pp. 722, 725.

<sup>3</sup> Convention Proceedings, 1895, pp. 287, 298.

<sup>4</sup> Convention Proceedings, 1900, pp. 210, 329, 330.

<sup>5</sup> Convention Proceedings, 1897, pp. 227-229; 1899, p. 76.

about them were required to work. The president said that he returned home feeling that it was useless to try to bring out anything against tug or vessel owners when the men who were complaining were afraid to tell the truth.<sup>1</sup>

The secretary reports, in the summer of 1900, that the national association aims at 12 hours' work out of 24; that engineers on steamboats average 12 hours out of 24, in 4 and 6 hour watches; that on tugs they work in many cases whenever they are needed, and that on western rivers, Puget Sound, the Atlantic coast, the Great Lakes, and the Gulf it is customary to run tugs 16 or 18 hours with one engineer, and sometimes as long as 22 hours, without intermission.

According to a memorial presented to the Lake Carriers' Association by the Marine Engineers' Association in 1896, the reduction of the wages of engineers upon the lake steamers in 1894 was in many instances as great as 40 per cent. In 1895 there was an increase said to range from 11.1 to 13.3 per cent. This was attributed by the secretary of the Marine Engineers' Association to the presence of the president of the association among the lake engineers, and to the fear of the vessel owners that trouble might arise if an increase was refused. In 1896 the wages were advanced 121 per cent above the rates that prevailed at the close of navigation in 1895. This increase followed a request for an increase of 20 per cent made by the engineers' association.<sup>2</sup>

The report of the national secretary for 1897 again notes the wage difficulties of the engineers upon the lakes. Wages have of late years been based, he says, upon the minimum freight rates at the opening of navigation, and have been fixed by the Lake Carriers' Association. The size of lake vessels has increased that steamers of 1,500 or 2,000 tons are almost supplanted and that vessels of less than 7,000 tons can hardly run except in booming times. The Lake Carriers' Association have so classified all steam vessels of late that steamers which were rated as first class and paid first class wages a few years ago are now rated as third-class vessels and pay third-class wages.

In the spring of 1900 the Lake Carriers' Association adopted the following scale of monthly wages, being the same which had been paid since October 1, 1899:

	Chief engineer	Assistant engineer
On first class steamers	\$12	\$9
On second class steamers	11	8
On third class steamers	9	6

The secretary of the Marine Engineers' Association remarks that these were the highest wages paid in years on the Great Lakes. He adds that many lines paid \$1,350 for the pick of the men for the season of 1900, and that in special cases \$1,500 or \$1,800 was paid on the lakes for a full year.

Up to 1901 the custom seems to have been for the Lake Carriers' Association to fix a schedule of wages every year, which became the ruling schedule not only for vessels in the Lake Carriers' Association but for those outside of it. At the beginning of 1901 there were rumors that the Lake Carriers' Association intended to reduce the wages of the engineers. The engineers determined to take the initiative. On January 22 they agreed upon the following classification, rates of wages, and engine-room crews:

#### CLASSIFICATION

(All tonnage to be gross tons.)

*First class*—To include steel boats of over 1,800 tons. All passenger boats over 750 tons to be included in first class.

*Second class*—All steel boats under 1,800 and over 500 tons, and all wooden boats over 500 tons. All passenger boats under 750 and over 200 tons to be included in second class.

*Third class*—All boats not included in first or second class to be third class, including tugboats and canal boats.

All first-class boats having water tube boilers, and over 2 boilers, to carry 3 engineers and 2 oilers, and water tenders where required.

All other first class boats, 2 engineers and 2 oilers.

All second-class boats over 1,500 tons, having water bottoms or auxiliary machinery, such as electric lights, hoisting engines, etc., 2 engineers and 2 oilers.

<sup>1</sup> Convention Proceedings, 1896, pp. 494-496.

<sup>2</sup> Convention Proceedings, 1896, pp. 512, 513, 1897, pp. 659, 660.

<sup>3</sup> Convention Proceedings, Marine Engineers, 1898, pp. 311, 312.

All second-class boats over 1,200 tons not included in the above, to carry 2 engineers and 1 oiler	
First class wages to be as follows	
Chief engineers, per month	\$132
First assistant engineer, per month	90
Second assistant engineer, per month	84
Second class wages to be as follows	
Chief engineer, per month	114
Assistant engineer, per month	84
Third class wages to be as follows	
Chief engineer, per month	105
Assistant engineer, per month	75
Special wages for fish tugs	
Large	105
Small	90

This was presented to the executive committee of the Lake Carriers' Association on January 26, with the request that a reply be made on or before February 20. The receipt of it was promptly acknowledged, but no further notice was taken of it, and on February 27 in reply to a renewed request for an answer, the chairman of the executive committee wrote that the committee had not considered the classification and schedule, and that he did not know whether it intended to do so nor when it would meet again. The members of the Marine Engineers' Association refused to work on any steamer controlled by a member of the Lake Carriers' Association. Some owners outside the association accepted the terms of the engineers, and, according to the engineers' statement, many fleets were withdrawn from the Lake Carriers' Association for this purpose. Early in April it was said in the newspapers that the lake lines owned by the Eastern railroads might follow this course. On April 6 the executive committee of the Lake Carriers' Association wrote to the president of the Marine Engineers, saying that it had taken up the proposals of the engineers, and had decided that it could not "discuss matters governing the management and administration of vessels controlled by members of the Lake Carriers' Association, and must decline to take up the subject of" the schedule. The committee added: "We may say, however, that on the opening of navigation there will be no change in the wage schedule adopted at the opening last year."

It will be seen that the chief point of difference was recognition of the Engineers' Association. There was no important difference as to wages. The classification of vessels proposed by the engineers would involve some changes, but, according to their statement, it would reduce quite as many vessels from first class to second class as it would raise from the second class to the first. Aside from recognition of the association the chief question raised seems to have been as to some enlargement of the engine room crews.

On April 23 a new minimum scale of wages was put in force by the engineers, to be demanded from all owners who had not engaged their engineers before that time. It is as follows:

*Minimum schedule of wages.*

	Per month
First class	
Chief engineer	\$150
First assistant	110
Second assistant	75
Second class	
Chief engineer	125
Assistant	90
Third class	
Chief engineer	105
Assistant	75
Wages for fish tugs	
Large	105
Small	90

It will be seen that the wages proposed are on the whole higher than those of the earlier schedule. No agreement was reached with the Lake Carriers' Association, as such, but according to the statements of the Engineers' Association nearly all the engine rooms of the lakes were finally manned by their members. Some concessions were made by the men. In particular the owners were allowed in certain cases to hire a "humpy man," at \$50 a month, as a helper; but the engineers asserted that in the main they got the amount of help they asked for and the rates of wages that they fixed, which are said to be higher than were ever paid on the lakes before. The wages were not, to be sure, much above what the Lake Carriers' Association offered in the first place, and the recognition of the Marine Engineers' Association, which was the main point of difference, was not secured.

**Ladies' auxiliaries.**—At the convention of 1899 the Ladies' Auxiliary, which had grown up in connection with some local associations, was formally recognized, and in the following year a ritual was prepared for it.<sup>1</sup>

<sup>1</sup> Convention Proceedings, Marine Engineers, 1899, p. 175.

## INTERNATIONAL LONGSHOREMEN'S ASSOCIATION.

**History.**—This organization, although it was only organized in 1892, and although it is at present mostly confined to the Great Lakes, has grown with great rapidity. It was reported as having 124 locals and 8,000 members in 1899, 195 locals and 14,000 members in the spring of 1900, 209 locals and 20,000 members in August, 1900, and 250 locals and 40,000 members in June, 1901. The membership includes all kinds of dock workmen. Different classes of workers are in many instances organized into separate local branches. Thus there are locals of coal handlers, of ore handlers, etc. The extension of the organization to coast and gulf ports is one of the chief aims of the officers. During the year 1899-1900 about 15 local branches were organized at ocean ports, noticeably at Baltimore and Newport News. As yet, however, the membership among the coast longshoremen is proportionately very small and is confined to a few ports. There are many local unions not affiliated with the international organization.

The association claims to have had a very great effect in raising wages and improving the condition of labor on the docks. The reports of the officers for 1900 declare that some branches of the trade have increased their wages 100 per cent since organization. By the Lake Erie agreements of 1900 there was a general increase of from 16, to 30 per cent over the previous year. The improvement in wages and conditions varies somewhat in the different branches, according to the degree to which they are organized. The secretary states also that organization has awakened ambition among the dock workers, so that they are no longer content with being in re unskilled laborers. They desire better homes and shorter hours, in order that they may have leisure for self-improvement. There has been already, it is claimed, a revolution in the conditions of the trade.

**Objects.**—The objects are indefinitely stated in the preamble to the constitution as being to promote the prosperity and to secure the rights and interests of the members. It is also stated that the organization aims to substitute direct work for vessel owners in place of the system of unloading boats by jobbers or boss stevedores, which robs the worker of his wages.

**Conventions.**—The convention meets annually in July. Each local has two delegates, and they are entitled to two votes for the first 100 members or less, and one vote for each additional 100 or majority fraction thereof. A special session may be called by request of a majority of the locals.

**Officers.**—The officers are a president, seven vice-presidents, and a secretary-treasurer, all elected at the annual convention. They constitute jointly an executive council, which has all executive and judicial powers. The president and the secretary-treasurer are each paid \$1,500 a year, their compensation having been increased largely at the convention of July, 1900. The secretary-treasurer must give bond for \$5,000, and pay money only on the order of the president.

**Discipline.**—Any local may prefer charges against any elective officer for violating the constitution or for any act calculated to impair the dignity of the organization. The council has power to try such cases, subject to appeal to a general vote of the members of the organization.

No person may be a member of the longshoremen's association who deals directly or indirectly in spirituous liquors.

**Colored labor.**—In 1899 a color-line difficulty arose among the longshoremen of Newport News, Va. The local unions there of longshoremen were composed entirely of colored men. Whitemen refused to join them. The colored men were finally persuaded to consent to the issue of a separate charter for whitemen.<sup>1</sup>

**Finances.**—The per capita tax of the national organization is only 5 cents per month. The executive council is given authority to levy assessments, apparently without restriction. There is however no definite provision regarding strike or other benefits, and the expenditures of the organization are low, the total for 1899 being only \$6,361, and for the year ending June 30, 1901, \$11,055.

**Strikes.**—The central officers of the longshoremen's association have comparatively little control over strikes. This arises naturally from the absence of any strike benefit payable by the international organization. Locals are authorized to call upon the president, or some member of the executive council whom he may name, to visit them and assist in bringing about a settlement of any grievances. In case an investigation does not substantiate the demands of the local, it must

<sup>1</sup> Convention Proceedings, 1900, p. 11

pay the expenses incurred by the visiting officer. The constitution declares that any local which takes part in a sympathetic strike in its city, without the consent of the executive board, will not receive the support of the general body. Locals are forbidden to assist each other in strikes without the consent of the executive board.

The union reported to the Federation of Labor in the fall of 1900 that it had won nine strikes, compromised two and lost one during the preceding year. Two thousand persons were involved, of whom 1,200 were benefited. The cost was about \$2,000.

Some further account of the relations between the longshoremen and their employers is given on pages 369-373.

### AMALGAMATED ASSOCIATION OF STREET RAILWAY EMPLOYEES OF AMERICA.

**History.**—The Amalgamated Association of Street Railway Employees of America embraces motormen, conductors and other employees of street railway companies, except skilled workmen. It was organized in 1892. Up to August, 1900, 157 local unions were said to have been organized, of which 80 were then reported to be in existence. There is usually only one local union in a city, in a few cases there are two.

**Objects.** The Amalgamated Association of Street Railway Employees states its objects in its constitution as follows: To place our occupation upon a high plane of intelligence, efficiency, and skill; to encourage the formation of division associations of sick-benefit funds, to establish schools of instruction for imparting a practical knowledge of modern and improved methods and systems of transportation and trade matters generally; to encourage the settlement of all disputes between employees and employers by arbitration; to secure employment and adequate pay for our work; to reduce the hours of daily labor, and by all legal and proper means to elevate our moral, intellectual and social condition.

**Conventions.**—The convention meets biennially on the first Monday of May. Each local union which has 200 members or less is entitled to one delegate, and larger unions to one additional delegate for each additional 200 members or major fraction thereof. Each delegate can cast but one vote; no proxy votes are allowed. To be eligible as a delegate one must have been a member of his local union in good standing for at least 2 years, provided the local has been organized so long.

The constitution may be amended by a two-thirds vote of the delegates present at a regular session of the convention.

**Officers.**—The officers are a president, three vice-presidents, a treasurer, and an executive board of five members. All are elected by the biennial convention by ballot, and a majority of all votes cast is necessary to elect. So long as there is no election the balloting is repeated, and the candidate who has received the lowest number of votes on each ballot is dropped on the succeeding ballot.

The president combines the ordinary duties of a president with those of a secretary. He decides questions of order and usage, constitutional questions, and appeals, subject to appeal to the general executive board. Subject to a like appeal, he has power to fine or suspend local divisions for violations of the constitution, and to recall charters. He is chief organizer, and it is his duty to see that proper efforts are made to form a local union in every place which is capable of maintaining one. He is ex officio a member of all committees. He edits and publishes the official journal. He keeps and publishes the records of the convention proceedings. He has charge of the seal, books, and papers of the association, furnishes supplies to the local unions, and keeps a list of the names of all members. He receives all money, and turns it over to the treasurer. He gives a bond for \$500, the cost of which is paid by the association. His salary is \$1,200 per year.

The vice-presidents render such assistance to the president as he may require, and in case of a vacancy in the office of president they are entitled to succession in their order.

The treasurer takes charge of the money received from the president, and pays all bills which have been allowed and countersigned by the president. He is directed to keep not more than \$100 on hand at any time, but to deposit money received by him in a bank designated by the executive board, within 24 hours after receipt. He gives a bond in such sum as the executive board may determine, the expense being borne by the association. His salary is \$50 per year.

The executive board audit all books and bills of the president and the treasurer, and decide all grievances and points of law which may be appealed to them. They have power to authorize strikes, and to levy assessments for strike purposes, not exceeding 25 cents per member per month. They are paid \$2.50 per day while in the actual service of the association, together with hotel and traveling expenses.

**Local unions.**—Local unions may be formed by ten or more street railway employees. Ten dollars must be sent to the general office for a charter fee, covering the cost of outfit and seal. No new charter is granted in a city where a local union already exists, without the consent of the general executive board.

**Membership.**—Candidates for membership must be of good moral character and competent workmen in their lines. No officer, superintendent, foreman, or other boss having the rules of a railway company to enforce can become a member. When a member is promoted he is required to withdraw.

A candidate is admitted to membership by a three fourths vote.

**Cards.**—Traveling cards are granted for not more than 3 months, and all dues must be paid in advance for the time for which the card runs. A member holding a traveling card and wishing to become a member of another local deposits his card with the secretary of the local which he wishes to join. The secretary forwards the card to the local which issued it, with a request that a withdrawal card for the member be sent in its place. Upon the receipt of the withdrawal card the member is admitted.

**Finances.**—The constitution provides that the initiation fee shall not be less than \$1, and that the dues shall not be less than 50 cents per month. It is said that in practice the monthly dues of the several local unions are uniformly fixed at the constitutional minimum. Twenty-five cents for each new member must be forwarded to the general office, except in the case of charter members. The per capita tax is 10 cents per month, of which 80 per cent goes to a fund for general expenses and 20 per cent to a fund for death and disability claims. On the 1st of April of each year a special assessment of 25 cents per member is levied for the organization fund. If a deficiency is likely to arise on account of an increased death rate the executive board has power to draw from the funds of the local unions a sum not exceeding 25 cents for each member in good standing.

**Benefits.**—A funeral benefit of \$75 is paid after 1 year's membership. In case of total and permanent disability, making a member incapable of ever again following the occupation for a livelihood, and resulting from accident or injuries received not less than 1 year after becoming a member, the same benefit is paid as in the case of death. To be a beneficial member one must have been in sound health at the time of joining.

No claim for benefit exists in the case of a member whose disability or death is caused by intemperance or his own improper conduct, or is due to any accident or disease from which he suffered before he joined the union, or occurs while on duty as a volunteer or a militiaman. If any local union fails for 2 months to pay its dues or taxes to the national union, its members are not entitled to benefits until 3 months after all arrearages have been paid.

The president's report to the convention of 1899 stated that 17 death claims had been considered during his term of 2 years, and all had been allowed and promptly paid. The total amount was \$1,225. From the convention of 1899 to that of 1901 27 death claims were paid, amounting to \$1,975. Up to 1901, a funeral benefit of \$50 was paid after a membership of 9 months and less than a year.

Partial reports for 1900 show 25 divisions which have local sick benefits, ranging from \$3 to \$5 per week, on account of which \$1,364 was paid during 1900. Local unions also reported \$1,683 contributed to help unions of other crafts in strikes.

**Strikes.**—In case of any difficulty with employers the executive board of the local union is first to call upon the employer and try to obtain a settlement. If it fails, the local union is to decide by a secret vote whether it will support the demands of its members. A two-thirds majority is necessary for further proceedings. If such a majority is given, the president is to be notified, and he, or a person appointed by him, is to visit the scene of the trouble and try to effect a settlement. If he fails, he must get the consent of the majority of the general executive board before ordering a strike; and he must not in any case order a strike without first offering arbitration. Local unions going on strike without the consent of the executive board forfeit all right to assistance, and are subject to expulsion; but a local union may appeal to a general vote of all the locals, and the decision of the general executive board may be overruled by a two-thirds majority of the

members voting. The general executive board has power to declare a strike at an end so far as the support of the national organization is concerned.

Members who participate in an authorized strike are entitled to a benefit of \$5 per week. Twelve strikes were noted in the report of the president to the convention of 1899 as having occurred during his term of 2 years; but only 2 locals were mentioned in the financial report as having received strike benefit, and the total amount was only \$150. This is chiefly to be explained by the very short duration of most of the strikes, and by the rule that strike pay is not allowed for a fraction of a week. Perhaps it is partly due to lack of funds. Twenty-two strikes are reported for the two years preceding the convention of 1901. In support of 3 of them, \$1 657, the proceeds of a special assessment, was paid by the general organization. Besides this, about \$1,400 was contributed by the locals for the St. Louis strike. Of the 12 strikes during the two fiscal years 1897-1899, 6 were reported as successful, 3 as compromised, 2 as lost, and 1 as unsettled at the time of the convention of 1899.

**Wages and hours.**—The following resolution is appended to the constitution: "We hold a reduction of hours for a day's work increases the intelligence and happiness of the laborer and also increases the demand for labor and the price of a day's work."

A report of the president, published in the official journal for February, 1900, stated that 18 local unions had increased their wages during the preceding 11 months, and that 8 locals were then working a 9-hour day and 9 locals a 10-hour day. The president estimated that the increase of wages during the preceding year amounted to \$250,000, without any regard to the decrease of hours, which had taken place in some 18 locals. Details of wages and hours, past and present, in many different local unions were given. Nine locals, organized during 1899, in which changes of wages and hours had taken place had increased their wages per day on the average about 3 per cent, and at the same time had shortened their working day by an average of about 1 hour. Nine locals of earlier organization, ranging from 1892 to 1898, had increased their wages per day on the average about 9 per cent since they were organized and had besides got in average shortening of the working day of more than 2 hours.

Partial returns at the close of 1900 showed 10 divisions working 9 hours a day; 9 divisions working 10 hours; 4 divisions working 11 hours; 5 divisions working 12 hours; 6 divisions working from 8 to 10 hours; 6 divisions working from 9 to 12 hours; 5 divisions working from 10 to 12 hours; 2 divisions working from 12 to 13 hours; 1 working from 7 to 16 hours; and 1 working from 11 to 16 hours. Out of 49 locals reporting, 20 show hours as long as 12, at least for a part of the members; and only 19 report hours as short as 10.

**Official journal.**—The Motorman and Conductor, the official journal of the association, is a monthly paper of 12 pages, devoted chiefly to news and discussions relating to the organization. Its subscription price is 50 cents per year, and it is not sent free to members. To local divisions which subscribe for their whole membership it is sent at 3 cents a copy. It has paid its way during the last 4 years.

### SWITCHMEN'S UNION OF NORTH AMERICA.

**History.**—The Switchmen's Union was founded in October, 1894. In June, 1901, it reported 311 lodges, with a membership of 15,500, in the United States, Canada, and Mexico.

**Convention.**—The convention meets annually, on the third Monday in May. Each local lodge has one delegate. The grand officers have a voice in the convention, but no vote. Each delegate receives from the general treasury \$5 a day for time spent at the convention and in going to and from it. If a delegate is absent from roll call, or when the yeas and nays are called on any subject, unless he has been excused by the convention, he receives no pay for that day. If a delegate leaves before the convention closes, \$1 for each day to the close of the convention is to be deducted from the amount due him. Sickness is a valid excuse for absence or for premature departure. The convention has full power to amend the constitution.

**Officers.**—The officers are a grand master, 5 vice-grand masters, a secretary and treasurer, an editor of the journal, and a board of directors of 3 members. The officers are elected by the convention.

**Membership.**—A candidate for admission must be white, must be of good moral character, must have had at least 6 months' experience as a switchman, and must actually be employed in railroad service at the time of making application. Pilots,

switch tenders, and yard masters are eligible. No person engaged in the liquor traffic can be admitted. Applications for membership must be made in writing, and applicants must be recommended by a member of the union in good standing. Each application must be referred to a committee, which must report at the next regular meeting. Election to membership is by ball ballot. If not more than three black balls appear, the applicant is elected, if four or more black balls appear, he is rejected. If, however, a candidate is blackballed after being favorably reported on by the investigating committee, those who cast the black balls are required to state their reasons, and purely personal reasons will not be permitted to stand in the way of admission.

**Cards.**—Transfer or limited withdrawal cards are granted on applications made through the secretary of the lodge which the member desires to join. They are accepted only by a majority vote of that lodge. Final withdrawal cards are granted to members who wish to sever their connection with the union, provided all dues, fines, and assessments have been paid. Traveling cards are granted to members seeking employment, or traveling on account of death or sickness, or for the transaction of lodge business. They are good for the time for which the member has paid his dues in advance, not exceeding 4 months.

**Discipline.**—Any member who engages in the sale of intoxicating liquors or in any unlawful business is to be expelled. Any member who uses intoxicating liquors to excess, or who is found guilty of drunkenness or other immoral practice, or of conduct unbecoming a member, is to be suspended if the offense is of light character, but if it is of a serious nature, or is a second offense, he is to be expelled. Fraud or imposition upon the lodge in connection with benefits or otherwise is punishable by expulsion. Expulsion is also the penalty for divulging any business of the lodge, and, in particular, for divulging the name of a member who has opposed the admission of a candidate for membership.

**Finances.**—The charter fee for new lodges is \$25. This includes payment for a seal and a full supply of blank forms and lodge supplies. The per capita tax is 75 cents. The initiation fee may not be less than \$2. Subordinate lodges may levy assessments by a two-thirds vote of the members present.

**Benefits.**—The general union has heretofore paid no benefits to members as such. The local lodges are expected to pay benefits to their members in sickness. The master of each local lodge is required to appoint a committee for each road on which the members work, to take charge of injured members and visit them at least twice a week. It is forbidden to pay benefit to a member who was injured while in a state of intoxication, or whose injuries were brought on by any immoral or improper conduct, or whose disability is due to disease with which he was afflicted before his admission to the order.

Early in 1899 an arrangement was made with the Imperial Mystic Legion, of Nebraska, by which that corporation was to issue policies to all members who should desire insurance. Under the agreement a certain number of applications were necessary to make the plan effective. The required number was never obtained, and the scheme fell through.

In May, 1900, a beneficiary department was established, which might be joined by all members physically qualified to perform switching services. Certificates of \$500 each were issued, and any member might take either one or two certificates. The secretary and treasurer levied a monthly assessment of \$1 for each certificate. In order to join the beneficiary department a member must be in good health and must pass a satisfactory medical examination. On the death of a member of the department, the amount of his certificate was paid to the person named in them. If he lost a foot, or half of a foot, a hand, or a thumb and three fingers, or four fingers of one hand, at or above the second joint, or if he suffered any other disability that permanently prevented him from performing the duties of a switchman, the amount was paid to the member himself.

By decision of the convention of May 19, 1901, participation in the benevolent fund is made compulsory on every member on and after September 1, 1901.

## CHAPTER XII.

## LABOR ORGANIZATIONS IN MISCELLANEOUS TRADES.

**JOURNEYMEN BAKERS' AND CONFECTIONERS' INTERNATIONAL UNION OF AMERICA.**

**History.**—The Journeymen Bakers' and Confectioners' International Union of America was organized in 1886. It includes bakers of bread, cake, pies, and crackers, candy makers, ice cream makers, and salesmen of bakery goods. On January 1, 1900, the membership was 3,208. Up to that time there were no female members. The secretary reported the number of locals as 116 in the summer of 1900, and the number of members in good standing as 6,007, of whom 23 were females. On January 1, 1901, there were 141 locals with 7,120 members in good standing and 1,666 in bad standing, or 8,786 in all. During 1900, 63 locals had been chartered with an initial membership of 1,919, and 15 locals with a membership of 291 had been disbanded, suspended or expelled, 3,276 members had been initiated by existing locals and 1,118 had been expelled or lost. The total gain for the year was thus 3,786.<sup>1</sup> On June 1, 1901, the number of locals had increased to 169 and the number of members to 9,654.

**Objects and declaration of principles.** The constitution of the Bakers' and Confectioners' Union is preceded by a declaration of principles, which is substantially the same phrase for phrase, as those of the Brewery Workmen, the Amalgamated Glass Workers, the Textile Workers and the Wood Workers. It is given in full in the account of the Textile Workers' Union. (See page 77.)

The Bakers' Union declares that it "aims at the promotion of the material and intellectual welfare of all workmen in the baking trade. First, by organization; second, by education; third, by the reduction of the hours of labor; fourth, by gradually abolishing such evils as may prevail in the baking trade; fifth, by establishing labor bureaus wherever possible; sixth, by assisting members in local causes in matters concerning the union; seventh, by agitating the abolition of night work.

**Convention.**—Local unions are represented in the convention as follows: Those with a membership of 100 or less are entitled to 1 delegate; those with a membership of 100 to 200 are entitled to 2, and those with 200 members or more are entitled to 3 delegates. The international secretary represents the International Union at the convention. He is required to produce all financial books, and he has an advisory voice, but no vote. He is not allowed to represent any local union.

Both the English and the German language may be used in the convention, and the minutes are required to be kept in both languages.

**Constitutional amendments.**—The convention is specifically empowered to alter the constitution; but it is also provided that on an appointed day in each year a general vote shall be taken on propositions which have been brought forward during the year with the indorsement of seven local unions.

**Officers.**—The officers are a secretary, an editor of the Bakers' Journal, a treasurer, organizers, five trustees, and an executive board. The officers are chosen by popular vote on the Australian system. An absolute majority is necessary to elect. If there is no election on the first ballot a second ballot is taken, in which only the two candidates for each office who have received the highest votes are eligible.

Each local union, by secret ballot, nominates one candidate for each office. The five candidates for each office who receive the nominations of the largest number of unions are eligible to election. Each of them must, however, on being notified of his nomination, send the international secretary a letter of acceptance and in it "give his views of the methods and aims of the International Union. These letters shall not contain more than 500 words each, and shall be published in the issue of

<sup>1</sup> The gain and the totals of membership, as given, do not agree. They are as in the original report.

the official journal immediately succeeding the nominations. Should any candidate not send in the letter as prescribed herein, and within the specified time, his name shall be stricken from the list of eligibles for the election." The International secretary has ballots printed, containing the names of all eligible candidates, in the order of the number of nominations received by each. These ballots are furnished to the local unions free of cost. Every member is obliged to vote, under penalty of a fine of 50 cents. Those reported sick or holding traveling cards are excused; "but any member drawing a traveling card to evade the duty of voting shall be fined the same as though he held no traveling card."

The executive board consists of seven members. It has power to authorize strikes, to annul charters, and to vote assessments, subject to the approval of a general vote. It can levy assessments without a general vote in the case of strikes or lockouts. It is directed to employ an expert accountant every 6 months to examine the finance books of all officers, and his reports are to be published in the journal.

The duty of the trustees is to investigate the snarities of the officers, to audit the accounts of the International secretary, manager of the Journal, and treasurer, and to perform all other functions that may be referred to them by the executive board. They are to give the executive board a detailed report of the financial standing of the union once a month.

The secretary and the editor of the journal receive \$20 a week apiece. The treasurer is paid \$5 a month.

Organizers are to be appointed in every large city from among the resident members. They are International officers, and while actually employed by the executive board they are paid \$5 per day, with car fare and incidental expenses.

One of the officers of the local unions is a recorder of statistics, whose duty is to collect and compile once in each year statistical data relative to the shop conditions of the journeyman bakers of the town or city, both organized and unorganized, and to send them to the International secretary before January 1.

**Membership.**—To become a member of the Bakers' Union one must have worked at least 2 years at some branch of the trade. The recognized branches of the trade are bread, pie, cracker, and pretzel baking, confectionery and cake baking, pastry cooking, candy making, and ice cream making. "No distinction shall be made on account of race, sex, creed, or nationality." No member can hold political office. Election to membership is by majority vote of the members present.

**Traveling cards.**—Traveling cards are issued to members who have belonged to the union at least 6 months and have paid all dues and assessments. On arriving in a city where there is a local union a member must report at the first meeting of such local, under penalty of a fine of \$2, to be imposed by the local union of the district in which the member works. The financial secretary of the local union to which a member is admitted by traveling card must notify the financial secretary of the union which issued the card.

**Discipline.**—Members are debarred from membership "when convicted of a dishonorable act, thereby injuring the labor movement in general and the International Union in particular. First, by defrauding money, the property of the International Union; second, by taking the place of a union man on strike, third, by systematic work to undermine local unions or the International Union; or when ceasing to be wage workers." Members who remain at work when ordered on strike, "or who have acted as traitors to their fellow members, shall, upon conviction, be expelled, and their names shall be inserted in a book kept by the International secretary." It is elsewhere provided that "members who injure their union by a dishonorable act, who have defrauded moneys, or who have acted as scabs" shall have a trial before a committee, "which shall report and recommend the fine to be imposed." Any member convicted of persecuting or injuring another member in his work is to be fined not less than \$5.

**Finances.**—A charter fee of \$5 is collected from new unions. All locals are required to send \$1 to the International secretary for each new member admitted. This amount is credited to the agitation fund. The per capita tax is 30 cents a month. Payment of it is evidenced by adhesive stamps, furnished by the International secretary, and affixed to the member's book when payment is made.

The initiation fee is required by the constitution to be at least \$2. The dues collected by the local unions are from 50 cents to \$1.25 per month.

All money except the income of the Journal is collected by the secretary. The secretary and the manager of the Journal turn over all receipts to the treasurer. The secretary is forbidden to have more than \$250 of the organization's money in his possession at any time. The treasurer is forbidden to keep more than \$150 in his possession. Sums above this amount are to be deposited in bank in the name of the trustees. The secretary, treasurer, and editor of the Journal are each

required to give bond for \$1,000. Excluding the sick and death benefit fund, the receipts during 1900 were \$33,984 and the expenditures \$15,999.

**Sick and death benefit.**—The union maintains a sick and death benefit fund, which members are at liberty to participate in or not. Members who have passed the age of 50 years, or are not in good health, are not permitted to join it. An initiation fee of \$1 is charged. The regular payments are \$1 per quarter, and a further amount of 25 cents per quarter which can only be used for the payment of death claims. When the money on hand in the sick fund is less than \$5 for each member the executive board has power to levy an assessment of 25 cents. In case of sickness or disability, a member who is in good standing both in the local union and in the sick and death benefit fund, and who has been a member 6 months, is entitled to \$5 a week. No member can draw more than 26 weeks' sick benefit in any one year. The organization has the right to send at any time a physician to the sick member to ascertain his condition. A refusal to permit this physician to see the sick member shall be sufficient cause to stop the payment of further benefit.

Upon the death of one who has been a member of the fund for 6 months, his heirs are to receive a death benefit of \$50; if he has been a member for a year, the benefit is \$100. If no legal heirs are known the burial expenses are paid out of the benefit and the surplus, if any, is returned into the fund. On the death of the wife of a member of the fund he is entitled to a benefit of \$50.

Each local is directed to elect a sick and death benefit fund secretary, whose duty is to collect and remit the money of the fund. The general secretary of the International Union is general secretary-treasurer of the fund. As such he is required to give a bond for \$1,000, and to publish monthly reports in the *Bakers' Journal*. The receipts from members during 1900 were \$270 for initiation, \$1,603 for sick dues, and \$101 for death dues. The payments were \$680 for sickness, \$400 for death, and \$61 for expenses. The balance on hand January 1, 1901, was \$2,690.

On July 6, 1901, a popular vote was taken on a proposition to establish a compulsory sick and death benefit. It was defeated by a vote of 2,183 against it to 1,192 in favor of it.

**Strikes.**—The Bakers' Union declares that it is the duty of the local union to prevent strikes as much as possible by trying to settle differences with employers in a peaceful way. If a strike seems unavoidable, it should be limited to as few shops as possible, so that the members at work may be able to support those on strike.

Strikes can be declared only by a three-fourths vote of the members in good standing at a meeting which every member has been invited personally or in writing to attend. A three-fourths vote is also required to declare a strike ended. If a local union desires aid from the International Union in a strike, it must make application to the executive board before going on strike, with a full statement of the circumstances. The amount of strike benefits is determined by the executive board. A local union can not be supported in a strike if it has not belonged to the International Union at least 3 months, or if its dues or assessments are not fully paid.

The Bakers' Union reported to the Federation of Labor in the fall of 1900, that it had won 3 strikes during the preceding year, involving 327 persons, at a cost of \$1,363.

**Journal.**—The Bakers' Journal is the property of the union and is under the ultimate control of the executive board. The editor is one of the national officers, and the business management of the paper is intrusted to him. He is instructed in the constitution to conduct the paper "in accordance with the principles of an advanced tendency of a trades union paper." The paper is a weekly, of 4 pages, about 17 by 22 inches. It is printed partly in English and partly in German, and has occasional articles in French. It is sent free to members. During 1900 the cost of issue, including the salary of the editor, \$1,010, was \$1,750, and the receipts from advertisements and subscriptions were \$3,639. This left \$1,114, or about 20 cents a member, to be paid by the union.

**Union label.**—The Bakers adopted a bread label in 1886, and a cracker label in 1896. The secretary reported that over 70,000,000 bread labels and 100,000 cracker labels were used in 1899.

From February 1, to March 1, 1900, it was reported that 17,311,000 bread labels were shipped through the general office to the local bakers' unions. It was said that in the mining districts the union label on cracker boxes was universally demanded.<sup>1</sup> The locals paid the national office \$1,919 for labels during 1900.

<sup>1</sup> American Federationist, June, 1900, p. 172.

**Piecework.**—The secretary reports that piece work is not approved or allowed.

**Hours of labor.**—The hours of bakers have usually been long, but the union has set itself to the shortening of them. The majority of the Hebrew bakers of New York City, of whom there are said to be 1,000, got a 10-hour day and a 6-day week by a strike early in May, 1901. The national secretary asserted in June, 1901, that none of the members were working over 10 hours.

## JOURNEYMEN BARBERS' INTERNATIONAL UNION OF AMERICA.

**History.**—The Journeymen Barbers' International Union of America was established in 1887. On September 1, 1896, there were reported 76 locals, with a membership of 3,183. During the next 2 years 29 locals, with 520 members, were suspended or disbanded, leaving 47 locals and 1,673 members out of those reported in 1896. There were enough accessions, however, to bring the totals up to 123 locals and to 3,381 members on September 1, 1898. In the summer of 1900 the secretary reported 207 locals and 8,127 members. In June, 1901, he reported 317 locals and "nearly 13,000" members.

**Convention.**—The Barbers' convention is held once in 3 years. Local unions are entitled to one vote for each 100 members or fraction thereof. The whole vote may be cast by one delegate, if it is desired. No proxies are recognized. To be entitled to more than 1 vote a union must have paid per capita taxes on 101 or more members for a full year. No member is eligible to act as a delegate unless he has been a member in good standing for a year, except when his local union has not existed so long. Delegates are paid \$1 per day for the period of necessary absence from home, and railroad fare by the shortest route. The expense is paid by the international union.

**Constitutional amendments.**—The constitution may be amended by a majority vote of the members. Amendments are submitted to vote when endorsed by 5 local unions.

**Officers.**—The officers are a president, 4 vice-presidents, a secretary-treasurer, and a general organizer. These officers constitute the executive board. They are elected by the convention. A majority is necessary to a choice. Balloting is continued until a majority is obtained, the candidate who has the least votes on each ballot being dropped. The officers are members of the convention, with the same powers and privileges as regular delegates. The salary of the president is \$360 a year. The secretary-treasurer, in addition to the ordinary duties of his office, edits and publishes the official journal. His salary is \$1,000 a year. He is required to give a bond for \$10,000, and the constitution specifies that the bond shall be procured from the American Surety Company of New York. The general organizer is the head of the organizing department, with power to appoint organizers in each State or province and to issue instructions to them. His salary is \$240 a year.

**Membership.**—Any competent journeyman barber who has served 3 years at the trade may become a member. No employer is eligible, and no one who is incapable of working on account of sickness. Persons who are disqualified by reason of having an incurable disease may be received as nonbeneficiary members on the payment of 50 cents per month as dues, of which 25 cents goes to the International Union. Members are elected by secret ballot or otherwise, at the discretion of the local union. A majority elects.

**Apprenticeship.**—The constitution requires that every person engaging to learn the trade shall serve a regular apprenticeship of 3 years, and shall then pass an examination before a committee. Local unions have power to determine the number of apprentices within their jurisdiction. The secretary-treasurer asserts that the apprenticeship system is rigidly enforced, that locals are not allowed to accept an apprentice to membership, and that they must see that he serves the required 3 years.

The representative of the Barbers' Union induced the American Federation of Labor convention of 1896 to pass a resolution advising union men not only to patronize no barbers but members of the union, but also to use their utmost endeavors to discourage so-called schools of instruction in the barbers' trade, whose pupils "in the majority of cases constitute a direct menace to public health and are not competent to render the public good service."<sup>1</sup>

**Discipline.**—Any general officer may be impeached on motion of any local union,

<sup>1</sup> Convention Proceedings, 1896, p. 89.

sustained by one-fifth of the other locals. Officers are tried before the executive board.

Charges against members must be presented in writing and signed. They are tried before a committee of 3 or 5 members, and determined by the local upon the report of the committee. Every member has a right to appeal to the general president, from him to the executive board, and from the board to a general vote of the members.

**Finances.**—The charter fee is \$12 on the organization of each new local union, including the outfit of seal, books, and stationery. The initiation fee may not be less than \$1 nor more than \$5. The dues are fixed by the constitution at 60 cents per month. Dues are collected by the stamp system. An adhesive stamp for each payment is affixed in the book of the member and canceled. The per capita tax is 35 cents per month. Assessments can be levied only by popular vote. The per capita tax is divided as follows: 12 cents for a general expense and organizing fund, 12 cents for a sick and death benefit fund, and 10 cents for a convention fund.

Any member who fails to pay dues for 2 months is to be suspended. A union which fails to pay its per capita taxes for 2 months is to be notified, and if the tax is not paid by the first day of the following month, the union is suspended.

**Benefits.** *Sick benefit.* Every person who has been a contributing member for 6 months continuously is entitled to \$5 per week when sick and unable to attend to his usual vocation, provided his sickness has not been caused by intemperance, debauchery, or other immoral conduct. Sick benefit can not be drawn more than 16 weeks in any one year. There is a provision for a visiting committee, who are to visit the sick not less than 3 times a week. If the visiting committee are refused permission to see the sick member it is not obligatory on the union to pay the sick benefit.

*Death benefit.* A death benefit of \$500 is paid on the death of one who has been a member in good standing for 6 months.

**Charity.** The members of the Barbers' Union contributed over \$5,000 for the members of the organization, 23 in number, who suffered by the Galveston flood.<sup>1</sup>

**Strikes.** The constitution of the Barbers makes no provision for strikes. The first strike which took place in the organization was a strike of the Colored Barbers' Union of Nashville, in July, 1898. On this occasion the executive board voted a gift of \$25 from the general fund, and the local unions, being appealed to, contributed enough to bring the total support up to \$339.10. This enabled the Colored Barbers to win their strike. During May and June, 1901, there were strikes at Dayton, Ohio, for less hours on Saturday; at Springfield, Mass., for less hours throughout the week; and at Seattle, Wash., for less hours and no Sunday work. All were successful. In general the union does not resort to strikes, but places its entire reliance upon the shop card which corresponds to the label of other unions.

**Hours of labor.**—At the request of the delegates of the Barbers the American Federation of Labor convention of 1900 passed a resolution reciting the long hours and the Sunday work that prevail in the barbers' trade, and asking all delegates to bring the matter to the notice of their unions, in the hope that the labor organizations will make it plain that they desire the barbers to have the same relief which they desire for themselves through the 8 hour day, and that they do not desire long hours of toil for the barbers to meet their own self-convenience.<sup>2</sup>

**Journal.** The Barbers' Journal, the official paper of the organization, is a monthly magazine, well printed on calendered paper, and in its appearance attractive. The subscription price is \$1 a year.

**Union label.**—The barbers have a union label in the form of a shop card, which is displayed in union shops. The American Federation of Labor convention of 1897, on motion of the representative of the Barbers' Union, passed a resolution declaring that no member of an affiliated union should patronize any barber shop charging 3 or 5 cents for a shave or 5, 10, or 15 cents for a hair cut. The resolution added: "As no union shop card of the barbers is displayed in a shop of this kind, the members of affiliated unions are instructed to patronize only such shops as do display the union card."

<sup>1</sup> The Barbers' Journal, January, 1901, page 8.

<sup>2</sup> Convention proceedings, 1900, p. 163.

## NATIONAL UNION OF THE UNITED BREWERY WORKMEN OF THE UNITED STATES.

**History.**—The National Union of United Brewery Workmen was organized in 1886. In the summer of 1900 the secretary reported about 300 local unions and about 16,000 members. On September 1, 1901, the local unions were reported as 280 and the membership as 26,000.

Until 1896 its allegiance was, in some degree, divided between the Federation of Labor and the Knights of Labor. A part of its locals were also local assemblies of the Knights, and formed a national trade assembly.

The grievance committee of the American Federation of Labor at the convention of 1895, in reporting upon a dispute between the national body of the United Brewery Workmen and one of the local unions, declared that the trouble had arisen because of the dual affiliation of a part of the National Union with both the American Federation of Labor and the Knights of Labor. The committee recommended that the National Union be required to take steps at its next convention to dissolve the district assembly of the Knights of Labor, which was composed of certain of its locals, on pain of suspension from the American Federation of Labor. The representatives of the brewers denied that the dispute in question had anything to do with the affiliation of certain of their locals with the Knights of Labor, and declared that dissolution of the trade district assembly referred to would cause an immediate attack by the Knights of Labor upon the unions of the brewers in 14 cities, and help the brewing bosses in their efforts to destroy the United Brewery Workmen. The convention, however, adopted the report of the committee.<sup>1</sup>

The expected war broke out at once and has continued down to the present time. So recently as February, 1901 the Brewery Workmen congratulated themselves on conquering the chief stronghold of the Knights in New Jersey by inducing a local assembly of some 80 brewery employees to dissolve for the purpose of going over to the National Union.

The National Union has claimed jurisdiction over all workers in breweries, including brewers, malsters, coopers, drivers, stablemen, engineers, firemen and bottlers. Trouble has consequently arisen between it and other unions which have claimed a part of this territory. The contest with the coopers is the oldest. Up to the present time the coopers seem to have, upon the whole, the best of it. The executive council of the American Federation of Labor decided in 1898 that where there was enough coopers' work in a brewery to require the entire time of one cooper he should belong to the Coopers' Union but where a cooper's whole time was not required he should belong to the Brewery Workmen. This decision was ratified by the American Federation of Labor convention of 1898; but the Brewery Workmen declined to comply with it. The American Federation of Labor convention of 1899 declared that the tightening of loose hoops is under the jurisdiction of the Brewery Workmen, but that all repairing and new work should be done under the Coopers' Union. This decision has apparently been accepted. Good feeling seems generally to prevail at present between the two organizations. Brewery unions in many places are demanding of their employers to use only union-made cooperage.

During 1899 representatives of the Brewery Workmen and the Steam Engineers made an agreement that engineers working in breweries should be required to join the Engineers' Union. According to the statement of the executive council of the American Federation of Labor, the Brewery Workmen did not keep the agreement. It kept the engineers it had and continued to receive others.<sup>2</sup>

The Brewery Workmen, in the Federation of Labor convention of 1899, maintained their right to retain control of the brewery engineers and firemen, and declared that these workers had better conditions under the Brewery Workmen than they could get by joining other organizations. The delegate of the Coopers' Union declared in the debate that when the brewery coopers joined the Coopers' Union their wages were raised \$2 a week. Resolutions were introduced proposing that the convention should demand of the Brewery Workmen that they turn over the engineers and the firemen of the breweries to the Engineers' and Firemen's unions. The convention directed that a committee of three members of the executive council adjust these disputes, and instructed the unions concerned to appoint representatives to meet them as a committee of conference.<sup>3</sup> At the session of the executive council in July, 1900, a decision was rendered that the Brewery Workmen should refrain from issuing charters to engineers and firemen, but

<sup>1</sup> Convention Proceedings, 1895, pp. 101, 105.

<sup>2</sup> American Federation of Labor Convention Proceedings, 1899, p. 55.

<sup>3</sup> Steam Engineers' Convention Proceedings, 1900, p. 63.

<sup>4</sup> American Federation of Labor Convention Proceedings, 1899, pp. 127, 128.

should refer such applications to the national organizations of the Engineers and Firemen and that the cards of these organizations should be recognized in the breweries under the jurisdiction of the United Brewery Workmen. At the same time engineers and firemen who were members of the United Brewery Workmen should have the right to retain their membership and their cards should be recognized by the unions of Engineers and Firemen.<sup>1</sup>

In the American Federation of Labor Convention of 1899 a complaint was made that members of the Brewery Workmen were painting barrels, vats, walls, and woodwork in and about breweries in derogation of the rights of the Painters' Union. The convention decided to hold the matter in abeyance until the existing split in the Painters' Brotherhood should be healed.

The beer bottlers attempted during 1900 to secure a charter as a national organization. The executive council of the American Federation of Labor refused for the time being to grant such a charter, but left open the question of granting one in the future if a sufficient number of bona fide unions of bottlers should be formed.

The American Federation of Labor convention of 1900 took action which completely reversed the previous tendency of the Federation in the treatment of these jurisdiction disputes. It declared that the best interests of the labor movement would be conserved by putting the employees of the breweries under the jurisdiction of the United Brewery Workmen's Union. It was recognized that this decision was contrary to previous decisions of the Federation, and in order that it might not injure those who had been organized according to previous decisions, the following limitations of its operation were adopted: (1) That the coopers employed on new work or on repair work in a brewery should be members of the coopers' union; (2) that all men employed as painters on new or old work should be members of the painters' union; (3) that organizations of engineers or firemen or other trades already existing in a brewery should be permitted to continue to work under their several trade organizations without interference from the United Brewery Workmen; and, (4) that while team drivers employed in delivering the product of a brewery should belong to the Brewery Workmen's Union, team drivers employed by the agencies or distributing depots of breweries in other places, as well as drivers temporarily employed by breweries, should belong to the 'Team Drivers' Union.

This decision has by no means ended the controversy. The Team Drivers in one place and the Engineers in another have continued to try to bring the brewery workers of their crafts into their unions, and to have them leave the Brewery Workmen, or if they will not consent, to get them discharged.

In the spring of 1901 the International Brotherhood of Stationary Firemen levied a boycott against the breweries of Cincinnati in consequence of a strike of its members. The Brewery Workmen sent out notices calling attention to the fact that the beer of the Cincinnati breweries bore the union label, and urged its members "not to permit that the union label of the national union be boycotted."

**General aims.** The union says that it seeks to promote the material and intellectual welfare of its members by organization, by education, by reduction of the hours of toil, by the increase of wages, and by active participation in the independent political movement of the country. Its declaration of principles is identical, save some slight verbal changes, with that of the Textile Workers, the Wood Workers and the Bakers. It is printed in full in the account of the Textile Workers. (See p. 77.)

**Convention.**—The convention is held annually. Each local union is entitled to one vote for every 100 members or fraction thereof. One delegate may cast not more than three votes. The convention has power to levy taxes and to amend the constitution. Amendments adopted by the convention need not be submitted to popular vote. Amendments coming from the national executive board or from local unions may, however, be submitted to popular vote, but a two-thirds majority of the members voting is required to adopt them in this manner.

The convention elects a president and a vice-president on each day of the session.

**Officers.**—The union has no president. Its national executive consists of 13 members, 7 of whom live in the place where the national executive has its headquarters and form a business quorum. The remaining 6 are chosen from other local unions. All the ordinary executive powers are lodged in this national executive. The decisions of the quorum are binding only when the outside members have sent in their vote, and when, thereby, a majority has been secured.

<sup>1</sup>American Federation of Labor Convention Proceedings, 1900, p. 65.

The other officers of the union are 2 national secretaries, 3 trustees, an auditing committee of 3, and an editor of the official journal, the *Braner-Zeitung*. The secretaries and the editor are elected by popular vote; the trustees and the auditing committee are elected by the quorum of the national executive.

One of the two secretaries, called the financial and corresponding secretary, is to collect all money and turn it over to the other secretary, called the secretary and treasurer. The two secretaries are forbidden to have more than \$2,000 at their disposal. Any further sums must be turned over to the trustees. The trustees deposit the funds in their hands in a bank approved by the national executive. Each of the national secretaries gives a bond for \$3,000, furnished by a trust company and paid for by the organization.

**Local executive.** Whenever there are several locals in one place a general local executive must be elected to decide matters of common interest. Locals which refuse to carry out its directions are to be suspended by the national executive board.

**Membership.** In order to become a member of the Brewery Workmen's Union one must be a workman in a brewery and of good character. "Every candidate who desires to be one a member of a local union must be in possession of his first citizen's papers and must take out his second papers at the expiration of the time when it is legal to do so." Sons of brewers whose fathers are carrying on breweries in the same place are ineligible to membership. So are foremen, bookkeepers, shipping clerks, and other office employees. Members who run saloons are obliged to take out withdrawal cards.

No member of the union is allowed to belong to the State militia.

**Finances.** The per capita tax is 15 cents a month. There is a further quarterly tax of 50 cents a member, which goes to the reserve fund, and may be used only to support strikes and lockouts. There was formerly a quarterly assessment of 24 cents a member for an international defense fund maintained in common with the brewer's organizations of Germany, Switzerland, and other countries. The American brewery workmen abolished this international defense fund in 1900, though their correspondence with the European organizations is still maintained.

The initiation fee may not exceed \$10, and local dues may not be less than 50 cents a month. Dues are accepted for by means of adhesive stamps, which are affixed to the member's book and canceled. Members who are sick or out of work for more than a month are exempt from dues and assessments.

**Strikes and boycotts.** The union declares in its constitution that strikes are to be as much as possible avoided, and that only after all attempts at an amicable adjustment of the difficulties have proved unsuccessful the local union shall make application to the national executive, stating precisely the efforts that have been made to prevent a strike and how many members will be eventually affected by the strike. After the assent of the national union has been obtained the local union votes by ballot upon the question of striking. Local unions that go on a strike without the express sanction of the national executive can have no support from the national union. The national union will pay to those who strike with its sanction an amount determined by the money it has on hand and the number to be supported, but not more than \$5 per week for each man. No member is entitled to support during the first 14 days of a strike unless he has been out of work for 14 weeks before. The union maintains a reserve fund for use only during strikes and boycotts, by a quarterly assessment of 50 cents per member in good standing.

The Brewery Workmen have been very free in their use of the boycott. It has had sharp disputes over its policy in this regard with other unions and with the Federation of Labor. At the American Federation of Labor convention of 1897 a protest was presented from the Coopers of Troy, Albany, and vicinity against a boycott which the United Brewery Workmen had declared against the breweries of that region. The Coopers said that all the coopers employed in those breweries were members of the Coopers' International Union, and that they believed that no proper effort had ever been made to organize the breweries on Federation lines. On the other hand, the casks and kegs on which the label of the Brewery Workmen's Union was placed in many parts of the country were made by the lowest priced and most unfair labor. If the Coopers were to use the boycott on the breweries of the country, they said, as the Brewery Workmen had used it, they would boycott the most of the breweries where the Brewery Workmen's label is used and recognized.

**Journal.**—The official journal of the Brewery Workmen is a weekly paper of four pages called the *Braner-Zeitung*. The two outside pages are regularly printed in English and the two inside pages in German. The English pages are for the most part translations from the German pages. The paper is a strenuous advocate of the Social Democratic party.

**Union label.**—The Brewery Workmen first adopted a label in 1893. This first label was a combination of the emblems of the American Federation of Labor and the Knights of Labor. The American Federation of Labor refused to recognize this combination label. It was therefore changed, in 1894, to one which could secure the indorsement of the Federation.

The main color of the label is red. The name of the organization is printed in white. The trade emblem in the middle is printed in blue on a white field. The union has also adopted a shop card to be displayed in places where only union beer, ale, and porter are sold. It is loaned to the dealers, and remains the property of the national or of the local union, so that it can be withdrawn if any nonunion beer is handled. The shop card was not issued till the spring of 1901. In the summer of 1900 the secretary reported that more than 100,000,000 labels had been issued. It is complained that some breweries which recognize the union scale refuse to make use of the union label.

The constitution urges all members and their relatives to buy no cigars, bread, shoes, hats, or other articles in whose production union labor is not employed. It directs that special attention be paid to the labels of the various unions.

**Hours of labor.**—The Brewery Workmen are giving much attention to the shortening of the working day. Many local unions have reduced their hours to 9. Until very recently none had succeeded in reducing them to 8. At least for all classes of workers. In March 1901, it was announced that the union at Houston, Tex., had secured an 8-hour day for all its members. A similar announcement came soon after from Stockton, Cal., and during the spring of 1901 the 8-hour day appears to have been secured in nearly all the breweries of Texas and the Pacific coast. Progress in the East has not been so great. On May 1, 1901 the first 8-hour agreement in the East was obtained by the local at Lowell, Mass.

The union directs local unions in making or renewing contracts to include a provision that overtime shall only be worked in cases of urgent necessity, and shall be paid for at 50 cents an hour.

The constitution requires local unions to use their influence to abolish Sunday work, or at least to secure a reasonable extra pay for it.

**Division of work.**—The union requires local unions to provide in contracts with employers for a lay-off system, under which no workman shall be laid off longer than one week at a time. Sometimes each man works five days or less in each week.

**Wages.**—No brewers' union is permitted by the constitution to allow a minimum wage scale below \$13 a week. This rule is not found always easy to enforce. In the autumn of 1900 a traveling organizer reported to the national executive that the union label ought to be withdrawn from a certain brewery in Hudson, N. Y., because, though its employees were members of the union, they were working for \$9 and \$10 a week.

## NATIONAL BRICKMAKERS' ALLIANCE.

**History.**—The National Brickmakers' Alliance was organized in 1896. It succeeded the Illinois Brickmakers' Alliance, which had been organized in 1891. It includes makers of building brick and paving brick. Its locals and members are reported by the secretary as follows:

	Locals	Members		Locals	Members	
1896	.....	10	600	1899	35	1,400
1897	.....	17	00	1900	45	1,800
1898	.....	23	1,000	1901	62	3,500

**General aims.**—The preamble to the constitution is as follows: "Self-preservation is the first law of nature, in accordance with which man has organized into tribes, communities, and nations; and within the nations to secure advantages not possible from individual effort, the intelligent class have been organized into companies, pools, combines, and trusts, through the potency of which a few persons have secured possession not only of the wealth created by labor, but also of the social, political, judicial, and moral powers of society. On the other hand, the poorly or wholly unorganized workers possess simply labor power without the right or opportunity to use it except by the permission and for the profit of a combine, company, pool, or trust."

"In the struggle for existence the laborer is forced to compete with the labor-saving machine he has helped to make, and with the increasing army of the unemployed. Under these considerations he is at the mercy of the employing class and necessarily sells himself at his master's price or seeks help and protection in organization with his fellow-workers, and in proportion to the intelligence, unity, and numerical strength of such organization he finds in higher wages, shorter hours, and better conditions of labor a taste of the advantages so fully secured by the superior intelligence and unity of masters.

"In addition to the material advantages, the progressive labor organization encourages and helps its members to understand the fundamental causes which create on the one hand a small class of powerful but irresponsible employers possessed of all the means of labor and all its surplus productions, and on the other hand a great class of poor and dependent wage workers.

"It teaches that in such fundamental knowledge lies labor's greatest power, that through the peaceful and lawful use of this intellectual force every wrong can be remedied, every right established, and labor be made free and independent, the happy possessor of both the means and the result of its productive power."

The Brickmakers make it the duty of their executive council to watch legislative measures directly affecting the interests of brickmakers or working people in general, and to initiate, whenever necessary, such legislation as the Alliance may direct.

**Convention.**—No regular time is fixed for the convention. Whenever five local unions think it necessary that one be called, the question is referred to a popular vote. Each local is entitled to one delegate for each 100 members or major part thereof. The full vote of any local may apparently be cast by a single representative. A member must be in good standing to be eligible as a delegate.

**Officers.**—The officers are a president, three vice-presidents, and a secretary-treasurer and organizer, elected by the popular vote of the members, and constituting the executive council. The method of election is based on the Australian plan, nominations being sent in by local unions, and the national secretary furnishing to the local unions, 20 days before the election, a sufficient number of ballots. A majority of all the votes cast is necessary to election. If no candidate receives a majority a new ballot is taken, which is confined to the two candidates who have received the most votes.

Every member who has the right to vote and fails to do so is subject to a fine of 50 cents. Sickness and traveling are the only excuses.

**Membership.**—An applicant for membership must be a citizen of the United States or must have declared his intention to become a citizen. He must sign an application in writing, and must be recommended by a member in good standing. A majority vote of the local admits to membership. The age of 18 is specified as that which a man must have reached to be a charter member of a local union.

**Finances.**—The per capita tax is 24 cents a month. Any local 4 months in arrears is to be suspended. The minimum initiation fee is \$1.

The accounts of the Alliance are audited annually by a committee of three members. Three locals are selected by the president from those within 75 miles of the office of the national secretary, and each of these locals chooses a member of the auditing committee.

**Strikes.**—The Brickmakers' Alliance does not require the approval of a strike by the executive council before it is begun. It provides that if any local union orders a strike or is locked out, "and by reason of financial strugencies it becomes necessary to call upon the Alliance for aid, the executive council, if they deem that such local union is entitled to receive assistance, shall make an assessment, not exceeding 2 cents per member per week, upon all other local unions of the Alliance." This can not continue more than 5 weeks unless ordered by a general vote of the local unions. No local union can be entitled to strike benefit which has not been 3 months affiliated; but if a local which has been affiliated a shorter time appeals for help the president is directed to call on all affiliated locals to aid it.

The union reported to the Federation of Labor in the fall of 1900 that it had won 3 strikes and lost 1 during the preceding year, and that 2 were pending; 475 persons were involved, of whom 250 were benefited. The cost of the strikes had been about \$2,000.

**Union label.**—The union label of the Brickmakers was adopted in 1897. So far it has only been attached to common brick machines, and has scarcely been used except in the immediate vicinity of Chicago. This is partly due to mechanical difficulties in adapting the union label to the machinery which is used in other places.

The label is made of brass and attached to a metal roller by means of set screws.

The roller is set up on hangers directly above the brick; as the brick passes from the machine in one solid string of clay, before being cut by the automatic cut-off, the roller is allowed to rest on the clay, the motion of the clay and the weight of the roller cause the roller to revolve, and the impression of the label is stamped on each brick in its green state. After the brick is burned the impression is as visible and as lasting as the brick itself.

The demand for union-made bricks must of necessity be stimulated by other means than those which are used to create a demand for union-made cigars, hats, shoes, and clothing. The buyers of brick seldom belong to the laboring class. The most efficient aid has been rendered to the Brickmakers by the building trades workers of Chicago. They have repeatedly refused to work on buildings on which non-union brick were used. This is perhaps the only means by which the union brickmakers can hope that their label will be made very helpful to them. They seem now to have lost this help in the only place where it has been effectively applied. The agreement of the Chicago Bricklayers' Union with the Chicago Masons and Builders Association, made June 27, 1900, and binding till April 1, 1901, provides that 'there shall be no restriction of the use of any manufactured material except prison made.'

**Piecework.** The national secretary reports that piecework is allowed, but not approved.

**Politics and religion.** The constitution provides that no party politics or religious belief of any kind whatever shall have any place in the convention.

### INTERNATIONAL BROOM MAKERS' UNION OF AMERICA.

**Convention.**—The constitution of the Broom Makers fixes no regular time for conventions. On the request of 5 local unions the secretary-treasurer is to submit the question of holding a convention to a general vote, one will be called if a majority vote for it. Each local is entitled to 1 delegate and to 1 additional delegate for every 15 members or majority fraction thereof. The mileage and expenses of delegates are paid by their locals.

**Constitutional amendments.**—The constitution may be amended by referendum on the proposal of the executive board. A two thirds majority of the members voting is necessary.

**Officers.** The officers are a president, 3 vice-presidents, and a secretary-treasurer. These officers constitute the executive board. They are elected annually by general vote. On or before February 1 of each year each subordinate union may nominate 1 candidate for each office. All nominations must reach the secretary-treasurer before noon on February 8. Not later than February 16 the secretary-treasurer sends to each union a list of nominees and nominators. Elections are held at the first meeting in April. The general secretary-treasurer furnishes official ballots, on which the names of the candidates are printed in alphabetical order. The candidate for each office who receives the highest number of votes is elected, except that the secretary-treasurer must receive a majority of all votes cast. If no candidate for this office has a majority a new election is held, in which only the 2 candidates who have received the highest votes are eligible.

The secretary-treasurer is editor and manager of the official journal. His salary is \$50 a month. The president receives \$3 a month.

**Membership.**—A candidate for membership must be a broom tier, sewer, or sorter, who has worked at the trade 1 year or over and who is of good moral character, sober, and industrious. Chinese are debarred. So are foremen, who have authority to hire and discharge, and all persons financially interested in the business. This does not apply to members working for themselves and employing not more than 1 broom maker, tier, or sewer, and 1 sorter. Candidates are elected, after examination by a committee, by a two-thirds vote of the local union.

**Apprentices.**—Union shops are allowed 1 apprentice to 6 tiers. Apprentices are to serve 2 years. No boy under 16 can be employed.

**Finances.**—The charter fee for new unions is \$5, in addition to a membership fee of 50 cents for each person. The per capita tax is 15 cents a month. Fifty cents out of each initiation fee goes to the general treasury. The executive board has power to levy assessments at its discretion, not exceeding 25 cents a member a week. The local initiation fee may not be less than \$1. A member 8 weeks in arrears is suspended unless his dues or assessments are remitted by the local union. A member out of employment is allowed 16 weeks

**Strikes.**—When a grievance arises, local officers are first to make every effort to adjust the difficulty by arbitration or otherwise, and if they can not do so, they are to notify the general president. If in his opinion a strike is necessary, he may order one. His decision is final. A reduction of wages without notice justifies a strike without previous appeal to the president. The president receives \$2.50 a day from the local union for time actually devoted to its service in such cases.

**Prison labor.**—On March 15, 1901, in response to a call, representatives of the broom manufacturers of Illinois, Ohio, Michigan, Iowa and Missouri met in Galesburg, Illinois, and appointed a committee to cooperate with the Broom-makers' International Union in securing legislation to stop the manufacture of brooms in the prisons of Illinois.

**Journal.**—The union publishes a monthly journal called *The Broom Maker*. The price is 25 cents a year. It is sent to members in good standing without charge.

### CIGAR MAKERS' INTERNATIONAL UNION OF AMERICA.

**History.**—According to the sketch of the Cigar Makers' International Union, by Mr. Strasser, published in George E. M'Neill's book, *The Labor Movement*, the first union of Cigar Makers was organized in Cincinnati, Ohio, in 1844; the second on May 5, 1851, in Baltimore. Other local unions were established, in New York and many other cities, in succeeding years. A conference looking to the formation of a national organization was held in Philadelphia in 1863, and the national union was organized in New York on June 21, 1864. It was at first called the National Cigar Makers' Union; the present name was adopted at the fourth convention, in September, 1867.

In 1876 a local union in New York, which became Local No. 111, joined the International Union of Cigar Makers. In 1877 a member of this union, who had just directed a strike involving 10,000 workers, was elected president of the national union. His name was Adolph Strasser. From that time the affairs of the Cigar Makers have been largely directed by his influence, though the union has furnished an even more celebrated leader in the person of Mr. Samuel Gompers, and has also been influenced in its course by his ideas. Mr. Strasser's theory of trade unionism, and the theory of Mr. Gompers, and of Mr. Perkins, the present president, is that a union ought to protect its members not only in times of trade disputes, but also when they are sick or out of work, and that their families should be helped when they are dead. A solid financial basis should be established for these benefits and also for the support of strikes, and means should be taken to prevent too many locals from striking at the same time. Finally, strikes in times of industrial depression are folly. The selection of the time to strike should be put in the hands of experienced and careful men.

The success of the union is proof of the wisdom of its management and of the soundness of the principles on which it is organized. The trade of the Cigar Makers is not very highly paid. It is subject to sweat-shop competition. While the Typographical Union, from the nature of its work, could be recruited only from England, a country where wages are relatively high and where trade unionism is strong, the ranks of the cigar makers are filled with people from countries where the scale of living is far lower, and where the ideas of unionism have no foothold. Yet the union has maintained a fairly steady growth. Even during the hard times of the 90's, when the membership of so many unions went down with a slump, the Cigar Makers hardly lost.

#### *Membership of Cigar Makers' International Union.*

Date	Number	Date	Number	Date	Number
1865	984	1884	11,871	1891	26,788

1883	13,214	1893	b 27,045		

a Approximate

b Membership September 1, 1891

c Membership September 1, 1896 The membership January 1, 1896, was 27,760

The figures for the years 1865 to 1881 are from the sketch of the organization, by Adolph Strasser, in *The Labor Movement*, edited by George E. McNeill. Those of recent years, taken from the reports of the organization, give the membership on January 1, unless a different date is named. The numbers given for recent years include only members reported by local unions as paying full 30-cent dues. Members who are traveling are not included.

During the 3 years ending September 1, 1896 (preceding the last convention), 16,576 members were initiated, and 13,075 were suspended.

**General aims.**—The preamble to the constitution of the Cigar Makers' Union is of notable simplicity. It is: "Organization being necessary for the amelioration and final emancipation of labor, for this reason we have organized the Cigar Makers' International Union of America."

The single-mindedness of this declaration, in contrast with the formal professions of desire for far-reaching social changes, which many union-constitution writers have thought it well to make, indicates the temper and the tendencies of the most influential leaders of the Cigar Makers. The convention of 1896 on motion of Mr. Samuel Gompers passed a resolution which contains the following clause: "That we hold the trade-union movement as paramount to any other in the struggle for labor's amelioration and the laborer's emancipation; therefore, the introduction of party politics of whatsoever kind into the Cigar Makers' International Union is contrary to the best interests of our craft, our organization, and our cause, and should there be discountenanced."

**Convention.**—The convention of the Cigar Makers meets once in 5 years. Each union with 25 members or more is entitled to a delegate. Unions which have more than 500 members are entitled to 2 delegates, and to an additional delegate for each additional 500 members or fraction thereof not less than 200. Unions which have less than 25 members unite with the nearest sister unions in electing delegates. Delegates who represent more than 100 members are entitled to 1 additional vote for each additional 100 members. Delegates receive \$1 per day while on the road to and from the convention, and the cost of transportation by the shortest route, \$5 per day, including Sundays, for the first 12 days while the convention is in session, and \$3.50 per day thereafter. A member is not eligible to act as a delegate if he has been a member less than 1 year, except when his union has not been in existence so long.

**Constitutional amendments.**—The constitution is amended either by action of the convention confirmed by popular vote or by popular vote upon amendments submitted with the endorsement of 20 local unions. In the latter case a two-thirds majority of the popular vote is necessary.

**Officers.**—The officers are a president, seven vice-presidents, and a treasurer. To be eligible to one of these offices membership in good standing must have been sustained continuously for 5 years before the election. The president and the vice-presidents are to be from different places, and the third vice-president is to be a resident member of a Canadian union. The term of office is 5 years.

The president combines the duties of president with those of secretary. He keeps the accounts between the local unions and the international union, issues traveling, transfer, and retiring cards, and publishes the official journal. He decides controversies, subject to appeal to the executive board and further appeal to popular vote of the members. His salary is \$30 a week. Mr. G. W. Perkins has held the office since 1891, and has recently been reelected.

The executive board is composed of the president, the vice-presidents, and the treasurer.

Officers are elected by popular vote on the Australian ballot system. Each local union is required to nominate one candidate for each office, by secret ballot, on pain of a fine of \$10. The five candidates for each office who receive the nominations of the largest number of unions are eligible to election. The international president notifies each candidate of his nomination, and each candidate is required to send, within 10 days, a letter accepting the nomination and giving his views of the methods and aims of the international union. These letters are to contain not more than 500 words each and are to be published in the official journal. If a candidate fails to send such a letter his name is stricken from the list of eligibles.

The president has ballots printed with the names of all eligible candidates in the order of the number of nominations received, and furnishes a sufficient number of ballots, free of charge, to the local unions. Those who have been members less than a year and those who owe over eight weeks' dues, unless out of employment, are not allowed to vote. Members who have the right are required to vote on pain of a fine of 50 cents. Those who are in receipt of sick benefits and those who hold undeposited traveling cards are exempt from the fine, "but any member drawing a traveling card to evade the duty of voting shall be fined

the same as though he held no traveling card." The actual vote at the election in March, 1901, was 23,805. This contrasts with votes of 7,000 to 10,000 on proposed constitutional amendments, submitted about the same time.

A majority of the votes cast is necessary to elect. If a second ballot is necessary, all candidates but the two highest are dropped. Elaborate instructions are provided for the casting, counting, and canvassing of the vote, and penalties for fraud or misconduct. Every member is prohibited, under penalty of \$1. from preparing, in any way or manner, the ballot of any other member.

The cost of electing international officers for the term beginning January 1, 1897, was \$5,024.00, \$3,784.37 was the expense reported for the local unions and \$1,245.22 the expense of printing ballots and reports, postage, expressage, and pay and expenses of the international canvassers. The total for the same purpose 3 years earlier was \$15,200.<sup>1</sup>

**Membership.**—The constitution provides that all persons engaged in the cigar industry, except Chinese coolies and tenement-house workers, shall be eligible to membership; and this includes manufacturers who employ no journeyman cigar makers, and foremen who have less than 6 members of the union working under them.

At the second annual convention, in 1865, this clause was inserted in the constitution: "No person shall be eligible to membership in this union unless he be a white male of the age of 18 years and has served an apprenticeship of not less than 3 years." In 1867, however, the words "white" and "male" were stricken out and replaced with the words "practical cigar maker."

**Apprenticeship.** The constitution requires that all persons learning cigar making or packing must serve 3 years as apprentices, but may not serve longer without the consent of the local union. The locals have power to stipulate the number of apprentices within their jurisdiction. A manufacturer who does not employ at least 1 journeyman for his full time must not be allowed an apprentice.

In his official report of 1896, the president expressed his opinion as follows upon the question of apprentices:

"Considerable sophistry and false sentiment has been written and spoken with reference to the right of Young America to learn a trade and the so-called arbitrary action of labor organizations who seek to regulate this important question. To my mind, it is far more just and humane for trades unions to restrict the endless chain of apprentices to the natural requirements of the trade than it is to sit supinely by and permit young men to serve 3 or 4 years of their lives to learn a trade, only to find, when standing on the threshold of manhood, just ready to enter the struggle of life, that there are no jobs open for journeymen. While the planless system may be good for the manufacturer who seeks always to have a visible army of unemployed journeymen at his disposal, I hold it is not good for the journeyman nor right nor just to the young man. Local unions should be encouraged to restrict their apprentice laws so as to limit the supply to fit the natural growth of the trade."

**Discipline.**—Local unions may impose fines on members not exceeding \$10. Larger fines must be submitted to the international executive board for approval. All fines of \$5 and upward must be reported to the international president for publication in the official journal. No member can be fined or expelled without a trial.

**Finances.**—The money derived from initiation fees and dues in all unions constitutes a common fund. There is no fixed per capita tax payable by the local unions to the national union. Every month the president selects certain unions and directs them to remit designated sums for the expenses of the general office. The general officers never have any funds under their direct control, beyond a small amount for current expenses. Unions of 30 members or less are allowed to use 30 per cent of their gross receipts for local expenses, including taxes to trades assemblies and the like, unions of from 30 to 50 members, 25 per cent, 50 members and upward, 20 per cent. At the end of each year the amount in the hands of the local unions is equalized, in proportion to their membership, by the president. He directs those unions which have paid out less than their pro rata share for the benefits provided by the laws, together with remittances ordered by the national office, to remit to those unions which have paid out more than their share. By this means every union has the same amount per capita on hand at the beginning of the year. If the funds of any local union are exhausted at any time by expenditures chargeable to the general body, the executive board of the international union will direct other local unions to supply it with such funds as may be necessary. If any local pays out more than its legal per cent of gross receipts for local expenses, it is required to make up the deficit by a local assessment.

<sup>1</sup> Report of the president, 1896.

<sup>2</sup> President's Report, 1896, p. 9.

New locals pay a charter fee of \$5. The initiation fee is \$3, and the dues are 30 cents a week. Applicants afflicted with chronic disease or over 50 years of age can become members by paying the regular initiation fee and 15 cents weekly dues; but they are not entitled to sick or out-of-work benefits, nor to a greater death benefit than \$50. Initiation fees, dues, and assessments are paid by the purchase of stamps, which are supplied by the president of the international union and are affixed to the book of the paying member and canceled. To prevent fraud, the color of the stamps is changed at short and irregular intervals.

Local unions are required to deposit all funds above a small amount in some bank, other than a private bank, or to invest them in registered bonds of the United States. Auditing officers, called financiers, are appointed by the president, whose duty it is to examine the financial accounts of the local unions, instruct financial officers in their duties, and submit financial statements of the locals to the president. These reports are published in the official journal. Local unions have the right to levy local assessments for any purpose except an unauthorized strike. Local assessments may be levied in aid of strikes in other trades, not exceeding 50 cents weekly and not for a longer period than from one meeting to another.

Any member who fails to pay dues and assessments for 8 weeks stands suspended from the union. Members out of employment who are not drawing benefits of any kind are allowed 16 weeks.

The actual running expenses of the international office, including salaries, from July 1, 1895, to July 1, 1896, were reported as \$9,550.60, or a little less than one-half cent a week a member.

The aggregate receipts of all the local unions during the year 1900 were \$72,522; the aggregate expenditures were \$75,014, the aggregate balance on hand January 1, 1901, was \$314,806. Money collected by various locals and turned over to others, as assessments or as gifts in aid of strikes, seems to figure twice among the receipts and expenditures. The amount of this in 1900 was about \$150,000. President Perkins states in his report for the year 1900 that out of the three-quarters of a million dollars collected and paid out by the union during the year not over \$500 was lost through the shortcomings of financial officers. He points to this record as a convincing proof of the general honesty of the officers and the efficiency of the financial system of the organization.

Total	\$8,699,700	7,784,913		

**Benefits.—Traveling benefit.**—Any member in good standing for 1 year, not able to obtain employment, and wishing to leave the jurisdiction of the union where he has worked, is entitled to a loan sufficient to transport him to the nearest union in whichever direction he wishes to go, and 50 cents additional, but no loan of more than \$8 may be made at one time, and the aggregate of loans to a member may not exceed \$20. A member who has received a loan and traveled to another

union may receive another loan within the aggregate limit from the second union. When he obtains employment, he is to repay the loans at the rate of 10 per cent of his earnings weekly. A collector is elected in each shop, who collects the loans as well as dues and assessments.

*Out-of-work benefit.*—Any member who has paid weekly dues for 2 years is entitled to an out-of-work benefit of \$1 a week. After receiving this benefit for 6 weeks he can receive no more for 7 weeks thereafter, and no member can receive more than \$54 in any one year. No benefits are paid from June 1 to September 23 or from December 16 to January 15. Each local union is required to furnish a book for registering the names of the unemployed and each unemployed member is required to report and sign the book every day on pain of forfeiting his benefit. Any traveling member in search of employment, reaching a place where there is a union, is entitled to the out-of-work benefit after reporting to the financial secretary. Members who are engaged in any kind of work, including their own domestic work, are not entitled to benefit. This is of particular importance in view of the large number of women in the cigar trade. Any member who refuses to work when work is offered him or neglects to apply for work when directed to do so by a union officer is not entitled to benefit until he has secured employment for at least 1 week.

The president, in his report to the convention of 1896, referred to the occurrence of fraud among the members in obtaining benefits. He proposed, as a remedy, a return to the more rigorous system of registration of members out of work which had been abandoned. He said:

"I am persuaded that a serious mistake was made when the old registry system for the out-of-work member was abolished. The present card system opened the door to fraud and petty abuses, which, I regret to say, has in some instances been taken advantage of. I recommend a return to the book registry system as being absolutely necessary to the successful regulation and maintenance of one of the grandest and most humane features of our benefit system, and the establishment of such other safeguards as may commend themselves to your judgment and wisdom." The convention adopted the president's suggestion as to the system of registration.

The effect of hard times in increasing unemployment appears in the amount of out-of-work benefits paid. This benefit was instituted in 1890; it cost less than \$23,000 in that year, about \$21,000 in 1891, and about \$17,500 in 1892. It rose to nearly \$90,000 in 1893, to nearly \$175,000 in 1894, \$166,000 in 1895, and over \$175,000 in 1896. In 1897 it fell to \$117,000, in 1898 to \$70,000, and in 1899 to \$24,000.

The limit of the unemployed benefit which a member might draw in 1 year was reduced from \$72 to \$54 on January 1, 1897. Some part of the reduction of the payments is doubtless due to this change.

*Sick benefit.*—One who has been a contributing member for not less than 1 year is entitled to \$5 a week in case of sickness which renders him unable to attend to his usual work, provided the sickness was not caused by intemperance, debauchery, or other immoral conduct. Sick benefit can not be drawn for more than 13 weeks in any one year.

*Death benefit.*—The first attempt of the Cigar makers to provide a death benefit was made in 1873. It provided for an assessment of 10 cents a member, to be levied after each death. The plan proved a failure because the members refused to pay the assessment. Sick and death benefit features, similar in character to those now existing, were adopted in 1880.

Upon the death of one who has been a member for 2 years, \$50 is paid for his funeral or cremation expenses. When one has been a member for 5 years, \$200 is paid to the beneficiary named by him or to his heirs at law, on his death, after 10 years, \$350; after 15 consecutive years, \$500. One who has been a member 15 consecutive years, and has become incapable of working at the trade, may retain his claim on the death benefit by paying 10 cents a month.

A married member, who has been a full contributing member for 2 years, receives \$40 on the death of his wife, provided she was not engaged in the cigar industry, nor a member of the union and entitled to death benefit. An unmarried member who has a widowed mother dependent solely upon him for support receives the same benefit on her death.

No sick or death benefits are paid when the performance of military duties is the cause of sickness or death.

*Strike benefits.*—Participants in a duly authorized strike receive \$5 a week for the first 10 weeks, and afterwards \$3 a week to the end of the strike.

*Working of the system.*—The president of the Cigar Makers' Union, in his report to the convention in 1896, called attention to the great drain on the resources of the union which had come with the hard times, but declared that there was no better means of inspiring "respect and confidence in a trade union and securing its stability than a substantial chain of benefits backed by an ample reserve fund." While

the numerous and liberal benefits of the Cigar Makers, and in particular the great increase of the payments for out-of-work benefit, had depleted the reserve fund of the union, the members had been held together, continued the president, and the membership was even larger at the time of this report than at the beginning of the period of depression 3 years before. The liberal payment of benefits had thus maintained the integrity of the union as an organization, and it had also preserved its individual members from the position of outcasts, to which our society condemns bodied men who are willing to work but can find no work to do.

Nearly the whole amount of receipts from members in 1895 was paid out in benefits. As estimated by the president in his report to the next convention, the sick benefit took \$1.053 per capita, the strike benefit \$1.589, the death benefit, \$2.404; and the out-of-work benefit, \$5.994. In 1892 the out of work benefit cost only 70 cents per capita. The aggregate payment for benefits in 1895, exclusive of traveling benefits lent and expected to be repaid, was \$11.01 per capita. The whole sum collected from members amounted to only \$11.25 per capita. The benefits paid in 1892 amounted to only \$7.11 per capita. About \$100,000 a year was drawn from the reserve fund of the Cigar Makers during the period of depression.

<sup>1</sup>The figures from 1882 to 1897 are from the Bulletin of United States Department of Labor, 1899, p. 371. For the later years the figures are taken directly from the reports of the union.

**Strikes and lockouts.—*Constitutional provisions.***—Every difficulty with employers must be submitted by the local union to the international president and through him to the executive board. If the executive board does not approve any action of a local union against employers, the local may appeal to a general vote. Every difficulty involving more than 25 members must be submitted by the president to a vote of all the local unions. No strike is to be considered legal unless approved by a two-thirds majority of all votes cast. A local union of from 7 to 75 members is entitled to 1 vote on such questions; from 75 to 160 members, 2 votes; from 160 to 200 members, 3 votes; and 1 additional vote for each additional 100 members. All votes upon strike questions are taken by secret ballot. The strike benefit is \$3 a week for the first 16 weeks and \$1 a week thereafter until the strike or lockout is ended. Members discharged in consequence of having carried out orders of their union receive the same benefit. The funds of the International Union can not be used to support strikers who are not members.

No local union is permitted to reduce its bill of prices without first submitting the question to a popular vote of the International Union.

No strike shall be approved or sustained by the International Union for an increase in wages between the 1st day of December and the 1st day of April of any year, except in the States of California, Virginia, South Carolina, Tennessee, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Oregon, and Washington. But no strike for an increase of wages shall be approved or sustained by the International Union in any of the above-named States from the 1st day of April to the 1st day of September of any year. But this shall in no wise preclude the approval of strikes against the reduction of wages or the truck system, or against the introduction of tenement-house work."

The constitution provides for the maintenance of a "sinking fund" or strike fund, amounting to \$10 a member, consisting of the funds of the local unions. An assessment is to be levied to replenish it whenever it falls below the limit.

*Working of the system.*—The president, in his report to the convention of 1896, said that comparatively little effort had been made by local unions to increase wages during the existing period of depression, yet 35 applications for permission to demand higher wages had been approved by the executive board, and over 55 per cent of the demands were successful. In most of these cases, however, prices had been low, and the increases amounted only to an equalization with the rates paid elsewhere. In some cases the increases were only restorations of previous reductions. The most remarkable phase of this subject, in the president's opinion, was the rarity of attempts to cut wages. During the 3 years from September 1, 1893, to September 1, 1896, only 117 such attempts had been reported. Resistance was approved in 139 cases, and in 72 of these cases it was successful. The president congratulated the union upon its success in maintaining the position of its members during the time of severe business depression.

The president further reported that the executive committee had approved 371 applications for permission to strike, for all causes, during the preceding 3 years, involving 6,399 members and 3,663 nonunionists. Only 756 members, according to his statement, were involved in the strikes that were lost, while 3,558 members took part in the strikes which succeeded. The successful strikes were only 48 per cent of the number approved, but they were the larger strikes, and included a large majority of the members who were involved in disputes. Even if the members who took part in the strikes classified under the heads "declared off," "no action taken," "action postponed," and "members employed elsewhere" are added to those in the strikes classified as lost, the total is still only 1,568, as against 3,558 in strikes counted successful and 892 in strikes reported as compromised. On the other hand, 1,639 nonunionists are reported as involved in strikes lost and otherwise unsatisfactorily ended, against 1,112 nonunionists in successful strikes and 816 in those compromised.

Of the 371 difficulties reported as approved during the 3 years 23 were actually pending at the beginning of the period.

The following tables are from the president's report to the convention of 1896:

*Results of strikes approved, September 1, 1893, to August 31, 1896, including 31 pending September 1, 1893.*

	Number of dif- ficulties	Union mem- bers in- volved	Entitled to benefit	Non- union ists in- volved
Successful.....	179	3,528	3,050	1,142
Compromised.....	18	892	777	816
Declared off.....	20	350	355	322
No action taken, cause removed.....	18	350	36	646
Action postponed.....	1	18	18	5
Lost.....	51	736	145	663
End of by members obtaining employment elsewhere.....	40	74	71	3
Still in progress or pending final report.....	41	381	344	342
Total.....	311	6,389	5,705	4,005

*Causes of strikes, September 1, 1893, to August 31, 1896.*

	Total ap- proved difficulties to date Aug 1, 1896	Less "still in progress or pending final re- port at last conven- tion"	Net or ac- tual num- ber ap- proved difficulties since last conven- tion
For increase in wages.....	8	1	37
Against reduction of wages.....	115	6	139

## Final result of approved difficulties

Denomination	Successful	Compromised	Disapproved	No action taken	Action postponed	Lost	Ended <sup>2</sup>	Pending etc.	Total
For increase of wages	22	6	1	5		20	1		38
Against reduction of wages	22	8	15	12	1	12	8	9	145
Victimization of members	20	1	3	1		12	20	6	68
Lockouts	5	2				3	1	1	12
Against violation of apprentice laws	11					5	2	2	53
Against violation of 8-hour laws									1
Against machine, bunch, and roller system	1		1			1			6
Against truck system								1	1
To close shops to union men <sup>1</sup>	10	1	1			2	1	32	37
Other causes, obnoxious shop rules, label difficulties, etc.	6						1	3	10
Total	179	18	30	18	1	51	40	44	371

<sup>1</sup> Of the above 33 only 29 are bona-fide strikes against violation of apprentice laws.

<sup>2</sup> None of the above are bona-fide strikes.

<sup>3</sup> Ended by members obtaining employment elsewhere.

The largest recent strike in the cigar industry was that which took place in New York in 1900. Some 6,000 cigar makers were said to have been involved, of whom not more than from one-tenth to one-fifth were members of the union. Nevertheless, the union, in accordance with its usual policy, undertook the support of all the strikers. As has been said, the funds of the international union can not be used, according to the constitution, to pay benefits to strikers who are not members. Large sums are raised for this purpose however, by special assessments, not only by locals which are directly concerned, but also by other locals all over the country. Contributions from individuals and from other trades-unions are also used for the support of nonunion strikers. The local assessments raised by the New York district for the strike of 1900 amounted to \$81,797. Other locals of the Cigar Makers made donations by special assessments or out of their local funds amounting to \$54,060. A single local, No. 97, of Boston, gave \$14,000. Considerable sums were received also from other labor organizations. Nearly \$10,000 came from the American Federation of Labor. Besides these sums, which were applicable to the support of any striker, union or nonunion, the international body

levied an assessment of \$1 per capita to replenish its funds applicable to the support of members only.

*Expenditures for New York City strike, 1900, and sources of funds.*

SOURCES OF FUNDS	
Proceeds of International Association, at \$1 per member	\$22,596
Local assessment of New York division	84,797
Contributed by other Cigar Makers' unions	54,960
Contributed by American Federation of Labor	9,540
Contributed by other labor organizations	10,368

Expended in relief of striking or "locked out" cigar makers, not classified as union or nonunion	\$172,504
Paid to locked out members	101,828
Paid to Cigar Makers' "picking" shops	4,220
Hall rent, stationery, postage, lawyers' fees, and sundries	4,384
Salary and expenses of officers and committees for eleven months	3,960
Total	286,778

The expenditure on the New York strike, from the general treasury, was \$107,000; \$11,000 was spent at the same time on a strike at Dayton Ohio, and \$8,000 on one at Tampa Fla. The total expenditures for strikes during the year 1900, from the general treasury, were \$137,823. The union has surpassed this sum once in 1881 but it never spent half so much in any other year except that. Despite this extraordinary expenditure the cash assets of the organization increased more than \$22,000 during the year. It will be seen from the table above, moreover, that the payments of the International Union by no means cover the cost of a strike, in the case of the New York strike, they were little more than one-third.

**Hours of labor.**—The constitution provides that every local union shall have power to regulate the hours of labor in its locality, but that the hours shall not in any case exceed 8. The application of this rule dates from May 1, 1886. According to the constitution any member who violates this rule is to be fined 50 cents a day for each violation.

In his report to the convention in 1896 President Perkins congratulated the Cigar Makers upon having been one of the first organizations to secure the 8-hour day, and upon having maintained it in spite of industrial depression. He looked toward further shortening of the weekly hours of labor, and raised the question whether it would be better to rest content with an 8-hour day and work for a full Saturday holiday, or whether the effort should be made for a day of 6 hours. He referred particularly to the question of curtailing the daily hours of labor during the times of industrial depression until the limit is reached where all can participate in an opportunity to work, and recommended that the union enact legislation to this end before another period of industrial depression.

**Labor Day.**—The constitution provides that members who work on Labor Day shall be fined \$2.

**Journal.**—The Cigar Makers' Official Journal is a monthly paper, which the constitution places under the control of the president as editor and publisher. It contains articles in German and Bohemian, as well as in English. It is devoted to the affairs of the union and the discussion of questions of interest to organized labor. It is furnished free to all members of the union.

**Union label.**—The trade-union label, which has reached so great an extension in the American trade-union world, seems to have been invented by the cigar makers in 1874. It was an outcome of the race contest between white and Chinese labor, which gave rise to the sand-lot agitation in California. In 1872 the Chinese had begun to be employed in the making of cigars. In 1874 the white workmen, to strengthen their protest against "rat-shop cooly-made cigars," introduced a label to be attached to the cigar boxes which should enable the smoker to know that he was buying the product of Caucasian labor. The color of the label was white, symbolical of the color of the workmen in whose interest it was issued.

In the next year, 1875, the cigar makers of St. Louis used a label during a strike against a reduction of wages. Its color was red, and the contest which it symbolized was between organized and unorganized labor. In 1880, at the Cigar Makers'

convention in Chicago, a dispute arose between delegates from the Pacific slope and those from St. Louis as to the color of the label. "Let us," said an Eastern delegate, "take the other color on the flag," and the present blue label was adopted.<sup>1</sup>

The union label is furnished, free, to all strictly union shops, to be placed upon cigars actually made by members of the union. "Where the manufacturer deals in Chinese, tenement-house, or scab cigars, it shall be optional with local unions to withhold the label from such firms." If the label is granted to such a firm, it is not permitted, of course, to be put on the Chinese, tenement house, or scab cigars. It is forbidden to use the label in a factory which pays less than \$6 per thousand, or on any cigars sold for less than \$20 per thousand, or on cigars made, in whole or in part, by machinery. No manufacturer who offers presents as an inducement for the sale of his goods can legally be permitted to use the label.

In Massachusetts the cigar makers have used the power to vote for or against licenses to compel saloon keepers to keep blue-label cigars.<sup>2</sup> The following is a recent instance: "Taunton \* \* \* has been a no-license town, and last election the people voted for licenses, to go into effect the 1st of May. I drew up a contract for the label committee to present to the dealers requesting them to buy strictly union-label cigars, and with the understanding if they did not that they would go out of business next election."

Local unions are allowed \$1 per capita out of the general fund for label agitation by circulars, newspaper advertising, committees, etc. Considerable amounts are also raised by local assessments. Thus in 1900, the local at Amsterdam levied a local assessment for label agitation of 5 cents for each 1,000 cigars on members who had jobs paying \$9 a thousand or more and 5 cents for each 1,500 cigars on members who had jobs paying less than \$9 a thousand. An effort was made to get the local manufacturers to contribute the same amount.

The president reported in 1896 that about \$3,500 a year was expended by local unions for lawyers' fees in protecting the label against illegal use, and he estimated that fully \$1,000 more was paid out in the same connection for necessary court expenses, such as loss of time of committee witnesses, etc. According to the report of 1898, the local unions spent \$1,823 in that year for lawyers' fees in label and other cases. In 1899 \$1,201 was reported as lawyers' fees and \$783 more as expenses in label cases.

During the 3 years from September, 1893, to September, 1896, 19,393,000 labels were shipped to local unions, or an average of 16,161,333 labels yearly. According to the estimate of the president, each label represents 50 cigars, so that the average product per year put out under the union labels during this period was about 823,000,000. The total number of cigars manufactured in the United States for domestic consumption during these years was about 1,150,000,000 a year.<sup>3</sup>

In the summer of 1900 the cigar makers claimed to be using about 2,000,000 labels a month. It was stated that the label paper was made and watermarked to the order of the union and bought in carload lots at a cost of about \$1,100 a car.<sup>4</sup>

### RETAIL CLERKS' INTERNATIONAL PROTECTIVE ASSOCIATION.

**History.**—The Clerk's Association has been represented in the conventions of the American Federation of Labor since 1891. In that year its vote indicated a membership of 5,000. In the early months of 1901 it paid per capita tax to the Federation for 20,000.

The convention of the Federation in 1897 was called on to settle a dispute

<sup>5</sup> American Federationist, August, 1900, p. 253.

between the Retail Clerks' Association and the Meat Cutters and Butcher Workmen as to jurisdiction over meat-market employees. The Federation decided in favor of the Butcher Workmen.<sup>1</sup>

**General aims.**—Among the demands prefixed by the clerks to their constitution are: The shortening of the working day in their occupation to 10 hours, partly by educating the masses to daylight purchasing; provision of seats behind counters for saleswomen, and equal pay for equal work regardless of sex; abolition of the desecration of Sunday by unscrupulous employers; compelling clerks to forfeit their freedom by working on that day; reform of convict labor systems and the abolition of prison contract labor; the abolition of child labor in retail stores and in workshops.

**Convention.** The convention meets biennially in July. Locals are entitled to 1 delegate for the first 50 members or less, and to 1 additional delegate for each additional 50 members or major part thereof. The expenses of delegates are paid by their locals. A local must have been chartered at least 60 days and must have paid its dues and per capita tax up to and including the March before the convention. To be eligible as a delegate one must have been a member of the International Union for at least a year, unless his local has not existed so long.

The constitution can be amended only at a regular convention by a two-thirds vote.

**Officers.**—The officers are a president, 2 vice-presidents, and a secretary-treasurer. They constitute the executive board. They are elected at the convention by a majority vote. The vote is by roll call. The president's salary is \$300 a year. The secretary-treasurer's is \$200 as secretary-treasurer and \$600 as editor of the official journal. The secretary-treasurer furnishes the bond of a guaranty company for \$10,000, at the expense of the association. Members of the executive board and organizers doing work for the association, when duly authorized, are paid \$1 a day and railroad and hotel expenses.

**Local unions.** A local may be organized by any number of clerks eligible to membership, not less than 7. A local can not surrender its charter while 7 members in good standing are willing to retain it. If a local is suspended, or for any cause ceases active operations, all its books, its seal, and other property issued from the national association must be returned to the international secretary-treasurer. A second charter can not be granted in a city where a local already exists unless the existing local consents, or unless the executive board overrules the objections offered on the ground that they tend to retard the work of organization.

**Membership.** Any person 18 years old, regardless of sex, who has had one year's experience in any branch of retail trade, other than the liquor trade, and is actively employed in a retail store at the time of application, is eligible to membership. Employers are ineligible. Candidates for membership are elected by open vote by a two-thirds majority.

**Finances.** The charter fee is \$10, and there is an additional charge of \$5 for the seal and other supplies. The per capita tax is 25 cents a quarter for male members and 12½ cents a quarter for female members. A local is to be suspended when 6 months in arrears for per capita tax, after receiving notice from the international secretary-treasurer, and its charter is to be revoked when it is 1 year in arrears. The initiation fee may not be less than \$1, nor the monthly dues less than 25 cents.

**Death benefit.** A benefit of \$100 is paid on the death of a member who has been in good standing at least 1 year. Fifteen per cent of the per capita tax goes to the death-benefit fund, and the constitution forbids using it for any other purpose.

**Strikes and boycotts.**—Though the union reported to the Federation of Labor in the fall of 1900 that it had won 2 strikes during the preceding year, involving 300 men, the constitution makes no definite provision for strikes. It enjoins upon the locals the duty of exercising great care in endorsing strikes or declaring firms or individuals unfair. Locals are forbidden to take such action unless it is justified by facts presented in writing, officially signed and sealed, and unless the facts are clearly stated and the justice of the action is apparent.

**Sunday work.**—The American Federation of Labor convention of 1899 called upon all members of organized labor and their sympathizers to help the clerks in their struggle for the abolition of Sunday work, and instructed its members to bring violations of the Sunday laws, by the opening of stores, to the attention of the local central bodies and of all local unions, in order that existing Sunday laws might be enforced and that new ones might be passed where they were needed.

**Journal.**—The official journal, *The Retail Clerks' International Advocate*, is a monthly magazine, 8 by 10 inches, usually containing 16 pages. The constitution

<sup>1</sup> Convention proceedings, A. F. of L., 1897, p. 116.

forbids the insertion of advertisements from concerns known to be hostile to the labor cause. The subscription price is 50 cents a year; but the journal is sent free to all members in good standing.

**Union badge and working card.**—The clerks undertake to replace the union label of other organizations with a union badge, a working card, and a store card. The working card is issued quarterly, and the color is changed each quarter. The badge is leased to members, and the secretary-treasurer has the power to demand any that may fall into the hands of nonunion people and to replevy. The union store card is also leased to the local union. Each store card is accompanied by 2 printed agreement blanks, to be executed by the local and the proprietor who uses the card. No firm is to be considered strictly union unless all employees eligible to membership in the Clerks' Association are members of the local in whose jurisdiction the firm is situated.

**Union labels of other unions.**—The convention of 1899 resolved that at future conventions no printed matter should be distributed without bearing the printers' union label, and recommended subordinate unions to have the union label appear upon all printed matter prepared for the unions and their members.<sup>1</sup>

### TEAM DRIVERS' INTERNATIONAL UNION OF AMERICA

**History.**—The Team Drivers' International Union was chartered by the American Federation of Labor on January 27, 1899. At that time it consisted of 8 local unions with 670 members. On June 1, 1901, there were 289 local unions and 21,300 members.

Claiming jurisdiction over all team drivers, the union is exposed to conflicts with various unions which pretend to control all workers connected with certain industries. The Brewery Workmen have apparently prevailed against it. They have obtained the right, by judgment of the American Federation of Labor, to control all drivers that work in breweries. At the convention for organizing the Shirt, Waist, and Laundry Workers' International Union, held in November, 1900, a resolution was presented and indorsed, which had been passed by a local union of laundry drivers, protesting against being compelled to affiliate with the Team Drivers' Union, and declaring that the proper place for the laundry drivers was in the International Union of Laundry Workers.

**General aims.**—The preamble to the constitution names the usual objects of organization—to encourage higher skill, to cultivate feelings of mutual friendship, to assist each other in getting employment, to reduce hours and increase wages, and to elevate the moral, intellectual, and social condition of the members.

**Conventions.**—The convention is held annually. Each local is entitled to 1 delegate for the first 50 members or less and to 1 additional delegate for an additional 100 members or major part thereof. But no delegate can have more than 1 vote and no local more than 2 votes, and no proxies are allowed. Locals of less than 100 members may unite with other similar locals in sending delegates. Each local pays the expenses of its delegates. To be eligible as a delegate one must be a member in good standing for 12 months before the convention, unless the local has not existed so long. The local is not entitled to representation unless it has been chartered 40 days before the convention and has paid 1 month's per capita tax, nor unless all moneys due from it to the international union have been received by the general secretary-treasurer at least 3 days before the convention.

**Constitutional amendments.**—The constitution is amended by a two-thirds vote of the general membership on measures recommended by the general executive board.

**Officers.**—The officers are a president, 5 vice-presidents, and a secretary-treasurer. The officers constitute the executive board. They are elected at the convention. A majority is required to elect, and after each unsuccessful ballot the lowest candidate is dropped. No two officers may be elected from the same State.

Among the powers of the president is that of filling vacancies among the general officers, with the consent of the majority of the executive board. The secretary-treasurer has some powers which other unions more commonly confide to the president, such as the power to grant charters and power to decide points of union law. He is the publisher of the official journal. He is required to keep a register of all members initiated, suspended, and expelled. The president and the secretary-treasurer have power to call meetings of the executive board. The members of the board receive railroad fare and \$1 a day for actual time lost in attending its meetings.

**Local unions.**—A local union may consist of not less than 7 members. The con-

<sup>1</sup> American Federationist, vol. 6, pp. 138, 139.

stitution contemplates the establishment of separate local unions of drivers of different vehicles, as truck drivers, hack, cab, and carriage drivers, delivery-wagon drivers, etc. It also provides for separate locals of employers and employees engaged on each sort of vehicle, when the numbers justify it. When there are two or more locals in one city or vicinity they are to form a joint council with power to adjust differences between locals and between members and their employers.

The constitution provides that the international union shall not be dissolved as long as there are 7 dissenting locals.

**Membership.** Any teamster engaged in driving a truck, wagon, hack, or other vehicle, who does not own or operate more than 5 teams, is eligible to membership. Members who employ teamsters must employ members of the union and pay union wages. It was asserted in the American Federation of Labor convention of 1898 that when the cart drivers of Syracuse applied to the Team Drivers Union for a charter, the team owners, who had a charter, entered a protest against the issue of it.

No person under 18 years of age can be admitted. Application for membership must be made in writing and endorsed by a member in good standing, and the candidate must be elected by ballot by a two-thirds majority.

**Transfer and withdrawal cards.** Transfer cards are issued, which must be renewed or deposited in some local within 1 month on pain of forfeiture. They are also forfeited if not deposited within 30 days after going to work in any town where there is a local union. A withdrawal card is issued to any member who becomes an employer operating more than 5 teams or becomes a foreman, or becomes a member of any employers' association.

**Discipline.** The constitution provides for the bringing of charges in writing by a member of the union and for trial before the local executive board not less than 10 days after service of a copy of the charges upon the accused.

**Finances.** The charter fee is \$10, which includes charter, seal, and charter supplies. Fifteen cents goes to the international treasury on each initiation and 15 cents on each reinstatement. The per capita tax is 5 cents a month. Payment of initiation and reinstatement fees and monthly dues is indicated by adhesive stamps furnished by the international union, pasted in the member's book and canceled. A union more than 2 months in arrears is forbidden to appeal to sister locals for assistance in trouble when 3 months in arrears it is suspended. The local secretary-treasurer is to prepare each month a report giving the names of the members initiated, reinstated, and suspended during the month, read it in open meeting and forward it to headquarters.

The initiation fee of local unions may not be less than \$1 and the local dues may not be less than 50 cents a month. Members in arrears for 3 months are suspended.

**Benefits.**—The constitution provides that local unions may establish sick or death benefit funds and adopt local by-laws to govern them.

**Strikes.**—The Team Drivers have not yet developed a definite system for the control and support of strikes. It is the duty of the recording or corresponding secretary of any union which is in trouble to report the full particulars to the general secretary-treasurer "before going on strike, or as soon thereafter as possible." It is then the duty of the secretary-treasurer to place the matter before the executive board, and if the local requires financial help, an officer is to be sent to visit the place. The executive board may give such aid as it deems advisable. It is provided that no local shall receive financial assistance from the international union, nor be permitted to appeal to sister locals, unless it has been chartered 6 months and been 6 months in continuous good standing. Locals are forbidden to send help to any local which is in trouble until they have been instructed to do so by the general secretary-treasurer after a full statement of the facts has been received. No help is to be given to a local until its secretary-treasurer has been bonded by a legitimate bonding company.

**Hours of labor.**—A standing resolution of the Team Drivers' Union declares: "We hold a reduction of hours for a day's work increases the intelligence and happiness of the laborer and also increases the demand for labor and the price of the day's work."

## INTERNATIONAL UNION OF STEAM ENGINEERS.

**History.**—The International Union of Steam Engineers was organized in 1897. The occupation of its members is the running of stationary engines. The number of locals was 16 in 1898, 23 in 1899, and 45 in 1900. The secretary reports the

number of members as 1,900 in October, 1899, 3,000 in September, 1900, and 6,300 in June, 1901.

Jurisdiction disputes with the Brewery Workmen, with the Coal Hoisting Engineers, and with the Stationary Firemen, are referred to in the accounts of those organizations.

**General aims.**—The International Union of Steam Engineers, in the declaration of principles prefixed to its constitution, declares that the interests of all classes of labor are identical, regardless of occupation, nationality, or religion; urges its members to call for goods which bear the trade-mark of organized labor, and to strive to secure legislation in favor of those who produce the wealth of the country; asserts it "as a sacred principle that trade-union men above all others should set a good example as good and faithful workmen, performing their duty to their employers with honor to themselves and to their organization." It expresses the belief that the reduction of hours for a day's work increases the intelligence and happiness of the laborer, and also increases the demand for labor; criticises any attempt to establish a gradation of license or wages, and holds that the fixing of a minimum price for a day's work, letting the employer grade the wages above that minimum, is the best method of regulating the wage-question, and authorizes its local unions to demand a reduction of the hours of labor to not more than 8 per day and to bring about such a reduction as soon as possible.

The union announces as its objects: To encourage a higher standard of skill, to cultivate feelings of friendship among the members to assist each other in securing employment, to reduce the hours of labor, to secure a higher standard of wages, to elevate the moral, intellectual, and social condition of the members, and to strive to extend a uniform license law for the better protection of life and property.

**Conventions.** The national conventions are held annually. The basis of representation is 1 delegate for each 100 members or less, and 1 delegate or 1 vote for each succeeding 100 members or majority fraction thereof. No delegate can represent more than 2 unions, nor vote for more than 300 members. A local in arrears to the amount of 1 month's per capita tax can not be represented. Each local pays the expenses of its own delegates.

The convention has power to amend the constitution by majority vote.

**Officers.**—The officers are a president, 3 vice-presidents, a secretary-treasurer, and 3 trustees. They are elected in the convention by viva voce vote. The president, the vice-presidents, and the secretary-treasurer constitute the general executive board, which is the supreme executive power of the organization in the intervals between conventions. The secretary-treasurer has a salary of \$100 a month. The other members of the general executive board receive as such the same rate of wages, while in discharge of their duties, which they receive while at work at their trade, together with mileage and all necessary expenses.

The board of trustees have charge of the property belonging to the international organization, and it is their duty to audit the books of the secretary-treasurer.

**Local unions.**—A local charter may be granted to any 10 qualified steam engineers. In a locality where a union already exists no second charter may be granted unless with the consent of three fourths of the members present at a notified meeting of the existing local, the vote being taken by ballot. The charter fee is \$20, and when a union is the first in its town, and is organized by an official organizer, he gets \$10 of the fee.

**Membership.**—A candidate for membership must be a competent engineer, capable of earning a livelihood for himself and family. He must be an operating engineer, and must have a license if licenses are required where he lives. The local is to be the judge of the wisdom of admitting a candidate who is out of employment, or a candidate who is "a member of an organization that is opposed to organized labor." Agents or others who do not earn their living by operating steam plants are barred. Inspectors of boilers may hold membership. Election to membership is by ball ballot. All members must vote, and a majority elects.

**Discipline.** Any member who violates the trade rules of the local, or undermines a fellow-member in his wages, or willfully injures the reputation or employment of any member, or fails to keep strictly private all the business of his union, unless publication has been authorized by vote, is punishable by a fine of not less than \$5, or expulsion, or both.

Any member who goes into any city seeking work, or goes to work, where a strike or lockout is pending is subject to a fine of not less than \$25, or expulsion, or both.

Any member who becomes an habitual drunkard, or commits any offense discreditable to the organization, or encourages division of the funds, or dissolution,

of any local union, or separation of any local union from the general organization, is to be expelled.

Any member who enters a meeting of a local in a state of intoxication or who uses profane or unbecoming language during the meeting is to be admonished by the chair, and if he again offends is to be excluded from the room and fined 50 cents, for the second offense, \$1, for the third, he is to be suspended 3 months.

Any officer or committeeman of a local union who fails or neglects to perform any duty required of him is to be fined. Each member must keep the secretary informed of his place of residence, under penalty of 25 cents fine.

Charges against a member of a local union must be presented in writing, and must specify the offense and the section of the constitution or by-laws violated. The member is to be notified to attend for trial at the next meeting. The trial takes place before a committee of 5, chosen by lot from 11 members nominated by the union, the accused and the accuser having each the right to challenge 3. Testimony of persons not members is admissible. The committee reports to the union, and a two-thirds vote of the members present is then necessary to convict the defendant and to affix such legal penalty as may be deemed proper.

**Finances.** The per capita tax is 10 cents a month. The minimum initiation fee is \$2, and the minimum local dues are 50 cents a month.

The secretary-treasurer is forbidden to retain more than \$100 in his possession at any time. He is to deposit all money in some bank. All orders for the payment of money or for withdrawing it from bank are to be countersigned by the president. The books of the secretary-treasurer are to be audited by the board of trustees.

The funds of each local union are collected by the secretary and turned over by him to the treasurer.

**Strikes.** When any trade difficulty arises the president of the local union is to appoint a conference committee to wait on the employer with a view to settling the dispute. If the committee fails, the union proceeds to act on the grievance. To sustain it a two-thirds vote, by secret ballot, of the members present at a meeting of which due notice has been given, is required. If the grievance is sustained by such a vote, the general secretary is to be furnished with an account of the difficulty. The general president is then to send some suitable member, if the executive board think it necessary, to visit the scene of trouble and try to adjust the difficulty by negotiation or arbitration. If this fails, the general executive board may then sanction a strike.

## NATIONAL BROTHERHOOD OF COAL HOISTING ENGINEERS.

**History.** The National Brotherhood of Coal Hoisting Engineers was organized in 1896. Its membership has till recently been almost confined to Illinois and Indiana, and a great proportion of the members have been in Illinois. It has recently been organizing in Iowa and the secretary asserted in June, 1901, that 90 per cent of the Iowa engineers were now members. The proceedings of the fourth annual convention, held in February 1900 indicate that up to 1899 the organization was weak and had accomplished little for its members. The grand chief reported that at the termination of the annual convention in 1899 the organization was in a deplorable condition. There were only about 200 members in good standing, and there seemed to be danger that the Brotherhood would be broken up. The more favorable conditions prevailing in the coal trade during 1899, however, together with the efforts of the grand chief as organizer, greatly strengthened the organization. It succeeded in increasing its wages and in making an agreement with the employers of Illinois. The number of members was estimated by the general secretary in July, 1900, at 800, and the number of locals had increased from 20 in 1899 to 33 in 1900. In June, 1901, the number of locals was given as 48, and the number of members as about 1200.

The charter of the American Federation of Labor to the Coal Hoisting Engineers, which was issued in 1899, is said by the secretary of the union of Steam Engineers, to have been issued against his protest. On the other hand, it is said that the Federation officials asserted that he had given his consent. The executive council of the Federation smoothed the matter over by asking the two unions to appoint committees to arrange a basis of amalgamation. The request seems not to have been complied with. There was, however, a meeting between the officers of the two organizations in May, 1901, at which a modus vivendi is understood to have been agreed on.

**General aims.**—The constitution simply declares that the purpose of the organization is "to elevate the standing and to more effectually combine the interests of its members."

It is enacted: "The influence of the Brotherhood as a body shall never be enlisted or used in favor of any political or religious organization whatever, and no political or religious discussion shall be permitted at any meeting of any division."

**Conventions.**—The convention is held annually, and consists of one delegate from each local division for each 50 members or fraction thereof. Members are paid from the general treasury, \$3.50 a day, and railroad fare not exceeding 3 cents a mile. The constitution may be amended at any annual convention by a majority vote of the delegates present.

**Officers.**—The officers are a national chief engineer, second national chief, secretary-treasurer, and an executive board of one member from each coal mine inspection district in States so divided, Indiana to be allowed 3 members. The national chief is to give all his time to the organization and to act as national organizer. The secretary-treasurer must allow no orders to be drawn on the funds unless signed by the chief engineer. The secretary-treasurer must give a bond of \$5,000, and the grand chief one of \$2,000. The compensation of these officers is fixed at each annual convention. It is at present \$85 a month for the chief engineer, and \$80 for the secretary-treasurer, with traveling expenses.

The executive board has general control and decides all questions and appeals, subject to overruling by the national convention. The members are paid \$1 a day and railroad fare not exceeding 3 cents a mile.

**Membership.**—The applicant for membership must pass a satisfactory examination, before a board appointed by the local division, as to his qualifications as an engineer, and must then be elected to membership by a majority vote on a secret ballot. Only persons of good moral character and temperate habits may be admitted. In States where a certificate of competency is required only holders of such certificates are eligible.

**Apprentices.**—No member of the Brotherhood may teach an apprentice to run his engine without the consent of his division.

**Discipline.**—Should any brother neglect his duty or injure the property of his employer or endanger the lives of persons willfully, while under the influence of liquor or otherwise, he shall be given a fair and impartial trial and be disciplined as the case may demand.

Any member who takes the place of anyone engaged in a strike shall be expelled.

No member shall accept a less price for his labor than the scale set by the Brotherhood.

No member shall work with a nonunion engineer.

Every member is bound to recognize every other member in good standing and shall not slander anyone. For willful injury to a brother engineer a fine of from \$10 to \$50 may be imposed or the offender may be expelled.

**Finances.**—The charter fee for new locals is \$25. The initiation fee is \$10 in districts where the Brotherhood has been in existence 6 months or more; elsewhere \$5. The per capita tax is 10 cents a month, and an additional assessment is collected of 1 per cent on all wages earned at the trade. All dues are payable monthly in advance, and the constitution assumes that either a member or a local division will be suspended when 30 days in arrears.

**Strikes and benefits.**—The constitution of the National Brotherhood of Coal Hoisting Engineers contains no definite provisions as to the authorization or control of strikes or as to strike assessments. It is, however, declared that all members shall pay to the grand lodge monthly 1 per cent of their wages as engineers, aside from the grand dues of 10 cents monthly. This percentage payment is, apparently, to judge from the records of the annual convention, chiefly designed for defense purposes. The constitution declares that any member called out on a strike by a local grievance committee or a national officer shall receive \$5 per week from the national treasury, while any member thrown out of employment without just cause shall also receive \$5 per week for not over 12 weeks.

The annual convention of 1899 resolved that no increase in wages should be demanded for one year, but that every effort should be made to increase the membership of the organization in order that it might make demands later on. One division of the organization, however, in view of the greater prosperity of the coal trade, violated this order and demanded an 8-hour day. The grand chief, on investigating the matter, decided that the demand was justified, and a strike was inaugurated in which the men were victorious. Thereupon the organization sent circular letters to all the local divisions encouraging them to make similar demands. In August the operators of the State were asked to meet in joint convention, but failed to do so. The Brotherhood thereupon framed a scale of wages, and the employers finally met the representatives of the men and agreed to a contract as proposed by the Brotherhood. This contract, according to the grand chief,

advanced wages 50 per cent above the old scale in Illinois. Another strike in Indiana at about the same time also resulted in victory for the men, who secured an average increase in wages of \$25 per month.<sup>1</sup>

**Hours and wages.**—The present hours are 8 in Illinois, 10 in Indiana, and 10 and 12 in Ohio. The union adopts a policy which the Union of Steam Engineers strenuously opposes, and which is contrary to the policy of labor organizations in general, in grading its members and allowing them to receive different rates of pay. Three grades are provided for in the scale. All the locals in Indiana struck for the 8-hour day in November, 1900, but they did not obtain it.

**Obtaining employment.**—A list of unemployed members is kept at the national office.

### WATCH CASE ENGRAVERS' INTERNATIONAL ASSOCIATION OF AMERICA.

**History.**—The Watch Case Engravers' International Association of America was organized in January, 1900. In August, 1900, the secretary reported that the association had 7 locals and 530 members. In June, 1901, he reported 9 locals and about 500 members, saying that on account of slack trade and labor troubles many members had left the trade for the time being, and were employed on jewelry, etc.

**General aims.**—The preamble of the Watch Case Engravers declares: "It is necessary to protect ourselves by organization from the greedy clutches of capital, which, to endow itself with more than its proper share has driven us to this necessity, which is to unite and reject it. \* \* \* Our profession has been reduced by unjust means—by subtraction of the art therefrom—leaving it simply a mechanical labor. Therefore let us pride ourselves in elevating it to its proper stand as an art, demand the proper time for the execution of same, and increase the compensation thereof. Put a restriction on the employment of boys, the curtailment of the hours of labor, the abolition of the contract system, team and piece system, and minute system, and overtime work, except in cases of absolute necessity, when double compensation shall be exacted. That we shall use every lawful means to make week-work or week-wage system our striving object. A minimum standard of wages; properly lighted, heated, and ventilated shops for the comfort and safety of the employees."

**Conventions.**—Conventions are held annually. Local unions are entitled to 1 delegate for each 50 members or fraction thereof, but in no case to more than 3 delegates.

**Constitutional amendments.**—The constitution can be amended only by a two-thirds vote of the members, after the amendment has been submitted in writing at three consecutive meetings of each local assembly.

**Officers.**—The officers are a president, a vice-president, a secretary-treasurer, and an executive committee of three. The secretary-treasurer has a salary of \$1,200 a year.

**Membership.**—No person employed as foreman or assistant foreman or holding any office with a watch-case company is eligible to membership.

An apprentice who has had an experience of 2 years or more at watch-case engraving is eligible to membership at half rates. No person is eligible to full membership till he has had 5 years' experience at the trade. Apprentices must pay the remaining half of their initiation fee at the expiration of their term of 5 years.

**Apprentices.**—In January, 1900, at the time of the formation of the national organization, a resolution was adopted that "no person, male or female, shall be admitted into the engraving trade for a term of 4 years." The secretary-treasurer justified this step as follows: "Some of the manufacturers have been in the habit of hiring a large number of boys and teaching them one small part of the engraving trade. The consequence is that there are a large number of so-called engravers traveling around the country who, it rated according to their ability, are in reality nothing more or less than apprentices. As one of the objects of this association is the elevation of our craft, we have restricted the employment of apprentices, and at the same time have made it the duty of the shop committee to see that the members of the association do all in their power to teach the apprentices that are now employed in their respective factories the engraving trade in full, and try to turn out full-fledged artists at the expiration of the 5 years which they have to serve." In September, 1900, it was said that there had been no dispute with employers as

<sup>1</sup> Proceedings Fourth Annual Convention, pp 6, 7

to the exclusion of apprentices. The rule was abolished, however, at the next convention, held about January 1, 1901.

Apprentices must be 16 years of age before beginning and must serve 5 years. They must be taught the entire trade. The union undertakes to prevent subdvision. The admission of females as apprentices is forbidden.

**Discipline.**—Any member who fails to attend at least one meeting in each month is to be fined 50 cents. Sickness is a valid excuse. Any member who enters the meeting room in an intoxicated condition and disturbs the meeting, or uses improper, indecent, or profane language is to be expelled from the room. Officers who fail to attend the meetings of the local assemblies are to be fined 25 cents for each omission. A member failing to attend a shop meeting called by the shop committee is to be fined 50 cents.

Any member who undertakes to instruct unskilled workmen, not members or apprentices, in the trade is to be warned, and if he persists is to be suspended or expelled. Any member who defrauds a brother member, or leaves while indebted to a brother member with intent to defraud him, or fraudulently misapplies the funds of the association, or slanders a brother member, or acts contrary to the rules of the association on any question affecting the scale of wages, is liable to fine, suspension, or expulsion.

It is "the duty of the shop committee to notify members when loafing or not performing their duties that such will not be tolerated and that they shall do their duty to both employer and this association."

Charges must be presented in writing, and a copy of them must be placed in the possession of the accused a reasonable time before the trial. Charges are to be investigated by a committee. If the committee sustains them, the accused may present his defense in the local assembly. When the argument is concluded the accused and the prosecutor retire and the assembly votes, first on sustaining the report of the committee, and second on adopting its recommendation as to penalty. A two-thirds vote is required.

**Finances.**—A regular assessment of 50 cents a week is levied for the support of the national organization. Half of it is to be used for general expenses, the other half is set aside for "a national fund to be used in case of emergencies." Members earning less than \$8 a week and apprentices earning less than \$5 a week are exempt from this assessment. The executive board has power to levy an assessment in the form of a percentage of the earnings of all members in employment to cover the cost of a strike or lockout. For many months of 1900 such an assessment was levied at the rate of 5 per cent of wages. Any member who is sick or out of employment for a full month is exempt from all dues or assessments during the sickness or unemployment.

The initiation fee is \$25. The local dues may not be less than 25 cents a month.

**Benefits.**—Upon the death of a member a funeral benefit of 50 cents for each member of the international union, raised by a special assessment, is paid to the relative who bears the expense of the funeral.

**Strikes and lockouts.**—A strike may be ordered by a two-thirds vote of a local union without the approval of the national officers. The officers of the local union, as a strike committee, may render financial assistance to members on strike or locked out, not exceeding \$8 a week to married members, \$5 to single members, and \$3 to half-rate members. These benefits are paid from the national treasury.

Any person who remains at work while a strike or a lockout is in progress, or who takes a position in a shop where there is a strike or a lockout, is subject to an initiation fee or a reinitiation fee of not less than \$100, of which \$25 goes to the local and the rest to the national treasury.

The short history of the Watch Case Engravers has been exceptionally stormy. The union had barely been formed when two large watch-case factories locked out their engravers, it is asserted, for joining it. This misfortune was closely followed by strikes in two other factories, and soon after by a combination of all the watch-case manufacturers of the United States, except one, for the purpose, according to the statement of the union, of putting all the striking or locked out engravers, some 240 in number, on a blacklist, and excluding them from employment. The union asserts that the one manufacturer who continued to employ union labor found so much profit in it, by extension of his trade, and those who were fighting the union found their trade so injured, that all the manufacturers, except the two who first began the contest, gradually came to terms with the union. About January, 1901, the union believed that even these manufacturers would be obliged to recognize it. In the event, however, the combination of the previous year was revived, and on April 13, 1901, notices were posted in five large factories, as follows: "On and after Monday no union men will be employed in this factory." The union asserts that no demands whatever had been made by it,

and that these notices constituted an unprovoked attack upon the organization. About 300 engravers were affected. One of the factories, however, yielded after 3 weeks and took back its 33 employees. The lockout still continued in the remainder of the factories at the time of the preparation of this report. On June 18, 1901, the secretary of the union said that its battles had cost it about \$32,000, in its existence of less than a year and a half.

**Boycotts.**—The association resolved at its convention in January, 1901, to devote 50 per cent of all money received during the ensuing year to pushing its boycott against the two watch-case factories which did not then recognize it. The secretary reports that the boycott statement of the organization against these two concerns has been republished in full by the newspapers in the two great watch-case manufacturing centers in France and Switzerland, and it also appears in the Italian newspapers weekly. This international trade-union action can not fail to have an immense effect on those unfair and despicable firms as the bulk of their trade is in European countries.

**Division of employment.** The constitution declares: "In the event of dull seasons it shall be the duty of all members of this association to sacrifice as much time as necessary to keep all brothers employed in their respective shops."

**Overtime.** The constitution provides: "Any member or person working overtime without the sanction of the shop committee, except in case of absolute necessity, shall be subject to a fine of \$50 or more."

**Piecowork and taskwork.**—The Watch-Case Engravers struck in 1900 against the use of piecowork by the American Watch Case Company, and succeeded in abolishing it. The secretary stated that they had abolished the piecowork system in every factory in the country except two.<sup>1</sup>

In the spring of 1900 the Watch-Case Engravers struck against the Keystone Watch-Case Company for the abolition of the system of taskwork or the so-called minute system. It had been required, it was said, that the engraving of a case be finished in 30 minutes. It was also asserted that when a new pattern was taken up it was given to the fastest workman, and the time in which he did it was fixed as the time to be allowed for it. If more time was spent upon the work the full time was not paid for. This system was declared to result in deterioration of the quality of the work, and the Engravers protested that the artistic touch which ought to be given was made impossible.<sup>2</sup>

**Wages.** The union has never established a minimum wage, and every union man is rated according to his ability.

**Union label.** The Watch-Case Engravers adopted a union label about May 1, 1900, and in August, 1900, the executive committee reported that 100,000 had already been issued, though only one manufacturer was using it.

## INTERNATIONAL BROTHERHOOD OF STATIONARY FIREMEN.

**History.**—The Brotherhood of Stationary Firemen was organized at the convention of the American Federation of Labor in 1898 by local unions already affiliated with the Federation of Labor. The Steam Engineers protested against the granting of a Federation charter to the firemen. Their position was apparently that an agreement ought to be reached between the Engineers and the Firemen by amalgamation or otherwise. The Firemen offered to submit the question of amalgamation to a referendum vote of their members, but this was not satisfactory to the Engineers. Notwithstanding the Engineers' protest, the Federation granted the Firemen's charter.

The organization is meant to include all persons engaged in firing, tending water, and coal passing around stationary and marine boilers. In July, 1900, the secretary reported that the number of locals in December, 1899, was 20, and the number of members 1,101, and that at the date of the report the number of locals was 47 and the number of members 3,265.

**General aims.**—The Brotherhood of Stationary Firemen declares that its objects are to place the occupation upon a higher plane of intelligence, efficiency, and skill; to encourage the settlement of disputes with employers by arbitration; to secure employment and pay for work; to reduce the hours of labor, and by all legal and proper means to elevate the moral, intellectual, and social condition of the members.

<sup>1</sup>American Federationist, August, 1900, p. 248. September, 1900, p. 270.

<sup>2</sup>Locomotive Firemen's Magazine, April, 1900, pp. 301, 302.

**Conventions.**—The convention meets annually. Local unions are entitled to 1 delegate for each 50 members or fraction thereof. All the votes to which a local is entitled may be cast by 1 delegate, if desired.

**Officers.**—The officers are a president, 3 vice-presidents, a secretary-treasurer, and 4 members of the executive board. The president, the vice-presidents, and the secretary-treasurer are also members of the executive board. The president receives no salary. The convention of 1899 voted a salary of \$50 to the secretary-treasurer for the ensuing year.

**Membership.**—The constitution specifies no qualifications for membership and gives no rules for admission.

The convention of the Stationary Firemen in 1899 passed a resolution requesting the St. Louis union to abolish its rule excluding colored firemen, and instructed the secretary-treasurer to see that this resolution was complied with.

**Finances.**—The per capita tax is 7 cents a month, of which 1 cent goes to the support of the official journal. The local unions are forbidden to make the initiation fee less than \$1 or monthly dues less than 50 cents.

**Strikes.**—Local unions are required to submit to the executive board a statement of grievances and of the causes leading up to the demand for a strike, and must get the consent of a majority of the executive board "before an appeal for aid can be made."

The union reported to the Federation of Labor in the fall of 1900 that it had won 3 strikes during the preceding year, compromised 1, and lost 1; 178 persons were involved, of whom 161 were benefited, the cost was \$1,162.

**Hours of labor.** The Stationary Firemen aspire to reduce their hours of labor to 8. They have made several strikes for this object, and in the majority of cases have been successful. They often sacrifice a part of their wages for the sake of shorter hours. For instance, the Journal of November 15, 1899, announced that the firemen in the breweries of Kansas City had got their hours reduced from 12 to 8 and their wages raised from 20 cents an hour to 25, and the firemen of the Michigan Sugar Works, at Bay City, Mich., had got the same shortening of hours and an increase of wages from 15 cents to 20 cents. It will be seen that in the former case the daily wages were reduced from \$2.40 to \$2, and in the latter case from \$1.80 to \$1.60.

**License laws.**—The American Federation of Labor convention of 1896, upon the motion of an Ohio stationary fireman, passed a resolution asking the Ohio legislature to pass a law forbidding any person to fire a stationary steam boiler in Ohio without a license. The resolution declared that the members of the Firemen's Union of Toledo, whose representative introduced the resolution, were rapidly being replaced by minors and incompetent persons, and that the law in question was essential to the safety of every person where a steam boiler was used.<sup>1</sup>

## INTERNATIONAL UNION OF JOURNEYMEN HORSESHOERS OF THE UNITED STATES AND CANADA.

**History.**—The International Union of Journeymen Horseshoers of the United States and Canada was organized at Philadelphia, as a national union, in 1874. In 1892 it chartered its first local in Canada and changed its name to international. In 1893 it departed from the usual practice of trade unions by incorporating under the laws of Colorado. It is provided in the articles of incorporation that it shall issue only one charter to each city where a union is organized, except to New York, where two charters are to be granted.

In 1890, at the close of the fiscal year, April 1, it had 20 locals; 1894, 40; 1895, 48, 1896, 52; 1897, 60; 1898, 73; 1899, 78, 1900, 117. In August, 1900, it reported 121 local unions and 3,000 members; in June, 1901, 132 locals and about 6,800 members.

**Convention.**—The convention of the Horseshoers is held annually on the third Monday in May. The national officers are members of it, with the power of voting, as well as the delegates from the local unions. Each union which has 5 members or more is entitled to 1 representative, a union with 75 members is entitled to 2 representatives, and larger unions to an additional delegate for every additional 75 members. Representation is based on average membership for the whole year. To have 2 delegates a local must have paid \$30 per capita tax during the past year, which is the full tax for 75 members. Any union which fails to send a representative is to be fined not less than \$5 nor more than \$50. A union under suspension for nonpayment of the per capita tax can not be represented.

<sup>1</sup> Convention Proceedings, 1896, p. 94.

The convention of 1900 passed a resolution, without dissent, that the next convention meet in 1902. The provision for annual conventions still stands as a part of the articles of incorporation.

**Constitutional amendments.**—The by-laws may be amended by a two-thirds vote of the representatives in convention. The fundamental constitution seems to have been so fixed, by being put in the form of articles of incorporation, that it can not be amended unless by the unanimous consent of the members of the convention, who constitute the legal corporation. This was the purport of a legal opinion obtained by the union in 1898.

**Officers.** The officers are a president, three vice-presidents, and a secretary-treasurer. The officers constitute the executive council. They are elected in the convention by a majority vote, "by the Australian system of voting." The president, the first vice-president, and the secretary-treasurer are paid for their attendance at the convention at the rate of \$7 a day, including the necessary time of traveling; they also receive railroad fare by the most direct route. The president's salary is \$100 a year, the secretary-treasurer's is \$100. The officers, as an executive council, have jurisdiction over strikes and lockouts. They hear and decide all appeals and grievances, subject to a further appeal to the annual convention. When meeting as an executive council, they receive \$7 a day and fare to and from the place of meeting. The president, the first vice-president and the secretary-treasurer as a board of trustees are required to examine all bills against the union and order the payment of them when approved. They are also to examine and approve the bond of the secretary-treasurer.

The delegates of the local unions to the convention perform functions which are not commonly performed by such officers. They are elected for a year, their term beginning on the day on which the convention meets. In addition to attending the convention, they are required to act "as deputies for their respective unions, they shall do all the necessary correspondence with each local union, and forward to the secretary of the International Union the per capita tax and reserve fund or special assessment in accordance with the by laws, before the end of each quarter, the names of members initiated, admitted by card, reinstated, suspended, rejected, and the names and address of the officers of his local union, also number of members, and give him general news of the union, under seal upon forms furnished by the international secretary-treasurer."

The representative or delegate is further required to answer all the correspondence of the president and install the officers of his local union. It will be seen that his duties are in a great degree those of a secretary. In order to be eligible as a delegate, one must have served 12 consecutive months as an officer in the local union which he represents, and must be working at the trade. Among the qualifications of delegates is the ability "to read and write their correspondence."

**Discipline.** Any member who takes a position as salesman for any horseshoe, nail, or hardware company, or who permits his name to appear on cards representing any business firm, or who is in any way connected with the running of a shop, except as a worker for wages, forfeits his membership. So does any member who takes a contract or subcontract from any company or corporation for shoeing horses.

Any member working in the jurisdiction of a local union other than his own, who accepts less than the full amount of wages demanded by the union where he works, or refuses to strike when that union requests him to do so, is subject to a fine of \$20 for the first offense and to expulsion for the second. Any member who undermines another in his wages, or does any injustice to another, or accepts employment where there is a difficulty involving wages or the rules of the union, without the sanction of the proper authority, is to be fined \$5 for the first offense, and for the second is to be expelled. Members are tried for all offenses by the executive committees of the locals to which they belong.

**Finances.**—The charter fee from new unions is \$5. The per capita tax is 10 cents a quarter for each member; but there is a further provision, under the name of a reserve fund, for the payment of 50 cents a member a quarter—the 10 cents to cover running expenses and the 50 cents to be devoted to disputes.

The initiation fee of the local union may not be less than \$5 nor more than \$20, without special permission of the international executive board.

**Strikes.**—No strike can be constitutionally inaugurated unless sanctioned by two-thirds of the members of the local union present at a meeting, and also by the executive council of the international union. It is provided that not more than one city shall be allowed to strike at one time unless otherwise ordered by the International Union, and then only after all honorable efforts at arbitration have failed. The constitution does not specify the amount of the strike benefit. Eight dollars a week seems to be the common payment. Sometimes \$8 has been paid to

married men and only \$4 to those who have had none but themselves to support. The local union is required to support its members on strike for 2 weeks before asking for anything from the international. This provision tends to discourage the forming of a local union under the immediate pressure of a dispute and for the purpose of ordering a strike at once and securing the aid of the international body. It makes it necessary for a local to exist long enough to accumulate a certain reserve fund before entering upon a strike. It serves the same purpose as the provisions which some unions have, forbidding sanction to a strike in any local which has not been a certain time affiliated.

The union reported to the Federation of Labor in the fall of 1900 that it had won 4 strikes and compromised 4 during the preceding year. Three hundred persons were involved, and all were benefited. The cost was about \$5 000.

The first vice-president and general organizer says in a letter published in the official journal for May, 1900: "Remember that with the united efforts of the journeymen and boss horseshoers we can advance with the times and not decline, as is the case. Our fight is the boss horseshoer's, his fight is ours."

**Hours of labor.**—The union has passed a resolution declaring that it adopts a 9-hour workday for all locals that are prepared to demand it, and that no union which is working 9 hours a day shall be permitted to change its hours. The Horseshoers have made considerable progress toward the actual establishment of the 9-hour day. In June, 1901, about half the members were said to be working 9 hours and the rest 10. It was asserted that all overtime was paid at 50 cents an hour.

**Union label.**—The locals of about 10 cities have adopted local-union stamps. The mark is struck into the hot shoe with a steel stamp when the shoe is ready to be put on the foot. The rules of the locals generally provide that stamps shall be furnished to the members, either free or for a small payment per month, but shall remain the property of the organization, and shall not be used in any shop where nonunion men are employed. In Hamilton, Ontario, in Cincinnati, and in Syracuse, N. Y., all horses belonging to the city governments are required to be shod by union men and with shoes bearing the union stamp.

The International Union has recently adopted a union label, consisting of a monogram of the letters J. H. U. The regulations which have been published regarding it provide that local unions which have labels of their own need not use it until renewal of the old one becomes necessary. "Members and others working in a shop entitled to use of the label, who are not in possession of the current quarterly card, are required to pay 50 cents per day into the treasury of the local union under which they are working for each day's neglect to take out the same." In June, 1901, the label was said to be in use in 10 cities.

**License laws.**—The Horseshoers, following the example of the doctors, the plumbers, and others, have tried to get laws passed to fix the qualifications and so limit the number of those who should engage in their occupation. The American Federation of Labor convention of 1895 adopted the following resolution:

*Resolved*, That the American Federation of Labor heartily endorse the action of the International Union of Journeymen Horseshoers in its effort to secure legislation which will confine the employment of horseshoers and veterinary surgeons to those who possess the skill and necessary experience, and in regulating and directing the course of apprenticeship and the education of those intending to pursue the art of horseshoeing."

License laws have been passed in New York, Colorado, Michigan, Illinois, and Minnesota.

**Official journal.**—In January, 1900, the Horseshoers began the publication of an official magazine called the International Horseshoers' Monthly Magazine. It contains some 60 pages of reading matter each month, chiefly devoted to matter of particular interest to members of the union, including some technical articles on horses and horseshoeing. It has obtained correspondence from members or former members of the union in Great Britain and in Russia. It is sent to all members, and on account of it each local union is required to pay 25 cents for each member on its books in January of each year.

## **HOTEL AND RESTAURANT EMPLOYEES' INTERNATIONAL ALLIANCE AND BARTENDERS' INTERNATIONAL LEAGUE OF AMERICA.**

**History.**—The Hotel and Restaurant Employees' International Alliance was formed in 1890 by local unions which had before been attached directly to the Federation of Labor. The second half of its compound name was added in 1899. It includes bartenders, cooks, porters, and waiters. Where the numbers justify

it, each of these crafts is organized in a separate local. A local union composed of persons who perform one kind of work has no right to initiate persons who perform another kind of work which is represented by another local in the same place. The number of members on which the organization paid per capita tax for April, 1900, to the American Federation of Labor was 4,587. In July, 1900, the union reported 127 local organizations, with 7,997 members—6,791 male and 1,203 female. For March, 1901, tax was paid to the Federation on 9,522 members. The number of locals at this time was 180. The membership had more than doubled in a year.

The union was substantially reorganized in 1899, and the reorganization seems to illustrate the efficiency with which the American Federation of Labor sometimes acts, in spite of its renunciation of power to compel and to show the value which its supervision and control may have for the bodies affiliated with it.

The St. Louis local union and some others had become satisfied, it appears, that the international officers were unfit for their positions. The dissatisfied locals appealed to the Federation of Labor. The executive council of the Federation cited the accusers and the accused to appear before it during the convention of the Federation in 1898. After the preliminary hearing, the executive council of the Federation suggested that the persons on each side of the controversy name two men, well-known members of other labor unions, to be members of a board of arbitration, and that the executive council itself name a fifth member who should be chairman. The plan was adopted, and by agreement full authority was placed in the hands of the board of arbitration. After a hearing, which occupied 8 days, the board ordered a convention of the union to be held in Chicago in March, 1899, and itself assumed the authority to judge the credentials of the delegates and to supervise the gathering. It also abolished representation by proxy, which the dissatisfied members of the union alleged had enabled a few men to keep control of the organization. In spite of the measures taken by the board, it is declared by the present secretary-treasurer that the convention was packed, that Chicago with two outside locals controlled the convention, and that its proceedings were a farce, which the representatives of eleven locals, who had come hundreds of miles, were unable to control. The board of arbitration, however, took possession on the last day, made extensive changes in the constitution by its own authority, and made decisions and orders which resulted in the establishment of a new executive board and in the removal of the old general secretary. The new president and executive board were unable, however, to get possession of the general office. Though a new secretary had been elected at the Chicago convention, he failed to make the financial statement required by the constitution, and refused to submit to an investigation of his office by the executive board. The executive board appealed to the executive council of the Federation of Labor, asking it to revoke the existing charter of the Hotel and Restaurant Employees' Alliance, and to grant a duplicate certificate of affiliation to the legal executive board. This request was ultimately complied with, and through the support of the Federation of Labor the Alliance was established under new leadership, which has proved its efficiency by a remarkable increase of membership.

The report of the secretary-treasurer to the convention of 1900 acknowledges further indebtedness to the Federation of Labor for the work of its general and district organizers in forwarding the organization of hotel and restaurant employees in places where the Alliance has no local union. The secretary-treasurer also says:

"My predecessors in this office had sent out a circular to various organizers, and in this circular had made promises which they had never attempted to fill. This was with reference to our 'Outfit' for new locals, the understanding of the organizers being that said outfit contained a full set of books. After receiving considerable complaint, I finally made arrangements with the general headquarters of the American Federation of Labor to furnish me with outfits similar to those they forwarded to locals directly affiliated. To these outfits I attribute much of our recent success, as they are the one thing necessary to start new locals off in proper shape, and since we have been furnishing the said outfits we have not lost a single new local. We have received much favorable comment on the completeness of the said outfit, many organizers saying it is the best furnished by any of the younger internationals, and superior to that furnished by many old organizations."<sup>1</sup>

**General aims.**—The preamble of the Hotel and Restaurant Employees and Bartenders' Union is as follows: "Recognizing the fact that organization is necessary for the amelioration and final emancipation of labor, therefore, we have organized the Hotel and Restaurant Employees' International Alliance and Bartenders' International League of America.

<sup>1</sup> Report of Board of Arbitration is given in *Federationist*, vol. 6, p. 64.

"We declare—

"1. That labor creates all wealth, but the laborer does not receive his due share of the wealth he produces; therefore,

"2. To enable him to secure his full rights he must unite with his fellow-workers, so as to accomplish by united action what is impossible by individual effort."

**Convention.**—The convention meets annually. Locals are entitled to 1 delegate for the first 50 members or less, and 1 additional delegate for each 50 members or majority fraction thereof. No local can have more than 3 delegates. A local may cast its 2 or 3 votes in the convention by 1 delegate. Since the reorganization of 1899 no proxies are allowed. The expenses of the delegates are borne by the locals. The international union pays the expenses of the general president and secretary-treasurer.

A delegate must have been a member for at least 6 months, unless his local has been organized within that time. A local can not be represented unless it has been chartered 45 days and has paid 1 month's per capita tax.

**Constitutional amendments.**—All amendments of the constitution must be referred to popular vote. A majority decides. It is apparently necessary that all amendments be first acted upon by the convention.

**Officers.**—The officers are a president, seven vice-presidents, and a secretary-treasurer. All are elected by the convention, and together they constitute the executive board. The convention also elects the managing editor of the official journal. No two of the vice-presidents may come from the same town or city.

The president is general organizer, and has also power to decide all questions of law and to regulate any controversy between local unions or between a local union and the general body, subject to appeal to the executive board and to further appeal to the convention.

The secretary-treasurer is required to submit a monthly itemized statement of receipts and expenditures to the local unions, and an annual itemized statement to the convention. He is forbidden to retain more than \$100 in his possession at any time. All further sums must be deposited in some responsible bank in his name as secretary-treasurer. He may not pay any bill until it has been countersigned by the president. He must give a bond in some surety company for \$2,000; the cost of it is paid by the union. His salary is \$125 a month.

**Joint executive boards.**—Wherever more than one local exists in a town a local joint executive board may be formed with full power to adjust all differences between locals and between members and their employers. Two locals of the same craft—waiters or bartenders—existing in the same town are directed to elect a joint committee to investigate the qualifications of applicants for membership. All the locals in a city must hold a joint meeting at least once a year.

**Membership.**—Colored persons are received as members, but are organized in separate locals. The constitution provides that if a member of a colored local moves to a city where no local of his craft or race exists he shall remain a member of the local in the city from which he came. Every alien member is required to make a declaration of his intention to become a citizen, and to perfect his naturalization as soon as the law permits.

**Discipline.**—Charges against a member must be made in writing and examined by a special committee of five, with notice to both parties and examination of witnesses. If the committee reports that the charges are sustained, in whole or in part, the accused has the privilege of speaking before the local in his own defense. He must then retire, and, after the committee has read the charges which it sustains, the president puts to a vote, first, the recommendation of the committee, then the proposition of expulsion, and then, if that fails, such minor penalty as the union may deem fit. A two-thirds vote is required to condemn to any penalty.

If charges are made by the members of any local against members of another local, they are tried by the general executive board.

Members condemned by their locals may appeal to the general executive board; its decision is final. If the board undertakes to discipline a local union, the local may appeal to the general convention.

It is forbidden to fine any individual member more than \$10 or any local more than \$1 per capita.

**Finances.**—Every new local pays a charter fee of \$5. Out of the initiation fee of every new member 15 cents is paid to the international organization. The per capita tax is 7 cents a month. It was 5 cents a month up to 1900.

The initiation fee of local unions can not be less than \$2, except in the case of new locals, which may regulate the initiation fee for themselves during the first 60 days. Local dues may not be less than 50 cents a month. Locals of waitresses may have an initiation fee as low as \$1 and dues as low as 25 cents a month.

Members are in bad standing when they are over 60 days in arrears, and must

pay a reinstatement fee of 15 cents to the international union. A local union stands suspended when it is 3 months in arrears. The general executive board has power to reinstate a local, suspended for nonpayment, on settlement in full and payment of \$1 additional.

The receipts for the year ending April 30, 1901, were \$10,742, and the expenditures \$7,349. The cash balance at the end of the year was \$3,675. Local funds on hand were reported by 18 local unions; they amounted to \$16,026.

**Benefits.**—During the fiscal year 1899-1900 about \$1,600 was reported as paid out in sick and death benefits, and about \$1,900 as presented to other labor organizations. These sums seem to represent payments by the local unions. The national body provides no benefits.

Reports received by the secretary from 60 locals in April, 1901, showed that 18 of these locals had sick and death funds, 3 sick funds only, and 6 death funds only, besides 3 which levy an assessment of \$1 a member for burial purposes, when a death occurs. The death benefits reported range from \$15 to \$100. The sick benefits vary from medical attendance and medicines to \$6 a week for from 3 to 13 weeks. One local reported no time limit. \$3,209 had been expended from sick funds since May 1, 1900, and \$2,416 from death funds.

**Strikes and boycotts.**—The union declares that it will render financial support only to strikes which have received the sanction of the general executive board before being ordered. No detailed procedure for the inauguration of strikes is provided in the constitution.

The constitution provides that no local union shall, under any circumstances, be permitted to declare a boycott.

During April, 1901, the secretary received reports from 60 of the 180 locals of the organization, showing that 25 strikes had been conducted by these locals since May 1, 1900, and that 16 of them had been won, 2 compromised, and 3 lost, while 1 were still pending. Four hundred and thirty-seven persons were reported to have been involved in the strikes, 169 to have been benefited, and 23 to have been worsted. An average gain in wages of \$1 a member a week was reported, and reductions of hours by from 1 to 5 a day. The cost of strikes was reported as \$5,081.

**Hours and wages.**—Reports received by the secretary in April, 1901, from 60 locals, show hours of labor ranging from 8 to 13 a day, with 6, 6½, and 7 days' work a week, averaging 11½ hours a day and 6½ days a week. Wages were reported varying from \$15 to \$75 a month with board, and, without board from \$7 to \$25 a week, and from \$30 to \$122 a month. The latter figure was exceptional, however, and the average was said by the secretary to be about \$40 a month without board.

**Official journal.**—The union publishes an official journal called the *Mixer and Server*. It is an 8-page paper, published monthly. One page is regularly filled with the financial report of the secretary-treasurer. A considerable part of the paper is filled with letters from representatives of local unions, giving general information about the state of affairs in their localities. Other matter included is such as commonly appears in labor papers. One unique feature of a technical character is a column of receipts for mixed drinks. It is forbidden to publish any article referring to any political party, platform, or candidate, or to any religious question. The subscription price is 50 cents a year to members of the union as well as to others. The secretary-treasurer of the union is the editor. The expenditures on account of the paper, during the year ending April 30, 1901, were \$1,136.

Previous to 1900 a paper called the *Purveyor*, published by an individual, had the indorsement of the union as its official organ. The conduct of it was unsatisfactory; even its publication was very irregular; and the new managers of the union thought it wise to take the publication of an organ into their own hands.

**Union label.**—In May, 1900, the hotel employees adopted a union card for display in saloons, cafés, excursion boats, etc. In July, 1900, the secretary reported that over 1,000 had been issued. In June, 1901, the number was reported as 2,700, of which 600 were used in restaurants. There is also a "working button," which is worn by the members.

## INTERNATIONAL JEWELRY WORKERS OF AMERICA.

**History.**—The national organization dates only from July, 1900. It was formed by delegates of local unions in New York City, Buffalo, Newark, and Cincinnati. April 1, 1901, the secretary reported the membership as about 1,000, of which the New York local contains about half.

**Objects.**—"The protection of members in all matters relating to wages and their rights as employees is the principal purpose of this organization."

**Convention.** The convention is to meet annually in July. Each local is entitled to 1 delegate for the first 100 members or less, and 1 additional delegate for each additional 200 members or majority fraction thereof; but no local can send more than 4 delegates.

**Officers.**—The officers are a president, a vice-president, a secretary, a treasurer, and three trustees. The officers constitute the executive board. In case of a vacancy in the office of president the president's duties are to be performed not by the vice-president, but by the secretary, until a successor is chosen. The secretary is immediately to call a meeting of the executive council for the purpose of electing a president. The salary of the secretary is \$55 a year and that of the treasurer \$25.

**Membership.**—The constitution recites that its membership is to embrace all the different branches connected with the jewelry trade—general mounters, jewelry setters, enamellers, engravers and chasers, polishers and finishers, lappers, designers and modelers, and gold melters.

**Finances.**—The charter fee for new locals is \$5, with an additional \$5 for supplies. The per capita tax is 10 cents a month. It is said by the officers that the next convention will without doubt adopt uniform monthly dues of 50 cents, and a uniform initiation fee of \$3, of which 25 cents will go to the general treasury. These regulations were approved by the organizing convention, but were not formally adopted.

**Benefits.** The national union has made no provision for benefits, but the convention has recommended to the locals to use their best efforts in the establishment of local benefit features.

**Piecework.** The convention has recommended that piece work be avoided so far as possible, and that where it exists efforts be made to abolish it.

## THE UNITED BROTHERHOOD OF LEATHER WORKERS ON HORSE GOODS.

**History.**—The United Brotherhood of Leather Workers on Horse Goods was organized January 1, 1896. It succeeded the National Association of Harness and Saddle Makers, organized in 1887. It includes harness makers, collar makers, saddle makers, harness cutters, and machine operators. The number of locals is reported as 3 on June 1, 1897; 7 on June 1, 1898; 21 on June 1, 1899; 17 on June 1, 1900; and 62 on June 1, 1901. In July, 1900, the membership was reported as 2,500, and on June 1, 1901, as 3,900.

The general organization maintains a labor bureau, to which unemployed members apply.

**Convention.**—The convention is held triennially in June. Each local has one vote. A local of less than 10 members is not permitted to send a delegate of its own, but places its vote, with instructions, in the hands of a delegate from some other local. No delegate may hold more than one such proxy in addition to the vote of his own local. The president, the first vice-president, and the secretary-treasurer are members of all conventions, with full voting power.

Railroad fare and hotel bills of officers and delegates are paid from the general treasury, and the president, the first vice-president, and the secretary-treasurer receive \$2.50 a day for their attendance.

**Constitutional amendments.**—The constitution may be amended either by vote of the convention, or by a two-thirds vote of the membership at large, on the proposal of the executive council or on the proposal of any local seconded by two other locals.

**Officers.**—The officers are a president, four vice-presidents, and a secretary-treasurer. The president and the vice-presidents constitute the executive council.

The president decides questions of law, and where no law exists he is to decide the question at issue according to his best judgment. With the consent of the executive council he may suspend any law for 10 days and submit the question of the abolition of the law to a general vote. If charges are preferred against an officer he may suspend him, and, if necessary, appoint a substitute. He must approve in advance all expenditures greater than \$5. His salary is \$50 a year.

It is the special duty of the third vice-president to attend to the advertising of the label, and of the fourth vice-president to watch State and national legislation.

The secretary-treasurer issues membership cards and due stamps, collects and pays all money, publishes the official journal, and sends an itemized financial

statement to each local every month. His salary is \$75 a month, with traveling expenses, and \$7 a week is allowed him for clerk hire. The executive council has general supervision over the affairs of the brotherhood. Its members receive \$2.50 a day for all time lost in attending to union business, with necessary traveling expenses.

Each local is required to make a nomination by plurality vote for each of the general officers at its first meeting in March and immediately to send a list of the nominations to the general secretary-treasurer. Before March 30 the secretary-treasurer must send a list of all nominations to each local. At the first meeting in April each local takes a vote upon them. The result is immediately forwarded to the secretary-treasurer and the president. The two candidates for each office who have received the highest votes are again submitted to the locals for final choice. All elections are by secret ballot.

The salary of a local secretary-treasurer is \$15 a year where the branch has less than 10 members, \$20 a year where it has from 10 to 55 members, and \$25 a year where it has 55 members or more.

**Membership.** Journeymen working on harnesses, saddles, etc., or in fact anything made of leather, except boots and shoes, are eligible to membership. Any man who is competent in his class and can command the average rate of wages in his locality is declared to be a journeyman. Manufacturers who employ 2 journeymen or less, and foremen with less than 4 journeymen, may be admitted at the option of the local. Contractors must be excluded, and also foremen, assistant foremen, cutters, and journeymen who work in penitentiaries or for lessees of penitentiaries.

Application for membership must be made in writing and referred to an investigation committee, which is to report at the next meeting. The application is then voted on. If 3 black balls appear, it is rejected. If there are 1 or 2 black balls, those who cast them must present their objections to the president in writing at the next meeting. He presents the objections to the local, withholding the names of the objectors. He then appoints a committee of inquiry. When this committee reports, a new ballot is taken. If 3 black balls appear, the candidate is rejected, but if there are not more than 2 black balls he is elected.

**Apprentices.**—The rules of the union provide for 1 apprentice where 10 journeymen are employed, and 2 apprentices where there are 20 journeymen, but forbids more than 2 apprentices in any case at any one branch of the business.

**Cards.**—Each member is provided with a card, which is intended to serve the purpose of a due book, a traveling card, a transfer card and a loan card. Retiring cards are issued to members who become foremen or engage in other business, on their paying up all indebtedness. If they return to work at the trade, they must deposit their retiring cards with the nearest local within 6 days.

**Discipline.**—If a general officer become derelict in his duties, charges may be preferred against him to the president and he is to be tried before the executive council. Charges against any member of a local must be brought in writing. If the local votes to take them up, they are tried before a committee of 5. The committee must give the accused at least 3 days' notice of the time, place, and object of the meeting, and must give him full opportunity for defense. If it finds the charges sustained, it fixes the penalty in its report. If the local adopts the report, the president must put the judgment in execution. There can be no remission of the penalty except by a two-thirds vote of the local. An appeal lies, however, to the executive council.

**Finances.**—The charter fee paid by new locals is \$12. All necessary supplies are furnished by the United Brotherhood. The initiation fee is \$2 and the local dues are uniformly 25 cents a week. The treasury of the national body is supported by a percentage of the local payments, which varies with the size of the branch. For instance, a local of 15 members or less sends 50 per cent of its gross receipts, including initiation fees, dues, and fines, to the general secretary-treasurer; one of 16 to 30 members, 55 per cent; one of 31 to 25 members, 60 per cent, and so on up to one of 56 members or more, which pays 80 per cent.

A member who fails to pay dues for 4 weeks is in bad standing and forfeits all claim to benefits. After 8 weeks he is suspended.

A person working where there is no local branch may become a member at large by paying the regular initiation fee and dues. All dues are receipted for by adhesive stamps, which are furnished by the general secretary-treasurer.

For the fiscal year ending May 31, 1900, the aggregate receipts were \$16,660 and the aggregate expenditures \$15,048. The assets on June 1, 1900, were \$3,536. For the year ending May 31, 1901, the receipts were \$26,246, and the expenditures \$18,879. The assets on June 1, 1901, were \$10,903.

**Benefits.**—*Sick benefit.*—Any member who has been in good standing for 6 months and is sick 2 weeks or over continuously is entitled to a sick benefit of \$5 a week, provided the sickness is not the result of dissipation or immoral habits. Sick benefit can not be drawn for more than 13 weeks in any 1 year. The local is to appoint a sick committee of not less than three members, who must visit the sick at least once in each week, no two members going at the same time. The chairman of this committee draws and disburses the sick benefit, reporting at the end of each month.

*Death benefit.*—On the death of a member who has been in good standing for 6 months a death benefit of \$10 is paid; after 2 years, \$60; after 4 years, \$100; after 5 years, \$200; after 8 years, \$300.

*Traveling loans.*—One who has been a member in good standing for 2 years and who is out of work and wishes to travel is entitled to a loan sufficient to take him by the shortest route to the place he wishes to go to (not exceeding \$15) and \$1 over. If he fails to find employment at this place, he is entitled to a further loan of \$5. Loans may not exceed \$21 in the aggregate. A traveling member must be provided with a loan book, and no loan must be given unless this book, properly signed and sealed, is presented and shows on its face that the member is entitled to a loan. On obtaining employment the member must pay to the collector of the shop 15 per cent of his earnings each week in addition to his dues until the loan is canceled. Failure to do so subjects him to a fine of not less than \$5 nor more than \$8, and to expulsion.

All benefits and loans are chargeable to the general treasury of the United Brotherhood. Two hundred dollars was paid out for sick benefits during the year ending May 31, 1898, \$855 during the year ending May 31, 1899; \$2,105 during the year ending May 31, 1900; and \$1,736, or about \$1 50 a member, during the year ending May 31, 1901. During the year ending May 31, 1900, \$7,029 was paid out in strike benefits, and \$1,931 during the year ending May 31, 1901. Loans amounting to \$136 were outstanding May 31, 1900. Loans granted during the following year amounted to \$549, and loans repaid to \$171, leaving \$214 outstanding May 31, 1901.

A member who has been out of work for 6 consecutive working days is entitled to exemption from dues. Local secretaries are furnished with out-of-work stamps, which they affix to the member's card in place of the regular stamps in such cases. Members who hold positions, but voluntarily "lay off," are not considered to be out of work and are not exempt from dues.

**Strikes.**—When a local has a dispute with employers, it must send a full statement of the circumstances including the number of persons affected, and the number of union and nonunion men, to the general president and the secretary-treasurer. If less than 12 men are involved, the secretary-treasurer must mail an exact copy of the application to each member of the executive council within 24 hours. Each member of the council must telegraph his vote to the general president within 12 hours. If the application is approved, the president telegraphs the fact to the local branch, and instructs the secretary-treasurer to send each week the required amount of assistance.

If 12 persons or more are involved in the proposed strike, the question of approving it must be submitted to a general vote of the whole Brotherhood. A full statement of the circumstances must be sent to each local as well as to each member of the executive council, and special meetings to vote on the question must be called in all the branches.

The strike benefit is \$10 a week for 10 weeks and \$3 a week for 5 weeks more. Payments then cease unless the limit is extended by a general vote, in which two-thirds of the votes cast are favorable.

The union reported to the Federation of Labor in the fall of 1900 that it had won 10 strikes and lost 1 during the preceding year, involving about 269 persons. The cost was \$7,088.

**Hours of labor.**—The rules of the union forbid members to work more than 10 hours a day. The 10 hours are to be between 7 a. m. and 6 p. m. The Brotherhood has declared itself in favor of establishing an 8-hour day at the earliest possible moment. The secretary reports that the average hours of labor of all locals are 58 a week.

**Labor Day.**—The rules impose a fine of \$5 upon any member who is found working on Labor Day.

**Piecework.**—All bench workmen are paid by the piece.

**Team work.**—The Brotherhood indorses all efforts tending to the abolition of team work. Team work is not "construed to mean stitchers and finishers."

**Union label.**—The Leather Workers adopted their union label in June, 1898. In July, 1900, the secretary estimated that about 20 per cent of the product of the

trade was put out under the label. The label may be used only in shops or factories where all the employees are members of the Brotherhood except such as may be ineligible to membership under the rules. All union shops entitled to the label are expected to display the union shop card. The Brotherhood has passed a resolution favoring a universal label for union-made goods of all kinds.

### NATIONAL ASSOCIATION OF LETTER CARRIERS OF THE UNITED STATES OF AMERICA.

**History** - This organization was formed in 1889, incorporated under the laws of New Jersey in 1891, and reincorporated under the laws of Tennessee in 1892. About January 1, 1901, the secretary reported 767 branches and 11,800 members. On June 18, 1901, he reported 807 branches and 15,100 members.

The convention of the American Federation of Labor in 1899 directed the president of the Federation to visit the next convention of the Letter Carriers and invite them to affiliate with the Federation. It declared that the Federation had been "largely instrumental in procuring the 8-hour workday for the Mail Carriers." The Letter Carriers have not heretofore responded favorably to such overtures and they seem to rely on their own independent efforts rather than on other labor organizations to promote their interests before Congress. Yet they give some indications of a feeling of solidarity with the labor movement. The official journal of the association, in May 1899, contained an editorial article urging the members to buy their uniforms from union firms, and saying that in Chicago Cincinnati, New York and Brooklyn the Letter Carriers had passed resolutions refusing to deal with firms which did not employ union help.<sup>1</sup>

**General aims** - The constitution declares that the objects of the association are to unite fraternally the letter carriers in the United States for their mutual benefit, to seek improvement in the condition of all by legislation and otherwise to secure their rights as Government employees to strive to promote the welfare of every member, and to establish the United States Letter Carriers Mutual Benefit Association.

**Conventions** - The convention meets annually. It consists of the officers, the delegates from the branches, and one delegate at large from each State or district association. Each branch is entitled to 1 delegate for the first 20 members or less and 1 additional delegate for each additional 20 members or major fraction thereof. Each branch may cast its full vote, though it have not the full number of delegates present. Any branch may give its proxy to the delegates of any other branch within the same State. If a branch is in arrears for annual dues or has neglected to make reports of its membership, its delegate can not be admitted except by a three fourths vote.

**Constitutional amendments** - The constitution may be amended by a majority vote of the convention, but any resolution or amendment so passed must be referred to a general vote of the members upon the written request of 10 branches containing not less than 50 members. The convention itself may refer any resolution or amendment to popular vote.

**Officers** - The elective officers are a president, a vice-president, a secretary, a treasurer, an executive board of 5 members, a committee on legislation of 3, a committee on constitution and laws of 3, a civil-service committee of 3, and 1 vice-president for each State represented. Officers are elected by the convention. A majority is necessary to elect. If there is no choice the candidate who has received the least votes is dropped and another vote is taken.
